Keshe: (K) we are waiting for the legal papers on the CO2 GANS; this is for using the technology and how it is used. We have asked for support from some international organization and the trial cannot be done without major players. We need the backing and the support for such a trial. One thing you will have noticed last week we shared the the Pen from the Keshe Foundation in Italy, the Health Pad, the Magrav Car Power and the Magrav Power Unit. These are new generations of these units. The Magrav unit that will be delivered in shops in Italy and around the world. The new generation of the power unit we announced on Thursday that we will start in the progress of adding six more items in the next 6 weeks into production.

K: the Magrav systems all carry the seal of Keshe Foundation. The car units are going to be changed and are more effective; in the factory they have extended the wires. You put the unit in the boot of the car. The process is much more efficient. In the coming days and weeks SGS certification will be produced for the power units and the car unit. They will monitor the power of the systems. Some operations want to retail the products. There are other developments in production that will change the application of the technology. What is important is how we teach and how we develop the teaching worldwide and how much we can add. How much more can we learn and to what extent can we learn in respect to the application of the technology—medical application, energy application and more. We started with the nano-technology and we spread out in several directions. We went to energy and we went to space with it, nano materials, farming and health. Now we see the divergence and this is what is important. Everything will diverge to one point. In a week or so you will understand what we mean.

K: what is important is to understand this process, where we came from the matter estate, we went through the GANS and now we have come to the final point. We expect to show new application in the dimensions of this technology. From now on we only deal with plasma. Now that we only use plasma and the interaction of plasma in one state of matter. this is where the change has come and this is more or less the final leg of the total space technology. The matter state interaction of the GANS exists. This is where we will change the course and the development. We are going into a deep understanding that will carry a lot of people with us. In the next 14 days expect huge changes on the Keshe Foundation. All of you be asked to join in to change the course. What this means is that we introduce a new direction, a new way which you all know. We have come to the point that now we are ready for the final push and this will

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

be very important. We will try to disclose it this Thursday. It is a fundamental change in a way that a lot of you have had a problem in different aspects of this technology.

K: you could all understand part and you could see the effect of part and now we bring it together. Soon we will see the change in the course of plasma technology in the way that we will disclose it. if you go to the literature of the teaching from the very first days it has always been in front of you. Now you have to see it to understand it and apply it to change the whole structure. We have seen that doctors and scientists are building the new medical systems. It has taken years to move at a speed everyone could understand. What we saw with the health we always interacted with the matter and the GANS. Do we need to interact at that level or is there a new option.

K: I received a text yesterday from Sabrina in Rome. You saw Sabrina in the week of the blueprints for the Magrav systems and she was here as part of the crew. We stayed in Rome and we decided to visit with Sabrina. In meeting with her she has had some health issues and she is one of the women who started making the GANS and the coils. She has a good understanding. I explained to her the use of what I showed last Thursday and how to make the flat system with the double ring and how you apply the technology. You can hold one ring in one hand and transfer the energy across. She has made the system herself at home. She has seen the result. It would be nice for her to tell us how these double ring flat systems have changed her life. These double coil systems are part of the new products that we will offer worldwide and there is a 'twist' with it that will allow the transformation to be very rapid.

K: I received communications that you wanted me to explain more about the new coils. You have to understand if you go back to the Magrav system that you have a double ring operation. This means you have a ring that has gravitational on the inside and magnetic on the outside. As I explained before this is part of another setup that has more gravitational. What you create is an environment that is the exact duplication of the planet earth. This means that the system creates its own gravitational-magnetic field. This is what the difference is and how the development changes and how we see there is a different interaction. This is how you allow the environment of the whole rings to become magnetic-gravitational. This means that the double ring as magnetical has a gravitational element. The inside ring magnetical has a gravitational element. These two simultaneously interact in all directions. It is now defined and you have magnetical with magnetical adding a new size and gravitational with gravitational adding a new size.

K: now you have created a dynamic interaction with the field of plasma and this dynamic is not the same as the vibration of the electrons. This creates an atmosphere which is plasmatic in structure and behaves as a system that gives and takes. When you place your finger on the system and cover it with the palm of your hand over the whole system now you see the change; you are receiving from the inner magnetic-gravitational and the backend with your hand on the back, you are giving back what has gone through the cycle through the body of the man. the system is effective and it becomes the filtering system itself because it works in a condition that it gives and it takes and you have to understand the way I showed you.

K: the secret in handling these units is not just building it and holding it and understanding what you hold. We hold the system in the magnetic-gravitational in one part, but we hold the gravitational-magnetic in totality on the other part. So, we create a variation in the depth of the plasma. We create a change in the spectrum of the plasma with the plasma of our own body. You have to remember that the most fundamental part of the whole structure is understanding that the body of the man is in a GANS state and your skin is more or less a plasma which is reduced in speed to be in a nano-condition. Your skin is in a condition of matter of nano-state and your fingers are the conductor and the absorber of the energy of the gans of the rings. There is no difference between you taking energy to receive what you need in your body and when you plug in to the electricity and you try to use the energy for the house or whatever.

K: so, what is important is to ha understand this from the mental principal and to understand that you, the part of you that is in touch with the system is an integral and most important part of the equation. Without it your nano particle of your body is the structure which is needed. We are talking about the simple double core Magrav system. What we see is in holding the system you create the condition where you allow the gans in your body to create the balance. Your fingers are separate and create a division. Secondly, you take more in that direction so you have a change. you force the system to the 129 Magrav system. You create the change. you have to hold the system in a way that your fingers are in the back. Your two fingers –pointer and middle are connected with emotion; the ring finger and pinky finger are connected with physicality and as you see the physicality is always weaker and a less force. You have a lot of energy in the first two fingers and the emotion is always predominant. The emotion is the controller.

K: when you use systems like this especially, use the hand or your feet realize this one thing: you are bringing in the operation of the emotion and the physicality into the order where your index creates the _____ in the conditioning and forces the release of the plasma energy. This is why these rings will become part of normal life in time. when you carry a system like you feed

the emotion and the physicality. With your index right in the center you create the balance between the two. The gradient is more and it creates the flow which affects the plasma to be changed and to create the atmosphere around you. In a way it is a plasmatic interaction from one to another. Those of you who will test these things will understand how powerful this new method of plasma transfer is. It is so powerful that it can affect every condition which is psychosomatic. This is the interaction of physicality in the GANS state and emotion in the non-tangible GANS energy. This is where the change will come.

K: when we offer you these technologies and assume you understand, now we go into more depth. We have built up a lot of knowledge but very few have gathered it together. The rest is in pieces which we need to have so you can apply it the correct way. In cases of paralysis you can use the same understanding and process and connect the emotion to the physical part. Now all paralysis are due to physical obstruction of energy and are due to unbalance in the physicality and the emotion. These double rings are gold. The inside ring is your emotion and the outside ring is your physicality. You connect the totality together. When I started building these rings, a magnet inside of a magnet this is what I set out to do and that was to create interaction between physicality and the emotion. It is understanding physicality and understanding emotion. You can use the emotion to improve the condition of the physicality, so you satisfy where the two find balance and how you will manifest yourself in presence and totality.

K: the process is simple and direct and it is to deliver energy in the plasmatic form and it doesn't matter if it is a plant, if it is a body, if it is space or if it is for the production of material. In so many ways if you understand the totality and some are understanding and expanding the knowledge, we can understand ... gradient. With the fingers you create the gradient and two of your fingers are the physical and two are the emotional. In every direction you settle the balance between the two. This is how we will expand.

K: I will show you a new dimension on Thursday. We have made a lot of headway since Thursday and since then governments want to know and want to get involved in understanding. What I am trying to do in the coming week we bring living scientists around the world to discuss and explain and bring different technologies to the table. Gradually we all learn how this process works and how we can get in the nitty gritty. When you see a unit, don't look at what the unit can do, but how it does it and what creates the condition for the effect.

K: one man uses crystal in his system. If the summation is correct, go back to Dec. or Jan. where I said if you use crystal power you have much more effective systems. A lot of people were disappointed and some tried different crystals and some created new crystal structures. Those of you who do not have crystals and cannot get hold of pure crystals you can make it yourself. It is very easy to make powerful crystals, so powerful you will be shocked at how they work. This is something which in the coming time I will show and explain.

K; look at the system, the pen, in the ice. What D. has done shows the flow of the fields in the cup. This will come back to you in the coming time. WE have put a coil in the water which was inside the crystal mass. This was lake water without salt or minerals. We put this water and froze it. it showed the magnet on the coils. The ice was completely white and you can see the waves of the magnetics. They show a picture of the pen above the water; the water turns completely white when frozen. There is the projection of the magnetic in the water. There is no contact between the coil and the ice, and the ice has the effects of the plasma frozen in like 'feathers' or 'waves.'
