Topic: The interaction between the Eye & Thalamus

00:00:00

Ok welcome everybody to the 13th Keshe Health Teaching Workshop. This workshop will concern *The Interaction between the Eye and the Thalamus*, and Dr. Eliya Kostova, will give us a description of the eye in a medical way, and take us on a visual tour of the eye as we see what makes that up. That will be followed by a discussion with Mr. Keshe at the Keshe foundation, at the Spaceship Institute on how the eye interacts with the feeling part of the brain and the Thalamus, let's go through now to the spaceship institute and speak with Dr. Eliya Kostova, are you there Eliya?

E: hello everybody can you hear us?

R: yes, yes, very well.

E: Hello it's me Eliya, it's nice to be with you and the 13th workshop, regarding the eye connection with the thalamus. We start with the first slide, ok thank you,

Pic

The first slide is a picture of, well you already know this is a picture of the embryology of the nervous system and how you see the retinal watches the seat of the eye generates at the point of epencephalon and is the point of diencephalon and when you see.

On the chapter of the left side where is the area of the diencephalon the lungs are related with function of the function of the optic and auditory nerves, so actually the thalamus is the main

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

reevaluation system of the eyes so I mention to you that eyes and olfactory bulb they are a direct extension of our brain to environment and actually with them we accept the fields directly from environment transfer directly to our brain.

The difference between the eyes and olfactory bulb, and other receptor organs, is that they are so similar like in structure, and the organization of the fields and cells inside of them are so similar like our brain. Other sense organs are more individual and more like our organs and have priority in their function. Our eyes and olfactory bulb are directly connected to our brain and the function of eyes is so similar to the function of our brain they make one common composition, OK then we go to the next slide.

Pic

With this slide I want to show you that eyes are a direct extension of our brain and actually the nervous optical you see like two connecting between the brain and eye generate from the thalamus the main nucleus from the start from the innervation of our eyes is thalamus, you saw in the previous slide the seat of our eyes retina is from thalamus, then the structure grows from inner-side to outer-side and organizes different parts of our sensory organ eye, OK we go to next slide

Pic

On this slide is usable information from our brain to our eye, actually we receive two flows of light from different points of view to our eye, they're triggering different parts of our retina and the signal from the retina goes through the thalamus optical as a cross road of optic nerve, and actually the right eye gives the signal to the left part of our brain through the left thalamus, the left thalamus transmits the signal from environment through thalamus to the right part of our brain. The cross section of the signal is thalamus optical where above that place; this is the place of our pituitary gland.

Actually the thalamus optical has direct connection like a field connection, like between the pituitary gland, eyes, and thalamus, and they make a triangle, is what is important in the structure of our brain, so just remember that the left right, the left eye give the signal to the right

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

brain and the right eye give the signal to the left side of our brain this is the main part, but actually we have an additional part and they are directly connected to the central part of the brain. On the right picture you see with green color to the left part which does additional function to the signal part of the brain, to the similar part of thalamus and of the right line in the right eye we have again additional parts of signals to the same part of our brain.

Actually that happens because that these two eyes that we have are suppose to function as one eye, but we actually have evolvement for two because the information from evolvement is a lot and so needs to separate our eyes to be able to accept the huge amount of information and to be able to send it to the brain effectively and the brain transcribes that information, what information our eyes accept from our environment. They are actually like receptors for fields from environment and transcend the information like a field to our brain. Ok next slide please thank you...

Pic

So this slide gives you information of where is the place of our eye, in Latin we call that orbital fossa, which is like a hole in front of our skull, which is the front part of our skull, and regarding that plasma technology, if you remember that part of our skull belongs to emotional part of the brain and actually if you see how the eye is like a bulb situated in one hole and not being in touch directly with the bone, we have first fat tissue and that fat tissue makes sure that the bulb will be safe inside.

Actually the hole of bone makes a core inside of that core is the fat tissue for protecting the bulb of the eye and inside of the fat capsule you have the eye, and the structure of the eye is so soft and because of that it needs to be protected from bone, from fat, and must not be in contact directly with bone. On the upper side you see is like a small closed organized structure which is our lacrimal gland, and through the lacrimal ducts have a function to make moisture for our eyes, since it is again a protective system so our eyes do not become dry, and also you know that the water is a conductor, so through the water our eye can accept easier the signal from our environment, and because of that our eyes are all the time moist, they are not dry. If they become dry this starts to make difficulty in vision and accepting the signal from environment.

Ok, around the eyes which is suppose to move and actually we nearly have half movement in the eye because we have several muscles that are supporting the movement of our eye, and

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

the muscle that is connected with both of the eyes , on the top area and on the left and right and we also have the muscle that connect the corners of the eyes and we call that the juvenile muscles, all these muscles. All these muscle organize the retraction and extension of different movement of our eye, and actually it is interesting why we need to move our eye just to accept different kinds of fields, in that movement we are organized with the receptors of the fields, that is the muscles of the eye, we also have muscles inside of the eye and the organize how much to be white or near our nerves, in this introduction hole the light is accepted into the eye, ok next slide please,

Pic

With this slide I want to show you what is the position of our eye if you look from on top of the eye, actually our eye is just like in that hole, the optic nerve come from the brain, connected with the specific place of our eye pole and accept our pupil and iris like a south pole so that part of the eye will be like a north pole so from south pole we accept the fields inside and from the north pole we release the fields from the optic nerve to the thalamus, and how much is white or near our pupil controls how much light we accept in our eyes, so the contraction of the pupil just organize the different fields we are able to accept from the environment, actually we have different size with our eyes which one field we need to accept. Ok next slide please, thank you,

Pic

So here you see our eyes have a shape of bulb and how I told you we have the south pole and the north pole and is the same shape like a planet earth and we have an equator in the middle, from the beginning you have a hole with our south pole, pupil, then we have an Iris, inside of the iris is the inner muscles which regulates the geo matter of the pupil and in Latin language we call ciliary muscles and then you see that all of the bulb is covered with one layer of vessels and nerves and we call it the orate layer of eyes and this is the inner layer of our eye the outer layer is sclera which is made from connective tissue.

On the right side you see that we have actually a space between the iris and the in front of the iris we have a shooting from cornea, like a window, so cornea just cover the hole of our pupil, and then after pupil and ciliary muscles we have again a small space then comes the lens. The lens is the organ that transcripts the fields and transcends them to the next part of our eyes

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

which is actually liquid which is inside of our eyes so the fields just slow down the speed to all the systems and finally reach our retina and trigger the different cells inside our retina.

Our retina contain different kind of cells regarding colors each cell accepting different strengths of fields, then the cells organize the nerve inputs and then transcend to the thalamus and other parts of our brain, ok next slide please.

Pic

This is a cross section of the eye, this is the same structure for on how you see in the middle we have a hole and we have layering of the wall, in the center is our lens and above the lens is the covering from the cornea, in the middle we have a attune and actually we have our eye separated into two parts left and right, so from that slide I think for everyone is visible that our eyes have exactly the shape of planet earth and of shape of reactor, so you have a south pole which is our pupil and the north pole which is the start of the nervous optics, in the Latin language we call it macula point, ok next slide please,

Pic

Thank you this is different points of view of layering of our eyes so how you see we have three layers of the wall of our eyes and the reactor also have 3 layers, the outer layer is white and the middle is red and the inner is like yellow for you here so the right picture again gives you layering of the wall, Ok in front of you is the south pole our pupil, and from the north pole where the start is nervus opticus, actually the muscles outside the bulb they are just for positioning, they make the position of the eye which is non static, ok next slide please,

Pic

thank you so again this slide shows the layering and actually the outer layer which is white color and the main structure is connective tissue and actually is full of Cu₂ and actually a part of our eyes is Cu₂ in the osmotic grand state, inner part is ordinal part which contains the nerve

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

vessels of nerves and that is actually transition matter. Please show the picture of the reactor and the different kinds of receptors',

Pic

so here we have transitional matter between the outer layer and inner layer, the transitional matter here contains the black leaf state and liquid state between the cells, the inner layer is retina and that is the nervous system of our eye and autonomic nervous system of our eye and is actually copper of sight the inner layer is the copper of sight, this is the main nerve transmitter in plasma state and when we accept the fields through light from south pole pupil and slow down the speed through lens and liquid state inside of eye, the autonomic nervous system with cooper of sight (keeper) retina we transform the fields and transcend them from macula, the macula is the point where start memos optical and actually macula what we call macula which is the point that accepts the results of the transcriber fields, and transcend to the thalamus, this is somehow distributing the ovule in the same way ,

ok so we said transitional matter in our inner layer of the eye containing the vessels and nerves principle matter is inside hole of the eye when we accept the light and the light starts to make a trace, a road in the liquid state of the eye in the middle of the bulb of our eye starts to organize the principal matter, and then that principle matter organize new conditions and transcends through the macula nervus opticus to the lungs, so it is important just to know that **copper of sight** is everywhere we are suppose to accept, to resend the fields like nervous system impulse, we have in the muscles of the copper of sight because through the movement of muscles we resend information to our brain, and actually the eyes they are a direct extension of our brain, but they help to our brain to accept the movement of the orb and fields.

The movement is not only when some part is moving but also when different fields change their strength, this is also movement, and so they accept the difference and transcend the difference to the thalamus. Ok next slide please...

Pic

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

So that slide and the pictures is so similar to the pictures of inner earth. I know that most of you are familiar with that, and again I just want to show how it's like the lining of the world inside what is for you or on the right side in purple is the liquid inside and the center is macula just is liquid macula, at that point is like our oval is like our nervous impulse which is like transforming from **copper of sight**.

Retina is like receptor point where the macula accepts all the fields and transcends through nervus opticus. And again you see our lens is south pole and our north pole is in the place called macula and in the middle we have a hole, ok next slide please, thank you,

Pic

Next slide I want to show you how the eye is completely the same shape of the reactor of our orbit you have an optic nerve from your south pole then the reactor eye and on the right side you have **proplea**, this is your side bulb, this is the same shape reactor of our lobe, ok next slide please thank you,

Pic

That slide is again to be visible for you that the eye have the shape of reactor, the same structure so the brain just has two receptors from the reactor to be able to accept the fields from the outer and to transform to the inner part, and also our eye there is the place where the emotional part of the brain which means they accept the fields and also they emit the fields so generate in them the fields, they transcend the fields from thalamus to environment but also they generate inside the fields. Ok next slide please thank you

Pic

So this is a cross section of eye and the reactor of environment and this center pin is actually the macula of the eye so the center there just accept information and transcend. Ok we are done with that slide, next slide please,

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

Pic

So if you remember when we speak about the star formation, star formation in chest which is connected to the main reactor of our brain, so we have in that small reactor in our eye the left and right part which is like the shape of our lung and then in the middle you have macula generating and transcending the impulses to the autonomic nervous system in the retina, they same way our heart have autonomic nervous system, so here we have a replicated model and it again connected to the nervous channel through the thalamus. So in our eye we have again replicated model of the star formation. Ok next slide please ,

Pic

Thank you so these three pictures give you information on the place of macula and how the eye control the papilla and transcends through lens how the eye control the liquid inside the eye and reach the retina and the signal of retina just go through **liras** optical, on the right side you see a bright red hollow, this is the place of the macula. And actually this is the point where all the fields come to one point, this is like accepting point, accept the fields all I one place.

This is the same with the reactor of Armen, so you see our eye with this replicated model but replicated model of star formation in one hand is itself a reactor plasmatic fields which is able to transcend and emit the fields, and generate the fields itself. Ok that is it from my side, if someone have a question, if not I will give microphone to Mr. Keshe for next explanation.

Thank you Eliya that was amazing for another tour through the body.

I have a question about the eye. I once hurt my eye, I had a piece of metal embedded in it and they had to remove it. When they removed it the doctor said well she used a little knife scoop thing and actually scooped out the substance of the cornea of my eye, scraped it right out, and said that that would heal over within a day or so basically, that the covering of the eye that clear substance was actually able to heal itself and I thought that was actually quite amazing, can you say something about that?

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

Yes it is the same way you make your two kids to clean the room it is the same thing because the corneal surface layer...

That is like that fatty layer that forms on the water when Ganses is created and so on you mean?

Yah the carbon is a... well the main conductor of the carbon have the function to help out and to hold in the same layer is the CO₂ and the carbon accepts the fields and because of oxygen just helps it. ...Do you understand?

Yah thank you that is an interesting way to look at it.

There are lots of questions Eliya, please just hold on there are lots of questions.

What does it mean when the optic nerve is degenerating, is it falling apart or does the carbon structure change the diamond?

Mr. Keshe said he will answer that.

Actually it is back to diamond for nervous impulses you need to have the super conductive tissue and when the super conductor structure converts to diamond, then that's it, the signal stops, you have to re-change the structure to super conductor, so the degeneration of the optic nerve is because the tissue change the fields from that to refit diamond. Actually you just start to add more carbons inside and the organization of the structure goes to diamond which is more stable.

Ok thank you there are two more questions here

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

Question: What is the meaning of the cross section of the optic nerve and why does the right eye go to the left side of the brain?

Because your supposed to have only one eye and because the brain is suppose to organize and transcript the information like one which is why you have the main part to the other part of your brain and the second way to the same part to give you the full data.

But why do they cross that seems strange to me and why not go directly into each side of the brain it is much shorter?

They are not split if they go to one eye but to have two eyes they are split to go to different part. Mr. Keshe will give us more information on that.

Ok, why do people have different eye colors?

Because they accept different kinds of fields they need to accept different types of fields, you are generator for yourself and for each they require different kind of fields to contain your system. What kind of fields you need is what kind of color you have because you attract that kind of fields in it.

Great answer thank you.

Yah that is very interesting.

How come some people have slit from pupils instead of round ones and does that make a difference besides just the looks?

Oh the different shape of the eyes?

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

No the pupils.

Oh the different shape of the pupils, they make different straight of fields which they pass to the eye, they are more wide or they are more thin and they trigger different part of retina to control the shape of light that comes in which makes it so much more so that the retina itself is trigger the wide light trigger more cells and the thin trigger less cells, do you understand?

Ok ok.

Well I think the question is more about the shape of the iris vs the opening and closing.

Is it true that some pupils are actually slits rather than a circle like a cats eye?

Just because in the retina they have different kind of cells they are not round on the retina they are lines, you have the cells the red line the green line and so on so when you have different shape of window either more narrow or wider then you accept that much flow of the light inside the room. Same with pupil it sends a different shape of light based on the shape of the pupil to trigger different cells in your retina, and only part of the cells in the retina accept the light and others do not accept it.

Right.

Ok one more question.

If you focus on an infinite piece of the sky after a moment you can have a inner peace and see millions of sparkling lights...

Because you organize the light itself

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

Inside your eye through the fluid

Yah

Question, some people have a disease called photo sensibility so they have to live in a almost zero light environment, Is there a root cause of that disease?

Yah they don't want to see the reality that is the main cause.

Hehehehehehe

So it is a emotional disease.

It makes complete sense, if you don't want to do something and even if you can't think of it yourself or consciously say that to yourself the body will adjust to that emotional request

Everything is just fields for many of them are emotional fields, but everything is fields but some become photo sensitive, which means you don't want to see the reality solid or not solid.

It is so simple.

Yes I agree.

Can I give the microphone to Mr. Keshe?

Yep yep ok that was the last question thank you very much.

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

I give to Mr. Keshe

Thank you very much Dr. Eliya we start to understand that more and more Dr. Eliya will take over the teaching on the health side, and I will sit back and learn so more and learn to teach, the knowledge is vast, she carries much more than just knowledge, like a beautiful flower you have a rose and you trim it till it shows beauty. So it is coming up in time she will be the only teacher on this health section, she has on this to the concept and can explain it in a much easier way.

A couple of questions you raise were so facts about why people don't want to see, there was a case some time ago in Belgium where a girl became blind on a flight from South America and the people of the Keshe foundation in Belgium knew her and she attended one of the presentations, and I asked her to attend a 2nd meeting with us because I said to her I can give you your sight back. She was shocked she had been blind for about two years. I asked her to come into a dark room and sit and see if she can see and she said yes she can see and I said do you want your sight back?

She was shocked – she was in a graduate program at the university. She said no I don't want my sight back. To me and the people in the room this was a shock, that why someone given the gift of sight did not want to see? It was rather soul searching, then when you understand that the eye is a part of the emotional part of the brain and actually is created at the same time and is the only part of man that is created at the same time as the brain, the emotional part of the brain, it gave me a very clear indication she was looking for attention, in having sight she will not get that attention which was missing from her father and mother and by going blind she was getting the attention from the public and that was enough that was what she was reaching for.

So people think the eye is just a point where we receive information, but in fact through the eye we explain our emotions. We send more information out than we receive, very much the same process as the ears, the ears transfer the fields from the physical side of the brain and partially emotion, but the eye does the reverse, it transfer the fields of emotion, and not through the physical.

This is very important. Through eyes we love, we give love we care for love, we don't do that through our ears, when we love something, when we adore a person we look at them and enjoy seeing them, and by looking we send the information back about how we feel and for the

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

receiver to understand what has been sent so the eyes are the inner look inside the soul of the mind

That is a good look into the eye, now that Dr. Eliya has opened it up, is a copy of gas reactors. Now you understand that from the beginning we aimed for Cu₂ copper dioxide, the liquid inside is the same as CO₂ from the salts, in the eye there is light kind of sight which allows for the transfer of any kind of energy which is absorbed by the muscle tissue. Carbon dioxide, this is the limitation of the mind into the sight of the universe.

What does this mean? It means you have the copper as part of the nervous system of the body, then you have the water is exactly what we explain before even yesterday, is in a gaseous state connection like and now the tissues of the eye the copper oxides in the eye is in a gaseous state and then you have the co₂ in the back ground and the co₂ is white in color it is the same color as your eye and in your brain because it is emotionally connected.

True information is much faster than the information through physical part so it is so important that the information sent out is so rapid and instantaneous that the body itself has chosen as a part of itself structure the co₂, there are those who have only the white eye they don't have nothing else the eye is totally white the people can't see, about five years ago people who listen to this program carried it to the United Emirates and in week a girl who had not seen in thirteen years could see black, red and green but again she decided she does not want to see because the world was too horrible to see and again we see the same emotional part that if she could see she would not get attention.

We do not see the full structure and we do not handle our emotion and then that leads to a different kind of blindness, blindness is not by the sight but blindness is by the emotion the rejection of reality, so eyes are not physicality to see but in a channel for our emotions, and how we connect to our souls and how we connect to the other beings around us. If you go back to the origin of an eye when the first started eyes were a part of skin but it has adapted over millions of years so it has become transparent, it is not a separate organ but is literally a part of your outer skin but over millions of years billions of years the DNA and RNA have collaborated to allow RNA to change the DNA to allow the transparency which is through one single tissue it is very much one layer of single atom but is stuck so that all of the holes in the non layer are exactly in the same position, which is why you allow the light to cross through which is why it looks transparent this is if you don't have the nano- layers space gap there are positions that you can put space caps in a condition that by creating certain field internally that holes open up.

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

This is the future of nano technology then we put in patterns through holes but when you put the holes in the right position to allow the strength to cross through then you create the light and then vision the structure of the copper oxide inside is to do with its connection to humanity with its neuro system tissues because the reflection of the nerve is not by true neuro system but through plasmatic magnetic fields.

Why we have this copper is due to where the muscle tissue finish then operate only through copper in the muscle tissue when you have a neuro damage or a muscle damage where repair is not possible you use a copper woven tissue then the nerve repairs itself. The reason we have copper in the muscle tissues and in the eye is for example when we have a emotional stress when the stress sends to the emotional part and for the brain to give instruction to the physicality, there is a short communication with plasmatic tissues that allow instantaneous communication to the of the arm in trouble that doesn't not need to go through neuro system and because they are made of the same material the communication is instantaneously and you pull yourself physically back.

If that information arrives, because of neuro damage, too late, then that is the time you fall off the cliff. In so many ways people who jump across bridges, jump across rivers, and jump off high mountains and cliffs , they have trained their body to not have the information go to the legs so by the time it arrives it is to late the action has already taken place, and that is what I always say – only 20 % of the information goes through the neuro system, 80 percent is through plasmatic magnetic entities of our bodies, because many of the state of the cells of the body are made up of a gaseous state of matter.

If you understood the structure of the eye, the way it is set up is like telescopes that see into the deepest parts of the universe. You decide the gap in-between the nano layers this is how in the future we will judge the distance we travel even at thousands of time the speed of light. The realigning of nano layers in the structure of the copper oxide gives us that relative ability of knowing of advance electronic system technologies as we go into space.

We can't stop and open the door because we go too fast. Nano layers on the structure of the copper oxide is one of the easiest ways in the gaseous state to create non dimensional vision detection, it is one of the easiest ways. If you can create nano fabrics which are still in the nano

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

layers you have invisible vision where you detect with our being detected, because you're still in another wave.

These are part of the teaching of the future for body composition indications and if you understood this and what we have always said in the past. We give you by controlling the nano gates the parameters and the strength which allow you or you allow to look into the environment or the distance you are not use to and you see the future, or you see the entities you have never seen before, it is very much like a peeping hole you open it up and you see the whole and you open it more and you see more, and now the peeping hole opening we see the gap properties and often the material is dictated by the gap and as the gap is magnetic field controlled as a plasma now you decide what plasma you want it to go through.

Now for the first time those that were wondering about the telephone calls how you show the presence of the person or the entity that you have not seen before we create the plasmatic field condition that creates the magnetic field which allows you to see what you could not see.

Mr. Keshe?

Yes

Uhm... this came up a while ago in the plasma group meeting where we were talking about having glasses that had certain ganses and just by controlling the gap between the ganses lets us find the fields we are looking for as in sight.

MK: In a way yes but the opportunity you have now is by choosing the type of materials you dictate or choose the size of the gap and you dictate the strength of the gap and you dictate the strength of the rays you allow to go through it. When I said a few weeks ago we make presents to bless his name Christ, people thought it was a joke. Now you understand.

Do not forget thee is something very important those who have not understood the principle of Christianity never understood or denied the truth. Among the human race there is a daughter of Christ, who was in the south of France, and that blood is running in western Europe, and we

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

know how to access it, and through DNA and RNA, the confirmation will be there. If not Christ left nothing behind but he left a girl, 12 or 13 y o, that was brought to the south of France, and that brought high genetics

This is the same for the blessed Mohammed – his children and grand children live among Iranians as part of the blood of Iran, so it is not very hard to be able to achieve or reach the soul of these. This is the reality of the new knowledge, then no man needs to be killed just because he drew a picture of a prophet. It was his wish because he understood why his image was mis-used or shoddy image misused. He did not allow the misuse of a blessed way now you have the vision to see as how you carried the eye of your father or grandfather or color of skin.

Your RNA carries all the information the same, now we manage to open it to the length that it is using the same knowledge and technology now we have we should be able to see in the coming times the time of the past. If you remember I kept on telling you a long time ago that we play the action of the man to achieve what they have done, now as we truly understand more the way man has managed to open RNA though the same technology of gapping we open the magnetic field the strength of the RNA not DNA and that is a huge, huge information piece. We all see because our fore father have been present and because they have seen it with their own eyes what happened, who was just and who was unacceptable, this is what will shake or bring a lot of people to the end of their jobs.

Sorry I was just thinking about that and the patents well I know this is a huge subject and uhh... it is probably going to bring out a lot.

This is why we put these things out and start teaching this way. I said to you a few months ago we dismantle what is totally wrong brick by brick.

Let me explain. As you know on the 16th of June this year we went to the Vatican and handed over our demands and petitions for a World Peace Treaty. As you know we do not call him holiness, the pope yesterday has resigned claiming there is no God, he does not believe in God because for him believing in God he has to accept what was done wrong.

Mr. Keshe that article was from the Onion which is a satirical magazine.

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

No, no, there is a recording and the things will come up – It just has not started yet.

It could be based...

The process of this mentoring has not started because now we can show the truth through man's RNA recordings; don't forget where we are in Italy and here is a reason we are here. You have got to understand people were waiting for eight years to show movies, but in fact their RNA carries the whole information of the history of man. Now slowly, through the eyes, we allow it to open up. RNA research will become more important than DNA research, with better tools. You are part of that; you are building that tool.

I'm sorry about what you were talking about the alignment in the gaps, you were talking about aligning the different plasma fields to make a projection dream, that actually is a reality because that is the way our eyes work.

You see someone asked questions why the two halves of the brain are on one side and the two retinas on the other side you see and why they connect to one side of the brain and not straight and direct, you see this is in with what we perceive to be correct and what we want to be correct and react to. Most of you which has built reactors have will have two halves but the problem with your reactors is that the half to half sits right in the middle but if you have to half and the gap between the two nano flow creates different nano flow, and you will find out that one of the reasons you cannot get your reactor moving it is because of this reason. Where in the eye the crack goes from pole to pole but yours is at the equator.

This is the difference, you have loaded your reactor with CO₂ and copper oxide, and then and in the center while we were talking in the loading of the three layers we will see the first visible systems. The CH₃ will force the CH₂ in the middle and copper oxide will seep outside with the water we create a different dimension and the reasons will be different. This is why I kept on saying pray for your reactors, and we carry the key in our pocket.

You are connected to your skin tissue to your eyes to your skull, if we explain it they don't understand it. Maybe they understand why they carry it, and how they control it, and through their emotion they interact with the reactor which is millions of kilometers away. It is how we tell

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

other people we love them or other we don't want anything to do with them, this is how a father on the other side of the world needs his call because he is short on something and when people understand this then we understand how we answers back about how other people feel what we know.

The hardest thing is to communicate through voice; it is the slowest method. If you can communicate through eyes and emotions this is instantaneously received, then it is up to the receiver to understand what has been received and then has to be analyzed, and as we go into space we have to learn this technology and to understand it and read it.

The eye is the path to emotional part that connects, and through it we have connections with other entities in the universe. But we are too afraid to accept the truth because we cannot see what we cannot believe. In a way physicality or vision has become mans best source of man hiding from the truth. ...Any questions? ...We can go home now.

Wait a minute that last statement you have to explain a little more about that last statement you made. In many instance and on many levels those who are into spiritual teaching and so on the idea is the things we see are basically an illusion of one sort or another due to our interpretation and through the brain and our limited understanding.

You mentioned earlier that people not being able to open up to the full reality therefore we shut down in certain ways

Let me explain to you something, what the eyes see as green is not necessarily green to you or the same color green as I see, what s blue as sky to me is not the same color blue as you see , if we can make accurate thousands and thousands of different colors of blue, just using carbon, you say to someone so me on a chart the blue you see, then give it to your son and say show me the blue you see, no way he ever puts his finger on the same one you did. In so many ways color vision loss comes through the structure of the belief. Those people that become color blind then become visually impaired, is through what they don't want to see which allows the signal to the blood which then goes to the eye then becomes non-transferring, then you don't see it, you decide what you want to see and the color you want to see.

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

Ok and a lot of times that seems to depend on the intensity our intention or attention of our emotions.

There is a lot to do with our emotions. For example when one is really scared, like when you have a lion chasing you, your eyes will be wide open, taking in as much of the environment as possible. Would that be a correct analogy that way?

That has to do with the physicality of loss of life. It is the motion you don't have the chance to replicate and then it is very much like how the fear to sight can cause physicality to mis-function, but that is the reverse. A lot of times we don't want to see what is in front of us because it suits us that we can carry on to live not to terminate and it is the same with emotion.

So many people or most humans would tend to create internal pictures to substitute for what they are seeing in the environment directly and that can actually interfere with vision, for example if people are driving and they are day dreaming, they are not seeing what is in front of them, they are looking at their internal pictures... Can you talk about that a little bit perhaps?

It is just a physicality with the emotions, how we see, we look at the eye as a window into the world but to me it doesn't work that way and this is one of things that causes a lot of problems between me and a lot of people. They think you don't see through their behavior, but you see! What can you do? You see everyone with how old they are and you get to see them through the soul of the eye, ignoring it does not mean you don't see it. It is just the way it has to be otherwise it is just too much.

A lot of people who are very close to a lot of people see their problem, see their fault. But if you try to change every fault, then you won't have any time to do anything else. But when you see people, when you see the soul, you don't hardly see their physicality, because to me it is the essence of the way they look. The way they look at you they give their sincerity to you if they are who they are and what they are in the way the soul behaves, and how you look and the way you put in the line of the sight in respect to the soul it shows your position in your life in the realm of existence.

Look at the way Japanese bend, then they look up at the eye. They don't bend all the way and put their eyes down, they are still looking up, because when you bend your line of sight and the soul becomes the same, one line is like the base reactor, and the one who stays higher dictates

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

the habit of the weak, and this is what we do and now you understand. Look at one of the pictures that Dr. Eliya put on with two eyes and the thalamus they stay on one platform, when you bend when you bow the one who stands higher in front of you which like the thalamus which is higher, it becomes the head reactor, so he dictates. You are submissive by your own order, you find successful people always stand up and they don't bend because the thalamus dictates the position, because the eye sight keeps the setting.

Behavior of a man is psychological to what he sees through his eyes, but he hides in the back of his thalamus in his soul, the behavior's the same. You don't need to say words to someone to say you love them, you look at them and through your eyes you transfer the information and the feeling, it is for them to receive it and understand what is being read. They do by habit, they receive but they do not take it back, but they do not know that in receiving it they have already lost more than receive because they have to do something with it.

Sight has nothing to do with physicality but the man is again physical, you receive information on the matter on the heavy side because you go to the copper and then you go lower. You send information through the light because it is easy to transfer through the CO₂ layer of your eye, so in fact when you look at someone, what you receive very little of is one tenth of the area of the whole eye nine tenths of your eye is actually sending information out. It is like a radar dish; it sends out and sees what it gets back, but man has become so physical that he only looks at the pupil.

You want to understand the character of the man, how generous he is and how he thinks, or a women, what are you going to expect in a relationship with the white of the eye because that is what comes to you, this is what you're going to receive. The eye pupil, the little hole, shows how much she is prepared to accept and receive from you. That is why when you get surprised that the hole opens up because it wants to see more, it cannot believe there is so much.

That is why when we see children and we cuddle them our eyes open up, because they give freely, so we want to take as much as possible. The eye is the source of the richest energy we receive, yes and direct energy, and as much as you eat food as energy, energy comes to you in **your eye changes gives it to the muscles** that engross your brain and is the feeding line to your body, to your soul.

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

If you want to know if someone loves you look at the white of their eye when they tell you they love you, you will know if it is true or not. I have done that all the time, it is very easy to give love with your eyes and see how the eye closes and opens up. It shows a lack of trust in them in regards to what they receive because they know they don't deserve it or they don't understand it.

It is like when we went to Belgium, they said why Belgium? And why did you bring this technology to Belgium? Because they knew the nature of the country. It is the same with us, with human beings, if you do want to know the truth about a man look him into the eye. If he shivers it means he is a thief, if he stands and holds his ground and looks back it means you have met your match, you can trust one hundred percent.

I do this all the time, I meet people and in an instant I know what I have in my hand, and I have done that for years and years. You see through the soul of the man you don't need to look any other way, you tell a woman you love her in the eye and she if she is true to it in responding back and you say the same thing to somebody you love you call it whatever and you find out how they respond back to you and put the sun in your marriage, it is for them to understand you're not a fool you accept the condition cause what you do you transfer the energy somewhere else.

If you cut the head off a man, man on its own can live from a soul through his eyes. This is why originally we had the eyes connected to our emotional side of our brain for feed, that is the side of the brain we opened up to the water of the eye to hold it back to be able to feed the energy the eye needed and if you look at the structure of the eye, there is no difference between the eye, the water in your lungs, and the juice in your stomach, it is a compilation system, and why do you need to comply because you need the energy.

The lung is the energy for the physical part, the stance is the energy absorber for the physical part of the body, the lung is the physical energy absorber for the physical part of the brain and the eye is the energy absorber for the soul of the man, that is why, that is how the minute the body has created the eyes from the retinas, it looks for energy to accomplish this. This is exactly what he has not understood and if you can support the soul through the eye then you find a behavior that is correct and the life last for a long time so perhaps it puts a lot of fear into people who understand it and to come.

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

But at the same time the body, the emotional part likes to give and get emotion back for what it receives and what is my answer. So it uses the white, then you understand what you got on your hands, you employ a person look them in the eye and look at the white and tell them you want to employ them and then you see their reaction in the white of their eyes, then you know you have got a honest worker or not.

When you love a woman you tell her in her face, you tell her you love her and adore her see how she responds back to you. If you have a cheater on your hands or you got someone who can be a part of your life this will not change, the heart is between physicality and emotionality and after three years in fails out, but the eye never tells a lie because it is a part of our emotional side that is always constant that has no physicality change. The water in there stays constant, the coating of the copper oxide stays constant and the CO₂ stays constant there is not a factor of change as such. ...Any other question?

We have a question from last week from Eric about a when a person swims under water in a heavily chlorinated pool for a long time.

I said that is a physicality that is exactly what happens to Eric with metal in his eye but this time it happens to you through liquid.

Hello, are we still there?

Yep, yep,

I thought you were going to elaborate on that a little bit.

It is just an irritation is what you said basically or nothing spiritual.

You see if you ask that question you should have heard a noise in the background... we have our American guy here, he is a transfer of technology to American military, you all know him. We will let him speak so that you know who he is and he is one of the fore frontiers for the

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

peace for the American military and government in so many ways as they say, I give the headphones to him.

Hello, hello,

Can you speak up there Brett?

Can you hear me Vince?

Not too well we need a little more volume perhaps a little closer to the microphone, perhaps we need to reset that mike.

First I want to thank Keshe and the Knowledge Seekers for being so hospitable and really welcoming me and inviting me in, and I am here to meet up with some people who are supposed to be coming very soon to help transfer some of this technology to how it can be used in a peaceful way for the benefit of this planet and of humanity, and a it is really a joy to be here and to be around with him. We went out last night and had some food and walked around town and just talked for a long time, and I caught a sense of the people, and it was kind of enjoyable and I love it, it is nice to be here and I have a question for Mr. Keshe about the eyes though. What if someone loses their eyes what happens with the connection to the soul then?

MK: When you lose your eyes or you are born without the eye, part of the inner circle of the thalamus takes that position. Blindness is not the physicality of the eye, and in so many ways the information reaches the thalamus and is much stronger in the transfer of the information. You find people who lose an eye they become much more emotionally stable because now they have one eye to see with and cannot be lied to, is what they say. But when you're born without the eyes the thalamus must directly receive the information. ...Any other question?

I am still intrigued by this idea that the eyes basically interfere with this sensitivity with this thalamus and so on, so how could this be?

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

They are made of it, they are made of the same, like the pictures Dr. Eliya showed you, they are needed to cut the tail of it which is the eye, the body then receives the information.

But it seems like the body receives the information better without the eyes, like you were just mentioning, many blind people are more sensitive emotionally to ahhh...

Yah because, because what you do, you bring other senses to carry the information. The ears are our or less, you have got to realize, let me explain in a very simple way the shape of the core of the eye. The socket is placed and positioned in a way that to receive information you don't just have a bone. When the skin takes the place of receiving the information you just change the nano layer. If we scrape the whole eye out leaving not tissue on the bone then there is no way to transfer energy so easy, and then you go using the skin.

The skin of the ears can also send information to others, because still the information will not be the same, just what I explained a few minutes ago. Man did not need, and I have said this before, did not need the physicality. The physicality will leach on top of an entity which we call the emotional part, and that emotional part already has its own emotional source which is the eye. Just because it is not there and we never thought of it or never had the knowledge of the inside job to do, it is very easy and I say it again the structure of the lung or of the stomach and the structure of the eye all carry three liquids, those liquids are doing the transfer for information and to get information.

We do not need the space to create the body of the man, if you can take the eye of a man and his physicality away from the embryo, you have the man just the way you want him to grow, and then the physicality will adapt to the nature of every **line us** we use the eyes to knowledge sure to resend the information of energy to the emotional part. There are many creatures in the universe that use exactly the same system, not of the same process, but in different ways

Mr. Keshe do you think one day the technology you speak of will be able to re grow a new eye or substitute in some other way perhaps that will still connect with the soul.

MK: Why not? We have evolved a more complicated piece say five years ago the right system sits in your RNA, it builds itself into, you can re-grow any part of the body, and that just goes

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

further and further as I have explained to you yesterday, or as I have just now, that the Keshe foundation went into full operation in bring its health and technical know how, and have brought what I call the systems into worldwide usage, and about 2:00 this morning they start doing the first thing to do, or to be manufactured in the next two to four weeks.

We have just opened the CO2 section, the health section, very soon in January the very first biology can be put on the shelf. Everything is on the move, the Keshe foundation has gone into full production with the success of the Chinese. We are trying to reach at least one million a month in the beginning, and in about a month worldwide with collaborations with Keshe foundations around the world. You will see the changes that are coming now. We don't talk we have opened the doors to go full way. So building a machine so that when you are blind to see is becoming a reality in the coming months.

Would you want to show a little part of that video I made yesterday Rick? I did a short video yesterday, which I reloaded; these little reactors were flying around. As you know we have gone to closer landing positions by 2 centimeter

What is this we are looking at?

Are you talking about my reactor rotating at 2500 RPM?

This is on the live stream now it shows the field with the aluminum ganses

You want to talk about it there Vince?

Yeah for sure, I made a total of six reactors, and I emptied that yellow one I had before and added some more.

What was that Mr. Keshe?

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

No Marko was worried about his new reactor being a little wobbly and when I look at yours on the top I say congratulations.

So I emptied the yellow one so I added some more Aluminium ganses I also added some CH₃. I mixed it all together and I put it in to the bottom the bottom 5 reactors in kind of a star formation , so I just started rotating the other with the aluminium ganses on top and you can see it does create that band but there is some interesting effects that happened in the camera due to the rotation.

I just thought it was really interesting and that I should just get it out but the other part is that the tube in the center of the reactor, there is no tube there, there is no air in this reactor, and yet this tube is still there I am trying to show again it is not just a mix of ganses that does it, there is only 3 milliliters of known ganses in there and still it creates the tube, so you can see there is a definite different type of formations on the bulb area

Well first you can see the distortion due to the camera of how the timing on the camera and how the frames are shown, it gives it this strange distorted view of the reactor as it is going around with a spiraling kind of effect.

Exactly because it is not visible it is ah only in the camera.

But it does not answer it has it flown yet?

No it has not flown yet

Is it moving?

Not yet

Is it vibrating? Do you know why?

Yes it is vibrating.

There is more to the system

There is more below this reactor and it does vibrate quite badly.

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

It perhaps has to do with the drill press vibrating or what ever.

Yes but why your ganses are settled to the bottom, well you said the reactor might fall off

Yes exactly I took it out to shake it up to get the ganses to come start reacting, exactly. So I did put it back there and you can see they are all just one glued together but is real easy to take a part, this is more for testing to see if it will make the bands for when I do the other prototype and just the reaction of the balls at speed, so it was more of a test. I seen some interesting things and I wanted to show it

You can see how the ganses settle out between this shot and if I go back a few minutes it is shaken up then it settles down.

When do we expect to see you flying, Vince?

My plan is still for launch at Christmas

The moon or Jupiter

Ahh, you pick Mars is very popular this month

They just sent a rocket off, Vince was tuning into the launch just before the show today.

It actually got off the launch pad without blowing up too this time.

That is good news

This is actually if someone can go through the live stream for the past 72 hours and take picture shoots

I already started doing that

So you can see the movement of the system coming down, we are hoping we land by Tuesday maybe

Laughing

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

We are ready to go to the moon but it is taking us 5 days to land on earth from 30 centimeters while, but at least we landed without any fuel.

You got two hours of explaining this about our system, which is the medical part. But if you look our system is using a lot of energy and a lot of plasmatic magnetic fields to pull itself down to the ground, but it has a lot that is pulling it up so it is using more and more energy as it gets closer to the ground because these are elastic pulls and as you pull them further then you need more energy to pull so the first 5 centimeter if they use 100 joules they last centimeter it uses 20, 30 perhaps 40 thousand joules, to make that one centimeter is an exponential increase needed to use the energy the last centimeter. So we wait very anxiously to see if you're going to land.

But is it really an exponential increase in energy? Or is it just about the position and it does not matter what the energy is?

It is exponential energy but it is locked into the earth's gravitation field.

Amy was in the lab the other day and she said why you don't put a titanium core underneath to bring it down to balance it. It has not made much difference but in a way because of it we don't see the lift shake, maybe we don't see because it is there but everything is under consideration but the why has changed for the first time after nearly a week.

It is now 20,000.

Yes it now shows the system has started contracting in the right direction in the fields because of the odd one coming in.

No none, it is just here, what I am going to do it I am going to put the American Military advisor in front of our truth box and see how truthful they are in wanting technology for peace and then we will tell you the outcome. My system does not lie and an American cannot be off,

Laughing

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

No, no we have our American military guys here and the highest rank they could bring, so we put him in front of the machine and we ask him, how truthful they are about that they want to use our technology for peace, and if it is correct and what I see is correct then we can reign in the Iranian official, because it has to be clean cut, but we will see. So what is the next question, maybe we have to eye of the cone and see what is in it so we can get information back?

It is a very auspicious health workshop at this point it seems

It is but the thing is, the things are coming together; there are people in the background, who are doing a lot of work to bring the technology in the right way out, and we explain more and more in the coming weeks and months, how the Keshe foundation in 2015 will not be what we see now, or even in the next weeks or four weeks. Changes are coming so rapidly, if you can move 11 kilograms by pulling it down in a constant position of descent for four days without building a single atom, this is a miracle now for more.

His name is Lucien

Lucien

Yes Lucien ok I will get his name right, there was back biting behind me yesterday (laughing) so if you can tell him he can go to CNN, tell him we are descending and they can watch it. We have a little mouse in the back ground what does it want to say (voices undistinguishable)

Oh these are retina cells which you see on the screen.

I just see.

Wait why don't you explain – here is the microphone. Uhm... an extremely tough cookie, you laugh but we have to live with her every day.

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

There is a saying; an old saying that it takes a diamond to cut a diamond and so I think that is why you delivered Eliya.

Laughing actually that one does not cut diamond, copper cuts a diamond.

That is true you mentioned that in a previous workshop.

I thought that was amazing, I wanted to look that up.

In one of my old suits I used to be a diamond cutter, you don't cut a diamond with a diamond, to bring the beauty of a diamond out you polish it with the diamond dust, and she already has a diamond, she just needs a bit of dust to polish it up shiny. I know Eliya does not like it but that's what it is.

There is always a bit of heat and friction done by the grinding process, wow I bet there is no heat there.

If you work with diamonds there is no heat, if you push a diamond through a current barrier it becomes a conductor for, I think six micro seconds, this is one of the properties that when you put a current through a diamond, the energy in the lighter structure goes to a point to flip over to graphite, but then it goes back again in about six micro seconds. We don't really understand it.

A doctor from the board of the diamond people in South Africa was in Belgium four or five years ago, and at that time, just as the coating of the nano structure, the diamond structure and they have a very, very thin flawless, and then we put it under pressure and it actually conducts and they want to use it for switching in the high speed trains the levitation trains.

Does it become a super conductor during that instant?

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

Yes just for that instant, very, very short instant.

The guy has made a patent of it so...

Well there is an interesting physics article that just came out a couple of days ago about copper oxide being a room temperature super conductor, when a laser light is played on it in a certain way. This is the first time apparently that they have been able to make a room temperature super conductor, and it uses copper oxide layers with some barium, as one of the doping factors.

Well the problem is it goes from super conductor to super resistor, but here is the catch it is only for a picosecond, whatever a billionth of a second is...

This is exactly how your eyes work because you saturate the tissue magnetic field in the gap between copper and oxygen and the next cell and the gap fills up very quickly because the layers are not that thick. We have looked at this five years ago if you wanted to understand how it is, if you made one of those copper coated wires not the thin wires, just rub your hand on it, see how it changes and becomes shiny like a diamond then if you work it and rub it a few times it becomes literally see-through diamonds it goes from a matter structure to a very shiny structure and at that point at a certain point the energy between the layers is realized and that super conductor puts pressure on the layers to come together, when you are pushing the nano layers together is how your eyes work, you receive a impulse of light and then transacts immediately depending on the strength of the copper oxide layer it decides what color and what shape depending on the intensity received that is how we recognize colors and the shapes. Are there any other questions?

Just a quick question you said you would bring the cups of light to show ...so have you?

No I forgot, you see we have been very busy just before we came on the air, we have a birthday party lunch, so that was a technical problem.

No the thing is we have a lady who looks after us here and in the park, in the house, it was her birthday so she made some things for us to celebrate her birthday with her, she is an asset to

Transcript from 13th Health Teaching Workshop held December 5, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

us, she looks after everything for the foundation even the back ground, strange enough she is from Ukraine, a very beautiful lady she is there for all of us.

Yes, are there any other announcements or things we should discuss?

No I don't think so, but you know how we do what we do, Monday is a holiday in Italy but we shall carry on with the Chinese program and then after next week we all break up. I guess the American is flying back to America, and he has to go see to his wife, but he is sick and Brad is sick too. We all got it and we gave it back to the American, it is a chain reaction – by the time he goes back to America he will take it back to the rest of the military.

The secret weapon (laughing)

I have never seen Armen so innocent he is so sick.

Well that is another factor we can talk about it another time it is similar to when you lose your eyes you become more sensitive to certain things. When you become sick you actually become more aware and awake in certain ways.

I think he has a comment to make.

No don't give him the microphone we will all catch cold.

That is why it is happening the microphone is the culprit among all of this.

We have a quick question Mr. Keshe on the delivery of the CO2 kits, have they all gone out?

Transcript from 13th Health Teaching Workshop held December 5, 2014

We had a problem a large number were given to UPS, they came back, and they were resent out again. There is still about 16 or 17 left to go out next week and then we complete our order from here and after that , the second week of December or third week of December the delivery of the Keshe foundation will start from china.

So from the Keshe foundation from Italy the initially delivery is nearly complete, whether an order comes through in that time we should be able to meet. In China this morning there is a totally new kit and ration and we are waiting for the Italians to catch up, so by next Friday we should be able to close our delivery from Italy altogether.

There were about 20 that went yesterday but came back for a stupid reason, but then Monday is a bank holiday but we should be completely done by next Friday. The orders that come in next week will get transferred to the people in China.

So now we will just tell people right now to hang in there for a few weeks, and if they still don't receive it...

No, no, no, we have to change the delivery company and the whole thing has to be redone, the boxes came back they have to be readdressed and reposted if you have received a UPS number for delivery and you have not received it send an email back to us it means you have not got the goods from UPS. If you have not received a UPS number and your order was before the 22nd 23rd of November, the goods are all out by now so whether you got it or not it should be completed by next Friday, then after that all operations goes down to China.

There is no break right?

Yes we don't stop we just don't announce anything until next week, I was speaking to the guys in China today this morning, they are doing a new video to explain the process they are doing their own promotion and everything else is done. It is a totally different structure and we have to wait they will do that in the next few days then we, there are huge changes in the design so we can deliver the system and show what the system can do. The new ones are very much ready for the CO2 to be used for different applications, most of you have already talked to the guys in

manufacturing in China right so you know who you were talking about and they were here last week.

The batch next week will be two hundred thousand, and then it will go to 2 million after that. Our promotion and advertising has already been set up so we will give the name of the company when it is done. But Keshe foundation has become part of, what do you call it in production and marketing, and how we do or after that you will have the portable energy units after next week.

This is something we have been using for 10 to 15 years and is becoming a part of the production line up of the Keshe foundation, for pains of all sorts. I did not want to market it but Dr. Eliya said we should, so everything should be tied up. We have a special mat with a silicon cover with a cross cup you can put on you for a few hours and then it will usually release the pain. The price for this is about 140 Euro's for this body pack they call it and we hope to market them for 20 to 25 Euros with the new technology, which is very reachable.

Which anybody could then buy and keep?

Maybe we can get more information about that in the next workshop.

They are the people you have met from China.

They are definitely an active bunch.

They are ready for the star formation apparatus as well and we add the knowledge all around together with it but we got to get through the first batch, which they say is one hundred thousand so let's see. So that is the end of this workshop.

Yes we will be speaking Chinese on Monday we will report what is our position with everything with our new colleagues.
