Topic: The Stomach: The Fireplace

00:00:00

Welcome everyone to the 19<sup>th</sup> Keshe Health Teaching Workshop

This Workshop is called the Stomach As The Fireplace

and today once again will be speaking with

Mr Keshe of the Keshe foundation

And will here first from Doctor Alien Castova

spaceship institute

and she will described West The Anatomy of the Stomach

and how relates

to this concept of been Fireplace

and as we know the stomical is known

in history as the solae plexus

in the sun in centre

sometimes called the centre of gravity

and this images of burning and

combustion in this stomach so

These all mesetries of will be investigate today

Ok

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

I am ur host Kermend

see for ur can hear from Dr.Alien Kastova

and begin our shop

Aliayou ready there

and low volume not hear you Alia

(whispering)

Hello

Hello Alia

Can you hear me?

Yes I can hear you now

Ok I will repeat myself then

Hello everybody its me Alia

and nice to be with you and the 19th Keshe foundation workshop

The day subject is a stomach

why go fireplace in our body

so we start

with the first line

and the first line everyone of you.You just familiar with it

is this representation i give repeating that's why just because

we analyse different organs inside of abdominal cavity

and that's is the abdominal cavity again representation for you and starts information but we cavity inside

in actually the stomach is it one part of the starts information between the Liver

Stomach and at end part of the large

intestines clean opposite system and pancreas

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

and

that's information is placed inside of the largest one how you see on the right side of the slide

and

and exactly the meaning of that information is to convert of all the state of matter to the gongsteet

and then gongsteet

convert again to the metal state and would out the metal state out of our body

Today i will give you some kind of different point of view about the digestion system

because mostly in the previous workshop we spoke about anatomy and

function of different part of the layers inside of the organs chemical structure and so on

so today i will give you more different kind of point of view how we are able to analyse the digestive system

and we start we stomach like the main point like a subject for today for our workshop

so we follow we the next line please

and the next lines is the embryology of a stomach

in embryo stomach start from the guts

where you see on replace is return as a for goes as stomach

the guts is the part of an endoderm

on the right you see again layering of the embryo

in duration of the development of the embryo

so all the digestive system like oesophagus stomach and intestine their origin from the endoderm of our embryo

and how you see on the right side we have representation of layering like Endoderm, Mesoderm and Ectoderm

and just to remember you because it's important for our today explanation

that ectoderm is outer layer of our embryo

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

from their origin our skin this is our outer part our sheilding systyem

then we have a mesoderm this is our transditional method regarding KF technology

and endoderm this is inner core inner layer of our

embryo on the right side you see like a microscopic scan picture they completely

visible and explain to you how actually

a layering from the beginning like in play this task to make invagination

and regarding that ivagination finally we get the shape of the embryo

just keep in mind that picture because during in explanation you will see what's this

important of it.Exactly we are origin our body we are

build our body during embryology

from one layer and then we become with two layers and three layers and then three layers starts to

move and to squeeze between each other and to make different kind of shapes and actually

stomach the subject from today is origin from the endoderm in an how you see you

from the picture of embryo this is exactly facing the liver and from the

previous workshop you know that the liver actually is facing the allantois and

from the beginning of the development of them their

place in embryo is a behind the allantois so actually all of them they are so closed connected with  
emotional part of the brain

is this our allantois just they convert different kind of metal and we that conversion they actually  
different

point of and different feeding system for our allantois

just to remember you that our digestive actually convert all

different states of metal we are able to accept through our mouth like confuse guts

liquid and solid state.so because of that our digestive system even

in a traditional chinese medicine they called dawan danjian what is the meaning of the brain below

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

so we go to the next light the next light is this representation like a

cross section of the beginning of our development in embryo state

is this representation how different part in embryo from origin our the digestive system from the beginning even they starts to repositioning

itself our digestive system is cover it from peritoneum

we have of dorsal part and peritoneal of part of the peritonium

if we speak regarding the

give technology make sheilding like a skin around the all internal organs so that dorsal

peritoneum from beginning with actually connect each other all the vistral organs self to reposition itself

regarding the centre of the embryo and actually the centre of the embryo will goes on the spinning around

this is spinal cord of the spine beginning of the formation of the spine in embryo and the main

in our body organ so if we point them like a center

and around the center everything from the beginning start to spin if we remember from the

previous workshop when you spoke about a kidney so

then the positioning was from the head part of the spine

but here when we spoke about stomach then we have different kind of

organ from one point and then starts to grow

and during these drawing he took different kinds of position to the regarding the center of the embryo

he actually is not moving up and down he moves in cycle

i think this is the

understandable also because the stomach like a part of the start formation what is intermedal of our abdomen

and if you remember we spoke that the visit of that starts formation is spinning

right to left so even from the beginning of embryology the main part of that starts formation stomach

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

is rotating around the center again after right to left

again around the center of the embryo

ok then we go to the next light

next light is this representation of a stomach regarding notochord

for gut and

that for gut is actually of the gut and the gut is separate for the foregut and the hind gut

and the stomach is part of the foregut and

in the middle of the slide to see how starts to grow

from inner part to outer part so it means here we have the same layering of the gut just

change the volume inside of that notochord took what here

in latin language we called the gut then when stomach change the shape starts to change position

and starts to turn rotate to the left in 90 degree

and during our development actually from one narrow tube starts to be more wide and wide

and then to spin and finally took the position what is normal for our age

how you see on the right side

the coloring

is this gut and a stomach and

the tissue is this around this is the

what i told you the connective tissue around of visceral organs what we called the visceral out to re nail

and actually you know that the connective tissue is more original technology of

the see you took gonads and you know that the

the carbon this is one of element with make connection between the element so even now

in our body you see that the connective tissue is this main

tissue with make connection in movements in our body

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

ok then we go to the next light and next light this is actually short video

how does stomach grow

and rotate during embryology and how you see this is rotation is this again right to left

the same rotation how is the BZ

facing vector inside that starts formation

so again we have a repetitive model even in

development of the single organ inside of that starts formation

so is growing on is like a mass like a volume like a mesh

and then starts to change opposition

ok then we go to the next light

actually we all the time when we spoke

about the embryology

wee keep in mind the

is this a representation of the principal metal traditional metal and outer of

the reaxel is this regarding KF technology

and when we take the bigger picture of our body

is this again the same we have

inner part of us is this our principle metal then we begin

then we get traditional metal mussels and everything what is it

behind the skin and then we

we get a skin like a layering system like a hole of our body

so from the beginning our shielding

even when we represent our self only like a cells this is the

ectoderm this is our skin so

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

all the time we just grow it change our position inside of one balloon

inside of one memberan what we called our skin but this is again non layering

structure itself

if you look it our

body we doubt any

hows anything just some subject virgis modified inside of one member like a balloon

will be have the similar picture like on the right side of that's light just face

we doubt any how's and then the nature starts to organize that memberan in different enters

because actually the energy what we took from outside and inside

this is plasma itself this is the gongsteel of metal itself and the state of metal interact

with our mograve state but they are not mix they are just move and interact with each other for example when you take breath and breath inside

the amount of gas what you take inside its is not mixture with your bones and you are muscles just collapse each other no like a took

plasma hows you saw in the previous workshop and you saw the video of interacting of two eggs in the same way they interact to each other so if you except your body like mograve state and

all the energy refuse what you take from outside inside they interact sin same

in same manner so regarding the

if your body is cover it fully with skin then you have make it a holes

to take of the metal inside of you so you starts to

just cut the places of your part of your body when you suppose to except

the energy all to take out that energy from you

and from the day we spoke about the digestive system you we make some kind of

interaction of that skin and put the skin inside of the place where we suppose to take

all the state of metal this is some how invagination of that part of our face what we called mouth

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

and actually if you look your lips there are like traditional point  
between the skin and in our mouth cavity actually you have again ecdoderm skin this a outer shielding  
then you have traditional state your lips because they contain not only the  
soft skin over them but also mainting inside this is like traditional metal and then you go out to mouth  
state  
inside of your mouth and then we that part of your face your able tooth accept all  
the different kind of metal and actually how MR.KESHE said when you except the piece of metal  
even when you except of same moment the lamous is already informat what kind of metal you accept  
in you because all the information inside of your body just its breath in gongstee state  
and regarding that i want to compare different kind of tourist  
what have available after that moment and the new discovering from the different  
scientist around the world and just to compare that all the tourist speak about the same things and they  
just  
cover and explain more deeply her we are able to visualize how we really accept  
the metal so the next video is good representation  
of our death how our body if you  
when you listen the video just put in mind how our body is  
building inside of shielding in one balloon this is the principle memberan of our skin and we transform  
our cells  
inside and then that membrane suppose to open the enter and to accept  
different kind of plasma inside and this is the interaction between two plasma just  
could you please pay attention of our next video  
hello,i am going to explain you in a very short plain  
how dimensions are created and homosors are created  
in my opinion of the system

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

to the background of our good first is a membrane

because he like a spot of food follower

our this food in my opinion

this is spherical structure like a balloon and face moves like this

we can have for example

two different piece here

piece made by the membrane and so his move and go up and down

and one of the possibilities is that this membrane peak penetrates fill of membrane peaks

and this is very simple concept and very essential in our holones top logical holones are creat

so imagin that this is such a peack goes up and down,up and down and this is a second large one also goes up and down

now you can see this like what you see here we have two peaks.A peak here and peak there.since membane is not breakable

it cannot be broken these can have complex these have surface contents thats like this jumps provokes that the other jumps

in another way that is another possibilities when they exact corner and angle is respected the small penetrates the other one

but this membrane is not breakable and push away the other like this push away when the correct conditions are available this penetrates breakable push more and more

and will enter this system and then this one also push away the second one because we have two different surface in one peak

now imagin that this will happen we will have this gosts the second one goes like a second layer around like this and immidiately

turn this one and when we wil have this one so now different layers peaks over each other

and ofcourse when this moves you will see that second one will move to penetrated

and when penetrate moves it will also called remoktion in number one so we will have now dynamic system

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

how space and mentioned create by two dimension face which is fault and which is s membrane

ok i think we see the whole on idea there

yes and actually this is the same things when you accept inside the few are different states of metal

because you interact with other one metal but that metal just put in your fluids

this is not emorjng of different kind of metals this is interaction between them

so actually of representation of miser license this is the same like you help your skin and

you help in the embryology state for the first layering around the egg even in the zero

state then all the development is inside of that shielding and then that shielding starts

to evoginate itself and make different kind of layering so regarding that we get different layering

and because of that we are able actually to transform different state of metal and also because of that

we help in different parts of our body is in functional system where we suppose to the trasfer metal state

to the gongstee state of different layer how much we go down from our mouth to our nose in that

give picture is only visible in the slide show if you put on the slide show will represent the layering

from the top to the botom of our body this is the model of the holentary of their cloudness is completely great

because in that given picture able to see how our digestive system is made because the digestive system layering

and after and after to visible to put slide show to put representation is slide show

and then the give mark is visible.do you understand?no just slide show ya this is just some

option in the power point on the bottom arrived you see where you have the size of the picture

then help one the sign from the slide show and when you play then its visible for everyone

May i say

ok i will no i will just give you the websites on the group i will give you the website and there you just find out

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

the picture put on the light screen. thank you no because we that give picture is really visible so how to understand the digestive system

is made by layers and layers and important for representation is this that how many layer

you help that much mass you gain its mean you increase the gravity in the principle metal

what is important for representation after that actually when u gain the layers in us from the mouth to the

stomach we gain mass and we gain gravity and because of that we are able to transform the solid metal to the gongsteet

because how you know megrave how MR Keshe say and because of that picture if you accept the beginning of severe like a mouth

then its your esophagus then you go deeply inside this is your stomach and then all the layering

to bottom is it in your intestine and you all the time at more layers and layers even if

you look in digestive system in anatomy like micro view you see how the intestine their exactly goes

like their picture what it showing and layer and finish with the large intestine of rectum what is the shape

of the end of that picture and actually you gain the mass all the time if you accept them the middle of

drawing of the inside of the picture this is how actually you gain the mass in you in strengths manner

because you accept that kind of state of metal and then you convert that state metal and because of that you

accept that picture like representation of your digestive system is this more understandable for you to understand

why exactly the digestive system the place of the digestive system in slide of abdomen area and

its not only the place of theoratical area in actually i will probably the picture of the embryology

the first cavity is form in the embryo this is the pelvic cavity actually and how you see of that picture of

Mr daigrol lesson the gaining of mass finish in the pelvic cavity but is actually part of the end of our digestive system

Ok then we go to the next light. the next light is the representation of your digestive system that we starts

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

from mouth then esophagus stomach and then all the intestine small and large with different kind of function

just to repeat to you actually from a mouth we inform what kind of metal we accept and because of that information through our tongue

because in tongue we have all the receptors to recognise what kind of metal we accept thalamus starts to give the information to the digestive system work suppose to do and then starts all the transforming of the metal state

inside of the stomach why we call the stomach like a fireplace because from the beginning we put inside of our fuse

different kind of fuse like a state of metal and then this fuse like a state of metal they start to interact of our

metal and producing them different kind of shapes and different kind of movements and pressure in

them and because of that we get all the moment all the waves what we have in our digestive system so the first

one to the starting waves starts from from our esophagus what is the muscular organ itself again with layering with the

muscular part epithelium part but the first moment inside of the digestive system starts in esophagus and because

of that movement make the gradient before and after the metal what we take in us so we first shaving the metal states we took

inside of our mouth then we swallow we initiate movement and then from that the initiation movements starts from the

peristaltic waves inside of esophagus and that peristaltic waves cause the difference between the pressure before and after

that what we swallow in us and then they inform the stomach what is come to pass in and because of that information

stomach knows what kind of enzymes suppose to produce and how much and when and with which part because

different part of stomach have different kind of glands in between the epithelium cells and they

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

produces different kinds of hormones and enzymes this is not only the active part inside of the stomach

and how you see the right side of the picture to the end of the digestive system everything is on the movement of spinning so the stomach position itself even from embryo state of spinning are rotation and

then during the stage of our development we continue to use the spinning like a movement of our digestive system

ok then we go to the next light the next light is this the representation of the beginning this is the mouth

and you see the middle of your face this is called a cross section this is your tongue the tongue is completely muscles

organ then you have the glottis and start the firing from there we swallow we inform the next part that we do something we

need movement just to move the part of the metal down and then there this is the part of the peristalsis waves and

you see we generate different pressure inside the mechanism this is the graphic of the oscillation

and different kind of pressure generates inside the muscles this is regarding vein that state of metal will reach the stomach from the beginning one part of the contraction next is in relaxation state and then

verses follow each other so itself I repeat myself so many times but we completely sustainable machine and so intelligent

and you see on the right side of the slide this is the representation of the stomach its mostly reduce from

muscles from different reaction they are smooth muscles not on the control of your brain I mean like anxious

and because of that how to speak that belongs to under control of the emotional part of the brain they help in different direction

and this different direction just super different kind of contraction of the stomach .the stomach is like a mish and because of the contraction muscles make different kind of movements and this support

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

distraction of the solid of the metal ok then we go to the next light the next light is the representation of the

how regarding that the pretasis waves state of matter after the mechanical distraction moves to the next

part of the digestive system and how you see everything is scronyize it each part knows what to do and

then follow the next one and the next one and the right side you see the microscopic view of the persitatics waves

it is inside of the stomach wall is this like some kind of mountain and then this is relaxation and then again

and also the beginning enter of the stomachs have under the civicnic part this is the circular muscels and the

the end of the stomach and also have the circular muscels in pyloric area and when you accept the metal of

inside of your stomach the sphincter part in esophagus area just relax opened and the metal go inside

in the same time the sphincter part in the pyloric area just closed tiedly and then you collect the metal state

inside of that mish and start only mechanical but in himycal distruction of the metal state of metal and

then we go to the next light on teh next light is visible for you that again we have repititive model of

layering of walls so we have the epithelium then we have the suk muk place then we have the muscels area

with all the muscels different direction and then we have the serosa the connective tissue skin what is the

actually cover our stomach.this is the same repitative model all over our body if we speak regarding the

KF technology middle we have the liquid state of principle metal and then we have the inner cord and then traditioanal

part and the outer cord this is the repatative model all over and actually if you remember what we spoke from

the beginning if we analyse our shielding skin like invigation inside of that hole what we made from the beginning

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

our mouth and then all that invagination go to the bottom and starts to have more and more invagination inside

we may accept the stomach like a first place that invagination shape rotate and starts to do transforming

of the metal state with different action like a mechanical and chemical reaction

then we go to the next light the next light is so interesting experiment actually the pictures they gift from

the myth again if to play i will show you this is actually make the egg the opposite side if you are not able to play them

just play on the websites if you want this is not problem because this is really interesting how able to make inner

core to outer core this is the same way how you able to accept advance state of metal and the to divert the inner state

of metal because everything exist in all state of metal so we exist like a gongs state of metal like a plasma state, like a liquid state, like a solid state on the same time and actually that representation ya i will give you want

just one second i will find it and during that i will just keep explaining if you remember the previous workshop

when we spoke that other intestine manage to make from the solid state of metal X to the liquid state and now you see

this is a completely ordinary portion who idea how to cover the egg and how to spinning the egg then to boil the

egg in the specific temperature for 50 minutes and then he took out all the shieldings he saw that the

different state of metal inside of the egg just change the places but its completely to see when you spin some

state of metal in specific conditions you are able to change the positioning of inner part to become outer part

and vice versa and how from the beginning we say that if you accept our safe like invagination of the membrane

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

so that membrane is able to gain the mass and then to ungain masses it means this is same like a Mr Keshe said

when we gain a lot of gravity then gravity itselfs starts to initiate the magnetisum repotion so this is really

interesting of this experiments we X even saw the Mr Keshe experiment what he show the knowledge secrets ISI like

two X two plasma interact with each other and becuase of that for me intersting to show you how actually with X

we are able to represnts how they are able how the metal is able to change the state even in one shape i am

just searching that link one moment ...if someone help more easy than me

i think Alia perhaps to skip over the part and edit to the video later to the final video

ya its ok i am ready if yo want to show its visible its not problem just idea was show how even in one shape even in

one membrane how is the shielding of the egg the metal change the palces and seeds that was my idea to show you with

that experiment ok if you want to make the next light to show the video they are so short they are gift from maths

picture just that is interesting is the everything is help on because of spining and because of the correct conditions

like a temprature and pressure outsid ok then we go to the next light,the next light is actually what is the

constructin inside the wall of the stomach how you saw we have layering again we have epitheium part what is the

most important part of the chemical reactions inside the women of the stomach that part is this again so many

invagination and how you see on the right side the microscopic picture is so similar to the construction of the brain

the hemisphere the gray substance of the two hemisphere that invagination of the epithelium of stomach is this because

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

to give more surface interaction between the state of metal and different kinds of chemical that will produce how

I told you have different glands inside of epithelium they produce not only enzymes but hormones and actually the main

structure this is the stomach wall and how Mr. Keshe said if you remember when he was explaining about how the stomach state

of metal starts to be able the zinc and copper plate inside of the stomach it starts to be ordered like a mass of

the balloon like particles one by one with gapping in the same way you see the mucus membrane the epithelium

inside of the stomach help the same repetitive model so actually if you accept the wall of the stomach like a plate

and in the middle you have water here with the hydrochloric acid to everything that happens on the surface of that two

plate starts to the wall of stomach and because you have different muscles with different directions so you are able to

squeeze that layering and to actually generate different conditions and because of that to get different states of metal

inside of that stomach what we called the stomach could you please watch the next one video this is actually how you look like

our digestive system of stomach inside how we take a food and then food goes in our mouth and then we swallow and then go

through our esophagus and because you see this peristaltic waves inside the esophagus finally will reach the stomach

this is our stomach like a stomach and food goes inside and because we have different kinds of receptors inside of the wall

the movement the mechanical construction of the solid state of metal started then we have a chemical reaction

inside of the stomach which hydrochloric acid and then all the stomach produces now liquid goes to the duodenum this

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

is your ball in deodenal and then the ball and pencriatic produce there just following the digestion of now liquid

state of metal and you just see in the beginning of your intestine to the end this is the epithelium of you small

intestine so actually you see that the stomach is like a mish containing hydrochloric acid produce and how the

chemical process starts in it just the stomach collecting that solid state of metal what we eat and initiate the process

of the information of that state of metal and tehn we go to the next light,the next light is this a representation

of chemical how reactions inside of the wall how i told you we have the acid Ph level of the inside of the women of the

stomach is this because the chemical reaction between the carbonic acid and the solving or organising to the carbonic

acid to the carbon dioxide to the water or to hydrogen into the bicarbonates if you remember the same reactions we have

in the lungs area we spoke of the function of the lung and actally our stomach when we spoke like a part of the

information this is the row of the lungs and you see even the chemical reactions is completely similar so inside of

the women of the stomach go to the hydrogen following with the potassium and the clore inside of the women we have

the acid state this is more less 1 or 1.5 in the wall of the stomach the PH cube ocline and everything is of equilibrium

of this two chemical reactions to hydrogen connect with bicarbonates or water connect with the carbon dioxide of

that equilibrium of that chemical reaction this the information from the talasum from all peristtaic waves what

you saw before that how does chemical reaction goes to the right side or to the left side this is same like in lungs

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

Ok but how you see from the beginning when we spoke that actually we are help in brain and we are to mentional but take

inside different kind of matter and when we interact different state of metal we become even we start to convert the

state of metal even from the beginning different information of metal if you compare that with the black holes see what

will be happened could you please play the next one video

now holograms of something you are familiar with it from the security symbols you find a most credic card

but the universe is the holograms thats one of the most tragic revision in our pictures and in reality ever purposed

and the evidance comes from the around of space black holes.this is really disconnect and very hard to get around modern

ideas coming from the black holes tell us the reality in two dimensional that the three dimensional world full body three

dimension world is a kind of images of holograms on the boundaries of the region space

this is a very starnge things we said this is abslutely crazy here is the think about this the imagine took my wallet

into the black holes what will happenend we used to think the things is nothing not more then light escape the gravity

of the black holes my wallet will be lost forever but now seems that will be whole story recentally scientist exploring

the maths by the black holes make the curious discovery even my wallet disapear into the black holes and a copy of stored on the

surface of the black holes on the same way that information stored in the computer so in the end my wallet exist in

two places there is a three dimensional version lost forever inside the black holes and two dimensional version made on

the surface as information the information contents the whole stuff fallin that black holes can be entirely expressed

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

on the black holes the idea is on capture what is going on inside the black holes by referring only the two sides and

infinity i can use the information outside the black hole to reconstruct my wallet and hers's the truly mind blowing part

space with in a black hole by the same rules on the outside of the black holes for anywhere else so in an object

of the black holes it is described by the information of the black holes then it might be everything in this universe

galaxies, stars you and me even space itselfs is that just the projection information stored on some distant is two

dimensional stored on the surface around us in others word what we experience as reality in something like a holograms

ok that video as played should be continue by ALia

ya this is finished just because of that video i want to explain you that everything what we take in us in our stomach

we may accept like a black holes starts to dissolving and distruction the metal to convert to the gongs state of metal

and actually all the information what we took in us still exist in because we gaining the mass how you saw the beginning

of that presentation we may take comparisment the stomach and the center of the black hole because this is a part we

gain the mass because we gain the mass we gain the gravity and we know that the centre of the black hole we gaining

the gravity and everything what go inside just starts to transform how Mr Keshe said just we accept one state of metal

we transform the state of metal to the next one like we accept the solid state of metal and transfrm to the state of

the gongs state and in actually all information exist then gongs state we again able to recognise to the metal state of

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

metal but actually we do with our digestive system if all of you with familiar of the function of the black holes you are

able to just pass through next light because its the representation how the just black holes sucks the energy how to

transform the energy and actually what is going after that and how even you are not able to pass to the black holes

because of borders this is exactly representation of the model of Mr Keshe even the pictures there are the same

the principal metal of the borders of the inner core to the outer core how they tranform how the beginning we have

passing all of the object of the outer core then pass to the transditional metal they go inside of the inner core and

when go inside of the inner core regarding the black holes noticing able to go back but regarding the understanding of

Mr Keshe everything which pass the borders of the inner core starts transformation and the state of metal this is

not vanishing this is just transformation and how you see from the previous video everything what is inside just the

information existant and outside and because of that you look the experiment with egg you see how the outer

shielding is become inner core and vise versa and then you are just able to show the video the second light this a video

is exactly a representation of our digestive system if you compare how the black hole is working this is the second one

what you play here and this layering alone if you want to play its not problem if we have time for this this is long if

you want to play just to see

they are commonly from created the death of stars many times.

this is really five minutes but this is really interesting

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

so that is a endoscopic of our digestive system you starts from esophagus and if you compare with the previous video

this is enters of the black holes how the black holes suck the subject in it this is the same and because of that you have

peristaltic waves you suck the subject in it this is your stomach all the invagination of epithelium this is exactly

how you look like this is a food what you take it in and you go to the next part deodenum and intestine and if you want

after the workshop you just play both videos together and then you see this is a completely same function you just is this

like a black hole sucks all the materials in them they pass through a channels like a time space gaining the mass

and finally to reach the center of the black hole this is a same completely explanation of visualization just to compare

the video and then you get idea actually play what you mean just not to make representation so long you are able

to compare itself and how you see during this journey to all the nonocotic intestine the metal just all the time

transform itself and finaly you will start again to have from the gongs to the liquid and finally it will be have the again

solid state of metal this is your beginning large intestine and how you see there more different shapes what is important

the shape is more like perometer and how you know the perometer just protect the energy inside keeping the energy inside

of the construction of the perometer and then you following the reactle area this is the end of the large intestine

and you will starts to find out tehe solid state of metal what its mean ya this is a solid state of metal what it suppose

to go out from you is this actually what you take it in from your mouth is this a black hole you organise the outside

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

of the black hole the information goes out is this like a gongs state that gongs state transform itself itself go again

and organise again in the solid metal but in different shape and the combination of the gongs inside so we have

the last slide just want to represent you the drawings of the Mike Naseef and this is actually what you see in our

journey during our journey inside our digestive system you see how the beginning we starting with the combination

of the gongs state of metal and the state of metal like a solid state of metal but how i told you each state of metal

exist in all state even sugar exist like a gongs state like a plasma state,like a liquid state and like a solid state

in one time so this is a combination of different materials and how you see the drawings of the Mike you may represent the

combination of gongs we have different orientation between them and he explain the things how we from the infinity and

how we from the twinity how we make the image mirror of the state of metal and is actually what its happened the

inside of our stomach,inside of our lungs and inside of our kidney when we produce our energy hydrogen we have a

twinity in two atoms of the hydrogen this is the same picture in the gongs state of hydrogen you are able to find out

the plasma images of the hydrogen and this twinity combine and from the three infinity and so on to make a one

solid combination state of metal and how that combination state of metal this is a vise versa so you from the more

complex state of metal you go to the twinity again and from the twinity you go again to the more complex state

of metal so actually our stomach our digestive system is just like a black hole it is transform to the metal state

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

to the gongs state and again to gongs state to the metal state and that is my understanding of the digestive system

i will be happy to hear Mr Keshe the next one explanations thank you very much for attention if you have questions

please ask me thank you

thank you ALia

Good morning everyone its Mike

ya i think you mike are here thank you very much if you want to explain about your drawing because this is really

interesting how just state of metal from twinity to more complex and visa versa

all right try to get here as soon as possible technology seems to be slowing a stand i dont have pictures i just on

skype right now and i have an ipad at a time just get one picture guys i do my drawing in front of me

the picture we have mike is the equations for balance is called your ANB diagrams there

all right i am looking in it

ok

all right it really became very pain to me everythings is done is infinity loops when i drew up the last design for

twinity that i believe the workshop is put together possibly to get here working model it really hate me when i look

at my facebook page and i couldn't say back and see it very smaller and i saw two infinity loops there and i started think

all right well if you stack two infinity loops together there you get hydrogens atom bonded well at the other

infinity loops to tie the first loops together a combines the two elements together and how to explain it we get the

third loop there third infinty loop it takes half of the power from one of the loops and half of the power in the other

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

loops so this is really get the blue ok i really down so the you understand the blues is actually the one loop ok

are represented as one mega fields is twisted the best way to explain it is to take the balloons blown up in the air

in twisted 180 degrees for a half right and now you have the equal pressure of air balloons ok we are trying to

accomplished equal pressure of the plasmetic pressure inside of these loops so in order to creat the balance that

is needed to make infinity the third infinity loops has to accept half of the hydrogen atom on their side applying

it i am sure explain it directly but this is way i see in my head anybody has antasks on it

ya its ok its more important here is only to say that the spinning process but i keep repeating during the workshop and how Mr Keshe say that the condition to recieve the some kinds of gongs and into the transform

of the metal we suppose to look after the pressure suppose after the positioning and regarding the positioning is

spining of the subject so even inside of rare organism of different state of metal we keep repeating the same model

and how you see from the beginning when we speak about stomach even in embryology we have spinning rotating all are

repitative model of what Mr Keshe explained before in different workshop how we suppose to analyse the gongs

state of metal that's why i show you drawing so far mike and how he in simple way able to explain the positioning

different materials and how to acheive the next one level of metal and to change that the gongs to the different

one just because of positioning and audinc in how to explain exactly in audinc the same gongs regarding the same

positioning border that was my understanding what drawing the mike like the end of the representation

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

thank you very much a mike to be here

your welcome and thank you very much for your help

ya probabl tuesday in more technical workshop for me its ok now thank you very much

all right you welcome

ok let's go to other question may i should move on Mr Keshe to liberal his talk on a metal

ya thank you very much

Good afternoon thank you very much Alia can you back on the picture where you were showing acids and stomach lining

is the liberal of classification no is just the picture of line giraffe

19 19 19th lights

ya the one on the left side is that hydrogen on the top with clore and potassium

yes sir they go inside of the women of the stomach this is the protom pump they are called in biology language

so the hydrogen changes with potassium with active form which used the energy ADP TO ADP and release the organic

phosporus but actually potassium go inside to the women again like through channels possibly and how

so

ya

so the potassium between the can you explain about the potassium is on lining or on the food

no the potassim can't from the wall of the stomach inside to the women of the food and how we saw the kidney this is the

same mechanism hydrogen ever following from potassium possibly ya

ok no problem thank you very much its just come back to later on

thank you very much alia

aww your welcome sir

Good AFternoon

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

Good morning

Good Evening where ever you are hopefully we can add to the knowledge of the man in different way first of all we call

to the explanation in a way we see the spaceship program health is fine

Going to the suspect of the stomach before the Doctor Alia expalining we go back what we explain in earlier discussion

and the look and the work of the stomach in the third on the top of the body of man as the instruments to produce

and to release and to facilitate materials for a physical part of the body of man infact this is a job of a stomach

and as we said before the einsten as we seen in the video the food enters the backup of the throws

the enternity the materials is the total vaccum conditions in a gravitational magnetic field enviorment in those

fact the megnatic tube which is fully nono layers blind which means infact everything in this tube the beginning to

the end as we seen in the video is nonocotic through the structure of the material creatment the whole process the

work of the stomach is to convert the metal state which is enter the body gravaitional megnatic field of

enviorment core of the stomach which itself is position into the wall tyre from the acid core itseld to convert

these materials so plasmetic and energical system before the able to talk as we explain before the stomach is the reverse process of the work

of the sun and the earth where the energy arrived from the sun and enter face of the fuel of the earth gravitational

megnatic field is so now the hydrogen and helium majority different way of work and then into was the hydrogen into

the oxygen and carbon and in that process just absorb by the plants form and when the man eats these materials

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

put in the stomach the whole process starts to convert is only metals back to the raise of the sun arrived on the

surface of the upper atmosphere into the energy level that time to be absorb or extraction by the method of intestine

so the stomach is a reverse into a metal of plasma how is done is very liberat how does it work it is well

designed over billions of years they are just admit to it and as you seen its just collection of different gongs

in different strength which make the physical structure of the stomach if they tightly pack they perform as we called the

stomach itseld the wall of the stomach as we seen from doctor Alia the different layers of this gongs which infaact

the later point we can come back to it we explain the megnatic and plasmetic point of view and infaacts what happens

is that wants the material into the stomach in the megnatic gravitational field in a vaccum condition

now the process starts in reverse you have seen the reverse of the metal to gongs to see your two boxes so what happens

in your two boxes you put plate in a costic or you had the electric charge in a very low level and then what happened

the metal didn't melt but lose enough the materials become a gas so in the ody of the man in the stomach the same

process carry on and then when plate out to the right condiional enviornment of salt you creat a condtion to convert

nono material which you had on the plate into a gas which is a free energy and then we have seen then you put the energy

into our cores react with the plate and releases megnatic field and is exactly what happened in your stomach so what

hapened doctor Alia shows that the working of the stomach and have a single question if you could explain about the

potassium and clore and the rest of it just look at the structure you have potassium you have oxidation and hydration

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

you have the perfect costic condition which you did in the extreaming so was has been assumed that enzymes to creat

in the digestive system of metal infact they creat a costic conditons to be able to the nono sides to all the materials

in the stomach what is arrived so now you look the structure in different way doctor Alia explained the presence of

the potassium and then at the same time most of the food eat the salt of amount which creates NOH and KOH

with this conditions allownce material enter to the body is now in the gravitational magnetic field enviornment to

become non sides so now materials stopping coming field is exactly like ur nono materials in stomach in your two boxes

now you have them nono sides and then what you have at the same time we dissalt in the body of the stoamch what you eat

you have now the second process presence in the safe link process so now you have sodium or conditional sodium to

covert the gongses to release the materials into a gas so the presence of potassium and all water which takes two hydrogen

is to creat the condtion of the costics to creat the nono materials and then in the presence of the salt in the stomach

the nono materials immidiately converted into a gas and if you look at the structure what comes in the somach after

the job is done is exactly which you have the gas materials in the bottom of your guts so now we see in the reality

of plasmetic conditions and not told wass the wall of the embryology and the sun now what happens exactly in the process

as you creat the gongs is a process you have seen the you could termalite and other motor the same energy is produced by the

plasmetic conditions which this energy aborbs or extracted by the wall the stomach and according to the different layers

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

of stomach different gongs of layers absorbs energy and different energies in a plasmatic condition in restrict energy

creative impulses and interaction and contraction and this energy which is release in the production of gas

is an energy which is used for contruction and the emotion of the interaction itself so the energy for the motion and

creation of nono layers comes from change of the method in the nono and from the nono in the gongs immidiately which is absorbed

immidiately by the stomach or the wall of the stomach which is plasmatic as each players carries a different

gravitational method and the feels is strength and contracts or absorbs the energy and the emotional of the stomach

but at the same time those of you who have work at the electrical nono layers as the wall of the stomach themself

or nono coted because all of made of cancer as nono layers they released hard of this energy to the nono side

which are immidiately such of them so they creation of nono material the creaton of the gas is pwerfully done by the

AOH and by the salt partially is done by the circle which is released by the food itself in tranfoming to the gongs

which parts creates the energy for the motion and partially created is non layering energy which is this to the creation

of nono materials or in the stomach so in reality the proces of the stomach the work of the stomach is very very simple

there is no more twist we can more a lot of liberated and discussion about it and a lot of things all the structure

you see of stomach is all to creat different gravitational megnatic field which is the combination of these

gravitational megnatic field in the wall creative different megnatic strength in the stomach there is allows nono layers

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

to be created to different kind of materials which has the stomach this is very much to say as you see the magnetic field

in the gongs material we see in the tunnels of flow of cancer magnetic field through this world on the last year

so in fact all stomach is a magnetic core which is surrounded by a gongs and itself externally gravitational

magnetic field forces and in structure creates different condition that they can allow very much different materials

to be returned into a gas and these position on the holes and the gaps and every structure of fibre you see in the stomach

it's been very much as you put copper plate and copper plates of none you get the copper when you have a copper and zinc

then you see the change of copper with everything else of materials these craps and these magnetic field around the stomach

by the wall of the stomach is to create the condition for the conversion of the metals into different gongs later on

can be absorbed by the intestine so the work of the stomach is not that complicated it's a conversion unit and part

of this conversion creates heat because of its physical condition and this heat is a part of conversion of

the body of the man which returns from conversion creates his own by coming in touch with the skin of the man because as all

you have seen doctors have explain to us we have never seen any electrical heater around your body from the body holes

60 to 70 degrees temperature because this is a part of the conversion of the gongs, and then gongs changes into plasma

and this process actually is not in the stomach and the whole production in the plasmetic magnetic field environment

of wall leading creation of cistic and salt in the language you understand really and creating different gravitational

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

magnetic field to the different elements leads to create the different gong's element that becomes the produce in

the stomach that goes to the intestine but at the same time this condition created is all gravitational magnetic field

pressure which leads to forcing the food to be pushed or to be interacted unchannels to the intestine and

where the conditions change that one part of the body can't perform and gong's state of metal changes from body

should be changed to another so the stomach is to us conversion unit and to be used conversion unit a lot in the

all application of addition by use of the water in fact what we do we instruct the stomach what to accept how to

accept how to change his premises that we need to be absorbed opened up later in the intestine therefore I can't go

any deeper to us is a simplest this and we can go to the other level pictures was as you have been all you understood

and you make it yourself you see how you knowing not understanding the whole totality has man so many assumptions

and acidity and rest of it but in fact if you understood the production of the gong's nono layers exist that the

doctor alia put picture upon it as we asked the question about immediately of shown you, you sealing with a salt and

costic conditions I miss all repeats of your balls of the CO<sub>2</sub> and in the some of the waves because now you create

the different kind of magnetic field around your CO<sub>2</sub> and you see how the different methods are created in the boxes

you have and you see how you create the food and energy plasmetic conditions and if you want to understand and do this in

more depth follow the same procedure in your like copper's foods and fresh create a costic conditions and then called

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

a soft condition you will see the food materials changes into the materials of the stomach your knowledge is

to the external level you can do these things and the knowledge will do in the instituet we have a university

scientist from the mechincal background gravitational background different kind of science will convert into the

knowledge of gas and technology of the space and then you understand how easily have make different materials by the

construction of magnetic field with acidity and molecule acid and we call it to us as a costic condition because we see

how the process works any questions

thank you Mr Keshe

sorry very short us thats is called the stomach

hahaha

how sweets the effect the interaction of the walls of the stomach

the sweets are less more of the hydrogen the only things you eat sweet sugars is use of the hydrogen nothing else

is the conversion hydrogen if you understand the process of the gongs most of the energy of hydrogen in sugar pine

is realist of the stomach level because immidiate of the gongs itself atomic hydrogren,atomic hydrogen gongs thats why

you eat sweets after the food because the bonding the gravitational magnetic field is equal to all the stomach

so actually creating hydrogen

in the way of the gongs of hydrogen in atomic instruction but you said is immidiately that's all you do

so as human we tend to light this appearently because this is many drugs as well many forms of suger that have

the the hydrogen we seems to need or discreat can you say something about that

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

let me explain to you very simple when you take the CH bond materials the bond itself as two characteristics

hydrogen which is use rapid regenerates and then you have the carbon which is in information current release in your body

which gains starts information as our we received everything that's why you take sugar you feel good because the carbon is a conductor

and its a transformativ information part of the i mean acid and energy but don't forget something which is very important that

all the construction of the body of the man in the stomach and the rest worker as a super conductive condition

because everything its gongs and nono layers state everything is separated by the gravitational magnetic field so

the energy you received the energy is released in the separation of the hydrogen but everything going to be used for

the information the carbon released and that carbon released as the information of the energy carries recieved by the

information of conducts what we called the energy need satisfied thats why like sweets i mean you feel good when you sugar

all we take the sweet becuase energy and the information one feeds to the emotional part of the brain and one feeds

that likes to it and most of the energy is more for release in less in stomach not intestine that's why such a gravity

effect something which a lot of chemist with like i am talking about the yesterday as chemist

hahaha

so you look at the lines and double bond and single bond and infact we will differnet plasmetic conditions is two

atmosphere energy and how cross with separate each other and when you have the CH bond which is very weak hydrogen can be

released and that hydrogen in the gravitational magnetic field enviorment immidiatley such an amount released the

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

wall of the stomach and then because of the carbon being in the opposition part of there i mean structure magnetic field

of strength you feel the physical increase and you feel the emotional increased that be satisfied and that's why we like sugar we go for it we chochlates because its satisfied both they feeling of energy received is ok

because the energy received directly of the hydrogen

i often that reason the over use such sugars to conjects to use as my digestion and because a lot of issues

so i had give up chochlate recently

can you say something about that is the too much energy all advance on the body

no most of them changes as you speak about comes not much to do with digestion system this is very much like a long

as you get order the formation the shape and the pressure you put or the way you sits changes the gravitational

magnetic field of the enviorment of the stomach so certain things feels which you used to receive or you could used

its like a plate have been moved so its feels a sub change by physical change you can change the enviorment of physically

gravitational magnetic field the strength of the stomach and the you find out uncertainty same like before

the place of the stomach is i should to say

so when i get to like this concept the solar plexis the sun and in the center the furnes and the fire place as a title of this

workshop and this concept was called the fire in the belly which is the turned back hman used to humilate someone

health spirits well strength you might say they really feeling life a used an often but you can have a order person

that shows that fire in a belly too the most people think to lose that fire in a belly i am wondering that

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

over use the such things sugar certain foods or certain energy pressure over taking and fast and that kind of things

the most of the work of the stomach is physical not too much part of the emotional you feel in our stomach

i guess the essence of the question what is the difference between that feeling part of stomach and the anatomy and the

transformation of food that we see

the feeling part comes because of two things the large amount of blood which flows around the system and the blood

is the emotional part of the man so the reason for its come because its heavily because of heavy amount of blood flows

and emotional part doesn't come to the structure to the blood flow which carries emotion and at the same time your

physicality has to adjust itselfs to whats we called or to change of the combination of the enviornment

its very much partially them the food atually what we ask to eat has to do with partially and emotinally of the

blood and at the same time the gravitational magnetic field is not that we have the stomach and everything is in control

in it but the enviornment we are creating its own external like putting nono cotic wire around your core the

enviornment design what kind of materials stomach digest because its now just the plates the magnetic field which

put around we called magentic field that's why we can eat such kind of food becuae now we have no feeling for it

because its not just a plate as changed but the layers made of gongs all your stomach so enviornment of gongs affects the

conditions and absorpion and feeding of molecule gravitational magnetic field in stomachs allow digestion

when you speak about the working of the stomach nothing is more less in the structure of the body of man is affected

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

as much as the stomach and environment decides what materials and what conditions one thickness and what holds in a way

be position in the tissue of the stomach in the fire of red to absorb products or certain materials and that

materials is how going to be done is very much i can see in the people who put copper wiring or nono layers wire around

the core they changed on the visual materials this is happening in your life the environment of the gravitational

magnetic field dictates in the gravitational magnetic field in the stomach and what things can be absorbed and one

things this is the unnecessary video to all get to changed the conditions what is the biggest problem in the movements

to see is the way to people who get what they called the ring in the stomach of the intestine of the stomach

i see the complications the diabetics and cancers which is rest the part of the body of the man the stomach conjections

is because you eat less you can create the same conditions for as the reductions of the stomach with no problem by using

very much system very similar to the Keshe foundation of the spaceship institute release recently you create the

conditions not to the environment of the gravitational magnetic field inside the stomach doesn't see or demands

energy because to receive the energy from outside environment of the lining and it takes from the needs of it we

had a test about in 2005 in a 10 years ago we nothing to do as straight forward eating as normal leading at 1085kg

hundred a thirty kilograms is just 6 months to drinking water which we control the energy and gravitational magnetic field

it should be the normal life so you change the environment of the stomach i see this stomach should make the biggest

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

problem which is created but if you can like sugar to receive energy and eat in the way which the body does not all

some things and reduce it this is the new technology we should release in the coming months it can be reduced weights

eating normal to the body so what happened as you do in naturally the skin takes intact the body keeps straight or less

and overtime 6 months or 12 months lose the weight because have lost the part of the process we developed you don't

the weight put out pack up and you don't need any operations this is the health part of the program taught which will be

do it by the foundations in the coming month in the hospitals room. i am sure how you easily creating environment

around the stomach or inside the stomach and then naturally body seems to be stomach you provide we are need to do it

and we are people find very become to hunger to eat and greet to eat just this is the part of the rest of it

i know the large number of people who listens to different programs i will keep on repeating it if you running different kinds

of organisation of health or by default different kind of research now the keshe foundation has becomes institutes of the university

you can approach and research to be done aspects of technology on the field you want to stored the environment in

your society with very production and put up your technology you can have it what you pay for the rest of humanity

that's its exclusive and we have seen in this way two column to the keshe foundation of the spaceship institute technology

to the way introduction the technology for the radiation of the cancers and you can control the body is not stomach

because you decide what you do to the other question

there was a question in the skype here can you talk about the various of carbohydrates verses protein verses fats

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

what you mean in the way

look at the structure everything in the gongs state carbohydrate the rates of the flow the rate of the conversion on the

release of the energy protein because of the binding releases energy in different direction in diferent enviorment is not

much you have the chemical reaction to the carbon of the hydrogen and the nitrogen and oxygen the totality of the energy

makes the gravitational magnetic field of what i mean you ask but when you bring into the metal state to see the

combination of the materials as metal state and hoping to show you very short time also into the health but maybe its

not the life time the process is how much the body absorbs and how much the energy release and what body hows abosrbs

reaches in a sugar because of the simple change and the small what is called gravitational magnetic field to the eternity

to the near structure can absorb the energy they habbit so they release in the absorber and transparent with a protein you have a large plasma and different feels the high levels thats all it is

large of process long of process more masses gravitational magnetic field mass which you play with it

you have to start with thinking from the chemistry maybe we have to make it plasma chemistry keshe foundation as

come out with terminology before the behaves of the chemical gongs in the chemical structure

we will release a large number of new instrument and deduction to the keshe foundation externally by the coming months

we have very active manufacture factory and in chin we are also here and in europe this is not going to setup the

factory the factory is our the settlement sciences colliberate by the partnership of the keshe foundation partially

in some times ago in the university the italian side of university of keshe foundation together invlove it and then we show how it works and running

Keshe there is another question basically is about the process and unprocess foods and i might through in maybe

organics and non organics food how that the stomach in the terms of megra fields and release of those fields

to me organic and non organic is a very simple process when you have organic model organic means they don't use chemical

for the use of photolices and even the photolices comes with animlas full of what we called antibiotics

secondly if you speak about any kind of photolises they all carries such an amount of molecule potassium they

carries such an amount of materials which are highly and partially gongs state and we absorbs energy in different way

the plans of transversy the most of the albandges with organic field is better it if we feel is real organic where it was

supposed to be it respect to process to non process food is to do salt conducts of the movements we will discussing

it here the trick of the trade has become and the color of the process of food large contents of solid sodium and cloric

to see sodium clore in the body has nono layers on the costic and then you understand the condition which creats

the stomach in the absorption of the enegy gongses thats all difference does you creat the higher if you understand

what the process is the process boot is the high level of salt and if you know how affects its salt to change the

change the quantity in your COH solutions then you understand what process we does in your stomach put it on the

preserve in it but is huge you buy the susage in your supermarket then level of salt is huge and what does it to creat the

center conditions in the body as a certain magnetic field level which body has work to thats what we do if you have all

more less 95% of the ice cream sold on the high street to look inside it's a beautiful trick plate in it of play this before

they put salts preservative but in fact by adding more amount of salt they add little amount of sugar in materials

so they said a lot of money because of in your tongue you have part which taste the salts and then immediately the part

which taste the sweets because of it's just you touch ice cream doesn't taste so much for example but

when other salts into it has taste so sweet in fact we have received only sugar they with the trick of energy released

by which one of the tongue as the information carriers so all the foods on the carriers of preservative at salt

and level of salt which enters in the stomach certain conditions of the creation of gas in the stomach and certain

wants that process in creating that seen in your boxes energy release and that energy touches the emotional part of

body which blood flows and then you feel good or yet addicted to the foods they control your addiction literally creates

certain food through what they called preservative and all salts content and salts enter the body creates

certain environment the areas we play from the different food because energy release at that level transverse the

emotional part of the body and you feel good with it or creates the certain amount of energy that the walls of the

stomach work on and then the less energy needs for example from the hydrogen you find it truly system most of the

process food is on electronic system in frequency and what we frequency who can here was they tune to salt gravitational

magnetic fields which creates the environment in the stomach and the energy which is released by same protein which is added

to it you crave for a food and then you get addicted to it

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

any other question

i want to ask the regarding to dissolve salt subjecting how much salts really need each day and the normal one and i know

when somebody kept in hospital

what is the sodium

i am calling metrons

what is sodium in atomic mass

sodium 22

ok

now the doctor alia shows the potassium enjunction in the stomach what is potassium

39

now you can say good morning the body plays the division of the sodium because you have to let me explain when

potassium does in the lining in the stomach potassium under the conditions of the vacuum of stomach or in the

body of the man because we have potassium gages it behaves as potassium for radio active to leads to satellisation

that's why in the costic are always used at potassium because the small fraction of potassium of radio active

now if you work around in the gravitational magnetic field of potassium and sodium you see its nearly half of the

other part in the same of gravitational magnetic field you talk about then you see you can you don't necessary needs

sodium as a salt because in settling of conditions which means the presence of the hydrogen atomic mass ways the

magnetic field of the potassium creates that condition in after potassium salt we don't need sodium as such we look

for it you have to look the structure of the gangs not chemical reactions then you can understand very easy to have

enviormental field reactors which is magnetic field base we don't need sodium under no circumstances even we though

to take it to the process if you look at the structure of the nitrogen i mean no acid nitrogen does the same things

as the potassium does is in there as sattelite system as release of the radiation on the extray to allow the

release of the energy from the electro vibrational in the body of the man as you explain it but in a way as a plasmetic

conditions potassium of the magnetic field in exchange can be an available to the release of the hydrogen of the plasma

to change the size of the plasma very much as you go from one metal to another the energy release is in the way able

for hydrogen to be absorbs

there is absoluetly no need for salt even though the reason as the body of the man to the essential as become used

to shortcut use in potassium

Mr Keshe i see that the calcium is in part of that diagram shows interaction so in similar way that the calcium might

be in the top order some people will use in see of two kids and the calcium might out first before in the other

interaction i suspecting that might be similiar in the walls of the stomach so the sodium with the out of balance of the calcium perhaps

but as the structure you look at gongs state the calcium of the magnesium all creat the usaully the associated with

each other from the gravitational magnetic field point of view after finish the part of the human body that we go to

## Transcript from 19<sup>th</sup> Health Teaching Workshop held February 17, 2015

(v1 2016-03-10) ROUGH DRAFT (Transcription has not been verified. Double check info with video)

the what we called glangs and the operations of the glangs and then going to diseases and then in that point i will explain

how for example the gravitational magnetic field of calcium plays even in potassium plays in the conditions of the

creation of the cells in brain and emotional part of the body and how for example peristaltic glangs uses calcium

injection to the process with magnesium to create the feeling and the sense of the potassium

please we go it out i want to finish this structure of the body of the man then we go to the diseases and emotional

part and how emotional part affects what we called secretory they will definitely look forward to that

will give me a few years hahaha i think so i will be amazed up to this is the number 19th health series and i was

in there the 19th different areas of the body that we can even to discuss just we touch the service in many ways

if you want know about arms and legs then we have an amazing close that the real part of the working of man even those

we just seem other things

oh that's interesting comments we have to learn about it later

let me explain about it the arm works as a physical and emotional part if you don't like to touch then

don't touch it by the physicality grabs in so arms and legs are much more complicated what i called thesis of the

body running in the stomach itself because in the body of the man we show just now the food enters in the body and

then get digestive and other energy in same kind of conversion by the touch skin of the man the skin of the man hand

is a kind of stomach because you absorb energy by the touching exactly what you absorb energy by stomach

and intestine by the outside the body is not inside

Mr keshe if you said the grab up the workshop now we are ready we will do next workshop for spanish the next one will

be spanish for half an hour

all right

6 o'clock

that's perfect thankyou very much see you later on

thankyou very much Mr Keshe and Doctor ALia and everyone else for helping our in workshop

can i explain something before i forget i will see you now keshe foundation as released this plains part this week and

all available next or two day on the keshe foundation website or you can go directly order us if you want to be

distributes for them through the keshe foundation in china we put all information for distribbuting on the websites

in the coming days

thankyou very much

thankyou very much Mr Keshe Good bye

ok so ends the 19th teaching workshop thankyou everybody for attending.....

.....
