(00:06:14)

Rick: Here is a picture from Abby showing her roses. The bushes are 6 feet tall, twice as tall as normal and they bloomed months before the neighbor's roses. Portland, Oregon is known as Rose City. The lawn grew like a jungle and I could not mow it with the rotary mower. I used a sharpened Japanese scythe. She used the GANS water. I did nothing to the roses. I hooked up 5 plasma devices, 3 stackers and 2 cubes. I built 4 of them myself.

Jackie (J): Francois and I have started the teaching for the French speaking with Keshe Foundation. For the moment we have established the public teaching channel and it 7 o'clock in the evening. We deliver some teaching for the private teaching as there are many new students who are French-speaking. We will have some teaching for the French-speaking part. We have good news with the Africa section and the energy section. There is a lot of background work for people to understand the teaching in different languages.

Rick (R): Francois is helping with the Canadian French. Francois does a new power point presentation every couple of weeks that he does for people who are invited to the teaching.

J: I want to encourage people with other languages send the email to us so we can publish these recordings and bring them under the Keshe Foundation platform. Those who understand can join our English speaking teachings.

Francois (F): this is every Thursday at 7pm and there is data on Facebook. We have the list of different language teachings on the KFSSI website. We have translated much of the website for the KFSSI website. We make subtitles with the translation and there are subtitles when people play the video. They do the subtitles in English, French, Polish and more. We have done the kids' videos in Polish, Spanish and French. We have these subtitled also.

J: Students joining now can watch the private teachings with the subtitles and spread the knowledge faster. We need help with translation and subtitles.

K: I think the Berlin group has completed the German and Spanish on the KFSSI.

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

P: we have the website translations and we will soon have German and Spanish websites. We will start with full time German teaching and a lot of Germans have not been able to follow the teachings in English.

K: the German teaching will be with German teachers. Once you become a student in one section you get access to all the other teachings in other languages. You can go across from one teaching language to another and this will be the same with the Chinese teachings in the next few weeks.

P: we translate every document or manual brought up by the German speakers. We are translating the Knowledge Workshop videos plus the private teachings that were given last year.

K: There is a lot of work going on in the background and the 3 Keshe books are translated into German. We will publish these only 'order to print.' In the coming weeks we will list the 3 books in German and Chinese and soon in Chinese. We will release Spanish and 12 more languages. All books will be printed to order in China. You can buy books in the many languages at the end of the year.

K: hopefully from tomorrow the Italian people with Italian address can go to Italian bank, the name released today in the Italian press and gives a code number which we will release in the next few hours. We tried to do 10 year at 10 Euro, but the bank brought in condition. We have renegotiated with the bank and reduced the payments from 10 years to 3 years. We pay \$25 Euro for this for 3 years; you sign a contract at the bank and the bank will allow you to submit the form and the bank sends us the confirmation and we let the bank know we accept the application and the unit will be developed and sent to you. Tomorrow you can start submitting the applications. We start with one part of Italy and then the offer will extend all over Italy. Banka Intessa San Paolo (?) is the bank. You pay in the bank and they approve the documents and inform us of the approval. Deutsche Bank is the second bank approved.

K: next week we allow the Deutsche Bank application to be used by German, French and Spanish. You will have 3 years to pay and this is the 500 for the Magrav unit, plus taxes and interest. We have to have the quote released tomorrow. You go to KesheFoundationItaly.com and we will check the application and send to the Italian bank and they will do the checkup for the application and the order. We have geared up for 100,000 units per month production starting in July. The bank has 600 branches. You will see sales people in the bank. The bank approves the sales. In Northern Italy in the next 2 months there will be billboards with the Magrav units and other products.

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

K: Keshe Foundation will be the financiers for the technology in the next 2 months and we will not need the banks. As we promised from the 1st of June you can go to the bank or the website and within 7 days you get approval and in the first phase we will meet the orders within 90 days. On the back of this we will submit the offer the factory to any location and we will in the next 3 months have the units and you can open build the factory inside. This is targeted for governments and industrial organizations. We will finance these factory setups through the same structure. We delivered 2 containers to the African countries and everything needed for manufacturing for production of the GANS or the Magrav systems. We supply the materials and the backup.

K: in the next month Keshe Foundation Africa will open. We will do mass production of the GANS material in Japan. In Italy we will supply the diversion and diversity of the systems which means household goods, medical applications and more. We are negotiating to be able to deliver the technology to most of these nations. This means we offer the same packages to the Europeans, the Africans, the Americans and more. They all move through the same container business and the technology is available through the delivery of containers from Hong Kong. We have fulfilled the promises to deliver Magrav units to governments, universities and institutions that requested them. We as Keshe Foundation around the globe are building peace through this technology. We have become a powerful organization with the peaceful application of the technology.

K: today I am traveling and we will be present at an international meeting. It was short notice and we accepted. Keshe Foundation has turned the tables by being correct and being in position. We make mistakes and mistakes are to be corrected. In the next 6 months there should not be a nation without a factory. Most of the factory will be supplied with the cost in the international market. Everything is being done by a central basis. It has taken over 6 months to get 2 major banks. Everything has been done correctly and from now on we move and scale up the technology world wide.

K: I receive communications that major forces have become aware of us and see us as a 'danger.' I have made my usual remarks. We have received your messages and the technology is for the benefit of humanity. We were approached by church foundations to bring the technology to through the churches and we have no objection. We collaborate. The links to churches, synagogues and mosques has been made through the man. We have agreed to use these channels to deliver the technology world wide. We will announce with 2 major churches in the coming weeks. We will work with the Chinese with the technology and we have appointed a leader,

Transcript from 17th International Knowledge Seekers Workshop held May 31, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

Professor Zhu and now we go into massive structure in China. Keshe Foundation is international. We give you a platform.

K: it's takes 3 to 4 weeks to shift from coils to plasmatic and field conditions. We see people offering new dimensions in delivering the technology. We will carry on with the open door policy. We don't say who is right and who is wrong. Everyone has the same opportunity to learn. The only ones we block are those who use foul language and all that goes with that. If we see new technology and ideas we support it. You must have the capability and capacity to be accepted and to accept. We share unconditionally with humanity. Keshe technology covers every aspect of the knowledge of man, from birth to death, from energy to space to food. We are teaching heavily on the space technology. We will complete this process while we are in China.

R: I wanted to show the presentation that Dr. Rodrigo Vildosola did a presentation last Saturday in Washington and it was an outstanding success. It sold out and was standing room only.

K: ask Dr. Rodrigo is there was a recording of the presentation that was made?

S: I will get the recording.

K: we have started interaction and work with different scientific organizations. Interact with scientists at the level they can interact and disperse the knowledge. We met with top nuclear scientists. We explain the results we get. They wanted to test and develop with the GANS and they wanted to know how to solve problems in their testing. We have to start interaction with universities. They want to add to and bring technology. Approach scientists, doctors, physicists so they understand the technology. They have spent millions to keep Keshe foundation away from the media and they have seen us to as a threat to the income of the established science. We are the generation and the people who share knowledge freely. You kept us away from media so we went directly to the people and our support runs into the tens of millions.

K: you have to realize that we don't want to become an organization without credibility. Leaving Keshe Foundation open is to your benefit. When the technology you have workers and underneath you have the technology for their homes and their children. Threatening the news media not to publish anything about Keshe Foundation gave us an opportunity to build with a different layer in society. We came to Italy on the back of the support of the Italians. Now from next week you will see Germans, French, Dutch will see how the Italians benefit. We chose Italy. It is important for governments to understand what is coming up. We work as one nation and when we develop and see the technology as one across the planet.

Transcript from 17th International Knowledge Seekers Workshop held May 31, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

K: we are going very fast with the teaching. We were called to an emergency meeting with some of the most powerful people in the world. Hopefully by Thursday we will be back in the center in Italy. This structure of the plasma has to be understood the way the plasma works and the way the plasma releases its energy, interacts and absorbs. As long as you consider only one you will fall into the pitfalls of science that shows only the magnetic fields but never understood the gravitational fields of the magnetic field attraction and what is released from these fields. In the structure and the understanding of the plasma it is paramount when you work with the system to look at the whole environment of the system. It is no longer an engine that you can ‘tune’ under the bonnet of the car and change the cylinders, or a valve, or reposition the flow and the intake. When you work with plasma you look at the entire structure not what is under the bonnet. You have to understand what it receives, how it receives, what it gives, the way it gives and what rate it gives and receives and how much it shares with others. It all happens simultaneously in one go. This is where the plasma technology, the way we developed it, differs from a mechanical system in how the present world of science has worked on for centuries and has always run into problems from one to another.

K: when you work with plasma technology you work in a very fine line of understanding the totality of the size in that fine line. There is no other way around it and no ‘adjustment.’ The environment for the fields is important to work with the system as you develop it. As long as you don’t understand this totality you will see no results when you work. As you create energy through interaction of fields by releasing the friction residue of the fields of what you call energy, there is no free energy, but the conversion of the energy and the application of the energy in the large order as you need it. If you understand it now you can create a slightly different friction from stronger to lighter to create heat. You can use the same interaction of the fields in a different strength to create light. You can use the same thing, a slightly different distance from the source, to create matter. In reality you can create the condition inside the fields you have created to define your position for space travel.

K: It is now for us to learn that we don’t need one engine for the car, another for space, another for drinking water and fertilizer for the field; now with one system you decide at what rate you allow the fields to release their strength or interact with to release the energy. This is where the change will come. Allow people to work with the coils and the plasma until they understand this concept, this principle. This is the working of the universe; we will have a problem for those who cannot go through the transition of understanding the totality. And they get bogged down in different parts of the science of the plasma—in the nano, the GANS, the liquid plasma and the fields. We see each one of you developing different angles and methods and producing what you think you are looking for results. None of you is wrong. All of you are correct but you have to

Transcript from 17th International Knowledge Seekers Workshop held May 31, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

understand what the consequences of developing and what are the applications of using the technology. No one can tell you unless you interact the wrong way that it (what you are doing) is wrong.

K: you need a huge amount of energy through the field transfer. The body of the man in the matter state you create huge problems, psychological and physical. Those who say they just nano-coated one end of the pin you put in the skin, the nano-coating travels across the pin to deliver nano-coating to the rest of the pin. Now you are delivering nano-coating to the plasma of the person. And then if it is a huge amount it can cause havoc. Those of you who deliver and develop technologies in a GANS state and try to drink it, you are told not to because the GANS is too powerful for absorption. You can transfer and balance the man through the liquids. If you go a further step you can deliver it in the liquid plasma condition or the field strength. This is what we have—plasma technology is simplicity of the creation and diversity of its application—it is all the same.

K: How you create and how do you interact to give you the desired food? What is food? It is an energy package that is acceptable by the body of the man when it is depleted of that energy. So, how easy should it be to feed everybody? It should not be very hard. Do we need to create high-rise apartments or can we all live in different stacks according to our needs in the spaces in the universe? As I said, we don't teach anymore how to live in this system because we have reached the pinnacle of man's understanding of the creation of this universe. Now we teach you technique and we open your eyes to how you can play to create. As I was explaining we built the first engine and now it is you have to change it slightly to become a racing car, or a stock car, or a lorry, to be used in a boat or to be a water bike or used in engines of industry. Now plasma technology is a hybrid and it's another fuel added which we did not know.

K: there is another structure; this fuel does need containment, processing to produce it. It doesn't have to be stored to be burned or to be refined and there is no pollution and no danger with plasma technology. It is you who have to understand the uses for this material and adapt it to what you desire. We need to bring the understanding of the plasma technology in a very simple way that it can be understood by everyone. How can we apply the plasma technology in the application of disinfection? How can we disinfect? On Thursday we hope Benjamin in Ghana will open a new door with the authorities he is working with. You will be surprised at the applications that are coming from Africa and governments unconditionally helping with this new technology.

Transcript from 17th International Knowledge Seekers Workshop held May 31, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

K: we will show you a new product which every one of you uses every day and it is tested. It has been analyzed and tested by a scientific organization and every one of you needs it every day of your life. This is the development of the technology and understanding the strength of the plasma and understanding the strength of the waters of the plasma and the use and strength of the GANS that create. We will teach a new structure on the understanding of the work of the plasma within the atmospheric system; all of you know this and you never understood it. I have explained it so many times over the last two years and you have not understood it. On Thursday I will show you how to make diamonds, pure diamonds. You know that we can make diamonds the size of 200 carats. The diamond forces of the world will not be able to stop this. I will give you the principle and the knowledge. You have all seen it and you have not understood it. You will be able to produce with the understanding of the interaction of the fields how to create the purest designs you want in diamonds—20 carat, 200 carat. I teach you this because we told you of the crystals. Now you can build and make the crystals but they will be pure carbon based with no impurities. You will see the purity in the diamond according to the purity of your thoughts. I ask you to make the diamond; it shows your intentions in its structure. It shows marked thoughts in respect to what you have built.

K: I told you I would bring the technology in the way that we build the tools. If I build a diamond and my intention is for peace and you look at it, in a way to see the diamond and you see the color of blood and hate in it the diamond will change color. It is the attraction of the fields of your intention that will show the gravity of the intention of the soul. We will show you and you all know how to do it. You have already done it but you never understood; now I will show you the use of the fields. If I make a diamond with my intention to feed the world but my plan is to destroy as much as possible I ask you to open the book. If there is no interaction between the intentions... Now I want to know how many of you are prepared to start building labs. You have been looking for crystals and how to make crystals and now you how make them and you all see the intention when you build your own system. No peaceful president can ever lie. My intention is peaceful and we will see what color will come. (1.13.45 minutes)

K: these are the processes I have taught you for the last 2 to 3 years. Understand how to make plasma to understand the emotion of your opposition. Ones who have used the technology in the correct way will deliver it. The application of technology to make diamonds has been on the table for all of you for months and you were so involved you have not seen what is in front of you. The interaction of the plasma, the creation of the plasma and the control of the plasma leads to the aspects to love because you have used the ranges of emotion that are comfort to the soul.

Transcript from 17th International Knowledge Seekers Workshop held May 31, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

The behavior will be on the table. Building materials and building systems are not everything. We have to do these for man to understand. But those who become wise to understand through their emotion through the movement and interaction with their souls can build whatever they want. I wonder how many of you will build these crystals and take them to the presidential elections when nominees say their intentions are peaceful. Will the color of the crystal match the words of the nominees?

K: the structure of the universe is transparent and the darkness is not a lack of fields; you see an equal balance of the fields which creates no interaction. Where you have the fields of vision and strength interact you see the stars—red stars, blue stars, pink stars. They interact with the environment that you control. Your emotion is an environment that is in the crystal. The process to develop technology systems to be able to reach a vast number of people has to be done through plasma technology. Otherwise it will be thousands of years before we can teach every man everything and then they die and we have to teach their children. Now we teach the technology and ingrain it within the soul of the man and it doesn't matter how many generations will be created, man will be peaceful because we have changed the soul that is created out of the matter state of the environment of creation.

Nadine: I think many of us are depressed; I think we need emotions instead of reactors to make ourselves being the reactor; am I wrong?

K: Do we need reactors? We answered this last Thursday.

R: This comes up quite a bit during the last 6 months. Do we need reactors? We explored that idea. Do we need a spaceship to travel in space? This is a pretty big idea. She says we need emotions instead of reactors to make ourselves being the reactors.

K: So maybe we answer: use your emotion to build an understanding of what the emotion can be. When we can bring in balance an intermediary condition between the vast energy difference between the gaseous part and the matter part of this planet, then we create peaceful creatures. Understand the lesson: go back to what you have done before in the past teachings. The reason for the aggravation of man is the energy needed to satisfy the existence of his physicality when the amino acid of the gaseous part of this planet interacts with the physical matter and the gap is so huge and the transfer of energy is so massive that satisfying needs a huge amount of energy. That energy in man compacts huge amounts of energy. That is why we eat packages of animals; we eat verticals. If man understands that he can introduce through a specific condition through the plasma technology then immediately within the structure of the soul of the man there cuts such a huge gap and becomes a supporter between the two to heal every creature on this planet.

Transcript from 17th International Knowledge Seekers Workshop held May 31, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

This is what I thought you understood and I explained this in a teaching before. You have the amino acid and then you have the metals which create the iron. Between is a big gap, a huge gap and to satisfy the energy needed for the huge gap you have to go into understanding and use of packages of energy and this is where the habit of killing is gone for the man. This is where everything has changed. In a way if you can find the elementary understanding of this we will find out very easily you can avoid all the pitfalls of the creation _____.

K: can you go on wikipedia and look at magnesium?

R: Magnesium is not to be confused with manganese. Magnesium is a chemical element with symbol Mg and atomic number 12. It is a shiny gray solid which bears a close physical resemblance to the other five elements in the second column (Group 2, or [alkaline earth metals](#)) of the [periodic table](#): all Group 2 elements have the same [electron](#) configuration in the outer electron shell and a similar crystal structure.

Magnesium is the ninth most abundant element in the universe.^{[4][5]} It is produced in large, aging [stars](#) from the sequential addition of three [helium nuclei](#) to a [carbon](#) nucleus. When such stars explode as [supernova](#), much of the magnesium is expelled into the [interstellar medium](#) where it may recycle into new star systems. Magnesium is the eighth most abundant element in the [Earth's crust](#)^[6] and the fourth most common element in the Earth (after [iron](#), [oxygen](#) and [silicon](#)), making up 13% of the planet's mass and a large fraction of the planet's [mantle](#). It is the third most abundant element dissolved in seawater, after [sodium](#) and [chlorine](#).^[7]

Magnesium occurs naturally only in combination with other elements, where it invariably has a +2 [oxidation state](#). The free element (metal) can be produced artificially, and is highly reactive (though in the atmosphere, it is soon coated in a thin layer of oxide that partly inhibits reactivity — see [passivation](#)). The free metal burns with a characteristic brilliant-white light. The metal is now obtained mainly by [electrolysis](#) of magnesium [salts](#) obtained from [brine](#), and is used primarily as a component in [aluminium](#)-magnesium alloys, sometimes called [magnalium](#) or [magnelium](#). Magnesium is less dense than [aluminium](#), and the alloy is prized for its combination of lightness and strength.

Magnesium is the eleventh most abundant element by mass in the [human body](#), and the [ions](#) are essential to all cells. Magnesium ions interact with [polyphosphate](#) compounds such as [ATP](#), [DNA](#), and [RNA](#). Hundreds of enzymes require magnesium ions to function. Magnesium compounds are used medicinally as common [laxatives](#), [antacids](#) (e.g., milk of magnesia), and to stabilize abnormal nerve excitation or blood vessel spasm in such conditions as [eclampsia](#). Magnesium ions are sour to the taste, and in low concentrations they help impart a natural tartness to fresh mineral waters. Magnesium is the metallic ion at the center of [chlorophyll](#), and is a common component in [fertilizers](#)

K: is this correct if you look at it? Partially or totally the interaction of the magnesium or the plasmatic gravitational fields of the magnesium which is about 24 and sodium is about 22 which

Transcript from 17th International Knowledge Seekers Workshop held May 31, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

leads the creation of vertical people calm and serene? Is this an answer for us to create systems which is halfway between the two where the condition of the vast field strength of the amino acid and the in existence is not so big? If you look at iron and amino acid we get hemoglobin. The gap is big and in the process it needs to receive. If you do the same with amino acid with magnesium we get what we call the greenness of the plant waters and what we call the imitation color. Taking energy from the amino acid has created calmness (of the plants?). Do we need to produce a magnetic plasmatic condition where we take energy in the structure of what we are building? But make it universally in the position that allows the reduction without changing the totality. Is this the solution? Or do we go for everlasting energies of the highest orders compared to our amino acid and in order to satisfy we consume more and more of it and trying to get energy in bigger packets. 56 from 24... whatever you are chasing to find food to satisfy the matter strength in the physical and the gaseous states. Or do we go to the green side and become serene and have the energy but peaceful and no need to walk?

K: So in your systems you have to understand what you need to build to create a peaceful planet with an energy package that allows the retraction or satisfies the interaction of the use of the heavy element by subsidizing, by changing, by understanding the interaction of the amino acid with the body of the man. Then if you understood that and you can create such a condition would the man turn green? Is the color of green the balanced peaceful condition of this planet? Are there Martians or are they those who understood and converted their understanding in position to the atmosphere of this planet? You remember the story of the orange soft drink that went on the British market several years ago and when children started drinking it their skin turned orange? Would it be the same way if you want to make a peaceful man by using and understanding the use of lighter physicality and emotional senses like the plants that change man into being?

K: We have to understand the interaction of plasma fields and the choice of finding the condition where the energy package comes from the environment and not the matter state. Then you will find that it takes energy from the balanced level of the magnetic gravitational field of his environment and not from the physical structure matter state of the planet. Because the amino acid is created from the same environment you will find the balanced way to absorb energy and not the high demand big packages and the man will lose the habit of rendering and killing and everything else and just get the energy (in a way that) he can emotionally act and reproduce. Now maybe we opened the secret to the way you have to build your systems. You must have the understanding of the creation of the matter state but without the high difference in gravitational magnetic field strength that to keep it you have to feed it. Feed it--if it is in balance does it need such? If it is too big it has to find a packet just to satisfy.

K: no matter how much emotionally you feed it but at the end the physicality has to be satisfied with the energy balance of the existence. This is what we start teaching—the production of the system which creates magnetic gravitational field strength which satisfies the need of the emotion of the existence that the physical existence will change itself to accepting a new way of fields without digesting packages all day.

Transcript from 17th International Knowledge Seekers Workshop held May 31, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

R: it mentions in the part about magnesium that spices, nuts, cereals, coco and vegetables are rich sources of magnesium and green leafy vegetables are rich in magnesium since they contain chlorophyll. It is interesting that they mention deficiencies in the population and it mentions it can lead to neuromuscular, cardiovascular and metabolic dysfunction as well as alcoholism is often associated with magnesium deficiency. There is a treatment with magnesium for mild cognitive impairment. The results are in line with systematic reviews showing that Alzheimer's patients have lower magnesium levels than healthy people.^[67] Despite the apparent simplicity of replenishing the brains stores of a vital mineral, this study parallels recent findings in other domains of neurobiology. For example, the finding that a new copper formulation is able to halt the progression of amyotrophic lateral sclerosis.^[68] Copper is used in treating motor neuron disease in mice.

K: this is in line with what we said years ago, the neuro system of the body of the man is done in muscle tissues by copper. So this confirms what we disclosed a long time ago. R: you have used this as part of the processing of ALS.

K: That is why I said the systems need the copper because of copper being in the neuro system of the muscle. This is the way it works and it has the conductivity of carbon which is 12 and if you do 5×12 that is 60 which is copper. In the tissue you have the high density of the mass and the body uses the interaction of the fields of the mass with the copper for information transfer which is your immune system. We realized this years ago. Copper is the communication line and is the information carrier for what is happening physically to the brain of the man. The copper does the job in the high density and you see that copper plays the game... 5×12 and it carries the intention and the information within the high density tissues. We can use it and because you support the physical part it carries the energy. When it gets to the brain it is an equal to transformation of the information of the brain of the man. It has a direct connection with the zinc because the zinc carries the emotion. The copper carries the information. Copper is the conductor that can carry it. The emotion has to be slightly more than the copper so it can carry it. So we use the zinc for the emotional purposes. Pieces are all falling together. 1.43.05

R: Steve says in the Livestream: Mr. Keshe says there is a huge gap in the 13. So is he referring to 12 for Magnesium and 13 as aluminum on the periodic table? Why is there such a gap with these elements?

Q: he is looking at the graph at the periodic table and there is a visual gap between 12 and 13.

K: you are talking about 12 as what and 13 as what?

Q: Element 12 is magnesium and 13 is aluminum. Picture of periodic table at 1.44.55 minutes.

K: as a picture, the way it is laid out?

R: Mg is grouped calcium, strontium and others.

K: this is how it has been done in the matter state and it doesn't work that way in the GANS state. When we speak to you about energy we speak about copper and carbon. We look at the plasma transfer of energy and the tolerance according to the mass. Different tables are set up in different ways; it depends on the table you look up.

Francois (F): remember when you gave the bottle to Daniela and she had missing time and went 22 Kilometers away? We had two bottles of GANS and she didn't know at the time they were

Transcript from 17th International Knowledge Seekers Workshop held May 31, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

GANS. One was white, probably CO2 GANS. The other was a shade of green and was that the GANS of CUO or Lead? I'm trying to find out why there was a mixture of the field that was pretty strong that interacted with the emotion.

K: We didn't disclose all that was in the material in that system and we are waiting to see the results. As I said before when some said they wanted materials I gave them the liquid which was the blood of the man and I gave them the _____. When I give things like this to people I expect certain reactions. In so many ways if you go back to the teaching a couple of weeks ago we talked about time and space _____ the emotion of not wanting to be was part of this structure. Both liquids carried an element to assist in traveling in time and space. You are not supposed to discuss this now. How many times did this happen?

F: it happened twice. She had the liquid with her and she was going somewhere and she might have gone through an emotional state that interacted with the fields and that is why she lost the time and traveled 22 Km without her knowledge.

K: in a way you can create the condition and you have to ask the person what the thoughts were at that time.

F: That was my next question that I was going to ask her. She didn't answer because she had to leave and take care of a customer so I missed asking her that.

K: we create a condition and we have now seen people who are repeating the time lapse, the time stop. They are doing this in the innovation center. All of you will come to see that because the intention is of the same as the field the time does not exist. This is very, very easy to do and you can create this yourself and you can create the systems in the coming time if you understand how to make crystals in the teaching today including how crystals are made, where you can make crystals. Then you will understand if you are in the center of the crystal which is equality of the balance of the fields there is no time because you are part of the time itself. An important liquid she was carrying was carbon oxide (? Garbled).

F: one was green and one was white.

K: yes, but you didn't see how strong the color of green was before the carbon oxide was added to it. The person we are talking about is in a condition that physical life is a development because of what she does is not here and time does not exist. So as part of the job we do is to bring the copper to the soul and when you bring the copper to balance the soul, time does not exist. That is how we serve those who serve the foundation. We take their pain or we give them the desires of their wishes.

F: Somehow this GANS made her feel well.

K: in a way it is more than that. You need to ask where she was going both times and you will get your answer. We can create with a very small amount of liquid the conditions to stop the expectations of life on this planet. It is very easy; it is so easy it is unbelievable. All of you know it and you have ignored it because you don't understand it. The structure of the life on this planet depends on the creation of amino acid to kick in the time of the existence of it. If there is no amino acid there is no life. If you can create the plasmatic magnetic fields of the amino acid in the existence of the environment, your body, the time comes to a stop. It depends on how much you keep in touch and interact with it. So if you want to look at the storing of time on this planet, how to store time, look in how the life started on this planet and this is when the time started on this planet. As long as there is no amino acid, there is no life, and there is no start. In

the atmosphere of this planet is such that you breathe in amino acid and you breathe in life. Every breath man takes; part of it is amino acid that is floating in the atmosphere. The salt of the sea is in the vapor of the environment of this planet. Materials that are floating on this planet are like everything in your CO2 box. If you can create a balanced energy in respect to the creator of the life you have reached zero time. Blessed are those who understand and then you know how to stop time in the universe if you understood this.

K: This goes back to a step that we have seen in the interaction of the fields due to the interaction of the GANS of the atmosphere of this planet has led to life of the man or a fish or tree or the entities that are still in the condition of lower state and will become plants or animals which they owe to the atmosphere of this planet. Then you understand the same exists in the atmosphere of the solar system. So you do not need to have the plants, or the soy (?) to have the interaction; life exists in the plasma of the solar system also because of the interaction and the creation of the fields as was taught in this morning's teaching. Then you understand that this applies within the structure of the life in the galaxy. The environment of each galaxy creates life that is specific to it. This is what man has to understand and then you have the same thing in the interaction of the spaces between the galaxies. Life repeats itself meaning it should be existence and maintaining existence in all levels and environments in the universe. If you can create balance then time in that level does not exist. Time exists when there is a change and introduction in the strength. When it is the change there is no time to change—it is zero time. If you satisfy the emotion and the physicality equal to what is needed then time does not exist. if you are satisfied it could be 1/100th second or near to satisfaction it slows down to 10 seconds in one hour, or 10 seconds in a minute or if you are satisfied fully, physically you travel and time wise there was no time...you go from one to the other. Now you know what I have done. (1.58.43 minutes).

K: are we there or are we lost? Now you understand.

F: yes, but I need to meditate on this.

K: you don't need meditation; you need to understand the strength of the creation. When you desire is to be with your loved by being with the loved one you satisfy the desire and there is no time. Do you understand? The woman we helped lost her husband who she loved so dearly.

We satisfy that loss. Now you understand how it works?

F: yes, absolutely.

K: That is why I asked you what she was thinking at the time when there was not 'time.'

F: She was talking to me about her husband.

K: The two containers were on the back of the car seat and she was the third part which completed it. She came to cure and she got cured if you understand. Not cured of illness but cured, as we say, you cure a mate. We create the environment to hear the lesson for those who will receive the lesson and hear it.

F: She was probably on the way home when she 'lost' the time.

K: yes, to be with him. The time is zero. One another person in the innovation center has achieved this zero time and cannot explain it. I can explain to him why because it was a few seconds and not totality because part of the emotion is satisfied and not the totality. Time can run for me and not for you because this is what we wish to leave the body of physicality because then time does not exist. Physical life has decay to it and decay needs time. To become the

point of perfection there is none. As man understands this more and more you will find man will exist for hundreds of thousands of years in space.

K: I hope you understand Francois and you can make your machine for that.

F: sure. You know, remember the story that Ralph told us when he had this experience in the flying saucer he built and there was 'lost time?' The intention was that he felt so great, so part of it was not only the technology but what the intention as well.

K: ...satisfy the intentions. There is saying of spending time with your loved one and time flies.

F: That is quite a story you never told because he never figured it out. It's great to be here.

R: here is a GANS questions from Rick Harris. I have watched the video of making the GANS of silver and they used 4 9-volt batteries all connected. I have repeated this process and what turns out is large flakes and very heavy black substance. Can you recommend a proven process to create the GANS of silver and gold?

K: who did he listen to and what process did he follow?

R: He says he watched a video of it with 4 9-volt batteries.

K: yes, but who made that video and was it pure silver?

R: let me see if Rick is here.

F: I think I know what he is talking about; it is a video where a guy is creating the crystal and he used 4 batteries with the different elements and you see that being created in the microscope.

K: How big was the crystal?

F: it was very small; you could see it in the microscope because he used a resistor to reduce the current and when he went to using direct current without the resistor, the crystal was very small but formed faster. When he lowered the current you could see the nice crystal being built. From what I saw it was just very small in a little container and he put some liquid between the two electrodes and a glass on top to focus with the microscope.

K: I will teach you why one day. Is Armen about?

K: There is a process to produce silver GANS in different ways. I produce it in a natural way and Armen uses a different way. If you produce silver GANS and allow it to form itself, or any GANS, which you produce in a rapid way with a high current is a separation of the atomic to the GANS state without going to the structure absorption. This means that if you go to create copper oxide, if the release of the nano layer from the copper to the water, it's very slow and it allows the interaction of the fields of the matter and the GANS state with the GANS matter of the water, H₂O for the oxygen to attach itself to the fields of the copper—that is how you get CUO or CUO₂. Don't forget copper is 60 with the variation of the field mass in the plasmatic condition. Oxygen and O₂ or 32 or 16 which is 1/4 is in proportion in the same ratio as the gravitational magnetic mass of what is with the copper so they create that green color—copper oxide zinc. If you increase the power slightly to certain voltage and amperage, the ratio of the attraction and interaction between the oxygen and the copper becomes very fast and it cannot be so much. You produce what I call a reddish brassy color. If you increase the speed of the conversion from the matter to the nano to the GANS you create the single structure because it is in the single structure in the way that it absorbs everything in that single structure as nano layer and it becomes black. If you choose copper the nano structure is black and we do this quite often in the factory.

K: The same thing things when you do the silver and it can create the black O₂ in the GANS state. This ratio of separation from the matter to the nano state to the GANS state, so what do you do? In fact you release nano atomic on its own but in the structure. The reason you may get it white is again it is orientated on the field strength of the plasma under certain atmospheric condition. If you get blocks of it, it means massive blocks have been released in one go together. It means the current is too high, the water is too high or the composition. The way you have to produce, and a lot of you are trying to produce nano silver for application in energy or medicine, it has to be a process where you loosen your material and then you release it. So, you can the way I have done for years, put silver in a very small container and a large quantity of NaOH; large quantity as it is a heating up process and then leave it to do its work. Create a water and then you can put it across _____. (2.12.11 minutes). Again if you use a resistor it will release a little bit; if you use current it will release more and if you use high current you get flakes of it. If your system is that you heat stuff very quickly nano layers become black sheets. You get nano particles. This is a different way to produce GANS. You have to understand what you are doing and be able to control the separation. If you want pure silver, gold and nickel oxides on their own you have to understand the process. You need to loosen it and when you loosen it then you can separate it with a very low current. And usually in taking the energy you allow the separation. You see it is the way they produced mono atomic gold in Fukushima is that we spread the material; we sprayed over it and in that process of spraying everything becomes very much nano-structured and it allows the creature to come into the forces of the nature. If you block it nano work. When you use GANS water you have that possibility of control. With GANS itself you don't have that. You have to understand the technology and the interaction of the fields and how they react in matter state in a medium and as an entity.

R: how does magnesium react with iron?

K: in the GANS state they work together. This is what is different in matter state. When you make the GANS of the water, the plasmatic liquid of the GANS of the magnesium or the iron you will find out that they totally behaving differently than in the matter state. And so in our work we try not to speak about matter state, but about GANS state interaction of the materials.

K: Due to the situation we have that is out of our control we might have to cancel the teaching of the doctors. If they want to speak together I might not be present in the teaching tomorrow so inform the doctors who are listening. There is a carry over of the discussion of your systems and what you are doing. I might not be able to be there because I might have to be in an important high-level governmental level meeting. I will let you know a couple of hours before. The Thursday meeting will probably be short because if we come to agreement we have to be present in a certain number of meetings. We will do Thursday for one or two hours.

R: a question from Dimitri: are those plasma fields neutralize the negative emotions of the human and is that what creates a direct connection into our soul?

K: There is nothing negative. The matter state has negative. In the plasma and GANS state we look and if you have surface thing to give you allow it as you take it as you need it.

B: There is no negative, just acceptance. There is no negative; it's a generality. They accept what they need and there is no negative or positive.

K: is it to their benefit to understand.

Transcript from 17th International Knowledge Seekers Workshop held May 31, 2016

(v1 2016-06-10) DRAFT (Transcription has not been verified. Double check info with video)

B: it is to the benefit to one entity or another. As you know I have encountered many entities.

K: if you learned a little bit of knowledge of what we shared today you have crossed a huge barrier in time and understanding how to correct and change things. Hopefully we will be at the teachings tomorrow. As I said we are going to China and we will teach on Tuesday and Thursday from Beijing live in Chinese time. All the teaching and work in China will be supplied to the Chinese community and the foundations. We thank the Chinese government for their report and the response we have received from the Chinese with the announcement.

R: when does the China broadcast start?

K: we don't disclose anything; we had the Canadian experience once and we don't disclose ever again. The most important thing is for our Italian listeners the banking system opened and we have Deutsche Bank and that will be online and you can order the systems. We will see to the structure of producing 100K a week for the coming weeks. We can go to the bank and this will be in the Italian press tonight. We are testing locally and then nationally and then internationally. You can go to Keshe Foundation online to do the ordering. We will start with 4000 a week.

B: The DOE in US is full speed ahead. You know what I mean.

K: explain what you are doing with Colonel Handke and the US Government. I am sure President Obama will knock at your door.

B: The DOE, DARPA and space technology is outside the purview of the government. I am telling the public this is what we are doing.

K: the Keshe Foundation has a connection on the government side and is delivering to DARPA and NASA; our collaboration has started in a very open way.

B: I am telling these people to put pressure on them.

K: you don't need pressure; the DOE has been a supporter of Keshe Foundation for a long time. I have attended a number of meetings with DOE and NASA. There are a lot of people working with these agencies in the US.
