Keshe (K): we like to bring in students around the world on structures they are working with to share the knowledge. Stephen Zang provided the pictures from China.

K: they are putting the panels with the coils on two clothes racks (9:09 minutes). They use a workman's helmet for the helmet. That's interesting how they have made the helmet. We have seen this machine with the blue top (10.50 minutes) and we have a copy of the picture in the lab here. The one with the blue on it is a medical unit. There is a star formation at 11.41 minutes. Another picture is of the workman's helmet with the coils at 12 minutes. We have given them permission in China to sell some of our units on EBay so they can finance their researchers. You can buy components from the labs in China but they are not allowed to export out of the country. At 14.31 minutes there is a pyramid hat attached by a tube to gans water. The tube goes into a jar with a pump to keep the water circulating through the tubes in the pyramid hat. Teachers in different Chinese universities are teaching our methods. Keshe Foundation in China is huge. All the Tues and Thurs teachings will be done in Chinese out of Beijing in a short time and the Chinese organization will announce that you can come to the teachings. Because of the time difference there is no interference with our Tues and Thurs teachings.

K: another picture of the pyramid hat made of plastic coils attached to a jar of gans water and circulating through the hat. (16.47 minutes). We are seeing the same kind of teaching structures in Africa. Let me explain to the Chinese people: when we arrive please make sure all your systems, all the materials you have used, all the applications, all the research you have done and you have data for, the gans you have produced and this will bring government organizations and researchers together as we show we have scientific data. See 18.52 minutes for an enclosed tent with side panels for sitting treatment between the panels. If you listen to the teachings, we will announce in Chinese in two or three districts and link you to become teachers for the environmental organizations. You Chinese can help your government rapidly. At 20.01 minutes there are panels hanging from adjustable clothes racks so one can sit on a stool while receiving a treatment. When you hear the announcement, organize it. We are not coming to China for about 6 months so there is plenty of time. We are coming in the fall on an official visit which has been requested at the highest level. In the coming time we will be going to Japan for up to 10 days for the Japanese Keshe Foundation.

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

Rick: Stephen Zang says they are using zinc wire in the coils and asks you to comment. Is it better than copper?

K: when you use zinc oxide these are for emotional diseases and they are fantastic. See the coil/battery set up at 22.29 minutes. These systems are effective and if you make systems totally out of zinc wire with the coils at 90 degrees to each other.

K: the systems like this are fantastic especially if you use zinc coils on your batteries or zinc wire. If you make systems totally out of zinc to be your capacitors, to be your battery capacitors and your coils these systems are exclusive for mental disorders such as Alzheimer's and Parkinson's. These are the best solution. The others with the copper coils are for use on the body. Especially make the helmet, the zinc coils are the best. Be careful how you do it. You cannot use CO2 gas liquid on these. You must realize that in the brain if you keep everything homogenous it is perfect for psychological and emotional—the zinc coils are perfect.

K: if forgot to tell you that our visit to Bulgaria is official so please contact the Keshe Foundation through the webmaster.

K: the structure of the zinc coils shown at 24:46 minutes, be careful that you create zinc oxide and you use zinc and CO2 water liquid plasma—you will see fantastic results with these. I would love to see these small ones on a helmet with the CO2 and zinc oxide liquid plasma. Please mix it and we could do the helmet here and do a special test and we could use these immediately in Europe.

K: Keshe Foundation Arizona has now started operation. We expect Pennsylvania to come in a short time. I say this because in Germany there have been recommendations to attack the factory and say derogatory things. Please make these things and bring attention that the factory is opened up. You are welcome to go through the factory and you can bring units for testing. Let people know that you will show them how to make units and test them for your specific purposes. Do not object to these things.

K: 28.57 minutes shows the Arizona Keshe Foundation factory. Keshe Foundation Italy sends the material and the boxes and health pads and pens look the same. They get their own licensing. At 30.46 you will see the nano coating machine made by John Pond (?) in Canada. Keshe

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

Foundation has become a family structure. There is now an automatic coil making machines. In the next 3 months we will announce that we are vertical structure. See a picture of that machine at 31.39 minutes. We have bought 3 of these for Keshe Foundation in Italy. You get full support. All the factories start in a small scale and then building up. This is Colonel Hanke (?) has tested the technology at home and is high ranking. He is taking everything to the highest level in the US government and is responsible and is on the board of directors Keshe Foundation USA. Because he has tested things himself he is taking the technology directly to the pentagon and the white house. He is highly respected and he wanted to be there when the factory opened. Armand is there also. Now this increases by numbers. They don't have to wait—Keshe Foundation in Italy will send the raw materials and boxes so you can get into production. This is beautiful to see.

K: we repeat these on Thursday. For the Italian public from next week you can send the request to Keshe Foundation Italy to receive a power unit. There is a specific form for Italians only and send the form back filled out online. Upon approval of your credibility which has nothing to do with Keshe Foundation. With 10 Euro for the first payment once the bank approves a Magrav power unit. There is a payment of 10 Euro per month for 4 or 5 years and you will benefit in electric savings for \$50 to \$60 the first month. So, you save 100 Euros a month and pay 10 Euro for the unit. From next week if you are Italian this arrangement was made with a major bank in Italy. You will be able to buy a Magrav unit for 10 Euro. Your credit reference has to be accepted by the bank. Estimated numbers by the bank is that we will do 9 million pieces for Italy. The factory will go into full production to meet the demand. You must have an address and bank account in Italy in which the 10 Euro per month will be paid to one of the top 3 banks in Italy. The bank will approve the application. This should be ready by end of next week. We try to make the same arrangement with other banks and organizations in EU. This will give a boost to Keshe Foundation in other countries in EU.

K: on Thursday teaching we will give 2 hours of teaching to Ghana Keshe Foundation. They will show the results of their data and what they have produced and how we are going into production in Ghana in about 6 weeks to produce Magrav system and cleaning up the water. There is a joint venture between the Ghanaian Government and the Keshe Foundation. Keshe Foundation owns 60% of the shares and Ghana Atomic Agency owns the other 40%. This is the first joint venture between government and Keshe Foundation. Benjamin has tested and shown the reduction in energy consumption and the clean up of the water. All of our returns from whatever is sold in Africa will go back into the society of Ghana. They had tested the equipment and the technology; you will see the papers presented by scientists. We have 3 or 4 more joint ventures to announce in the coming weeks. We expect 3 more governments in Africa and 2

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

more in Asia to join us. WE have started negotiations with a couple of other countries who have approached us. If you are from any country from Africa please get in touch with us and we have trusted people such as Benjamin, Alexz taking the knowledge in. The knowledge is now embedded in Kenya.

Jackie (J): 46.34 minutes. This is gans of sea water. In normal gans you have the gans and the water. Now I am trying to make this to 3 layers and not 2 layers. I found something to create the gap between the 2 layers and have 3 different layers and it is the same as seawater but not as heavy. 47.35 minutes—here is the seawater, another layer and then the liquid gans. Here is another set up from an Avocado. There are 3 distinct layers. 48 minutes. More of the matter goes to the top, then you have a gap and then you have the liquid layer. When I shake it, after a few minutes there is still the total separation of the elements. The acidity and the basics and if you look at the other side in the same position you have the opposite scale. When you mix the elements you have the total separation and you can play with both sides and you can play with the different combinations and reactions and strengths.

K: you brought something to us last week...you keep the pool heated at 30 degrees centigrade in the winter and there is no bacteria or algae in the water.

J: I have the swimming pool with 2 containers. One is copper wire nano coated with CO₂ gans and one is copper wire with the CO. This is in the swimming pool. See picture at 51.24. When I opened the swimming pool I put 2 liters of liquid plasma and 3 liters of distilled water. I put the liquid plasma directly into the swimming pool. Now it is at 30 degrees and it is totally clean. I can adjust if I want to clean it tomorrow I add more liquid plasma CO and if I want people for their emotion I can put more CO₂ liquid plasma into it.

K: you have become a 'swimming pool magician.' Let me ask, when you have swimming pools you have to check the chlorine and pH.

J: there is no chlorine.

K: if you measure on the chlorine scale?

J: the husband of my sister does the chlorine. But I can check the pH and with that I can go higher or lower.

K: let me tell the test we have done. In a swimming pool we have put one plate of 15cm nano-coated copper plate in a plastic bag. It has been hanging in the pool for 7 or 8 months. When we start it we kept the chlorine blocks over the winter and nothing else has been added. When we

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

opened the pool to start we saw something strange. The chlorine is very high and the pH is 8.2. We have not added anything to the pool. The chlorine in the testers that you have, the test goes yellow and is darker than the maximum. The pH is the same. I said this is impossible. We took measurements 2 or 3 days later and it was the same. I was thinking about it. How could we have such high chlorine and such high pH with a copper plate in a plastic bag hanging in a pool, where we have no algae and not a single piece of green? Before, last year we could see the algae growth on the wall of the pool. Then it came to one interesting conclusion and maybe I'm wrong.

K: what we see is that the copper plate is hanging on the northeast corner of the pool in the drawing. (56.44 minutes) and the pH is 8.2 and the chlorine is at the maximum at the southeast end of the pool. It has not been touched for 6 months and it's too cold to swim in. It has a lot of leaves in it and tree bits, dust from the sea side that has blown in. This 8.2 pH is interesting; before we had to add material to it to bring it in the 7 range which is normal. Go back to the teaching from the innovation team in the Philippines where they showed the connection between the pH and the cancer and the growth; this was shown a few months ago. And how is it possible the chlorine be so high. How can this change to where it is upside down and the other way around of what you expect in a pool not used for 6 months? It is easy—the swimming pool is made of steel sheets coated with plastic on the top. What we have is literally what you would call a sealed nano-coated, rusted steel pool. This pool has plastic coating which has been rusted over the years; it has salt in it.

K: What has happened is the copper plate with the copper and metal has created a fantastic gans material; the whole pool is in the gans state. We know; we have seen the drop of gans in Tokyo and Africa and how they killed everything. Even the texture of the debris at the bottom looks and feels different. What is interesting is if we allow and develop this in the further condition the chlorine is not needed. The chlorine is in the gans material which is in the swimming pool environment and as a property the gans liquid in the pool is disinfecting the whole pool. This has a huge application. This means if you put gans or nano-coated copper plates in your swimming pool you don't need any kind of chemicals you keep your pool clean. With the high pH and chlorine this showed you might have to just put one block of chlorine for the whole summer. Before we used 3 kilos a month as it evaporates continuously and you have to add to it. Nothing has been touched on this pool for 6 months. We have found the solution into disinfectant on a large scale. Does this mean in Africa and other nations we can add this liquid plasma at different points of the river and the whole river can have life?

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

K: now you see how simply if you understand this, and I will bring the pictures from our pool on Thursday. In so many ways if you are and you understand this a lot of good things come from this. You will see more from different rivers in Ghana and this information allows us to take this chance, allows us to be able to bring the new technology to be rapidly implemented on a large scale. If we put the liquid gans in the bottles and give a bottle and copper plate and you call them swimming pool disinfectant plates you don't need to add chemicals to be able create all sorts of inherent problems. We don't see the worms, or anything else. It will be interesting now that we have seen it with Jackie and ourselves in a large pool how the application of a small plate affected the pool. In our case we have a metal encased swimming pool. The other ones that have plastic on the sides, now children do not need to be exposed to chemicals any more. It is the time where a lot of these waters have chemicals in them. What I have, I added a mixture of gans liquid, about 3 liters, to the pool in the past 3 days. But, I have made a pool with a specific purpose and amazingly enough it has changed the environment of the house within the first 24 hours. This is not the time to go into it but I could feel that it has changed—everything has changed.

K: before I added the liquid we had thousands of mosquitoes on the surface; there are hardly any now since I added the gans to it. You can test things if you have an area with static water. It allows for the technology to change the environment. What happens is the gans of the gravitational-magnetic field of the water changes and is not attractive to other things (mosquitoes, algae, etc). You change the environment. We used to get birds flying over it; you see the change in the environment of the whole house changing. The effect is literally within hours. Maybe instead of fluoride we can add zinc oxide to the tap water to change the behavior of the people. Maybe we can add water of CO₂ and we will do this and test this with local authorities where we can add copper oxide water to the system without adding any chemicals. We are waiting for the data from Ghana because they are a set organization, to release their information to us. We can do this very easily. Where in water plants there are a lot of chemicals; there will be no need for these chemicals and the hundreds of thousands of euros for filtering.

K: if you are in different countries we will post the certification of the Ghanaian Atomic Energy with the measurements of the bacteria in the sediment after Thursday once the scientists have completed their papers. Don't forget that we are becoming an organization where scientists are coming and asking to deliver their research. People are coming and we are showing doctors and scientists of different calibers. In the coming weeks you will see scientists from Bulgarian organizations present their papers; we will see them from China and different parts of the world

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

to present papers. We have been here long enough to create and for them to have the trust that the technology works and how to implement it in different applications.

K: Today's international teaching shows that we can deliver simple technology at no cost to governments. We are looking at the replacement of a specific combination and I'm very careful at choosing the words—we are looking at specific combination of gans of material in the gans state of water to replace the immunization system of today. This means the way we look at it is that you give a spoon of water to a child with the gans of measles weak enough that it kicks in the immunization structure of the body of the man without any side effects. This means that we will replace the 3 injections that have created mayhem with the children with autism and all kinds of problems.

K: If you are a scientist, please contact us and join us in testing and confirmation. We are doing this with governmental organizations. If I am right and this is what I propose and what I have put on the table and that is what we are developing, you can give small doses of the gans waters of certain products to a child—natural as water and it triggers the immunity but allows the child's body to create the immunity, for example from cancer and malaria. We don't need to wait for the malaria or take all these kinds of tablets. You can take a spoon of water with the design of the natural problem to immunize yourself from the disease. Vaccinations in the coming months if we are correct will change. The cost of vaccinations and the problems such as autism in the children are a huge burden on governments. If we are correct and we can promote this in the next 2 or 3 years we have achieved a lot.

K: we need scientists from all countries around the world, not just one or two countries. Hopefully we will announce soon a lot of things that are happening with governments and Keshe Foundation and we can change the structure of health all together. We have to wait and see how the levels of immunity increase in the blood. Governments and institutions have to control and see and in the coming time you can literally buy drinks as a drinking water to immunize for different diseases in the body that man might have. We are working closely with different organizations and we don't mention specifics any more as there a bunch of hooligans on the internet. Once we have the job done, we will make the announcement. The Keshe Foundation and scientists will deliver this in international seminars and how we are using the technology and how it is done. If we are correct and we can complete studies in the next few months, the immunization—the 3 Ms—will come to an end. We have seen the results and we are waiting for Alexz to confirm them from Nigeria. If we are correct with malaria this can be done immediately and we will save millions of lives.

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

K: we have entered in a huge way. We took our time. We may have done wrong words and wrong approaches but we have corrected that by having the technology coming through governments and that silences the enemies of the foundation. They have to swallow their own excrement. In the coming weeks if we deliver the totality of the immunizations, they will be on the side of the Keshe Foundation. Japankeshefoundation.org is the blueprint which every person in the world can get confirmation and certification from its government has used the technology, and when applied it works. We deliver our knowledge freely and we see the change in the delivery of the liquid plasma interaction with all kinds of skin infections. Again as I said we are keeping a number of developments in the background as a gift to the Chinese government when we arrive. No new technologies will be released by Keshe Foundation until we arrive in China. There are things that are being developed and are a gift from the Keshe Foundation for freedom of the governments to use in peace activities.

K: the whole structure is set to change in understanding very simple things in how gravity is created and how magnetical fields can interact and how the interaction of the two can bring the condition which you desire. Now we are learning more and more how to achieve conditions. We now learn how the interactions will lead to the position of the desired condition and we do not need to do much more. It is very on the on the ethos of the Keshe Foundation; we don't fight but we create the environment to bring change.

K: we don't ask, we act. We add a new dimension and we change the environment. In the atmosphere we do the same thing. We do not change and blame CO2 for global warming. We go to find out what we can add in the natural way to the environment that the CO2 finds in its way to be contributed to the betterment of the environment that being a menace and destructive. Again as I said this is for cleaning up CO2 and pollution of the cities of Shanghai and Beijing will be a gift from the Keshe Foundation to the Chinese government on our arrival. We are developing the technology in very different ways and it is how we will be. There are no cities more contaminated and polluted than Beijing and Shanghai in so many conditions. You cannot see the buildings any more. We don't go to clean up; we go to change the environmental condition within the city. This is what we try to bring to your attention in these international teachings. You can part of it; you have to develop as part of what we do. The same position applies to the condition where we see all sorts of contamination due to different kinds of activities. We have seen the application in Fukushima and we have seen the plant which nobody could walk into since the 2011 accident and now they are driving and going everywhere in Fukushima. What happened? Thanks very much Keshe Foundation.

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

K: I have news for you; in the coming time we will release the names of the directors of the American Company which took the technology from Keshe Foundation and in the back door delivered their number. We will deliver their names, phones numbers and addresses. This is off the record of Tepco directly. The people inside Tepco are not happy what Tepco has done to Keshe Foundation. They are releasing huge amounts of information for us to be able to show how the technology was given in a gift and has changed in another way. We will release all the details and their business reports. We have all this in our possession. We don't fight any more. At the moment we have structured it so that we go in these areas as a problem solving organization that the people ask for. Once we release our data the seat of the Japanese Prime Minister is untenable. He will not be able to stand as the Prime Minister in the office of the Japanese government. The data and information that we have is so fundamental that it shows why having such knowledge in their hands they did not help the Japanese nation with their contaminated land and their farms. It cost nothing. There was an old saying of an American president: the buck stops here. The buck stops at the office of the Prime Minister of Japan. The technology was fed to the nation and has been used for the contamination but has not been passed on to the public to keep them from dying from cancer from the exposure to the reactors.

K: the structure and the knowledge are deep and the beauty of it is that it is in your hands, the members of Keshe Foundation worldwide who developed these things. We will release more and more technology on the back of the governmental researchers, scientific organizations and Keshe Foundation members. You have become the leaders of a new science and it is you who are laying the law of the new interaction. We will release new technologies and new developments as much and as fast as we can. Keshe Foundation is now in health, energy, space, agriculture, materials, decontamination. We touch every layer of society through your work, your sharing and you're bringing of the knowledge. It is very interesting how you have to add to the knowledge. You have to understand what the knowledge brings us and start to understand the interaction of the fields which create the condition.

K: if you look at the swimming pool and the copper plate, it is no different than your CO2 kits. There is no difference. And you saw how in Japan the water from the CO2 kits was used in the dirty water. You have seen how the CO2 kit water and the CO2 kit was used in Africa in the different rivers and you saw the data. It is you who have to understand it. Why do stay with 2 plates? Today for the first time we see our Chinese colleagues come up with a zinc coil. What about a silver coil, what about a gold coil? Why don't we use a silver coil? It costs a lot of money but can you imagine the field it creates for every disease? You make it once and you can

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

allow its fields to be used with the structure of the body of the man. Any disease can be reduced. We have seen what a doctor in South America (note: actually Rodrigo in Mexico) has done; even a dog has benefited from it. We don't need to see the multi-million dollar structures as you see for X-rays and MRIs. There are simple, active solutions. We encourage the Keshe Foundation members to see how far we can simplify the system. From now on it is not to make it more complicated—we have to simplify it enough that every man can help himself with it.

K: change your way of making complicated coils to have in a very simple way that you can create. Do we need so many coils? Or can we create an environment of coils. The systems we see coming from all over the world in the past 6 to 8 weeks since we disclosed this kind of system is too cumbersome for a normal layman to do. If you understand the technology develop it in a simpler way. Bring it out in a way that it can do the job. This is what we are going to deliver to China when we arrive. I see emails and people who ask why we deliver something in a certain way and then we change it. We do that because if you don't understand it I have to teach it the other way. But to you then it contradicts the first way. But, in fact it is just an alternative way to do something. The process, the work is very simple. No one needs to go through anything which is difficult, non-existent and it's hard to generate. We understand simple principles. Ashes and water in the right combination gives you NAOH. So a man in Africa in the jungle knows how to make ashes. He knows how to boil it to create a caustic. Now find another solution where a man in Africa, in the jungle or even in Europe can use the coconut or a tin pot to create a gans that he can use to create a gans with an apple to use with the NAOH. The gans of the apple can be put into the water into a cup and when it enters a child he receives the energy from it.

1.27.36

K: this is how simple it is; don't make it any more complicated. We need complicated systems for the rest of the eyes connected to the wrong side of the body which is the TV that we watch and watch and accept what otherwise does not exist. Those of you who are paying and becoming part of the training course for October that is what you will learn--how to use the fields of space to create what you need. You have to understand the totality and we are not going to teach how to make gans and nano-coating. If you want to learn to make gans and nano-coating, you have some homework now. By the time you get here in October you are already masters of making gans and nano-coating. We bring you here to teach you the interaction. We teach how the fields create the interaction with the environment. Try to simplify so much that you are at the field level and not the matter level. Try to create systems and conditions that it gives you what you need without actually doing very much but you receive everything you need. If you live in a place where the main diet is corn, then give them the water that gives them the taste of the beef and the energy of everything that is known. All you need is to get it from the

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

water. We will deliver these waters for food in the next 3 to 5 weeks. The Keshe Foundation is a majority shareholder in the structure and we deliver it not as a food supplement but as a food system. It's not very difficult to do this.

K: go back to the system and the understanding of it and simplify it. It is nice to see the complex, complicated system of coils, the hats, and the rest but go back to the way I think and I work. If you change your energy system at this level of food system you don't need to make the helmets to change the body later on. If you kill the whole thing at the beginning when you create the environment you don't need to solve the problem which is created. If you don't put chemicals and antibiotics in the beef to fatten them, you take the beef in the water. Why do we eat? We eat to transfer energy. Now we have an easier way to transfer it and at the moment it is liquid plasma. In the coming time it will be field plasma. Do we need to see people going hungry? In the coming times we place systems in the environment of the cities that everybody receives energy in a field plasma that they don't go hungry. No one should die in the coming times on this planet from hunger when such a simple technology is in the hand of every man. This is what we are targeting and where we have to go. This is where people like Jackie who has been using the system without any food and they are not hungry. Eating has been the habit of a lifetime. It is not that they are hungry and they are not eating. Actually they are eating more than before. Now they take everything they need and there is no shortage. We see in the face of Jackie, we don't see him dying. He has been getting his energy this way for more than 2 months now.

K: please start simplifying the technology. Those of you who make complicated coils and are targeting to the direction of the flight system and those of you who understand, try to simplify. We go for survival of the man on this planet and now we learn from the space technology and we can use it too. Try to understand. There is no simpler way to produce the gans of any liquid or any food or any mineral that you can add to the water and the man 'eats' and receives energy. With what he drinks he receives the full spectrum. At the moment we see malnutrition because of lack of vitamins or whatever to complement it. We see hindrance of learning in the third world countries for the children because they do not receive enough energy. We can do this now with the water. You make a cocktail. Jackie has shown us coconut; others have shown us bananas. Add these waters because in the spectrum of the plasma each one takes its own seat. (1.33.47 minutes). So the banana, coconut, sugar and water all sit in different places in the spectrum. When the child drinks the water he receives everything he needs. This is the condition we must go to. To eradicate hunger there is no solution than what is on the table from the Keshe Foundation. Because now we can give water to a man for the man not to go hungry

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

and he can receive energy from the water. In the coming weeks you can buy a spectrum of energies from Keshe Foundation.

K: when we do this in 20 or 30 years' time, the body has taken what it needs psychologically, emotionally and physically and we will not see the fibromyalgia. If we do this, we should not see any MS. In this process not only do you feed the body of the man, but also the emotion. The emotion works in constant perfection and the body works in constant perfection. Man will live 200, 300 or 400 years and this will be normal. This is how and what we are heading for and it's the direction we have to go. If we can our biggest problem will be how fast we can release this technology worldwide. It is not who is going to bring this technology, it is now your responsibility. Make the gans of whatever you like: steak, tea; Armand has made gans of many foods. You can have one drop of each in your water and that water in the container will stay for centuries. We have seen with the Australian Keshe Foundation how the liquid gans in the bottle of water hanging in the water channel for the greenhouses and fish are of the aquaponics increased his harvest. We have to be able to extend this knowledge. In the Keshe Foundation teaching we are not here for you to show off your systems any more.

K: You have to come up with solutions. This is what we said in the universal council. We don't accept anyone who comes to moan and groan about what is wrong. We only accept solutions and the people who elected themselves to be members of the council. We don't accept those who come to play games in the past with "I know more, I am more and I destroy what I can't have for my own." Two members of the council put themselves up in this manner in Dubai were removed. The development of the new technology is the promotion of the physicality. I have seen the communications on the internet. It is the same game as the present time. Immediately 2 members were removed. There is no way they can remain. The structure is to create unity and peace and not "I know more" and then there is anarchy. You know exactly who you are. Please, you will find out the Foundation will not support such action unless you agree to create a condition of peace and unity in a direction of not only the environment but in every other way.

K: try to extend the knowledge and to understand how you can simplify in the easiest way that we can drop leaflets across a nation. How in a simple way it shows that no one needs to go hungry. One of the biggest burdens and military followed by health care. Health care especially for the elderly in Japan is crippling the economy and the country. Import of food is breaking the back of the African nations. The American government subsidized food in Africa has stopped the Africans from farming. Now they have not farmed for years and they have to pay for what was free. We see the same in India and many farmers are committing suicide. It's very simple:

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

you get the seed that is tampered with and genetically modified and sink it 2 liters of CO₂ gas water and all the tampering is gone from the seed. Water the seeds with the same water and you will find you get more harvest. The genetic modification that would not allow you to harvest the seeds next year, but now with doing the soaking of the seeds in the gas water you will have seeds for years to come.

K: how has this crisis in India come about? There are tens of thousands of farmers committing suicide because they cannot pay their debts because organizations who provide the seeds have played with layer of genes in the seeds that the seeds do not give flowers that can be used again. The farmer every year has to borrow to feed himself and he cannot see how to pay his debts. The water of the CO₂ gas is your best solution. Add to it the gas of CH₃ and you see the growth. So in so many ways the structure of the change on the international arena, all of you have, how far can you penetrate society and find that you do not need NBC, CNN, FOX or any other television channel. People give to each other from hand to hand. You have not seen on the TV or the radio where the cheapest place is to go buy fuel. Why? The taxes won't cover it. You cannot find something which you can afford because it does not serve the structure (of big corporations and taxes). Now do the same. On a leaflet show a bottle and put, "Feed the Nation." This will change things this is how it will be done. We need to and now that we understand the knowledge for saving your lives for the cost of zero has to be implemented. We have no choice.

K: if you have been talking and saying you want to serve humanity; I will tell you how to do it. Walk into the back of the supermarket and you will find perfect oranges, apples, meat being disposed of. Make a gas of it and create the water of it. Walk and give a small mixture of it to every man and tell him to put it in a glass of water and just drink the water. You will find nobody will be looking in the bins around the city to feed themselves. When they don't feel hungry, they don't need to eat and they don't scavenge and they change the psychology of the mentality of life that makes a man a beggar and a street person. You stop a child from going hungry. In the morning it does not matter how if you have the gas of the food to put in the water. In the coming times you place systems that cover the whole nation. Everybody does not need to eat. If you have food and want to chew you are welcome to do that. But you will find out a lot of people, because they are receiving energy from the gas material of the fields (of the food) will no longer be obese. Obesity will become a thing of the past. There is no hunger so there is no need to continuously eat.

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

K: in the coming time in the next few weeks we will bring the pressure to such level with the knowledge and the easiness of sharing the knowledge to the level that no one needs to fight or worry about the next meal on the table, or who will abuse their having food on the table. No one will need to worry that their borders are defended against invaders who will steal this or that because everyone will receive the same. We will enhance and improve this technology in full to the Chinese government in the coming weeks. We have to; we work with the strongest and most peaceful nation on the planet and this has given us the leverage to be able to deliver the technology in the hands of safe leadership. Those who have animal behavior have to stay where they are. If the color of the skin in the United States is important, the man does not deserve to be the president. He has not understood that they white came from the black. He doesn't understand that Hitler killed the Jews to cover his own backside.

K: the future leaders with this technology in their hands have peace as their target. We create the condition and more and more people can live peaceful lives. That is all we can do and that is what we deliver. Try to make the technology as simple as possible. We have a beautiful team sitting in the Philippines; they have understood this. No one does better than these guys to keep it as simple as possible so that the most people can use it. Setting up factories for the rest is part of this; we have to filter the knowledge in different ways.

K: this is the exterior picture of Keshe Foundation in Arizona. 1.46.31 minutes. In the coming time you will see more. We have the same in Italy and we expect to hire 3000 to 5000 workers. The whole structure is simple. We have to make the knowledge reachable by everyone as much as possible. This building in Arizona will release a solution for the vaccinations that you dread to give your children. This is one of the first to offer the alternative for immunizations and we submitted our information to the FDA, the White House, and the Pentagon to do the testing. The beauty with this is that the testing is a maximum of three days to get results from the testing. We don't need to wait for months for results. The test results with all these systems show themselves within 7 to 14 days. All these heavy costs on testing are unnecessary. Show me why you need \$10 million to do a 3-day test. We release the data internationally.

K: I do not agree with making it complicated. It has to be simple enough that the man in the street can apply and supply and deliver the technology. The process is simple; it is us who made it complicated because we didn't understand it from the beginning. Please understand to try to understand the essence of the knowledge and simplify it so it can be used. Alexz is doing it in Africa beautifully. Armand is doing it in the United States. We have seen Ghana and Chinese and different cultures coming in with different materials used in different ways to deliver.

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

149.59

K: Go back and look and understand and see what the culture has brought you; use your own culture and your own materials in your own environment to make your energy and apply it. You don't need to look into the rest to find solutions for malaria. How have they found the solution for malaria through the gans? Very simple: they have used the materials that have been used by Africans for malaria for a long time. They could strengthen it, but it could affect the condition. Now it seems it can be done; you make the gans with what they used for malaria for a long time and 3 spoons of water a day has changed the malaria in less than 24 hours. We wait for a report of this being done by doctors. It was not by a private individual, but a doctor. We will see the report in the coming days by Alexz as he is back in Nigeria now. We will see how the process will change.

K: if you live in India, look at why we use herbs and why we use roots and for what purpose. Every herb, root and everything you see that is used has a specific magnetic gravitational field of energy and can overcome something which is not good for the body of the man. That is all you need to create from what it is to its power state of gans so it can be used. You look for certain conditions in the body and look at why in India they use certain herbs. The majority of herbs and roots used in food in India are for killing a kind of parasite in the body from what is consumed. If you look a majority of them are anti-parasite. Now it has become a taste in the food and that was the purpose for them. Look when you cook with them what kind of oil they produce and understand the purpose of the oil in the body of the man. Water cannot penetrate and oil has a finer structure and can penetrate the skin and it can release energy that matches the parasite and neutralizes the energy of the parasite. That why it is used. Now you create a stronger one.

K: learn how to strengthen your gans waters. In the gans waters you want to strengthen the power, the power of the interaction. All you need to do is to make yourself –you know the mixes so whisk them and make a foam. Or you can mix the food. You have the electrical mixers and put them in the gans water of the CO2 and look at the power it will give you. If the power of mixing the CO2 before was 100, when you whisk or use the mixer it will come to the new power greater than 100. (1.54.30 minutes) now you have opened the plasma. If you don't understand this in the Magrav units, the mixing comes from the impulse of the hertz. That is all it does and that is why you need to connect it to a power supply. The bashing and the hit of the frequency as it comes in from your main grid comes in a continuous sinusoidal wave (1.55.01 minutes) and there is a blockage of nano-coated (material) which cannot see the matter so as the matter hits, the hit releases energy. That is how you release the energy of the nano-coating back into the grid. Here if you understand you will have no problem. There is no difference between the hit

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

in the Magrav unit and the hit in the gans with the whisk or the mixer. You have CO₂ or copper oxide to release the energy of the plasma in the Magrav unit and in the gans you are doing it in the liquid state.

K: that is why you don't need anything after the Magrav unit has been hooked up for a month. You see 60 to 80% reduction of the power usage. Now the system has picked up in the vibration of the nano-layers and it's this vibration of these layers that creates the release of the energy from the gans material. Now you do this with a mixer and then if you add this mix to the sphere of the core you create the flight system that can fly and you create any magnetic gravitational field system for your flying system. On Thursday I will go into more detail. We push the limit of knowledge to the point that it goes out of the hand of the governments to the people. When the people have it they can share it. If you increase the release of the plasma, you decide which plasma is released. If you create a plasma which is a barrier to microwave and to shielding, you create that shielding.

K: everything in technology in the next few weeks will be completed and I will stop teaching in a very short time because I have told the man what the man needs to know. When you achieve understanding of the technology as far as what we see I will start teaching to specific groups to rapidly develop conditions. I have achieved what I came to achieve and I have laid down the structure to be used. It is for you to develop and understand because it is like being taught in the school. You don't know how much you need of what you have been taught until you free in the lab to see how much you understood. There is no examination. Now it is time for you to get into your lab and there no reports to file for FDA or other agencies. It is your understanding of the technology that will save your life in space.

K: the first people to ask us to become part of the space technology are from Belgium. They are challenging us. *We want peace and we want nothing to do with what our government does—we want to be part of the space technology.* We respond to you correctly and you know who you are. We accept you and you know who you are. This knowledge has to be in the hands of the people who understand the change. This has to be in the hands of people who want to make the change and it has gotten to the point where we collaborate not with the people who want to make money by killing but by killing the habit of the man, they bring money to the table of peace. We will push with this.

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

K: we received something important and it is how you can produce systems which put you on a flight path. (2.00.22 minutes) those of you who start testing for flight remember to inform the airport authorities near you. The reasons are very clear and some of you are setting up and see the first signs of lift. Report to the Keshe Foundation so we can support you. At the same time understand you are amateurs and if you lost your flight system, land near an airport or hit a plane in the sky. Understand the way we work and you have to work the same way. In creating the flight system understand the flight system will become part of your food, material, energy and everything else. Lower strength is how you create matter state and how different matter states give you from water, gold, shielding and motion. It is all coming from the same system. (2.01.46 minutes—top fan, ball, lower fan). Understand the totality. In the future structure that we will show you for the space ship, your space ship does need to be a spool (?) (2.02.00 minutes). You can use the structure of the space ship itself, if you look the meeting of the space plasma. (2.02.10 minutes). You can use the rotation of the plasma to do the same thing as your mixer does.

K: Translate the knowledge right across and in its totality and not isolated conditions. Most of you will do this; this is the level you needed and you understand and respect it. But those of you who are there to push the limits of the knowledge, understand the knowledge and then add to it. try to explain it, making the coil at this time for those who understand the gans and the liquid plasma, vapor plasma, field plasma, you will find out that none of you need any coils. None of you need the interactions or to be part of the matter state. It's a very interesting proposition. If you can, try it. This is the continuation of the expansion of the knowledge you already have.

K: (2.03.59 minutes) you remember the orange and the tubes which transferred the taste of the orange. Build yourself a cube. Get yourself small empty glass balls (small marble size) and in these balls put on the wall of this cube. The balls can have CO₂, orange, tea, coffee, steak, beef, anything you can imagine. Transfer the fields within this box inhaling it or putting water in it. You have a cup for life. You receive the full spectrum of what you need. Don't forget that one of the balls has to have the amino acid which links to the level which your body needs. If you do not add the amino acid, you do not create the boundary. Start making as many gans as you like and the principle of working with the body is that the body takes what it needs from the mixture. This box becomes like your stomach and you put everything in it. The body only takes what it needs from it. Now the energy is already digested in a form that what you need you inhale or you can drink. Break the whole structure up with as many products as you like. Put the chocolates as much as the others. If you feel like chocolate when you drink you will only pick up the chocolate. Your emotional strength is already in it. You want to have a banana, the

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

texture, the energy is there, you have the emotion in it and the body only takes what is needed. How simple this can be.

K: everything from anything which has been used and you want, now you just make yourself a cup. This is air liquid plasma transfer. If you can do it and use it, put it inside as liquids in the reactor as we showed and the expansion of the fields will do a totally different thing. The expansion of the fields if you can bring this into the coil system and use it we don't see any directions. Your system can feed a whole village. (2.07.47 minutes). You put this in a space craft and man receives everything he needs and never has hunger and never looks for any conflict because he has satisfied the emotion with the zinc oxide in it and calcium oxide (?) in it. Now you can spread this across the countries; spread this everywhere. We saw people last week putting units across cities. We see the changes in the behavior and we see what we expected to be delivered and now we can deliver it.

K: you have to understand that constant teaching takes a lot of energy especially at this time.

Q: can you advise how many Magrav power units are needed to install in school campus, large hospital or an office building?

K: we are testing a 20,000 sq. meter school we think it will take 9 units depending on how it is wired. In building blocks there are various positions; it is the same in hospitals. We are not adding new power system. We are adding a hybrid system to the power supply which will capture some of the energy. You have to realize that this is something maybe a lot of you have not understood it this way—let me explain how it works. You have a government that has committed itself to 200 megawatts. These 200 megawatts are for 1000 people, or whatever. The country cannot afford any more. They cannot go any further because the consumption is already set. Now that you add a hybrid system at no cost and now if the original system takes 50% from the hybrid section now you have 20,000 megawatts available. When you go to 95% now you have changed the game drastically. You can see the change. At 50% it was twice. When you go to 95% it becomes twenty times the megawatts available. The others in the original 200 megawatts commitment for the 1000 people only use 5% of the original committed megawatts. You had 1000, then you helped 2000 and then you are helping 20,000 with the same structure. You have to replace the power stations on a regular basis in the original 200 megawatt system or the economy stagnates because you have maxed out at the original level of the 200 megawatts. The economy does not stagnate when you add the hybrid units.

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

K: This is one of the reasons we go to China; we know we can reduce the power consumption with the Magrav units by at least 90%. It means a lot of coal power stations to meet the demands of the nation do not need to be built. The state of economy is paralyzed and with the units you can bring a nation into full prosperity. The biggest problem for the Keshe Foundation is the Western nations. The EU does not want to see this technology. The United States government does not want to see this technology. Why? Because with the stroke of a pen they have spent billions in Germany on nuclear power stations. These debts have to be paid. They would not want these Magrav systems because with these systems nobody uses much power and the power stations become idle for what they committed. That is why you see the opposition in Belgium and Germany are paid to do that. This is the scale of the change.

K: the German government spent billions to build the nuclear power stations and they are useless now. But they still have to service the debt. The nation still has to pay. So they pay these agents to go out on the internet with negative information. This is why the western world has a problem with Keshe foundation and its technology. We are not wrong, we are right and now the wrongs of the past are coming to roost. Now that we have come to Italy with the banks, and very soon the banks of the world will follow this, once we put the units out at 10 Euro a month, the others will follow. How come the Germans have to pay 80% and in you only have to pay 10% in Italy? How come an Italian family with 10 Euro gets all their energy? Don't forget the first month is 50% and in 18 to 24 months it is 5% of the \$200 a month they used to pay. Now they only pay 10 Euros. Do you think the Germans are going to sit back and see the Italians pay 10 Euros for all the electricity for each family? No way.

K: the governments have to oppose this technology because we have changed the course in a very simple way. And then they pay people like Red Circle half a million euros to kill us. They realized long before you did what is on the table. Now you know who the terrorists are against the Keshe Foundation. Half a million euros was good enough to kill a scientist because it saves billions for those who want to abuse. The scale of change is huge. You look at the health section. The touch is amazing. This is international. Look at the country with old people. Most of them at least 2 to 3 times to doctors for analysis. Now they can be given water for the cycle of life. You don't need to have these extensive health systems. No cancer, reduction of all kinds of diseases and the money saved runs into billions for the governments. National health systems will change drastically. Old people do not need to sit in old houses waiting for the death to come. They can be active, enjoy their grandchildren and have lives without disease. But, who is going to pay \$400,000 in America for X-ray doctor in the hospital? Of course the doctor says everything is wrong with us because nobody is going to pay \$400,000 when there are not that many people to use that system any more.

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

K: look at the health system in the United States. When you have no people sick you have less people who need it. But the problem is what will be done with the highly educated people? There is one way--Space. (2.19.34 minutes). Because we learn, we have everything we need and want, and what do you do when you have a lot of money? You go on holidays and go to places we haven't seen because we have already seen all the museums of our city. We have seen all the waterfalls, all the beautiful buildings and all the mountains.

2.19.54

K: let's go to such and such a planet to see the beautiful scenery. Keshe Foundation technology will become the biggest in tourism in space. We are here to bring peace on this planet. If you do something good you get a prize—how about a week in space? Now we are really doing this and not talking about it. Did you have nuclear physicists and idiots like me who created nuclear bombs a year ago? No. Did you have heart surgeons 100 years ago? No. The future is bright for humanity and man has to forget about the past and make the jump. We will be changing space for peaceful activities for man and not for a war zone to see who is bigger and stronger. This is the guarantee we have to the governments we work with. It will be no time for this technology to grow like a mushroom. When the governments don't have to collect taxes to support the army there is no pressure on the citizens. When healthcare is only there if it is needed then there is no pressure on the citizens. Now people have more leisure time and more comfort for humanity and you will see that even the politicians will change.

K: very soon we will announce a man who will stand for American president and only for peace. The Americans are tired of war. Don't forget when they kill they carry the burden of the soul. The whole nation is drowning with crimes done to humanity under the banner of war because of a few making money. We are negotiating and we put American presidential candidate on the platform of peace. We are getting prepared for July. We are speaking to 3 or 4 people who are or can be on the ballot and carry the banner of peace using Keshe Foundations across the United States to influence and not to speak about the war but unity of the nation under peace. I wonder how many Americans will sign papers that they want to spend more money on arms and more taxes. You don't go to fight; you have the option of peace or technology. That is why we're asking the people tell others the Keshe Foundation is an organization for peace. Go home and have peace. Our security people wrote me that now these trolls are asking people to jam the telephone lines and go and demonstrate in front of the Keshe Foundation Manufacturing. Publicity is never bad is what I told them. We need it, please send as many as you can; it makes us easier to enter the election. They see we are here and we are producing.

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

K: where there is buck, there is money. Where there is hate and war there is a wish for peace. There is a desire for peace and activity and movement for peace. The more the present candidates talk about race and war, the more we talk about and deliver technology. We don't need to need to spend billions on campaigns; we receive millions from people who buy the units from the Keshe Foundation. We enter on the path of peace and policy in the elections in the United States in June and July. I told you months ago that I am making a lot of preparations for it and we are talking to a number of people who can be candidates, but they have to sign the world peace treaty and on the back of it we give them access to all the facilities and factories which can deliver and teach the nation to be peaceful. Will we win the election? We don't know. But we will 100% win the next election. We win it on the platform of peace and change from war to peace not just for our friends and families in America and for our friends and family across the world. This is how strongly and confidently we can speak about this.

K: we speak to the world leaders directly and indirectly and the people who will become the world leaders in the coming years. I have spent a lot of time negotiating with these people. The Keshe Foundation team knows that I regularly sit in different conversations and different structures and we are choosing more leaders who sit on the platform of peace. We are not politicians; we are scientists who with the technology will deliver peace. Why should I fight when I have everything? This is how we change. The American presidential election is on our list and we are working on it. There are those who are close to the Keshe Foundation and have sat at the table with us. We are not talkers, we are doers. We have the have the technology and we use our technology to deliver peace.

K: the only chance we have to deliver peace is to deliver the technology to people and they can see the change. They can move away from cancer, hunger, war, cold in the winter and heat in the summer because they couldn't afford the electricity. Now everybody can. From next week in Italy 10 euro saves you 50% off your bill and according to Giovanni who has studied the statistics they can save 64% on the grid line and total reduction in the bill with a solar system is 84%. If you pay 200-euro last month for the bill, this month you pay 32 Euro. Next month he will be even better—don't forget June, July, and August are the summer heat. Next month there will be more that goes to the grid and they will have to pay Giovanni back.

K: The change in the scale of the economy is affected. 1% puts a big change in the economy. Why do the politicians, the governments and those who come to power say that they will reduce the taxes by 1%? You are feeding 9 million units into Italy in the next few years through Keshe Foundation. Most likely our workforce will grow to 14,000 (40,000?) in this country alone

Transcript from 15th International Knowledge Seekers Workshop held May 17, 2016

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

because everyone wants the units. We have created new jobs and there is now 170 Euro to be put into the economy by each family. The boost in the economy is huge. 170 Euro per month multiplied by 12 months is around 2000 euros by 20 million families and this is colossal. You are talking about 14 billion. On top of this the Italian nation does not need to import oil. That is the savings on top of the other savings. That is how we managed to show the banking system that this will work to boost the economy while helping families. And now they are prepared to go forward. We needed time. We went through 6 months of rubbish but now we have data. You met and saw Colonel Hanke in Arizona. He was here; he wouldn't believe any of it. We had to install a system in his house. And he has seen the reduction in the use of power at his house. He said if it works in my house, it works for the government.

K: would be put Colonel Hanke as a presidential candidate in the United States? Why not? He is man of war and he can show the war is over. Now it is time to use a new technology for peace. He is an old man but he carries a lot of weight. The only people who don't like this are the oil industry which has already accepted it is kaput. It's gone; it's over and done with. The oil nations have already accepted the (drop in oil price from) \$110 to \$25. Now you see how the Foundation is hitting the abusers and the abusers are going to sit back and lose all the dollars they made through abuse. This is a fight of a dead man going through his last kicks. When we explain the situation to the governments they see right through it. The health, the food, the environment, the space technology—it is unlimited and is the change of the course for humanity. Anybody who talks about conflict, war, I'll be a leader and do this and that, has no seat in the Keshe Foundation. K: Now let's see who and how we can serve humanity and change the course humanity is on. It's very simple; find 10 to 20 pieces of wood, burn it, have your ash and create your NAOH or burn the material which you can do to create the coil, but out of ash you can create your oxidate (the ash creates the lye) and with it you can create your gans of materials and with it you can gans waters and with it you can feed yourself, your nation and walk them out of poverty. I wish man would have understood this thousands of years ago.

K: it is very interesting: If we create the conditions of peace flying over a city or a country, and we can feed them, we need them to become peaceful why don't we put the gans of zinc oxide, CO₂, CH₃ in the water of the oceans of the planet. The animals will benefit from the same. They will absorb the energy of what they need from the water and they don't need to eat each other. You will find fish swimming everywhere and not eating each other. We will change the habits of man. In my swimming pool I have created the first condition. Jackie has done this in his in Switzerland; we see the same thing in Africa. The Chinese are doing the same thing with the gans using the plasma technology. How many more babies have to be born in the sideways in different cities in Africa and India, not knowing where the food is and if they will live? We

(v2 2016-09-27) DRAFT (Transcription has not been verified. Double check info with video)

can give them a glass of the mixture and tell them to put it in the water every day. When man is not hungry there will peace.

K: It is the way we have to go and we have no choice. As a race we have been given a new opportunity to open the door of peace for the totality of the human race and the creatures of this planet. From now on we are the only ones who can fail humanity. We cannot blame anyone else because the knowledge is free. We have opened all the knowledge and the scientists have come and given their knowledge freely. It's never been done before. The Keshe Foundation members are the people who listen to these teachings. Reach out and put one to two hours a day and make units and go into the streets where families have no food and just deliver it to them. I tried to negotiate with the World Bank with one of our directors who used to be a director of the World Bank. He has retired and still very active. We have a door to a lot of places. Once we settle the position with the Italian bank next week then why not have what we are doing in Italy with the systems for 10 euros a month in Germany, Britain, France, Belgium. Do we need to have nuclear reactors running which are dangers to lives? We could deliver the technology in Belgium so they can shut the reactors down.

K: this is choice we have made and we have changed the course. Now it is time to move. The flight systems will be seen; you have seen what the gans are made of and you see the delivery of technology in a rapid way. As I said to you by the time the time the Americans are going to fight us and send people to Arizona (where the first Keshe Foundation manufacturing plant is); at the same time the Africans have already started the research, they are working on it and using the energy system. The Africans will lead this effort. Thank you for today; we will see you Thursday morning. On Wednesday afternoon we teach the doctors; bring you patients' cases.
