Topic: The Mouth and the Anus: Two Conversion Points of Matter

00:00:00

Ok we are ready to go this is the 15<sup>th</sup> Keshe foundation Health workshop thank you for attending I am Rick Craman the host and we will be talking with Dr. Elliot Costova of the spaceship institute and Mr. Keshe from the Keshe foundation and today topic that we will bring up on the live stream here is MOS and the eNOS two conversion point of matter sounds like a controversial kind of title, I am sure Dr. Elliot will clarify every thing for us, Mr. Keshe will in the way of science and health give us knowledge and also the teaching with the Keshe teachings as well, ok Elliot are you ready to go there

It is nice to be with you again after the holidays of the spaceship institute today we talk about the mouth and the two point of conversion of the matter, this is an interesting subject because actually during the holiday it no one of us and actually all the followers of the foundation actually helped the holiday and every one of us just discovered different kinds of things regarding the case of technology and already in the institute we have the new set up and the other guys around the foundation, not belonging to the spaceship institute have a different kind of development so I just decide to combine all of them and to put inside of the human body because finally we reach the point we are able to explain most of the things of the magma way of working of our anatomy, so we start with the first slide their I want to show you the lovely set up of a co2 kit that Mr. Sahel from China produces and all of you know how the co2 kit works and what is the purpose of co2 kit it is to collect from a place the co2 from the environment, and actually how Mr. Keshe explained this is the working way of each leaf in our planet on the left side you see the anatomy of the leaf and you see how all the structure of the leaf is contained between the skin of the leaf and you see in the middle you have some kind of channels were it starts the exchange between the carbon dioxide and oxygen which is actually the place inside the box of the co2 kit, so the two skin of the leaf this is your two plates of the co2 box and between the two plates which are nano coated you produce the co2 which is the carbon based and actually live on the planet earth is base of the carbon and our body has a carbon structure so keep this in mind as we go to the next slide, the next slide I want to represent you how the life in our planet start it starts form the two seeds that come from mother and father and this cell starts to separate in a specific way which we call mitosis and finally starts to reproduce like an amount of cells from the shape, no need for our terminology , I want to show you

## Transcript from 15<sup>th</sup> Health Teaching Workshop held January 23, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

the shape how from two cells become one and that one cell starts to separate with different kind of cells per day, situated in a specific manner in space, they organize themselves in specific shape this is actually regarding the golden ruhe, finally they organize some kind of ball, what in Latin language we call gastrula and how you see it is the same shape like a reactor and that shape start to organize when the embryo starts to organize itself with different cavities inside of that shape so from the beginning we build the core of the reactor and then inside the core of the reactor gastrula starts to starts organization of inner part of that reactor so it means is that from the beginning our bodies our sustainable, we start our life from one small reactor because each cell is a reactor itself that reactor starts to multiplicative because the energy we need to grow and to build our bodies is huge so reactor starts to multiply itself to organize in the same shape like an reactor so all the time we exist on that shape and organize ourselves inside of that shell on the left hand of the slid you see different stages of gastrula-ization and you see from the beginning what is the skin or core of the reactor and even from the beginning that small shape have a pole have a north pole and a south pole and every thing comes in the south pole all the changes then they go up to the north pole on the last picture which is written gastrula finally we have nano layering inside the reactor so we start to have the ectoderm what is the skin core of the reactor and the mesoderm which is the transitional matter in layering and inner layering what is the endoderm is site of that core and all the layering which have a principle mater out base from where we start to grow like a structure, then we go to the next slide, ready, so on that slide you are able to see when we became like a shape of a core inside and the inside of the core starts to produce layering, each layer give birth to different kind of organs also each layer if we speak about the gans has different kinds of strengths of gans that and regarding that the birth of its original place is for different systems and organs and because of that embryo layering and because of that there are specific gans which structure, all the systems all of the organs the originate from that layer contain the same strength and characteristics of gans, actually in each layer which have the gans composition mixture of gans and one or two simple gans of their amount are more in that layer, actually we have composition of ganes in each layer and because of that composition of ganes is regarding there strength there they start to mix with each other and make a new mixture and because of that during the embryology we get different kinds of organs finally because of that composition on the left side you see again the layering starts to organize themselves inside and all of the time during the embryology state we keep that shape of the reactor , ok we go to the next slide , the left side of the slide this is the picture of the embryo you see outer core is shell of the embryo then you have the hereon this is the place where all of the vessels inside your body this is transitional matter it is like ch3 what you use in your reactors then we have atlantes this is the inner part of layering from where your nervous system comes from and inside we have a principle matter this is the shape of the beginning of the shape of our body so, we have reactor, shielding layers, and principle matter so you see how we became like a being from principle matter we became like a bank from seed, we are principle matter which all the time transform and evolve ourselves in different shapes and all of the time around us we have all of the layering which is represented before and how Mr. Keshe explained in all the books and in all the papers that represent the state of matter in our state of development of our structure our body, on the right side it is visible for you in a more easy way how it start layering of ectoderm endoderm and mesoderm and on the back

## Transcript from 15<sup>th</sup> Health Teaching Workshop held January 23, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

side you have some kind of sacks, wall sacks this is the feeding place for the embryo, then the embryonic sacks is the place where the embryo starts to grow and all of the layering as I told you before are based where starts to all the systems and organs in our body so our origin starts from three layers, ectoderm endoderm and in-between mesoderm from ectoderm which starts to prepare parts of nervous system and epidermis, which is your skin and as Mr. Keshe always explain to you our skin is our outer brain it is our outer emotions, mesoderm is the place from which starts to develop the connective tissues and muscles this is the middle part of transitional matter and the endoderm is the place where we begin the mucus membranes and glands ok go to the next slide so on the left side you see this is the beginning how the sacks start to organize to have a hose and after he gastrula part is shooting all over the sphere of the embryo we start to have two poles south and north and our north pole from the beginning is our mouth and our annals, the digestive system starts to represent in the middle this is the first representation of the digestive system like a mess or side of the gastrula with two poles south and north, north is our mouth and south is our anus on the right side you see this is the explanation of how the layering begins, first we have two layers in our sack reactor and then we add the mesoderm the 3<sup>rd</sup> layer and we finally reach the level of three layering in our reactor in our embryo sack so even from the beginning we are sustainable beings we are able to produce our energy from the beginning then the next slide, ok on the left side you see all of the development of the embryo so we start from a sphere then from the middle of the sphere the embryo starts to grow and take different shapes, imagine the embryo is like a leaf, if you bend the leaf in two sides the embryo will be in-between the two sides of the leaf, what does this mean, all the time in our embryology our shielding or outer pat becomes our spin so all of the time we have protection from outside and with a carbon structure which for us is the calcium or co2 which you use in the co2 box, inside when you saw the appearance of shielding and after shielding appears the transitional matter in the embryo after that part of the spine appears all the organs and circulatory and nervous system, and then we have a principle matter that stays always in the deep inner part of our body, with the form of the embryo we have unfolding of the structure so from the beginning we have sphere and that sphere starts to unfold , all the inner part from inside starts to be visible in front, but from the beginning what you see in front like a face and then all your body is the sight of the embryo and what is so important is to keep in mind your shielding actually is on your back and that shielding is like you open the egg when it opens every thing that is inside of that egg goes out which is the traditional Chinese medicine they call yen and yang, every thing that is hidden is yen and every thing that is visible is yang and the right side of the picture you see when, we have already structure out system is like a carbon system we start to have layering we produce our bones, muscles, circulatory system, nervous system, lymph system, finally we get the shielding from skin for all of our development for one cells to gastrula, to embryo, to development and in each process we have a layering our body like all star formations like you have in laboratory have directions and have plates on how the body represents in space and regarding this plate, different kind of organs have symmetry on one side of the body and because of that orientation we have organization and separation in cavity on one side of the body what this means is the bigger structure of our bodies we organize the places the core where different kind of organs are suppose to be has specific proportion and position to each other and al of the proportions inside the cavity they are very specific from each cavity, ok and on the

## Transcript from 15<sup>th</sup> Health Teaching Workshop held January 23, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

right side you see how we separate the body from upper lower and left and right all that kind of measurement is so important to orientate where the organ is suppose to be and when we go further in our representation you will get a idea why , next slide, it is regarding all that measurements in our body with a cavity inside and holes where different kinds of organs take place and shape, if you remember when we spoke about the chest area this is the place for 2 lungs and heart and regarding the star formation this is the base of star formation and the top is the cranial cavity where the top reactor where during the workshop we explained that is the thalamus and the middle point between the base reactors is what is the left and right lung and heart this is the thymus in the point is the conversion point of packages, what this means is the thymus receive different gans and says where that different gans go and what they do if you keep in mind that structure and remember the structure of lung and the structure of heart like the previous workshop with the structure of thymus and how then are connected with the cranial cavity and how the thalamus is the place of the middle of the brain and what is it structure, let me explain the next step , the next slide this is your cranial cavity the main brain which is the two hemispheres left and right and they have a mapping, each part of the brain is connected to a specific function of your body and contains the specific nucleus of that part of the bodies function or of the specific system, they have specific gans inside which correlates to specific part of the body because they attract a certain symmetry, this is the same way how Mr. Keshe explained to you for cup of life your suppose to have the mapping with different kinds of ganses and you attract inside different kinds of fields regarding the type of nano coating, the same is the brain it has a mapping that contain different kinds of ganes in each place so in the middle of the brain we have our emotional part of the brain and this is the thalamus which is the emotional part and the hemispheres are the physical part they regulate the physical part of our body and if you remember the shape of the star formation the star formation inside the cranial cavity will be lungs they have two hemispheres they have the same shape and function and the heart is the physical part of our thalamus so the thalamus will be on the shape of heart and the two hemispheres will be your lungs so you have the fitting systems lungs to the heart and two hemispheres to the thalamus , the two hemispheres accept different kinds of fuets that feed you emotional part thalamus and if you connect these three base reactors and you want to find out where they are busy and the place of the cranial cavity will be on the place of epiphyst and hipiphyst and so this is your full star formation and you have a shielding from you skull and skull also have a layering not only bones you have a transitional part with the middle matter and vessels and other layers under the skull this is your nano shielding of you top reactor then you top reactor connected to the next one which is already in your chest you have two lungs a heart like a base reactor and your top reactor your cranial cavity, how there two parts separate to each other, the first one the defrag of you mouth and the defrag which is the muscle and the next is I you thoracic area and again on the bottom you have the defrag of the shielding, and why you need these things because the diaphragms give you different positioning inside the reactors inside the star formation so if you follow the logic of the previous workshop and how you find the busy is the place where the heart face the thymus the s in cranial cavity our heart will be thalamus and what will be the thalamus the hypophist and eypophist, so what will be the direction will be from top to down, now from your face with the next star formation which is your thoracic area and the busy of the thoracic reactor is will be from heart to thymus and the point up to the cranial cavity so

## Transcript from 15<sup>th</sup> Health Teaching Workshop held January 23, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

you already have two star formation your cranial cavity star formation, and the thoracic star formations, they are able to sustain them selves without other which there place is after the diaphragm, then the next slide so next formation start after the diaphragm after the diaphragm you have a lot of organs inside you abdominal cavity, how to understand which one to connect and how to organize them, in front of you this is the digestive system starts fro mouth and finish to anus and most of the time is represented of the tubes you have the esophagus which is like a tube this is larger tube , then all the intestines and finish with anus the thing is that it more solid here and belong to the digestive system is the liver , and also liver is so similar to the heart in color and shape, it separate to four parts each of these four parts is fed by specific artery and vein and all the circulation inside the abdominal so before it go through the thoracic area it pass through liver, so the liver one of it's functions is, this circulation inside of the heart also is correlated to circulation of the digestive system the organ which is more similar to the heart is liver, two lungs they feed the heart which two parts are able to feed the liver, this is the stomach we take in the matter and reorganize the matter and from the stomach we receive all the nutrients and we feed the system through that area of the stomach, so one lung will be stomach even though separate, the other lung will be the end of the large intestines because in the end we collect all of the water and has a liquid state inside and circulation to takeout that water, lung if you remember we have a lot of internal water and also the circulation system to exchange the matter what we take in and give out, that is the same function of the stomach and all the intestines they convert here from matter state to gans state, this is the conversion system that feeds other parts and what will be our thymus the organ with the immune system so we have our two lungs, our stomach, the beginning or end part of the large intestines, heart , liver, thymus, spleen, this is the star formation of your digestive system and if you remember the plan of the body all of the organs of the digestive system they stay in the first part of the vertical plan of the body, the next system after the vertical is where the place of you kidney there part of another formation the important part is to organize decide shape, function, place and to be in one plane, vertical , horizontal or soggiestol , how to organize the other organs in the abdominal area so we left to kidney and gallbladder and we have tow more glands the renal glands, kidney have a shape like a lung , like a brain and regarding the shape and function they are a feeding system in one end and cleaning system and buffering system in the other end, we put them like a lungs, bladder will be your heart even have the shape of your heart and contain a huge amount of water and that water is in the gans state and this is the organ that has a lot of circulatory system, and this is the organ that take out the liquid from the body it have pumping function and heart so they have similarities is function and in shapes that why we put two kidneys to be your lungs our heart will be the bladder and the thymus will be the two renal glands right now they have a similar shape like two parts of the thymus, but that star formation stands behind the first one is like a triangle and the base of the triangle is the kidney and then the arch is the bladder and the base is beside the digestive system formation but the arch is on place of digestive formation so why do we have two formations inside our abdominal cavity, because this is the area we transform the solid matter to gans this is a long lasting process and takes a lot of energy to support I the digestive system if you orient it the busy from heart to thymus from liver to spleen it faces right to left which is not a surprise because our DNA from our planet and its vortex is spinning from right to left to initiate the spinning of the matter state and the formation from kidney and bladder with the

## Transcript from 15<sup>th</sup> Health Teaching Workshop held January 23, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

bladder facing the renal glands means the business will be from bottom to top and facing the previous formation in the thoracic area so this means we have a matter state organized in the formation that is going up and also that place starts to spin because of the digestive system because we have to have a vortex and two buses of that formation and the digestive system to information to the kidney the cross each other in the naval area in the middle of the abdominals and actually in atomic energy is your 3<sup>rd</sup> chakra and next is the pelvic cavity next slide please the fifth formation is from male prostate gland two testicles, and the skin gland in traditional Chinese medicine they call it the point of 1000 treasures this is a specific gland with a lot of innovations inside ok how to organize them, the shape of testicles are similar to shape of lungs and to shape of brain the prostate gland is the similar shape of your heart and thalamus and also on a line the heart liver and every thing which have are on the line in the middle, the prostate gland will be your heart the testicles will be your lungs, and the behavior of thymus we have the g spot and the busy will be face down because comes from the prostate gland to g spot then testicles and is facing down, this means every thing goes out from your south pole and if you remember the vies faces down which is coming out from your south pole and is going in your north pole, the next picture is the system from the women, this is the formation from your womb to your ovaries and the skin gland or g spot, this is like that because of the 5 star formation our body like a whole is sustainable tool, it is feeding itself and also finish the star formation on the bottom we have the pelvic diaphragm so with all this 5 star formation we start with skull nano layering then we our denomic shielding with full diaphragm of mouth, and shielding of thoracic area, and last one the pelvic diaphragm next slide, so when start our development inside of the womb, we don't have a digestive system to convert the matter we live in a liquid environment we are not able to see and not able to hear everything so first we start to feel and touch through our skin which is our shielding that we have from the beginning but when we sense everything that we sense with our head this is actually acceptors of fuels so we accept the fuels from our eyes smell sound and this is feeding system also the next system will be here what we accept with our thoracic reactor converts the information from air to gas state of our body, and we accept that kind of gas that we need to sustain our body, we have a lot of energy systems that we use to feed our body this is not only our digestive system, we start from cranial cavity with our senses organ we accept more soft state of the energy matter, this is sounds, this is fuels, this is colors, they are more soft than the matter state of matter, through the mouth and nose we accept gas or air, and the gas we transform to the gas state so our cavity reactor transforms from the fuels and gas to the plasma state of the gas, the thoracic reactor is for the gas state of matter to the gas, so then we go to the next two star formation that is the digestive system, but unfortunately it is in the same place where all other star formations are to start, why because when we accept the matter through our mouth all the receptors we have inside cavity of mouth and tongue, they inform the brain what we accept and state of matter we accept fuels, gas or solid matter, the brain say to the system where the matter is suppose to go, to the thoracic area and when we breathe close the epiglottis and all the air go in the lungs if we but when we want solid like chocolate the glottis close and the piece goes in the esophagus and then in the digestive system, next slide, I that slide I try to make a model to make it easier to understand what I explained, so on the top is the cranial cavity with star formation to left right brain to thalamus and hipo and epifist and the v is facing down and then we go to thoracic area right and left lung, heart and

## Transcript from 15<sup>th</sup> Health Teaching Workshop held January 23, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

thymus and v is facing up this is the same formation as Armand's star formation, then the next slide, the next one we have three star formations but we have two star formations in abdominal cavity and the other is in pelvis are they are close but are not the same and how you see the new formation of ssi and from Armand idea is from two star formation and actually the arrangement of the reactor is two star formation, between the stomach intestines, liver and spleen, and also the immune system inside of your intestines, so actually we have small star formation inside the , this is the same that Armand has done we have the same in our body and if you listen to the previous work shop from yesterday Mr. Keshe explained everything if you move different reactors and you change the positioning between the different reactors you get different kind of conditions and the system will produce different things all of our organs are not static they are moving and they make a sound what we call the magma state they are always moving not static again an example , in India this is the organ chanting different kinds of sounds they call seat sounds to cure the organ or benefit the organ, or to increase the vital force inside that organ it is not by coincidence, if you put all the knowledge together and how you see the v formation inside the abdominal area and that is the point of your umbilical navel area then on the picture you see the pelvis area with the pelvic star formation here is the mixture for man and women but separate information in pelvic cavity, ok we go to the next slide thank you , on that slide that the thoracic star formation is feeding it self, and the digestive system starts to feed it self, this is in common place but combination of mouth and nose they are separate from each other even though they are connected they have specific kinds of connection in between in the thoraces area so actually this is the one structure ad you see in the middle, the picture in the middle this is our mouth the nose and outside is the parotids glands and on the bottom is the saliva glands so the thoracic area is field with air and how you see on the left picture and through the same place from mouth you feed your digestive system because on the head and tongue and mucus of the mouth you have the are receptors to recognize what kind of matter you take in your reactor, next slide , this is the video but it cannot play in this presentation, and that video will show the sequence of the digestive system and digestion, we start over view of organs the digestive system from mouth, you take some thing inside your mouth you make the pieces with your teeth and saliva this is the first separation then go inside of the thorax through the sphincters of esophagus then inside of stomach is gastric acid and after the mechanical and chemical destruction, the food go inside the intestines, through all the testiness the food starts to be attacked by the bio juice and pancreatic juice they dissolve the carbohydrates and different kinds of fats and build the mono materials and now you see the mucus of the intestines they reach the villa this contains a elevation of the mucus inside the nerves and vein's and everything after the dissolving of the food go inside as a mono material and from the blood it reach each cell of your body, next slide, so here this is like a picture and is the same as you saw in the video how the food go inside of the mouth and then swallow the food and is why baby is born without teeth in mouth, why your suppose to feed yourself with different kind of state of matter, when you are able to feed yourself with solid state it is because your body is growing and you need more solid matter to support your solid body that is why the tooth starts to grow in the mouth to feed yourself you are suppose to demolish the more solid matter to the liquid sate, the first chemical action starts in mouth and in saliva you have a lot of enzymes then in stomach with gastric acid, from there to duodenum from there to reach the bio juice and pancreatic

## Transcript from 15<sup>th</sup> Health Teaching Workshop held January 23, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

juice and the dissolve everything to the mono materials and mono materials go inside of the blood to each part of your cells and everything that comes out of the intestines through liver then to heart this is another point where the heart and liver have a common function and you see from the beginning you have different kinds of Ph of nano materials inside that large tube inside intestines and you have to dissolve all of the sold materials to the different states of matter you need more acid states in the environment that is why in that state is where you produce the choleric acid, then from duodenum the ph starts to grow to a alkaline state and all the intestines you see on the next slide they are one huge nano coated tube then this is the small intestines when you reach 30 -35 they are like 6 or 7 meters and a huge amount for nano coated tube, because how you see that, next slide, this is like everything in our body this is the same representative, you have the connective tissue like co<sub>2</sub> , the transitional matter, all your nervous system, circulatory and lymph and then you have go to the mucus which is the absorbing part of intestines, but interestingly here the muscle are like different shape they are like this means the small intestines get from two parts of the brain from physical and emotional and why do we need the muscles inside of this large tube , I cannot be only connective tissue, when you have the muscles you are able to squeeze the tube and how Mr. Keshe said when you squeeze you are repositioning the layering inside of the tube and you get new conditions and new things inside and because of that we have different muscle inside that large nano coated tube that we call digestive system the next slide is cross section of that nano coated tube and you see again in that represented model of that reactor, we have the same shape and the same layering, and we have all of the time the same representing model with all the state of matter and finally we reach the principle matter and inside of the reactor we have liquid state , this is the hole inside of the intestines and this is the liquid state of that reactor the intestines, and you have a shielding from serosa to contain the co<sub>2</sub> and you have all of the principal matter with all the muscle and nerves, circulatory system and lymph system which for you will be ch<sub>3</sub> and then you have you have a layering around the water state which for you is the copper of site and is interesting to know that when the baby is born the first fuets will be completely green from the digestive system so everything the digestive system collect inside the womb during embryology is there because is not working inside of the womb which is why we collect the green material which we call macomium, why is it suppose to be green, because this is the co<sub>2</sub> connected with the nervous system directly so this is the same way the muscles contain the copper and because of that they are green ok we go to the next slide soon that side is how the structure of the wall in the different parts of the digestive system when we start from the esophagus, when the food pass some point it starts to have some, we need that to have a gradient before and after food and inside of the wall of the esophagus starts to generate electrical impulse in front, this is so important , how to get rid of the parasitic waste , why do we need it to generate the gradient between two parts then in the stomach we have different kind of muscles, with different kinds of direction like a mess and inside the stomach we have not only chemical but mechanical organization of the food and is suppose to make into small pieces here in this state of matter in different direction with chemical reactions and mechanical reactions and change the state of matter from one to another one so it can pass to the next level of the digestive system and the next level is testiness and intestines we have the same different kinds of muscles inside the wall so we have a muscle just to squeeze that way we get a different kind of state of matter inside everything is the same

## Transcript from 15<sup>th</sup> Health Teaching Workshop held January 23, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

as in reactor state and nano state, how you do in your laboratory in the next one is the villa of the system and have specific structure and why we need to have mucus there because in that way the super face starts to get large and gives more place for exchanging of the packages the next slide is a anatomical structure of the villa and all the nutrients travel through the body and finally are collected the right side is the same this is the villa and written on the bottom is different types of layering of the wall of the intestines and the direction of visibility of different kinds of muscles because of how the body needs to squeeze that kind of tube and to receive what is needed the next slide represents the regulation of the digestive system, the main regulation is the part of the thalamus and hypothalamus and sympathetic parts of the central nervous system regarding what kind of mechanical reaction or chemical reaction or different part we have different combinations the central nervous system, and the peripheral nervous system, the Para sympathetic and sympathetic part this is the common innervation with the beginning of the lungs which means, when we receive some state of matter it informs the brain what kind of state we receive and the brain directly reacts that part which is able to accept that state of matter, with digestive system or lungs and heart, the next one slide, in this slide it represents the concept in the East about fields inside of the body, they are organized into what we have a left and right part and you see the cross exactly like the infinity nano coated which is the same way your energy crosses all the star formations from one pole to the other one is nano coated and represents the infinity of passing the energy of passing the energy inside of you the same as the infinity nano coated wires in your reactors which they did in the previous workshop, just to see the similarity, everything in our body produces sound and other states of matter so we have a solid body this is the one state of matter that is supposed to become plasmatic and then gases but to be we pass other states of transitional matter like color and finally to reach the gas state, this is the guitar and everything inside of you tells the organs what they are supposed to do and how to synchronize them this is the same difference so your body works like one performance of everything is synchronized and even when you see this video you see the representative of the helix DNA, with the next slide I want to show that, because of all of the organizations we have inside like organization of fuels in the East it is represented by chakras and different states of the energy level and vibrations and finally an explanation about the chakras we get that with energy flow that energy flow compresses from the 7<sup>th</sup> to the 4<sup>th</sup> in different vibrations and depends on that part of the body and what kind of vibration they need and because of the working of the fields inside of us we get the common field which is our aura which contains different but we actually live inside of the egg, this is the same like inside the energy egg as inside the embryo inside the embryo sack and we have everything in us to be sustainable, and this is the energy shielding around us like the aura, just a different state of matter

Thank you so much Elliot that was quite a presentation there

You are welcome thank you

## Transcript from 15<sup>th</sup> Health Teaching Workshop held January 23, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

That was fantastic I learned a lot I was the student as I am sure the Knowledge seekers were

Thank you very much sir

Is there questions

The question is the sphincters at the stomach and the esophagus, I have had surgery there due to not being able to swallow food and I was told that the sphincter at the base of the esophagus was the problem so they had to go in and wrap it around and open it up and then it closes again after a certain amount of years and seems food is getting stuck again, but there has to be another reason for that not that the body is trying to stop the food from going down.

It is actually very complicated especially that part because the part is the middle in-between thorax and abdominal and is between the one star formation and the and the other one star formation and you don't transform the energy from one to the other it just stops and this is the place of the solar-plexus and this place from a energy point of view when you speak about energy for accepting the environment around you from the upper part and lower part you swallow the food but you're not able to transform for something useful for you and when you have contrition in some part it mean you collect the energy but it does not transform to with you just collect and when the amount start to get filled up it cause the spasm on that part understand

Yes it is like a block but more of a energy blockage so you collect but not take it out

So that energy could be stuck but also adding to the matter at that point and not allowing it to do its own job

If it transforms to the matter then finally you got constriction of esophagus, the body starts to connective tissue inside and the DNA so the sphincter becomes smaller and smaller, and then finally it obtains it then coverts the matter to the solid matter, you just defy your emotions

What is the roll of the pancreas in the star formation system it is with the spleen and I forgot to write it this is the information with liver stomach and colon so and release hormone for regulation and it release to control the choleric acid secret only in a alkaline state indie the intestines, they don't go in the wall of the stomach

I thought it might neutralize the acid when released from the stomach so not to damage

The bustle system is inside the wall of stomach and gets nervous regulation directly from the brain,

So the stomach is less acid or others more

No is all the time in the range of acid PH

But this is inside the stomach after the mucus of stomach it is acid but alkaline in the wall and there this is regulation to produce more choleric acid or block it, this is the hydrogen pump inside the wall outside the wall everything is alkaline

I mean with the digestive food mixed with the stomach, because when I have a reflux I refer to it a very bad burning sensation and then the juice go up, not all the time related not related to function of choleric acid

But this is not because you secret a lot of choleric acid the is because of your esophagus and the sphincter does not close in the proper manner

I was wondering if the small intestine would resist to that acid in stomach content

Yes this is because of bio juice and the of the pancreas and actually they can convert it

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

So the Pepsi helps to restore it the same way

Thank you Elliot thank you so much

Mr. Keshe-

Good after noon and good morning I have been the student as well as the knowledge seekers and to help us understand the core of the man and as you know we have an emotional part and physical part of the brain and how the body of the man has become a combination system everything we went from mouth to anus and all the systems that have taken billions of years for its mutation then for conversion and then for it to be put in one package

This has been put in one package, the human body package without the arms and legs, the arms and legs are the wheels for the motion of this system it is the main function you can't have a car without the wheels it goes no where the section where the mouth becomes a central core of the human body with all we have discussed is just a conversion system, what does it mean the energy of the sun in reaching the earth and in collaboration with the materials of this planet convert themselves to digestive materials for man or other entities to be able to have large packages in one gulp and over time evolution has made a conversion system for it we call it the digestive system so what happens the energy in the sun in a plasmatic magnetic field reaches the earth upper atmosphere and converts to nitrogen or release a condition equal to plasma of nitrogen and then the subsequent conversion to helium with that interaction and the increase in reduction of energy to carbon and oxygen consequently then comes in touch with the material parts of the earth becoming proteins of different forms, red protein or movable of animals and horizontal protein which we call vegetables then when you put all these different proteins together through the mouth the whole process of reversal starts which means now this new combination arrives in a matter state through the mouth of the man then the whole process to convert back again to the energy of the sun and this is the digestion system there is no more to the digestion of the human body that matter back to plasma the plasma of the sun converts to matter and through our digestion systems we convert the matter back into plasma that is plasmatic magnetic fields can be used to add to the human body for working and maintaining this machine in action so our physical part is nothing but a conversion system of energy from matter to one thing which is to keep the top which is the emotional side of the human body which is connected to the soul or the man in working condition. All these systems is just for the existence of the thalamus all the brain structure to control this

physicality is the same, the structure is like factory and you bring materials then convert it to products you bring in metals and melt it to forge what you need it could be in ore condition then it can be made to fit your need and this is what your digestion system does it converts it, melts it and then the energy given to it from the sun goes back to the sun then it extracts its energy through plasmatic magnetic fields across, the wall of the intestine in to the lymph of a man then the body of the man decide what it is going to become, when you eat b12 you don't say this is b 12 so it goes to such and such a place the energy of it the gravitational magnetic field which it releases in the intestines which adds to the lymph makes it available for the body to convert when it wants in a way when you digest the food and energy is converted the system in releasing the energy at the intestine level is like the sun, the sun radiates out then we decide what that energy is to become, if you go back to the teaching of yesterday the sun is in the middle and when it reaches the earth it creates the material for earth and when the same things goes on further with different characteristics it becomes Saturn so the organs of a man are satellites, stars and the planets the digestion system releases the energy and the organs are the planets, and what each planet absorbs from this plasma dictate how it manifest itself, but in the body of man we have put a regulation system in what we call thymus and the pituitary gland they are the only thing in the human body that dictates what becomes what matter and at what strength so pituitary glands decide this is to be phosphorus the thymus decide how much and what strength, soft or hard for bone, the pituitary glands follow so they become the thermometers the whole process is to be able to extract energy from the environment to keep the emotional part of the body in action one of the things of science and the medical people and this who deal with the digestive systems have never understood there is no difference between the reactors you operate and the man you out matter in a state of gans in your reactors and the minute you start moving within this structure even the water behaves like a gans you can put it in a freezer it doesn't freeze, so the water and what ever is inside it that is inside the gravitational magnetic plasmatic field say it is copper or co2 it starts behaving like one as well, so this means that the instance you enter the food in your mouth it doesn't matter what it is, meat air water sugar, the instant they pass the upper part of the mouth to go down they become captured part of gans state of matter and from that moment on when you enter the food in your mouth the food changes from matter to gans state you can fill your reactor with water but the minute you fill it with gans it behaves as a gans, it is not matter anymore till the point it comes out of the body it doesn't matter it stays in that shape until the conversion system comes into play to make it ready to become and be released in a matter state your bladder is one of the points of conversion and your big intestine so the instant that you put something in your mouth which is to be digested so then the gans of the enzymes and saliva and the direct carriers of the digestion system they start sending gravitational magnetic fields that start to open up the structure of this new gans, water cannot do anything with a piece of iron but if you create the right environment the iron will open up and at the right temperature it loosens up and then the stomach can start the fire so what do we do we call them enzymes but they are magnetic gravitation particles that allow the opening up of the matter state which has entered into a plasma condition into the stomach to released there energy to be taken at the right strength so what happen when the other enzymes get ready to release there energy into the environment the hydrogen is affected by a nitrogen the cases it to open up and become a part of the environment then it becomes one thing then once you

have done this opening of the plasma and goes to the intestines different parts of the intestines has different structure and so different materials which create different gravitational magnetic fields and different strengths of plasma going into the intestines, so now it become a conveyor belt and each part of the intestine is responsible for picking up what it is to be picking up it is like a recycling factory where they bring a lot of clothing and they put on a conveyer belt one person is only for shirts, another for pants or certain sizes your stomach works the same way but with different structure of the nano tube and this tube is not just always the same thing, through different layers behind it they create different fields the food in the stomach literally floats and swims over a magnetic plate like a conveyer belt as it goes further down and each field extracts very much like how we do through nano layers and the environment creates a field for a specific strength of a certain product outcome then this energy is passed on to a transparent liquid we call a lymph, which is under the conveyer belt in the structure so when it gets to the big intestine then anything that has the energy equal to an amino acid and the strength of the intestine which is not needed any more now has to be converted back into a gans state but yet still being in a matter state of gans, then it is discharge and one step further why is it used is because it is already in a gans state to can be used as a protein of the plants to grow faster that is why we use animal excrement's for fertilizer because it is already converted gans material and since it is already converted to gans it delivers growth and the plants absorb it much easier that is why we use fertilizers because it is a gans state material, that is why if you go a step further synthetic fertilizers are a problem because they are in a matter state and half to be converted so creates some problem for the plants, so why all this conversion and work, so where the mouth and the anus end up on one tube is the ends of one magnetic field channel where given specific energy allows the manifestation of the man as matter and that is the purpose of this tube, what I call empty sausage is to be able to create a condition around it to allow the appearance of the man by supporting the emotional part it gives essence as a man and a soul this is how we view the physical digestive system like a man and nothing more an man has made is not just an amazing thing that nobody knows, it is one of the simplest things it has a factory and a storage capacity for what it takes, it has a liver, it cleans up what is not needed like a filter called a kidney and stores it in a bladder and there is nothing else to this life and no more so when you create different conditions for this sewage system you end up with different gans and solidifications if the man understands that through the emotion he can control everything in the physicality then man can survive for millions of years I space, the human body is one of the shortest living hominids in the universe because it is weak and uses very week gravitational magnetic fields to exists, and in fact it is which is why man is not hunted as a food, and in space no creature eats another species, we tap into the energy beyond the testiness not the energy within the lymph of a man is in a pure state has no living structure that can make a decision is in a state of energy not matter but in clusters, it is just packaging for size and the size of the lymph liquid is dictated by the environment around it but has a life it sustain through condition of division, so this mystery of man is nothing more than to manifest itself as a entity to show itself in the emotion of the man, if you're in a room the moisture is there you just don't see it the condition of life on earth allows the condition of the body of the man to manifest these conditions and that point of conversion is the digestion system so to do so much good for man to do so much harm to others, yet this emotion to the soul this is one of the biggest mysteries of the creation and that is why

the soul through the emotional part of its power it allows physicality that it attaches to itself for its own existence and presence why do we chose sexual organs to produce another physicality is nothing but a lack of understanding into the existence into creation , in time when man and the new technology goes into space the emotional side of the brain realizes it could have energy back again without the ganses will be a another step in the evolution of man, in the future a very fast reduction in the intestine and then the stomach and in time we will be slim like the rest of the species because we won't need this massive digestion system anymore, and the emotional become the thing that creates for the body and this is common in the universe, this planet has forced the part of certain creature to manifest themselves as a body of entity which depends on how the universe has allowed this solidification to appear so when we open the doors you will come across hundreds of thousands of human like entities, so a digestion system as we call it from mouth to anus with it storage capacity and conversion of the air and solid as we spoke before is nothing but physicality for the soul and the emotional part the point to add to your knowledge is at the moment when it inhales matter in as a gans which is what it came from originally which is what it came from the amino acid and the origin comes from the atmosphere of this planet which is why we use the co2 to extract it or keep it out the air from the environment, the instant that the air or food enters the body of the man and behaves like a gans it releases 80% of its energy into the environment, this is the same as in our original nano coated boxes when you put co2 into the water you create light or a motor instantly it is release to become a part of the gans and that water through the plasmatic magnetic goes through the bottom of the brain into the emotion part so the emotional part of man receives all of its energy the instance the food or air enters the body of the man it does not need the organs to do this you have hardly any lymph compared to its size around the brain of the man and most of the liquid that is there is for the physicality of the structure the physical human brain receives from the energy that is releases the instant it comes into the body in a ganses state , not through the blood which is only 20% of it, when the food reaches the stomach more or less at that point has lost its energy it moves up through the fields into the brain directly in a way the pumping of the heart and the way the fields flow show the direction of the fields to the top to the brain and the bottom connects to the reproduction line to keep it going, in so many way man has not even does not understand the working of his body, this is how the brain works there no feeling the brain, there are lines for the physicality but come instantly from what you breathe and what you put in your mouth and digest going up to the brain decides what material will be put in what state and in what form it becomes the leg or the body that is why you don't have vessels in the brain of the man just for the physical part because the feeding does not come through the lymph the feeding and digestive system comes through gravitational magnetic field which are released at the bottom of the throat up to the brain to the emotional part , then the emotional part in turn release upward what it does not need for example when you under stress and you breathe a different way you release different kinds of energy because of this breathing and is too much then has nowhere to go can release into the brain as a brain hemorrhage, this is the channel of release this is why the human brain is divided into two halves because the gap to use nothing are more or less packed to each other but because of the channels of energy between them from the thalamus the y are energy nano's and when they become too much for the energy to go

though them then they releases the energy into the upper part or arm at he two contact points we see paralysis and the rest of it

Does sex work into what we have learned here today, so I don't know if you want to get into that today we are up to past 2 hours

There will be a session for that in the coming time you cannot cover bit by bit this section has to be done as one and the next step is the function of the different organs in this part and hopefully in the coming time we go through diseases and how these changes come about, to find a easier way to handle diseases.

Are there any other questions from Skype?

Some people are born with there Corpus Colossus Bridge much larger so how will that effect the brain compared to ours

Explain to a common man what it is

It is between the two hemispheres of the brain and some people are born with much larger connections so how does that affect them

No different it is just the conversion of the information that brain needs that bridge to hold the same thing your brain does but there is less of it, don't forget just because there are two arms ad two legs and a heart our bodies are made the same way we are not a photo copy we are part of the evolution so if there is a amino acid difference it means there was different information to reach the same outcome.

Ok thank you for that and I have one more what is going on in the minds of people with synistisha

No please explain the terminology

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

It is where people read a word and get a taste, the senses all get impute at once if they taste something they might think of a word or trigger a sound they get all mixed up

All of us have that but some of us decide to speak about it but some don't and is part of our RNA subconsciously this is why when they see something it brings back a taste to them all of us that it came through our ancestors we see a cactus but we don't touch it because we know there is a pain with it so does it mean does it mean we lack the emotional part asked for, no it means we indentified it we know it so we don't touch it, some of us see it as a point of attention and what we call ADD , it is why you go to McDonalds you know the taste it has been printed in your brain and it is a slat density concentration point, it is why we like some people but not others, because one is always nasty and can have a condition and then change the manifestation

Death in the universe is meaningless

We can wrap it up there thank you very much

So we have a teaching in Chinese on Tuesday

And soon we will announce the different weeks we have for which language and different fields of expertise so we are going to do between 5:30 and 3:00, 1 hour for Spanish and one hour for Italian and then every day go to Dr. Elliot between 3:30 and 5:30 go to Dr. Elliot of medical, then the following week one for Chinese and one for children and again with Dr. Elliot because the medical part is one of the most important parts of the space technology, but we will stay on with the Thursday workshops to answer different developments

I believe that is the correct schedule but it would be nice if they were on the even hour instead of half hour, like can we start at 2 and go till 6

It can be done but it would be better but the Chinese had a problem with that,

## Transcript from 15<sup>th</sup> Health Teaching Workshop held January 23, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

Yes it is getting late then for them

Yes but if one hour and not 2

So the changes are coming very rapid and the spin offs are now starting to come out of it with the universities and the governments and we will announce it today as we did, we have reached agreement with different Keshe foundation structures for the first clinical trails of the eye less for 10 volunteers and spinal damage and was waiting for conformation, and the documents have to be signed today and I hope it is done by the time we finish the program the health organization with it plasmatic technology is officially accepted by the neurological society as an official alternative in Belgium for its influence organizations in this field and in the world, hopefully when we sign today we can announce it. They allow all the technologies to be used in hospitals around the world in their organization and it was very strange because it was one of the organizations that we had different reactions wit in one form or another and this allows the Keshe foundation health organization to work in over a 100 hospitals around the world instantaneously, and this goes through the new university and one floor deals with health only, the space technology has not reached that level but the health has and is already there, and the health section which is headed by Dr. Elliot and Pavarosti, so this medical technology will become available in the next coming weeks and months , and a lot of work is going on in the back ground with governments so we can release it very rapidly and in the coming weeks as we move to Barry as I explained to Armand and Marco is to start the spin off of the water purification and other aspects of the technology immediately with in the university, so if there are those who are interested in this at a master level, you have to go through the university registration, the fee has finally been agreed for the university and the fee for the technical side is 5000 euro per year for the first 3 years, and masters has been put at 10,000, any profit from this will go to pay for the fees for those you can not but have the intellect to do it, we have been looking through the Keshe foundation for those you have been to come in, we just don't accept any students, it is very much granted but no asked for, those that tell us they want to be 95 percent will sit on the back self until we satisfy the or we see they can add to the knowledge very fast one of the biggest problems we have is not the 3<sup>rd</sup> world but the lower financial but with the intellect to be a part of the university , age, color religion is totally blank to us, and we have been keeping with people through out the years that have been taking part in everything we have people from united state, we have people from China and in time so those that pay a part of their fee will pay for the others to be here and in the coming weeks we will announce the direct teaching so you can learn on the internet , these will be very much the classroom teaching but recorded in the back ground and then added to, so this has all been agreed and for us the biggest problem is moving everything to Barry and we will lunch the space technology within the first weeks we arrive, so our part with the space technology will be the same, if you want to be a student you can send your request to the [SpaceshipInstitute@gmail.com](mailto:SpaceshipInstitute@gmail.com) we will look at them the reply if your accepted and then you will get

**Transcript from 15<sup>th</sup> Health Teaching Workshop held January 23, 2015**

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

an official reply from the university or you can apply directly to the university they will release it then it comes back and we edit it, there are different people from the 3<sup>rd</sup> rite trying to get into the institute, we have collected a full list of your group, an international level you will be banned from attending because we know your ultimate goal is to create a 3<sup>rd</sup> world and it will not happen, come as friends to learn and you want peace your welcome, we do not exclude no race or nationality but we do exclude those who endanger the process of world peace, if you are a religion in the current situation, and you want peace you are welcome because we can spread the word of peace amongst Muslims around the world,

Thank you very much

Than you Mr. Keshe we meet on Tuesday

Right bye, bye,
