Keshe (K): By Thursday we will announce the bank that will release the finances for the Magrav power units in Italy. You will go to the bank, fill in the form and the financing is ready for the purchasing of the units. The condition has been set up by the bank structure for you get the Magrav unit, pain pad and health pen or the second option is to go to the Keshe Foundation website and purchase directly. The whole structure of the delivery of the power units in Italy is based on the bank financing. This is for Italy only. In the next two weeks, the German, Austrian, and French banking systems will provide the same thing as the banks in Italy. You can buy the units for about 10 Euro per month. We may add Spain and Portugal and we are negotiating with the banks there. This allows us to produce and deliver as we are doing in Italy. Then we will go to other parts of the world.

K: we will follow the morning teaching and we are going further with the development of the technology as I explained and there are more countries involved in the development of the technology achieving lift and structure. We have come to the understanding of the production of the magnetic gravitational field systems. We will focus on how to survive in space. In so many ways we have learned how to survive on this planet; we have evolved in colors from black, to white, to yellow. We have narrowed our eyes and we have widened our eyes. We have found ways to survive and this is not about man only, but all life on this planet. Life on this planet has changed drastically from the inception. Some chose hair, some feathers and some have different ways of protecting the GANS system of their bodies. Some have colored it with a matter state that allows the interface between the GANS state and the man.

K: what will happen to man now that we open space and enter the dimension of slightly different environment that we are used to? We have had excursions into space but we have covered ourselves with all kinds of clothing, masks, and whatever we could. What happens now when we become passengers in space with one kind of clothing for space but not for the environments in space? Now man can stay in space for longer periods where home is not earth but space for long durations. How do we evolve? What are the next steps of evolution of man in space? How do we interact with the creatures of space? What are the rules and where are the red traffic lights and the green traffic lights? How do we understand that what is green to us is not red to the others? The process of the teaching is moving to the steps of the interaction of the universal community. No more with what we do on this planet. From now on it is your decision the way

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

the governments and individuals decide to develop, create the environment in the condition of the space ship, the container or whatever you want to call it. In space we cannot confine ourselves to a box and a closed environment for centuries and thousands of years.

K: we will interact and we will come across other creations and creatures of the universe. Do we understand all the language? What do we need to do? What is the consequence if you are the last man standing in space? Do you know enough to survive and the rules of space survival? This is where the teachings go from now on and the international teaching changes to universal teaching. Maybe that is the reason we have no questions. When the man matures enough they will bring the creatures of space. You have to understand it will not be the zoo where you poke and look at the animals in the cage. You have to understand that man has been the animal in the cage and has been looked in to by the others. How do we expand the knowledge of the man? How do we bring man to the point that he understands and now the foot and shoe have to fit in every corner of this universe? Do we need government as the government will negotiate for their own population with one group of passengers of the universe and other governments negotiate different things? Do we choose the path and negotiate as one race, one planet and one nation? The teachings from now on will head that way to make man a unified family.

K: it will be very hard for those who are racist. The whole problem is do we understand the language of the universal community? Would we go the harsh way that man has done fighting with himself and negotiate to get a better deal for us to be equal outside? We have no choice and the choice is where we have brought our race today to this moment. We have decided to create division for whatever reasons and we have supported divisions because it benefited or suited us for whatever reason—school of thought, financially, or whatever reason. What has been your dream? We have to know how to be able to interact with the universal community. All the human race will behave the same; as we know a number of nations have already established link. This may be surprising to some of you. Leading world nations have already established a link in communication and they still do not know how to communicate. What is the structure? How can we establish a structure where we as one nation can negotiate or communicate that we understand the totality of the structure.

K: this is the way –we try to teach to the universal community work, understanding and interaction. We have to understand our own failures and it is we who have to polish our failures and come to understand that we kept ourselves isolated because of our behavior. How do we interact and how do we build a system? How do we build structures that are useful to us and it doesn't matter if they are social structures or whatever shape or form in the universe. We need

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

to present what you like to call the intelligent race of this planet. But here's a question: how intelligent has this 'intelligent' animal been? How far and what have we left behind? Have we created most of the conditions that we are now trying to find solutions for? Would we follow the same process and make the same mistakes in the coming times? The problem is very deep. To change the culture of man after so many years of conflict, separation, division, for whatever reason—color, language, race, imaginary lines of borders. Are we allowed or do we allow this to happen? Are we going to allow this division that has allowed so much mayhem to carry on that benefits a few and creates harm for the other?

K: in the coming time we have started the process that we establish an army of peace and this means that leading world governments will participate only in peace work. This means they promote one thing and that is the work to create peace and create military in direction of peace and in the way to be able to understand the totality and set examples that we can follow. This is very harsh: even today for us, people who have the tools, in decontamination and whatever contamination we have done to our planet it is a big question. Even when we show it, it has created problems for them. We had a meeting with a professor yesterday from a leading university and he agreed that Keshe Foundation has many enemies. The enemies are becoming more talkative because they realize that we are touching everything. What has been put wrong, we can put right. Look at what you are doing and understand how your work has brought so many changes. These changes are not good for those who benefit from wrongdoing. We touch energy—this is the biggest problem for them. We touch food and agriculture, medicine, materials and the most fearful, the space technology. With the Magrav units you are producing in any shape or form, you stack them together and they are used separately; you are using the GANS. You are touching the energy producing nations. They don't like it. We have created a huge number of enemies on the energy side. 26.49 You are seeing more and more opposition in all kinds of forms because now it is a big problem—energy should not be a commodity to create wealth and control. For those in oil industry who have been used to hundreds of dollars per barrel, what comes naturally created on a daily basis across this planet, or the creation of nuclear power stations that paid billions and billions not only for commissioning them, but for de-commissioning them. An interesting point of view is that now a number of stations have started de-commissioning nuclear reactors? Why? Suddenly out of nowhere and why? Because now it is more profitable to de-commission nuclear reactors than to build them.

K: we have touched food; the food industry is going to go beyond relief and understanding how everyday shopping for food will more or less come to an end. Now you are producing the GANS which have become the energy source for man. In agriculture we see the control on the seeds and that is finished. You come into medical application and doctors are reporting changes using

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

Magrav systems. The space technology is where the foundation work is more acceptable than anything else because man has not managed too much in space. We have limited 'fish tanks' with very few passengers. Now, travel to space is in your hands and to open space is the biggest challenge for the foundation because your work has two dimensions. One we have to bring the nations together to work together because there are no borders. We cannot detect, see or stop. The biggest problem man needs certificate for the understanding of the universal order which means you have to become peaceful.

K: You have to change to be a man in space. How do we do this? How do we change the characteristics? How do we go about this? We have shown a number of ways to create this elusive peace. We have tried two conferences. We have tried through technology delivery. And, we try through the food to change the habits of the planet. The space technology from now on is one direction. How do we create plasma and this plasma will give what we need? Do we create a condition through the plasma interactions with other plasmas to create motion? Do we create field releases from the same interaction to create food? Do we create a condition that creates peace in the man? We have choices in that matter. Man finds peace in two ways and so do the animals. There is no need to fight for resources for energy to stay warm, to stay fed, and to have shelter. In these regards there is a nation that has taken leadership in the past few days to create the oasis system in mass production.

K: I thank you for your work; you are on the panel and we know you are listening. We thank you for your work. The position is that some government and some people have decided to go into huge production with the oasis system. What is the outcome if you create this oasis system? But, we do not create oasis on this planet; we have seen interruptions. We have seen the structure. In totality are we going to support this? In the Keshe Foundation we become one supporting and developing systems as the majority decide that we think we bring peace on this planet. But, we have another option. We have seen the process, the working and the operation of materials which you produce as GANS, as we have seen from people in Vienna. They are putting together systems that will give enough energy to satisfy the emotion of the man to become peaceful. Do we deposit huge amounts of GANS waters in the oceans and the rivers where the GANS water mixes with the river to cleanse them and at the same time in that process allows the animals, fish to receive the energy they need to survive and not to eat each other but to take energy from the planet directly. There are a number of people testing this to see if this is an option for us. Or, do we go the other way and plan systems like satellites which feed all of us equally, internationally?

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

K: don't forget the satellites in the sky send communications, telephones, and the radiation from these satellites passes through all of us unless it finds its matching target. It not only looks for it, it spreads it until it finds it. Have we arrived at a point that we can allow governments like the Chinese government to create these satellites to put above cities and countries that can feed the needs of the man, animals and fish. This is a very viable proposition and this is exactly what you have created as Magrav system. We can extend the power of the Magrav system with the liquid plasma and the field plasma to cover vast areas of this planet. The way we see the rays of the sun, now we control the rays and that brings peace and tranquility and feeds man for everything he needs. There is a very interesting point about this: I was discussing this with the governments very recently but the question was if we could control people through these systems? The answer is no, there is no way you can control it because as you create a Magrav system it only matches what it needs. Can we control the emotion of the planet? Not really. Emotion sits at a level that man's knowledge at this time cannot reach to control. Can we come to the point where we can interfere with what the body needs? Yes, emotionally you can build up to a point where the body need is, but you cannot interfere with it or control it.

K: how do we do this; how can we control this? The systems that are in the process of being built and you can build them yourselves. Try to understand the work of the system. A lot of you have built coil systems with a center. And then have built the coils around it where you have fed and filled with the GANS. Now you are in the process of rotating these 2 coils in any direction or the same direction. (37.35 minutes) what you put as a source you can feed from outside and this as a field can cover more or less, if you look at the satellite as a whole continent. (37.55 minutes). This is what you are targeting and you understand there is a different application. This is your ball in the center of the Magrav system and these are the double coils. (38.14 minutes) in so many ways you decide what radiates out – antibiotics, oranges, vitamin C or whatever. In a way we take one of the biggest problems for man out of the control of the man with his freedom to have as a pleasure for man, which is feeding him.

K: would any of go to the fields or would any of us go hungry? That will not be the case. We take for example there is going to be a war on water and energy. But, if you understand the use of the system you don't have to worry about the water. The water we need to guarantee our lives, we live by the rivers and the cities where there would be a pipe, you can transfer the energy of the water to the body of the man to take as he likes; you do this same way as you have done with the food, the orange and the herbs. The equation of the water and man and where he has to live goes out the window. These are the peaceful solutions which now that the technology is available can stop the cause of many wars which has been behind a lot of this.

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

K: if you understand energy and can transfer energy then every man can have light and heat as he likes. The innovation center in the Philippines and other people who support it already in 3 meters or so of wireless transfer of energy. This can come to a full dimension on the planet in the next 4 to 6 weeks. I do not teach; I support and every now and then I put the suggestion in and we see how we go. This is what we heard about the Rome conference. Come in with peaceful, practical solutions. Three members who stood in the way have been rejected from the council. They will not receive invitations because they carried the same as what we have seen before in destruction, lying and cheating. If you become part of using the system you have to be peaceful. If you come on board to bring solutions that advances man towards peace and towards solutions and technology for the peaceful purposes.

K: so what have we done for solutions? The teaching from now on is to enhance the intellect in the direction towards peace. It will be enhanced for you to come up for solutions and how you see that we can help humanity. We have seen how you can work on a structure. We have seen the situation with copper oxide liquid plasma. Yes, it destroys everything, but are we allowed to destroy everything or do we create a condition that every living thing exists and co-exists with each other and both have the opportunities to live according to their environment. If we create damage environmentally, unknowingly or for whatever reason, the mistakes of the past, or the benefits not to become a mistake, we now have solutions to apply in a positive way with this technology. It is to set the standard of finding solution without damaging more or changing to benefit one to control others.

K: in the next 2 to 3 weeks the foundation will announce collaboration with a number or organizations around the world to be in water, food, peace, and application of the delivery of what is called by you, the spaceship. Coming with a positive understanding and understand that all the knowledge is on the table. In the coming weeks I will stop teaching because I have taught and brought man to the point that man has to decide for himself. Everything from then on goes to the universal council for them to start the process to find the solution for everything that leads to one thing—not only peace for the human race, but peace for this planet and all its creatures. We cannot be at peace if we don't create a comfort zone for everything that exists with us. The process of interaction of the plasma is the backbone of understanding the technology. Try to understand how the plasma works, what is the plasma and how do you reach it? Then you are in a simple place; you have copper or zinc and you have changed atomic structure of systems tightly packed with each other in an elliptical solid matter (44.46 minutes). You have the spacing of what we call mono-atomic or nano technology. From it you get the GANS and now

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

we have brought the technology to the fields of these. What it brings is whatever you need to make (45.23 minutes). From any state of the matter to any state of gas or liquid as it suits you. (45.38 minutes).

K: This is the option you have in the universe. This is what has been given and now we have to use, not the structure with all the independent elements but this, the structure of the fields of the elements. We have to use the interaction of the fields and what we expect to create from them and what we want to create from them. You can have everything you need from whatever material you use. You use CO₂, copper oxide and you end up with their fields. You use CH₃, copper, zinc or whatever—at the end, you end up with the fields of all these. In a way we have to learn about the soup of the fields that we make from materials to create a condition and it brings peace to us and balance in accepting equality for the whole occupants of this planet earth. None of us is wrong and none of us is 100% right. But, the setting of the universal council and the people who are working with the humanitarian efforts will find a beautiful time.

K: you don't talk about the peace and what can we bring now. The tool of peace is in your hands; you make the decision. We salute you and you will see them in the coming time. This field (47.33 minutes) brings you to your new headache. It is not just the peace on this planet, but peace and interaction with the universal community. This is what we have to understand—how and the way you will react with the universal community. We have to get our house in order before we can go 'outside.' We have to clean up this mess here before we go to the next step. A lot of people ask a simple question. It cannot be done and we are doing are best. It CAN be done and we ARE doing our best. How can we overcome multi million organizations? You change the thinking and the thought of the man who sits behind them. I was just telling Giovanni a few minutes ago that one of the richest men in the one of the countries has cancer. We have a number of them that do. Strangely these rich men with all their wealth cannot find solutions to their problems and they are turning to Keshe Foundation to see if there is a solution to their problems.

49.16

K: even the religious leaders that you see and 'worship'—they have turned in the past and the current time to the foundation for their solution for physical ailment but they don't want to go any further. It is good for them to receive the systems and for them to physically be able, but in the public domain they will not tell you what they use and how they use what they receive from the foundation. One of the most famous religious leaders that have the most populated support has been using the system of the Keshe Foundation since last November. It was built here in Balata for him. The people who were involved are listening to the teaching.

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

K: can we go to them and ask them for the support to bring peace for all of us? You have to understand that the biggest problem for the foundation is the religious organization because by being in peace you will find that there is no place for the religions to live. Because when you are all one, do we need religious leaders to tell us what to do? In a way we are a poisoned chalice. Don't drink or drink it, either way we come to the point that when we are unified there is no need for the division. So, how do we do this; how do we go to the next step? We need to create plasma systems which have two functions: they interact with the emotion of the man and we all know that zinc is one of them. (51.36 minutes). We need to interact with the structure of balance keeping within the structure of the amino acid which is the backbone of the life on this planet. Phosphor: we need to interact with the RNA of the whole backbone. We need to interact the way the physicality of being on this planet has been controlled through its emotion. (Zn + 1 (phosphor) + 1 Fe + 1 (sulphur) + 1 (lead or gold) H - + (amino acid of the man)

K: We need to interact with a system which allows the transfer of energy from one to another, sulphur. We need to create a system which allows any extra fields which are in the environment, given or produced and not wanted, to be taken out...and the options are lead or gold. So we need to find the system that does all this and a system that allows the development of free energy in the space of the amino acid of the man which is H and you have to find a system that connects the totality in the information transfer with the cell of the man. The system has to be: 1. balance of emotion; 2. balance of physicality; 3. energy that can support 1 and 2 and you need a line of correction. Now you can see how those number 1's in the formula above can be filled in. You need to make a GANS liquid that allows you to use such a mixture in totality to fit into the structure of life with deviation of Cu or Magnetic. You have to understand the connection between the structure and you don't rely on the matter and this (see formula) in totality creates a field that each one of us take from it what we need.

{Zn + 1 + 1

{

{Fe + 1 + 1 + 1

C {

{H_ +

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

Cu Mag

The GANS system has to be according to environment and conditions of this planet. That is why we are the children of this planet. Does it matter if you are a tree, a fish, a dog or a human being? We are all the children of this planet. We are created by it and it has nourished us and brought us to the condition to exist. For us to exist in the universe and for us to be in a peaceful condition we have to create that atmosphere constantly anywhere in the universe. On top of that you have to superimpose the condition of the destination or the environment that you have entered.

K: in so many ways now you need to create the condition where the field's interaction brings the condition and the condition is dictated by the interaction of the total fields of all the entities which creates the whole structure of the man. Any of the materials that are missing will doom the man because you will have a shortage. If you withdraw the zinc you will have a bunch of crazy people traveling because the emotions are not satisfied. If you don't put iron you cannot feed the essence of the creation of the man itself which is his blood. Then, hydrogen and other entities. But you have covered yourself with the gold and the silver. This means that with the presence of sulphur and lead you have created zinc but you have created the condition of division of one element to another. Don't forget that sulphur is the balancer. What you are short of sulphur is able to come to give what is needed and take what is not needed. So, it allows conversion of material from one to another as needed. You will come to understand very soon that sulphur plays a huge role in the body of the man to fulfill any shortages. It is the same with magnesium when it comes to vertical and horizontal people.

K: you need the phosphor to guarantee the solidarity and the energy balance of the recording section of the body of the man without an ability which is in fact your RNA and the backbone of the interaction of RNA with DNA. The bridge between DNA and RNA is phosphor and there is no other way. That is why phosphor is seen in the DNA of the physicality as spacing and its energy is the controller of distance of the RNA and it is what we call magnetic gravitational positioning. You need to create such a structure in your system and then you will find out the system will work perfectly enough for man in space. Understand the reason why you use these GANS and allow the filtering and why you create a condition of the attraction of the fields. I keep on saying the teaching will go away fast but it is so deep that a lot of people don't understand it unless you are a specialist in one way or another. We are teaching for totality for what some of you might pick up, add to and increase. You can create very much the direction and position, for example, the condition in the whole system for instant communication no

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

matter where you are, simply by understanding the work of the chart above highlighted in yellow.

K: you attract and interact and hold the human body with this gravitational system and the atmospheric condition of this planet. Now you see all the teachings, all the making of the GANS, all the making of the nano materials come together. You put nano of gold and copper with CO₂ and it will rust. You make the GANS and you increase its power and its range; you make it into a liquid and you have taken it from the physical for its energy. This is what you need to do. Then the change comes in how and what percentage in which we have added to the system. You want a peaceful man in emotion you make sure you have Zinc. You want to get aggression out of man; you reduce Fe (iron). You want to touch man for physicality then you play with the CU. You want man to understand plans in his mind, and then play with the magnesium. Then you understand how you change the whole structure and humanity has become the king and the king is to look after all his subjects. When you are the 'king of the planet' then you are responsible for everything from the fish to trees to the lions and tigers and it has to be correct and nature chooses the path and the path is not being forced upon nature.

K: the process of taking and understanding this will take time. We have been doing what we are doing for thousands of years. It is not easy to tell people there will be no killing. We have become so fantastic in killing and justifying it that we have created armies for killing. We have become worse than the animals. This is how low humanity has become; we have created tools to kill each other en masse. We have justified it by nations, religion, color or race. We are more or less the only creatures in the universe that plan and spend time and energy in how to kill each other. Shame on us. Why? We see killing as path for us to be in control and in charge of and for us to be the 'head of.' In so many ways when you get to that point you have become the lowest animal on this planet. How can you call yourself the king of the planet and the king of the animals? Animals don't do what man does.

K: The whole process will take time and as we have seen that the whole process does not need time. We have seen that our doctors report to us that they have changed the cancer in 3 to 5 to 10 days using the Magrav systems, the coils and the rest. That is the change of physicality. If Keshe Foundation decides that you are the foundation to bring peace, it will not take much. We have shown you building ways and building different things and now you have accepted the knowledge of producing the system that can satisfy all the needs of the man, a respecter of the physical and the emotion and the rest. We are running trials for different applications of the technology. I was talking a couple of days ago to a handicapped child. We give different names

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

to different genetic mishaps or taking of the air at the point of the birth. What if we put these people through the Magrav systems? Would we see the changes, and we do as this has already been done, would this now be the time that different supporters and Keshe Foundations around the world produce the same systems and just run it through the GANS?.

1:07:12

K: Make a standard mixture that fits humanity and the rest of the creatures on this planet. Then we can see the changes and when we do not think, carry or initiate wars through the non-existence (of war-mongering) within our system and then we might change the man. In medical applications we show systems that you put on either side of the body and you transfer energy to bring balance. Would putting satellites, ships on the waters and systems put in cities connect the fields from one part of the planet to another that the man can change? Yes, this has been done before and it works. When we come to this point and we have the peace mixture and a peaceful planet, you will find out that what is not needed is given to those who need it and the system finds a balance in what it receives and what it gives.

K: the biggest problem on earth, any kind of waste from fish, animals and man, is the high energy released from the amino acids. Technology like this brings balance to the fields and emotions and behavior of the man. The more we consume iron-based food the more aggression it raises in man; our face changes and our behavior changes. Would it be the same if we can create a condition when we bring a balance to whatever you eat, and we place a system that takes the energy from iron and gives it to other parts or allows it to be converted in the same mixture by phosphor or sulphur. The tool of peace is in the hands of the man for the first time. The beauty of it is that once you make this mixture in the GANS state all you need to do is spread the water across the world. You can pour it in the oceans, spread it across. You can run it in the cores and the coils.

K: the interesting point is how much is man committed to peace and the continuing of their race on this planet. Those will object to launching of systems like this because it intrudes on their privacy want to carry on with their abuse. Let's see how many people object and then we will see who the abusers are. The opposition comes from those who want to carry on abuse. The collaboration comes from those who want to see the change. This is the peace mixture that balances all the energies in the body of the man so that man can find peace within himself. He has everything he needs and through the right structure gives what he doesn't need and takes what he needs. You have the carbon on one side and you have the oxygen on the other side. If you look in all of it, you take a lot, but you give a very little and you convert it to the food that

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

others need. All your system if you take CO₂ – ZnO - FeO and CU – Mag. We use this with the mind of sharing and in a kind of giving.

{ Zno + 1o + 1o

{

{Feo + 1o + 1o + 1o

C O2 {

{CH3 + o

Cuo Mago

K: there are a couple of more elements that you can add to this. In a way you create and start this process without the man knowing. We have seen people putting systems around Vienna but if you a system around at least make the right mixture and satisfy the need of the man and even with the gold oxide you satisfy the need of the man for hunger, for wealth—it's amazing. He feels rich and that he has the gold, but he has no gold with him. This is the solution without any single bullet. This is a peace solution. Up to now you could not have it because you could not see the path of where you are going. Now that a number of nations have started the process of launching the Keshe Foundation for oasis systems and space and control of energy systems, now we can all have the same. We still carry on building and doing systems but this is a peace recipe which man cannot ignore. In the coming time we have a very nice plan for you. Without your knowing it you are manufacturing it, using it, launching it and in a very short time, the next 6 to 12 months no one will touch if you understand the process and the point of vibration.

K: we don't go to fight—we deliver the tool of the peace. In so many ways we always use the tool of the man to get what the man needs in this technology. A lot of you have gold and silver chains and copper and iron wires. All the tools of peace sit with you at home. Somebody asked us how to make silver and gold GANS. They want to make. I can teach you my way or other ways. Go back to the understanding of the top, where we started. (01.17.10 minutes) you have atomic structure; you have to loosen it up by heating but by field interaction. You use

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

caustic. If you go back to the beginning you always connected your plates to a current flow with another plate. Let's do it here. (01.17.36 minutes). So the current flow between the two plates has a direct effect on how you loosen after the heating or with the heating. One of the reasons we connect the power supply or put an LED to create a potential difference is to allow once it loosened to become correctly positioned. So, you can use both the caustic and the current flow. Then you can use the same process and a very slow current flow once you loosen it to create any GANS you like irrespective of the material.

K: we have explained many times and you have seen how we produce massive amounts of copper oxide for GANS units for the Magrav units. We connect our copper plate to the _____ and instead of NAOH we use salt. (1.19.43 minutes) That is what you do—you put your plates in salt water to create a GANS. But, you can produce and use a combination of the two to create GANS of any material. Some of you understood this and did this. Some of you have seen this from the beginning in the coca cola bottle. Don't forget one of the easiest ways to release energy at the present time is the reach of every one of you and is anything based on the CH₃ which is 80% of the plastics. One of the best ways to release energy in a liquid state that you can add a release of power is the glue guns. This is why in all the systems that are manufactured for years with the health system, if you open it up you will find the glue from the glue gun in the systems. At the point that the heat (of the glue gun) at the special high temperature, you release the GANS you put into it and it traps the energy to feed it. This is a secret that I never released in my technology in the health application.

K: You see the system in China that they did last year and you see a glue base and the glue hidden in the GANS I used at the high temperature to release its energy to be used by the system. That is the easiest way; it is like when you drink sugar. You take in a huge amount of energy but you have to create a condition for the energy to be at the high level of release that we can lock into the GANS and into the nano coating. It can release its energy at a constant pace. If you look in the system where we put the magnets to confirm the direction of the flow in the water containers you see the very little GANS totally undetectable and then you see a magnet which is surrounded and stuck to with hot glue. The interaction of the 2 creates a special connection of the field which is there feeding it with the whole inside of the magnet, you guide it to what you want it to do. If you use a solid magnet you spread the field. (1.23.16 minutes). Now you have the plates and the coils using the same process. In part of the health units that many of you are using there is a part that replicates the system. You can use both the solid magnet and the ring magnet. The ring magnet is for keeping the spread of the fields for targeting. If you make the health units, you can add to your knowledge. You made your coils, and your panels. (1.24.23 minutes). You can use copper plates on the other side. You can use nano-coated zinc plates.

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

You target from the 90 degree coils to the plates. Up to now you used these systems only from the coil to the plate. (1.24.49 minutes). You can GANS coat section by section on the plates the way you want.

K: Don't forget that those of you who are doctors using the health systems, to use the GANS coat with CUO2 plus Zinc, plus CH3. If you place this plate with the ring at the end of an amputation you will growth of the arm or the leg. You have created the energy of the tissue with the CO2 and you have added the emotion with the Zinc and you have provided the energy from the CH3 to call upon the healing. (1.26.05 minutes). For a long time I have been telling you the release for the doctors and the hospitals for amputations. The presence of the copper on the plate guarantees 100% that there is no infection. The distance is 2 to 3 millimeters and no more. You need to have the combination of the 3. The information carried from the new system and the blood will be responded by any of the 3 interactions of the CUO2. You can add phosphor and sulphur; you can add chlor to this in a very, very fine way. You will find out that if you get it in the right way and you can do it in the right shape and condition you should get the increase of a finger or toe by millimeters in a short time because the body does not see the 'end.' The body sees a continuation so the orGANS will keep on growing.

K: If you do the same, for example, the reverse of this where you create the condition of balance, you can target into the center of a tumor and create a reversal. The same process can be done for growing heart tissues where there is heart damage to the fiber of the muscle tissues of the heart. You can grow, if you understand this system and can target it; you can grow and build up valves which are damaged. There is no need for open heart surgery. But you have to understand the way it is done; it needs a total understanding. Now you see some very simple ways. If you understand the technology and if you are the last man standing in space you will survive for thousands of years until you decide to make an Adam or an Eve. Then if you have the knowledge and understand it correctly, it is at your will and your wish. If you allow that it means it comes from your soul and that is the true man. It is the true meaning of being able to give. This is what Christ did, bless his name. He gave from his soul to raise the soul to raise the soul of the man. The raising of the soul gives life to the physicality; the soul dictates to the physicality and the physicality walks. If you understand this and you are the last man standing you can always create and you will not be the last man standing because you can always create another. Then you have passed the point of the sharing of the soul.

K: Someone asks what soul mates are—soul mates know no separate space or time in the universe. It is created out of you by you for the confirmation of your own existence not to be

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

alone in space or the universe. The man can do the same. It goes back to the story—is there any truth about Adam and Eve? Is this so close to the heart and the heart is close to the emotion and the emotion then feeds the soul? Man did not understand what the soul meant when he was told the story of Adam and Eve.

R: Colleen mentions that the small orbs floating in a gold GANS fountain I made. Can you explain a reason for this? They look like small fluffy pearls and I have photos if you would like to see them. Pictures on facebook. (1.36.06 minutes)

K: it is becoming its own GANS.

R: see the ‘pearl’ in the center of the oyster shell? The other substance is on the right. This formed in her system.

K: this is a pearl shell inside the oyster shell.

R: it is not really a pearl and she says it is more ‘fluffy’ than hard. This was posted in the Golden Age of Gans. Her microphone isn’t working.

K: come back next time and explain it. I said in the teaching this morning, one of the Keshe Foundations has been able to form living creatures. He has a soft-hard shell, transparent when you take egg shell off and see the membrane. When he moved it, it burst and bled out. He was sorry that he destroyed that being. We are entering into an era where people are creating live structures. We have to have respect for what is done and how they grow.

R: John from Arizona manufacturing who can give a report.

John (J): I’d like to send pictures of what we are doing.

K: you are going to have visitors soon. Have you had demonstrators outside? They have been asking everyone to disturb as much as possible and I wonder how many free units you have given up to now to all these demonstrators.

J: we operate in peace.

K: I have seen that others have had their telephones blocked and people demonstrating in front; this is a foreign German body. How much has the publicity helped you?

J: we are doing good.

K: have you received your package, your unit?

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

J: it's supposed to be here today or tomorrow. It's in LA. Let me share my screen.

K: Arizona is the first US manufacturing going into production. They should have the first production in the next week or so. You have a beautiful center...I have seen the pictures of it.

J: we have over 5000 sq ft. in Tempe Arizona in a good area. Here is the first unit I built, followed by other units. We did one with the plasma battery and the Alec beads. We have put it on the electric bikes and we built a universal system, and a space ship.

K: how is the nano-coating machine?

J: we don't use it; we find the coils are not perfectly round and when we go from one coil to the next we have to adjust every one. We set it aside as we were spending too much time on programming.

K: are you using the caustic way?

J: we are using the caustic way.

K: how is the coil system working?

J: excellent. (1.46.23 minutes). We are making a lot of coils. We have a GANS production section. We have a large facility over 5500 sq. feet. We have coils ready for production. We have done over 3000 coils on the coil making machine. The coil winding machine is going very quickly. One of the things we have done is we are doing a lot of testing and we have tested many things. Right now we are testing our version of the oasis system. On each of the balls they are hooked to a fan (3 fans). 1.48.39 minutes. They sit in a plastic box and we can control the spin and they all spin together at the same speed. We put the totality water in each of these balls in the oasis system. The totality water is the water of a bunch of different GANS including the basic 3 plus brass, gold, lead and one more. One of the other things we did was to create a bucket of totality water and we added the higher strength fields in the universe which are love and gratitude. All of us sat around the jar of totality water and sent out love and gratitude and peace. Everything we generate with the totality water will generate those fields.

J: Another thing I did was to put my fields into this too. I took nano-coated copper cups with a cup of distilled water and on a q-tip in one plastic bag I put my blood and in the other one I put my lymph. I put those fields into this water. Now I have John's lymph which represents the emotions and John's blood which represents the physicality. I put two drops of these into each of the balls which then carry those energies with them. What we want to do is create a device (myself) which I can control with the emotions and the physicality. We are attempting this direction. We are building a second oasis. We have a glass blower who is blowing different size

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

balls. You can see that these are spinning and we left 1/8 at the top with air. You can see the 3 interacting with each other and this has been running for a day. One of the other things we did was when we do the steam caustic we end up with dirty water that we don't want to dump down the drains. We put a vial with CO₂ and a nano-coated copper coal and the very next day all the sediment settled. (1.53.21 minutes). All the caustic materials were at the bottom the next day. This goes very fast. Without this device the caustic material stays stirred up.

J: we have a bucket of caustic material that stays black and cloudy. Now we are working on a device where we put coil arrangement inside of a glass ball. (1.54.23 minutes). We will be spinning one coil one way and the other coil another way and the ball will spin another direction. We will extend from the coil with a loop arrangement to the bottom to stir the GANS inside the ball. We have a system that is in a glass cube; these are plastic balls and we are waiting for glass balls and we are waiting for different types of GANS. We put a fan motor and a GANS ball that will be filled with CH₃ mixture and the CH₃ is the giver. We are building additional ones also. One of the big things we are doing is getting ready for the mass production of the units and we will be having a lot of pain pens coming in next week. Mr. Keshe we need the certifications and we will go ahead and move forward with the US certifications and we want those that are already put together. We will put them in a package to get our devices certified in the US.

K: thank you; this is nice to see this progress. The German manufacturing is developing while they are waiting for certification also. The new units should be much easier to produce. It will be nice to see the production coming on line. The Magrav units will be the white ones as we have done here. The logo of the Keshe Foundation is on it, but the production is in the US. It is important to realize it has taken more than 6 months to get where we are now. This week we have no outstanding orders or backlogs. It has taken a long time to get to this steady point. You received the full package and you have to make the coils and place them in. We have placed a first purchase order to Iranian manufacturing for the copper coils. If you need copper coils at the rates which we purchase just go to the central bank with the order. We have 100 tons on order that should ship next week. This is fantastic. Let me know when you make your first system. Pennsylvania is the next one waiting to come into operation.

Colleen (C): I had the question about the pearl. There are a lot of these little 'balls' in here that are 'blooming.' There is a gold covered rose to make the GANS.

R: what is the liquid the shell is in?

C: yes. My question is what are these orbs?

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

R: she means 'fluffy' pearls.

K: I don't know. I can't tell you because I cannot see it.

C: someone said it could be a pearl forming. We shall find out.

K: wait a few weeks and we will see.

Dan (D): I can show you my computer mouse with the battery that was discharged for 2 weeks. It was charged with the simplest of battery. It was done everyday and I can show you the mouse. I am from Kiev, Ukraine. We have the blue tooth mouse. The battery was standard and another battery was used for some time and it was discharged to 0.08. Then I have put this plasma battery for this simple structure. (2.08.55 minutes). You can see this unit and I was using one section which has inner coil, out coil, aluminum foil and paper with copper GANS. They are separated on the outer core. I took off the battery in the blue tooth mouse that was here. You can see the battery was leaking and it leaked after 1.5 months of use. I put the battery between the output and input of the plasma battery and it stayed in this construction for 2 weeks. After 16 days of this type of charging I have voltage of 0.8 volt in the battery. I put the first battery back in and my mouse has worked perfectly for 2 months. My computer informed me the mouse was charged.

K: you are using the battery you made like a normal battery.

D: It was recharged. Normally the mouse works for 2 months on a battery. As the next step I will have 2 batteries for charge and discharge.

K: have you finished the charge? The battery you made?

D: I don't know. I will try it to see. I think it is working because I feel it.

K: in the coming time the innovation center will show new evolution in the power production in the next couple of weeks and we will see what we can add to the knowledge.

D: I have friends in our technical university and maybe someday we will start testing with officials in our country.

K: when you do place the unit in house condition.

D: we have the unit in this house and we are getting meter results everyday. We are using a little heater, 500W.

K: that should be about right. We are running tests here up and down. We started from 400 to 200 and then to 18 Watts. We are testing from 1500 to 100 to find the trigger point and we think

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

the trigger point is 50 hertz with the Magrav system. It is around 150 to 200 watt load. We start at 200 and then came to 15 to 18 watt LED. Yesterday we had the same as you. One of the universities here in Italy was here and we sent two units with them to test. We need the support of the universities to qualify the use of the systems. Let us know if you need help as we have very good support in Ukraine. We can support you.

D: a question—if we get official testing in the university and have certified system?

K: we support this and give us the address of the university and send the request to the webmaster and put request for university. Put the department where you want it to go and put in the subject ‘unit for the university.’ It will go from the factory with no problem.

D: this technology is needed by young people.

K: a number of universities around the world are testing and looking at different application. I will organize the shipping and it will take about a week.

D: the health section—this is about dental problems. Have you send cases like this?

K: we see a lot of them. Tomorrow a professor of dentistry is teaching. We have set up the doctors@keshefoudnation.org. The progress of learning and teaching is on Wednesday at 2pm. You must be a certified working doctor. You will be given access to these learning sessions. We have separated the military teaching and the doctors and medical health teaching with dentist is with doctors bringing live cases. We have a person looking at the data from the sessions. You can send to us to post testimonials for doctors and health authorities. She will separate and categorize every application, what was used by the doctors and what can be certified.

K: here is a small tip for you: if you have gum or dental problems, especially for youngsters you can keep everything intact by taking a block of cheese every night before you go to sleep. It will do miracles even with cavities. They will reverse. It works miracles on gums. Take the small piece of cheese 2 or 3 times a week; it works miracles especially for youngsters with tooth decay problem.

K: I thank people in the Ukraine, Chinese and Italian universities for their support. We are open to teach and learn from you.

R: there is a message from Sylvester from Dave Stewart. This is Dave from Peru and I have a friend working in Peru with Magrav systems. He had a terrible fall and shattered his skull 8 weeks ago. We would like for help.

Transcript from 16th International Knowledge Seekers Workshop held May 24, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

K: we have heard the request and we are not there and are not there. The first 4 to 6 weeks with head injury we cannot get involved. What is the condition, is he in a coma, is there bone embedded in the brain, and what is the condition. Then we have to have doctors to collaborate. We can send MRIs to the doctors@keshefoundation. If any of the doctors want to pick it that would be fine. You cannot interfere in the first 4 to 6 weeks. After that we will collaborate with the doctors and then we will get involved. We can advise the doctors and then they will decide. We need a doctor in Peru who understands the technology. We have taken the stand on the health side that everything involves the doctors as we have medical people around the world who join and increase the knowledge. They tried to clamp down in Belgium.

K: Keshe Foundation closes all operations in Belgium in the next 2 weeks. We have had enough terrorism by the people in Antwerp and the Germans. We have different organizations around the world and we can transfer all operations out of Belgium. It is a loss to their nation. We have paid tens of thousands in euros with their taxation. We are closing Keshe Foundation Power Cell, Keshe Foundation Research and Development and Keshe Foundation Belgium to keep the Keshe Foundation out of the hands of terrorists. We have already informed the authorities we are closing all our activities. We will not produce, or operate and we stay out of that country until the court case against the King of Belgium and the police force is settled by the International Court of Justice and the courts in Italy. The harassment has gone beyond the limits and we are gone out of the country. Once we have the settlement with the courts and the police force in one area especially the officer who is harassing people around Belgium and threatening them with prison and all the rest, we are having a check by Interpol. You will have a new address and bank system and we close the books in Belgium. The country is losing income of hundreds of thousand of Euros because of the fraudulent activities of what we call the red circle. There will loss of employment.

K: we will bring new insights and development of technology on Thursday. We will introduce a new process for disinfecting for the public. You can market it and produce it and you don't have to use new chemicals. There is a different structure that comes into production. It is a GANS detergent and we will introduce new systems for health applications. Thank you for your work and sharing your knowledge. Thank you for the group that sits in the back ground.
