Keshe (K): Good day, good morning, or good afternoon to you. As we see the numbers of knowledge seekers are increasing rapidly and the intake and uptake of the technology has taken a new direction. As we announced last Thursday the development of the new power generators has resulted in a number of organizations approaching Keshe Foundation for the delivery of the technology or mass production in certain nations. Our response to you is very simple. We have developed a technology which itself is part of the work of the Keshe Foundation; once we go into delivery around September we will expand the manufacturing to the Keshe Foundation Manufacturing only and we will not allow it to be manufactured outside until we come to an agreement with certain organizations around the world. We are limiting to this because it is so profound that it can change geopolitics. It already has started and we have seen this in the past week.

K: The Magrav systems will stay operational; we are still selling them and a number of people would like to have these systems for whatever reasons and we carry on with production. We have 2.5 to 3K units that can be dispatched with 9K more units coming up. The generator units will be delivered according to European standards and we are not changing at this time. That will not include American or Australian and other nations. They will be supplied and manufactured from Italy. The manufacturing technology of the power system then will be discussed by and through the Keshe Foundation as to how we will begin developing it through the others. But, until that point that we deliver from our factories nothing will be developed outside Keshe Foundation.

K: a number of announcements will be made on Thursday; please be present for those. There are a number of things we will show and expand the technology and distribute the technology across the planet. In the process of producing we are on the verge of the space ship development and lift and take off which will be the next system offered from the Foundation. We are not concentrating so much on energy at this point as it is completed and has to go through the conduction process. We are concentrating more on the sale and development of the space ship technology which means that systems that fly, that protect and bring the new position in delivery.

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

I see this in the next few weeks and we will deliver a full flight system in a very short time. The development is at its completion and we are waiting for a couple of other things to happen and then we demonstrate the full flight system. The whole understanding of the space technology as I was teaching in a private teaching this morning is understanding the process of the plasma and in a way we have gone so fast that a lot of people who are coming on the foundation and joining us do not see the connection.

K: for this reason Keshe Foundation will announce a new way on Thursday morning to teach for you to be hands on. Please listen and you will understand. We are bringing the technology to the masses on the planet which you can bring in. People will do everything themselves. It has been agreed and our team should be in place on Thursday morning and we will announce it. We will see how you take it. We made the blueprint and some of you made the systems, made different systems, came up with the understanding of the technology as you see it and you will be able to do the process. For you who understand the technology this is very good as you are going forward with it. For those of you who have come to know the technology, you are very vulnerable because we have seen how people cannot understand, and it's against the laws they have been taught, and now they are teaching something else. So there must be something wrong with the 'new teaching' because the old teaching fits in.

K: in the old science, physics, principles of chemistry and physics of the past, nuclear and others, there have been a lot of assumptions and a lot of reality has been ignored. In the new plasma physics nothing is ignored and everything is considered because it is all one thing; it is one element, one matter, one entity and everything you need to understand is how to interact with energies that are the same and in what position, condition and under what circumstances. Then you will find out it is not the equation of 1 and 1; it is not one-dimensional but is non-dimensional and it has no end. It is infinity and there's absolutely no way that you can count that the system is unique and one way is the 'only way,' or nobody else can do it any other way. As I always say, you can play with the plasma. In so many ways you can create as many stars, planets and galaxies and universes which are in this cosmos universe and you can even create more.

K: the beauty of this technology in the hands of the man that can understand and control this so rapidly is the understanding that you have a matter which you contain, that you can dictate, and which because of the structure of this planet can be made to become the plasma of itself. So in

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

making the plasma of the matter is your biggest problem. We are used to touching and what we touch we trust. We have to understand that even the touch itself is magnetic field strength positioning and how you touch—if it soft, hard, hot, can you hold it in one hand, can you feel, smell, or taste it. And does it have emotion, a direction of movement or does it have both emotion and knowledge. Every word in the vocabulary of the man which indicates the understanding of man of his environment has strength. Now it is for us to understand and development technologies that can replicate that strength. We have seen you with the taste and the smell of orange, and the energy of the orange that you managed to transfer.

K: we have one step further and in this morning's teaching we explained the next step in space technology that in a way brings to you why we say we are about to show you the space ship and the lift without connection to the matter state. Until our connections tell us that other scientific organizations are on the verge of working on the same technology to understand more and we will see the results of the outcome. But in fact if you look the plasma technology is very simple. As has been the biggest problem for man, we did not understand the principle of gravity. Now that we have the game has changed. We have made the gravity the holy grail of the physics of the science of man and that has caused us all the problems in the world of physics. Nothing has changed. (21.48 minutes) You used to have a magnet and you put the magnets in respect to each other and they found a position. You have the planet, the moon, earth, the sun and according to their own strength they found their distance, their position. Now we play with the plasma and there is no difference. We are not bringing something new that has been claimed as 'fake' and 'fraud.' The people who claim 'fake' and 'fraud' are fakes and frauds themselves. They missed the boat and now they want to use the understanding. There is as much 'fake' about this technology as those who have to claim it because they try to affirm their existence by their opposition and everything else.

K: When you have a magnet, the two magnets find their position as magnetic and gravitational. When you have a moon and sun they do the same and that is why earth is where it is. We do the same with the plasma. This is our stars, their moons, the planets, and the gans in the bottle that you carry of what you have made. It is for you to understand and learn how to manipulate these distances, interactions and conditions where 4 get close to each other and the other takes distance. What happens if one rotates at a different angle, or if it turns at a different speed? Everything will change the position and the direction of the motion of the fields in the others and everything is interactive. Because it is a magnetic-gravitational field it is instantaneous. (24.38 minutes). This is why for example in the health section nowadays you take medicine and you

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

wait to see what the outcome is and if it works and if you have the results. For example we see the reports from the doctors and because of the interaction of the fields successful cancer (elimination) results are literally 30 to 60 days. If you take a position within the cancer system using the Magrav system you have already started the process.

K: so, the system does not need to interact because it is on the line of the gravitational and magnetic field strength of the matter or the gans of the matter, the interaction is immediate. It is like putting a magnet in the middle of middles and everything is attracted. The interaction is instantaneous. This is where a lot of problems have been created by those who are not prepared to accept the new technology because to them it is the story of Edison and Tesla. It is something in their pocket. We know Edison caused men to die with the creation of the electric chair for execution and he put an elephant on the plate to die to show Tesla's alternative current had something wrong with it. Because in fact Edison wasted a lot of money in his technology and there was nothing wrong with Tesla's technology. Tesla technology was correct because it was for the matter state. Edison's technology was correct for the plasma state. The development done by Tesla is good and applicable on the matter level. That is why Tesla is well understood and some of his work which crosses to the plasma and the matter state has not been understood by the man.

K: when you look at the work and technology of Edison he worked on the DC which is the plasma. At that time when he was there his knowledge was not understood and he could not translate the totality because he was only interested in the financial return. Those of you who work around Tesla understood the matter state of the plasma and those of you work around Edison understood the plasma condition and what we call the direct current. Plasma does not alternate and it creates a continuous field which you decide what you want to take out of it. If the scientists go back to most of the work of Edison, now they find a lot of common ground that they can work with. It is DC. When you push the DC through the barrier of the matter state then you have the alternative (AC). It has to find a way to get itself in and it has to find a gap to get itself in. In fact if you look at AC it is nothing more than shock that you control with magnetic field. (28.42 minutes). It has to go through a narrow bandwidth of the matter spacing and it goes in pulses. When it goes to the next one it is like a drop of water. AC is nothing but literally drops of water from the space of the plasma and you can create that very easily. You can take it out and drip/drip it. those of you who have a problem of understanding the plasma, start looking back on the work of Edison because you feel safe and good with it and you understand the DC much better.

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

K: but, once you understand that you have come to understand the work of the plasma—the continuous. As I was explaining to some scientists it is a huge liver and you have to decide where you want to take the energy or if you want to put a bucket to get something out of it. You call it energy or power as the power station for a car or whatever you need and when you have the plasma you don't need oil, gas or whatever. When you have the plasma you make and you decide to use the energy as plasma, oil or gas. This is important. And we go over this in the international teaching because we are getting a huge number of people who are coming into the foundation and the work of the foundation and they want to understand. Those who prey on the lack of the knowledge we see the number of people in different TV and radio programs are opposing the Keshe Foundation work and we thank you for it. You are bringing a huge number of people to the foundation and to our work because they listen, they have intelligence and they check. They have never heard of Keshe Foundation.

K: I was talking to my colleagues in the past few days that one of the best things is our opposition. They put out and people start looking and it makes sense to them because they are not stupid so they become more active in understanding the technology and for that reason they are responding for this to understand more. Where does the technology come from? Understanding this is very simple. If you work with plasma technology as I say you have the base and you have to decide how to manipulate the energy you have created. In so many ways plasma, those of you who understand how to make gans, the nano material, the liquid, all of you have become (the equivalent of) the oil barons of the present generation. Because you have access to all the energy you need. Up to now you had oil, but if you wanted bread you had to sell your oil to get bread. If you wanted medicine you had to go and pay for your medicine to sell your oil. With the plasma technology your plasma is your energy and the energy of the bread, of the medicine and this is what is scaring the world leaders regarding this new technology. This is what brought and is bringing to the attention of the people to ask if they need to spend \$150K to \$250K on cancer chemotherapy and the rest of it and still if I succeed in a couple of years there is a secondary cancer. Or it has re-grown.

K: Now with this technology when you handle the plasma for cancer, you eradicate the cancer itself and the cause of the cancer. What we have seen is there is no secondary cancer that comes back. This is what is frightening the world health authorities. It is the same with the food. The more and more you develop one system in the house it is a complete system for everything the man needs and no man can be taken as a slave for any reason—a slave for food, energy, light,

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

nothing in the world. If you want to make a dress out of silk to go out, you can do so. You can make silk. Do you want to make bags of gold you can work with the gold. If you want steak and chips or a banana everything is in your hands. You can develop all this; those who say it's all fake are those who have lost control. We teach openly and we teach you to do it and it is you who is using gans and everything else. It is you who is walking away from disease and filling your bank accounts with the money you are not paying for energy. It is you who have extra time that you don't have to slave to be able to enjoy life.

K: one of the biggest problems with this technology is that leisure time will become a normal habit. We haven't seen any animal in the jungle that had to go to the office to get food and the rest. But the advantage of the man is you can do the same, and you can enjoy the lifestyle like everyone else across this planet. From now on you decide where you want to live. The religion mentality of cramming millions of people into one area because it is the only place where water can be provided as well as electricity and transportation is over with this technology. You produce water when you need it; you produce electricity when you need it. You produce shelter when you need to and the middle of the desert is as good as the center of New York. You control every part of this technology. You learn how to produce gans; you produce liquid plasma which is the information of the knowledge we have given you in a rapid manner for the past few months. You transfer the energy of the plasma into mono energy package and we call it the liquid gans. Or you can go to the field of the liquid gans and then you understand that you are a free man.

K: we have seen and explained the development so understand your freedom. No one can stop you from enjoying the freedom of this technology except those who are used to their own freedom. We explain this to you on Thursday. A lot of you will stand around and we have some shocking news for you on Thursday. It may be so shocking that you may turn against the foundation. Some of you might be turned off; some of you will understand that those who turn away from the foundation will be 1 in 100 or 1 in 1,000,000. We explained to you how the process has been done. On Thursday we open what you haven't seen and why and how they are trying to block everything for you. Otherwise there is nothing wrong with the technology because now you have every position that you wanted. Those of you who are after materials and see gold, you can make gold. Those of you who want diamonds, we have explained to you in the teachings how to make diamonds.

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

K: We had our friends from East Europe on last week explaining to you how they make CO₂ gans very fast using the carbon. We did this last week and you need to get a high tungsten wire which is very powerful. (39.21 minutes) Start creating nano gans material as we taught and create a high power that as you have seen, the speed of the flow of nano material from the copper creates different color. The flow of the current dictates the speed and if you can control the speed and put tungsten or a high electric power across on the surface of the carbon you have seen the beloved volcano which rains diamonds. You will be collecting any size of diamonds that you need. And the gas as we explained to you, you decide the color of the diamond. Depending on the temperature and the cooling of the system you can literally strain diamonds into the bucket. All you are doing is turning the volcanic eruption upside down. You are not boiling it but you are working at such a low temperature in the carbon that as soon as atomic carbon is released with the heat exactly like magma in blowing itself out you make yourself a popcorn system and you are growing diamond popcorn. You can do this with basically any element. It is very hard, but very easy.

K: we should see a lot of people selling diamonds. But, if a large number of you can create diamonds this way do diamonds have value? It is the same you do with the gold, making elements. In space if you understand the control and if you make the shape of the matter state, do you need furnaces to melt metal to make the shapes? All you need to do is make a filter in the shape of the material that you want, whatever you do will come out of the material in any shape, form and size. You dictate the flow if you want circular or any other shape. You change the position of the gravitational magnetic field and immediately after the separation with copper here (42.29 minutes) you create gold.

K: On Thursday morning Ghana Atomic Keshe Foundation will present a sediment result. I already have it but it is significant when they show you and then you understand exactly how the new technology is going to be used. These are documents issued by a leading Atomic Energy Commission affiliated with Keshe Foundation working together. We bring the technology and today we have seen the pictures coming in from Ghana. Students from all over Africa are attending lectures and teachings about the Keshe Plasma Technology in the universities. Now these students understand the technology and we have moved everywhere in the frontiers of science except one country. As usual those who stay under one man have to pay for their own work. And we will explain this all to you on Thursday which is very important. We try to explain and bring to you the knowledge, the understanding of the change and the application of the technology. We see now doctors are working in a blind and new science to different types of

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

medical application. In a coming time we will ask the doctors to present their papers in public. We have taught them and the knowledge given to them has to be used by other doctors in the public.

K: there is no classification in showing the technology works and how it saves lives and changes painful conditions to comfort. This has to be added by the other scientists. From now on, in a way during the next few weeks, we move from a lecture room here into a laboratory time where all the teachings are more or less hands on. We have not done this except in Sosano a couple of years ago with some cases. Now we will teach and put everything on the table. We don't allow anyone into the center. We pre-plan and then we present it. We demonstrate it or bring it in to be shown. We start moving back into the lab for the completion of the development of all the technology—production of water, production of energy or lift and motion. If you want you can share your knowledge with us. We will allow this kind of teaching in the coming time. The theory part of the technology is over and we add to it as it comes as need be. But, from now on we work towards one direction—showing the living, teaching and being proud to share. For those of you I have on the international side, who received threats from a number of people who come, threaten or use your name, we show you exactly how they work. We show you how they are trying to stop the progress of man for the benefit of their paymasters.

K: now you can come and show with the knowledge that your knowledge can save someone's life, bring new technology out, the new way of looking at it and we give you a free platform. What is important from now on is we wait for you to ask a question of what you want to know. We answer because we have covered the totality of the development of the technology on the theoretical part and most of the practical part. Now it is just filling in the gaps. To do this service you will understand why on Thursday morning and you will see that we clean the path and the sheets of the Keshe Foundation in what has been going on and we bring the new method of teaching into operation and the methods you can practice making. You will make the difference and this important because we all change the structure in our own lives. You don't need for a doctor to tell you that he cannot do anything for you because you don't have the money. You tell him thank you very much for diagnosing it because I know what to do to take care of it myself. I know how to make gans, how to place the system and what to do with myself.

K: in a way the whole knowledge now grows inside your homes, factories and inside your companies and we will see the change. Our teaching is done and technology on the space ship is

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

completed and it's for the people who have done it to show it. The medical application is on its way and its learning and teaching how to use the same things in different ways. The production of the materials is depending on how you want to produce it. Do we need to produce materials? You need to develop it further now. From now on we are in the background teaching, working and explaining. There is enough knowledge in the background for you who have just joined us to learn and study. If you have questions you can come back and the process we have set up to develop it.

K: are there any questions?

R: some people are interested in the idea of the tungsten wire or rod. Flint says from his notes that it is copper with tungsten wire wrapped around it will create gold. A graphite rod with tungsten wrapped on it will create diamonds like popcorn. We need to replay this for more understanding. Candy thought it was tungsten rod and not wire. I do know that tungsten is used in welding, tig welding (tungsten and inert gas welding) or some other inert gas. It can be used with aluminum welding. Also, tungsten is interesting and is also available as a welding rod with thorium inside. Thorium is a radioactive substance that could be interesting to use. These tungsten rods can be up to 2% thorium and you can order them from 1% to 2% thorium in these tungsten welding rods. That might be an interesting way to experiment and you can handle the rods with your bare hands. You don't pick up the radioactivity from that. You don't want to breathe the vapors, but tests show there is not much vapor given off. Mr. Keshe, why did you bring up tungsten today?

K: this is one of the metals which allow the carbon to expand more rapidly; it is the property of it. If you nano coat the tungsten and put the heating element and use it as a heating element you will understand the reason. When you use materials like this for creation of the gans, you nano coat them and you will understand that this is playing on the plasmatic level and not the matter level. That is why your carbon will pop open and becomes a diamond in carbon state or carbon in the diamond state. It is all the same. When you nano coat your tungsten and you put the carbon through it, and you leave it in the water which is near the electrodes of the carbon you will understand immediately how the gravitational magnetic field of the wire will pull. In pulling it gives it so much energy that it has to release and open up. It is not the heating; you do this by plasmatic condition. You have to nano coat your wire and then you will understand this. I have done this in other teachings. You don't just take the tungsten and heat it up and put a current through it. You have to nano coat it and understand how you nano coat it. You can put different types of gans on it, and it depends on approximately how fast you will be producing the carbon

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

atomic structure loosely. By adding energy to it, it comes from itself internally and it will blow up. It is like giving the carbon...look at the chemotherapy injection. You give massive energy and that expands to its full size. Depending on its grain and structure, decides how big the stone will be.

K: we are not talking about make hot wire on top of the carbon. You are talking about a specific way and a lot of you will call and say that it does not work. You have to understand where and how you position it. Those of you who can do it and you can do the transformation and you can make 3, 4, or 5 as though collecting popcorn. I wonder if the diamond has any more value. There goes an industry—it's finished. You have to understand why we brought up this information on the diamonds. At some point in the deep space universe you need diamond structure from other materials to a create a condition that you are safe in. Radiation does not 'go across'; it gets absorbed and it depends on how fine you have made your structure.

R: there is a question from Cecelia in the chat—if we connect the Magrav at 12 volts we get 12 volts from the Magrav. If we connect the Magrav to 12 volts we get 125 and if we connect to 220V we get 220 Volts. But if we connect to half tension at 14K volts or high tension at 20K volts, can we get 14K volts or 20K volts? We are a community of farmers and have our own power lines and we have 7 stations to pump the water for our plants. Will the Magrav since it seems to work at different voltage levels, could it work at those high voltages? (59.33 minutes).

K: let's be on the safe side with 7 new power generators. That is the only way I can answer because you want to use it. If you create the demand and step it up, yes you can. You have to go through the process of stepping up the demand. (1.00.55 minutes). As you saw last week we showed in the house in Rome, we could put many more units on the wall and the Magrav.

The Magrav can replace and the new generators will replace the power stations. Without a shadow of a doubt there is no need for substations once we release the generators. That is why we are holding back until we have complete and for some political cover-up we will deliver within 90 days. You can do 20 KW, and 20Megawatt should make no matter. If the wire in the Magrav can hold the load is a different proposition. If you are connected in the right way there should be no problem and you can literally connect one Magrav to any units. We had this discussion with our team recently. They wanted to sell a large number of Magrav units per KW for every 20KW for _____. I said it doesn't make any difference if you put one or ten. If you

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

put 10 you create more power because now the fields of plasma will compare to each other. One Magrav unit pair is more than enough.

K: we have put one Magrav system, in one of the most beautiful homes in Rome this week. Hopefully one unit as part of the village of the Vatican should be able to meet the demand. It's very interesting—it's a village in Italy and everything you want is in the village. One unit should be enough. A lot of people explained to me and said we could place a few Magravs across Vatican City and create free energy for them that they don't need to pay. Those of you who know and I tell you freely that Vatican Electricity is paid for by ___ of France so they are not interested in free electricity. We have managed to place a system and it should cover the whole village. We will check on it in the next view weeks. It is you who have to extract energy and the biggest problem is having the physical means, the cables, to transfer the energy. Or you nano-coat and you have no problem. At some point the energy becomes matter state conversion and you have to deal with the matter. You can do any amount. The new type of reactors getting tested indicates we can go into megawatts because we tap into the universal energy of the plasma. There is no problem; if it can energize the whole universe then why not a little planet? We have discovered the way to tap into the universal energy. It should be very easy for those of you who understand it.

R: a question that has come up is regarding how to create water, say 'mother water.' How do you transform ecoli and salmonella into neutral amino acids? Is there a way to decontaminate and neutralizing the poisonous herbicides coming out of the chemical industry which might be harmful to the human body? All that I guess is related to water and the decontamination of water and how to create water. So what comes to my mind is, do we create water or do we decontaminate existing water? We do live on a planet that is $\frac{3}{4}$ water and you'd think we would have enough water to use. It's a matter that a lot of it is not potable, or usable. Should we create water or decontaminate it, or both?

K: we should do both. In space we create the fields of water. And by demand we produce water when you need.

R: people are asking how to create water on demand.

K: it is extremely easy and extremely hard. A lot of you have tried and have not managed to do it because now that we have an understanding maybe you can do. Maybe...as I said many times,

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

you will not see water dripping but you will see it rising. Go back on the understanding of the use of the materials in creating matters that do not exist in reality. If you understand that the next step is taking part of the energy and put it in touch with the metal that is used in the interaction with the matter state and plasma state where there is a pulse and electricity created. You need to create...let me explain. I go along with this many times and I wait until somebody does it and then you will understand how to do it.

K: I teach for exercise now. (1.09.37 minutes) You nano coat the plate and put another plate and create a gans environment of the carbon and what carbon was passing over or available with the box you used in interaction with the oxygen of the water of your material gave you CO₂. So you did not CO₂, you created the gas environment of carbon and you pulled it. Most of the CO₂ gas you produce is from the caustic you used in your container. This might shock you because of lot of you have been using caustic. You see some containers produce much more and some containers produce less. The Ch from the container releases some of the carbon which with the field you created with the presence of the oxygen produced CO₂. Now you have H₂O. Copper (CuO₂, Zn or ZnO₂ and C (six) create the gravitational magnetic fields and I have explained this.
H 2

0 16

18

You are looking for 18. It will rain water from the sky. It is the choice of the material and the choice of the environment. (1.12.23 minutes) You have to look for the field strength. You can create gold the same way if you can find a balance and so producing water in the plasma condition should be no problem. But understand in the teaching today, create the field of 18 in the attraction of your plasmas; your reactor will be raining water. Now you create the magnet of gravitational magnetic field of the water. That is how easy it is. I told you 2 years ago that we could produce a system that will rain water and you tried every combination. As you know I never interfere—I leave you to learn. I taught you the CO₂, the copper oxide, the CH₃, the zinc oxide, because that is the combination of the life of the man. And through that, by seeing the change in your health you could accept this technology. This is the stupidity of the whole thing – we entered through the health to understand the total science.

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

K: if you understand this and you have dynamic systems and you can create gravitational magnetic fields of the water in the center as I taught this morning. There were 80 to 90 people in the teaching and hundreds of you in the background as their students. Some of you still have this and it's easy to create the 18 in the center using the combination of gans. What you create in the center of your reactor are the fields that will attract that field—iron attracts iron, copper attracts copper. From now on if you understood the private teaching you will see how you can produce. Now it is not just the matter of the flying that you have been taught today, it is the matter of your creating in a way the same condition as the stars do. The central star creates a gravitational magnetic field that decides what elements are going to be in the shell of the solar system. Then the gravitational magnetic field in the center of the planet decides what kind of water strength field it will take and it makes its own structure. If it attracts helium and creates the gravitational magnetic field of helium and it will attract helium. That is how Saturn works. Here the beauty of this is that why you couldn't do this, now your system has both magnetic and gravitational of helium.

K: this is what the world of science has never understood. This is the beauty of the development of the technology. The NASA scientists who were on board with the teaching and the rest of you watched it in your offices, the Chinese Space Agency people who were in the private teaching this morning know exactly what to do; this is a missing part in your work and development. You do not need to transport food, elements because as you were in the teaching this morning, you understand now that you create the gravitational magnetic field of the entity as you like, but by changing the field strength you change immediately the field strength from water to helium, from water to carbon. We have done the new teaching today and we have gone from creating two dimensional plasma situations which you see here, into the 3 dimensional. In the two dimensional system you are confined to the box. Here you are confined to the universe. Now you created a 3 dimensional ball which expands the universe. You decide if you want to create an ocean.

K: Professor Zhu of the Chinese University, you were looking for water for the oasis system. I think your students have learned a lot this morning and today. If you understood and you want to carry on, you need this as part of your oasis system to create water. You want to create energy of bread. You don't make the bread; you create the energy that is there. Our friends in NASA this has been one of the biggest problems in your payloads in sustaining people in space and you have to fly food to them all the time. Make one of these systems and ship it up to them and the fields in the upper atmosphere are good enough to keep them going. Once you manage to pass

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

the boundary of this solar system, our friends in different space agencies are working and testing to confirm and they were not happy with the 2 dimensional box. The new technology that I have told you this morning gives you a 3 dimensional system. Armen do you understand? Is he still awake? He's gone to sleep.

K: what you see with the new system is that you are actually creating a ball (he shows a world globe) which within the ball earth created the gravitational magnetic field that it absorbed oxygen, carbon, hydrogen and nitrogen magnetic fields to itself. And for that reason it positioned itself to respect to the sun so it can hold on and create what it can hold on to. For that reason it created the water. So, you can do the same. You are creating in your reactors the gravitational magnetic field of what you want. When you collect fields across the universe, and there are so much of them of the strength of the water, you have as much water as you like. If you are in an earthquake condition this is the biggest problem...and the Chinese are investing millions...in the development of oasis that with the upcoming disasters they can meet the demand for it.

K: our friends, this is your answer and we have shown you how this is done and all you need to do. At the same time you can produce a multi core reactor that while you are holed up in your shelter you are bringing fields across your shelter in so many ways that you create a reactor with 2 coils and no more. In part of your reactor you create the gravitational magnetic field of the water, and in another part of the strength of the fields you create the shelter. The total size of the reactor is 2 centimeters. The dimension of the tent is 100 meters if you need. The rate of the flow of the water is 1000 to 2000 liters per minutes. Now you decide what plasma. I said to our colleagues in China to hold on until they understand the new development. Now our friends understand. I hope that they understand. Total cost is maybe \$10 because if you understand it you know how to create from the interaction both gravitational magnetic fields of the shielding and the food. You have to do this in space all the time. Now that we see that you can create free magnetic gravitational fields it is you who decide how they interact to get whatever energy from them or absorb the magnetic field. We are moving into the space technology and the deep space program. In deep space you cannot come back to earth for a bucket of water because understanding it, even if your system fails you can set another one within minutes or hours that you can start attracting fields from the environment and use your shielding as a filter that you don't receive anything else but exactly the field strength.

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

K: in building a city I want to have as much of a menu as I like. This is going back into the essence of the creation and if you listened and if our colleagues in the Chinese universities and other places that are working in the background with us and watching us today, please understand that the development of the oasis system is so simple that you do not need to spend billions and billions. All you need is the field of the matters that you want to create. Once you create the fields you can put them in the way they are the matter state that you need. There is a big, big question mark in going to the next step. We get hungry and we eat; we get thirsty and we drink. But the water we drink doesn't go into our intestines and our lymph. It transfers the energy of the water that inside allows the space magnetic and gravitational fields that are needed for the liquidity of the gans of the body of the man. The question is, do you actually need to create water, or as it is in the gravitational magnetic condition whoever is here in the oasis has created what they need. This is more efficient than creating water unless you want to jump into a swimming pool. That is a different matter. Because in space you don't carry water to wash. You create a gravitational magnetic mixture that in respect to the material that is on the body or on the fields or on your clothes is cleaned up.

K: This is a gift which we are bringing with us to China for the Chinese people to clean up the mess in Beijing, Shanghai and other places. We are not coming there to stop (?) the air. We are coming there to drop a few very small units across Beijing and the next day you have piles of all the mess. There is no difference. This is what we have seen. On Thursday Ghana Keshe Foundation will show very simply and you have seen it. (1.27.51 minutes). The contaminated water, sediment and now the sediment has been tested and that is the beauty of what they are going to show you. Mercury is below the standard limitation (1.8%) using the technology. You have clean water and the mercury flooded and you can drink the water. This was the sediment and you still see it as a gans in the bottom. Before it was rotting. Now the city of Beijing looks like the sediment in the water in Ghana. The cloud is above it and it will rain down on the city and all the pollution. There is no difference and if you understand the principle you can do the same elsewhere.

K: I have given you a lot of hints for all the big cities in China, New York, Tokyo, that the gans water...let it rain and through the interaction it attracts and brings down all the materials that are the composite of the pollution in the air. But that is ancient. The new technology, what we have on the table, and I have referred to this for a long time, and it is basing the small reactors, no air flow, and the interaction of the total plasmatic of the elements in the air. You analyze the air and you know what fields you have to create. Don't forget the Iranian technology a couple of years

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

ago released a paper in nano materials accepting, absorbing pollution in the air. As I said to them, that is what we need to do. You don't need to change fuel and you don't need to tell people to stay off the streets. (1.30.26) You cannot stop the commerce.

But all you need to do very much, you have seen the cement trucks that go around for building and you place a reactor in side it and you run the reactor to absorb as much mercury and other composites in the air. You fill up the truck and empty it and bring it back out again. You extract gold and carbon from the air. The technology is complete and we hold on to it until we achieve peace with the governments.

K: but, in a way with what we have thought now we show you the application of the technology. It is very simple. You have contaminated waters coming from nuclear reactors, chemical damages and explosions and all you have to do is park you car, or a tanker with a reactor inside. When it is filled up you stop the magnetic gravitational field of the element you have created. The tank is full. No air is blowing and there is no energy consumption. That kind of process is finished. It's over. Now we are moving in the direction because those of you in the teaching this morning watched Armen in a very simple way try to explain to you and I elaborated on how it works and the way it is. The industrial cleaning is not by digging any more. You move the truck with the same thing over the land with the radioactive contamination and it absorbs to itself the matter which released it. You already know how you contaminated it. Washing and draining is ancient and over. Go back to the beginning of the teachings from 3 years ago and I said that you make the magnet of the magnetic field of the material you have. But, you have to remember the magnetic field for the element has to have both gravitational and magnetic field and in the new technology we have been teaching you already possess it.

K: Tomorrow or on Thursday we will see what Ghana will show you. Do we need to damage the fish when we are trying to clean up the mess? Do we need to damage the environment of a city while we are cleaning it up? Not necessarily. You cannot use airborne ships because you would collect so much stuff they would crash. So, it is much easier to put it on the ground, absorb it and there are benefits. What you absorb is pure. It is absolutely pure so you return the minerals of earth back to earth as minerals. And then you want to use it and what you collected as mercury or whatever is within that structure. This is not a fairytale anymore because the scientists have released the papers. You have been with us for a few weeks and I kept on telling you we need the sediments counts from Ghana from what they have absorbed. Now they have started the process on HIV and malaria. That is how it is going to work. You have been two dimensional and now in another step in development you become three dimensional and the way you work is spherical and not a box anymore. You decide how far you want to extend the

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

gravitational magnetic field of the carbon from your point of absorption. You decide the field strength of the magnetical field so you extend your tent. Or you reduce the tent.

K: Professor Zhu, please work with your team in understanding before you go any further, immersing (1.35.24 minutes) in another direction. As I said in my communication with you please understand before anything is done. Whatever you have done up until now is correct, but you have to add this to your knowledge so that you do not waste the finances of the nation. As I said if you understand this it is very easy to clean up. The only mistake Tepco made with us was they jumped the gun and they thought they did very well with what they did and the stealing, but fortunately they stole the crops. They showed their hand on how they really behave. On Thursday we release the picture of the place all the Keshe Foundation materials were tested in Fukushima. Now that Tepco has admitted they lied in respect to the meltdown of the reactor, whatever they had for two months from March until May, and it never melted and they changed it, they have lied about the Keshe Foundation work also. We are dealing with a bunch of liars. But that is their problem. We have seen others doing the same. The technology given to Tepco is now obsolete.

K: if you are involved in the situation as we saw in the Eastern Bloc in the 1990s with Chernobyl, nowadays we don't need that. All we have to do is drop a system that is less than a golf ball and all you need to do is create the magnetic/gravitational field of the uranium or whatever is the contamination and everything piles back in. You create a shielding on the field strength and you cover it up and cascade it and everything is back 'home' sitting in its place. The total cost is a few dollars. So many of our nuclear physicist colleagues in that condition lost their lives trying to cover it, protect it and now it is left totally abandoned because it is so badly contaminated. Even today it is not too end the contamination in weeks. All you need to do is air drop all the systems and analyze the ground and the air and get everything back in piles and it is your decision what you want to do with it.

K: this is the beauty of this technology and it will change everything man has worked for. On Thursday we will show you how they have tried to cover this technology. You will be amazed. The Keshe Foundation will release so much information on Thursday you need to come with a very big heart. What is going to be disclosed needs a man of steel to see how these people stopped the delivery of these kinds of processes and all of it for the last 20 years has been done by one man. You will be amazed; he has killed, murdered, children, adults, and scientists. He

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

has written a patent on what he has stolen from the scientists he has killed. It's in the public domain and we will talk about it on Thursday. We show and release the name of the people and the scientists and you can go on the internet and check to see how many scientists Red Circle has murdered. The one is being arrested and dealt with internationally. The white hair does not mean he is 'Father Christmas.' It is the hair of a murderer. Please come, but bring a very big heart on Thursday as we will release the name of scientists and the patents he has placed in his name after he killed them and stole the patents.

K: now he is a name with a name. We told you once the Alan Sterling situation was over and we opened our research. This time they cannot kill anyone because the knowledge is yours. It belongs to you and you possess it. You have to understand how you have delivered the technology collectively as a race. This was a very hard plan, but easy to execute. We brought thousands of you, millions of Keshe Foundation supporters and you can all do this. There is no reason that a man cannot do the job. We have seen a man who loves his wife and he went through it himself and did the job and his wife had lung cancer. We salute you for what you have done and for your wife and your love. We thank the doctors who are working this week and releasing information. We see the scientists who are working with the decontamination because the knowledge is so easy. The knowledge is in your hands and once you understand how simply it can be done, you will out that you are all Einsteins.

K: Einstein only understood mathematics and he played with it to show he was clever. But you are all clever. You are extremely clever and you can do it yourself. Some people in the background in the past few days, one of the richest men in Europe is filled with cancer. I said to him that if he wanted, I would teach him to do this at home himself. We don't need the doctors; they have removed tumors. If you want you can talk to doctors that I have worked with. If you don't want I will teach you to do it at home. Because all the wealth he has, cannot save his life. But the knowledge he has will save his life. And as usual the knowledge from the Foundation has been offered totally freely. It is working and if he decides in the future it can be disclosed. This is the problem; the simplicity of it and that you can do it yourself whether on a personal level or the national level, and the defense technology of this is horrendous for those who have been killing in the name of everything they wanted.

K: you have seen how we explain that you create a shelter and now you can do the same thing without your enemy knowing that you have dropped a few buckets, a few balls, and the color of

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

camel eye and totally camouflaged. No aircraft can fly if you have created the gravitational magnetic fields of the plastic in the microchip. Carbon is the cheapest way. You have already created the CO2 bucket and now in your reactor you create a magnetic gravitational field of things in the microchip. If you understand it, it is very easy. All the rocket launchers and electronic systems are tied up on the ground by a piece of plastic. Carbon is more effective. If you are really greedy you make a magnetic gravitational field that is a little bit harder of gold. All these computers have a gold component in them and they look perfect but they don't work inside.

K: do the same and rain peace on battleships. It's very easy. You find a battleship and just throw something the size of a golf ball. I gave a few weeks early warning to military and some of you very soon will develop it. Do not hide it; that is not the purpose of this technology. By bringing it out we delivered the peace and that is what we came here for. The teaching this morning was complete and those of you who understood it know exactly how you have to do it. Don't forget that atomic mass of the hydrogen and the game play between acidic and alkaline. What weight do you want--the weight of gold or the weight of copper? We have thought these through in depth. You create atomic mass of hydrogen to add up to the atomic mass the gold which is in the microchip of the battleships. Good morning to 100 million aircrafts and ships. We showed the frequency blockage and now we show the total annihilation of the military forces.

K: if I was you as world leaders, take the ships back as quickly as you can. If they are made of metal there will be ships afloat. 1.47.43 minutes

You want and you understand and you can change and I allowed the teaching to go in the way too much knowledge is now out to too many people because you were looking on the other side for the technology development going on the 'other side.'

K: there are too many busy with little crumbs and in the way they were developing their knowledge to have the cake instead of the crumbs. Now you understand these simple things: you have the knowledge, the strength, and the capability if you understood the teaching this morning and what was thought and understood in the past 2 to 3 weeks in different ways by the innovation center. The key (to peace) is to walk around the military bases around the world and just throw a golf ball. Inside it is a small reactor and you will not see the golf ball when you

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

come back because if you have done your job right it has collected and has become the color you love for giving back. The gold. Take the gold to the AF or military and tell them you are very generous and you would like to give them some gold. Without their knowing you have ended the microchips from their aircrafts, the guns and everything else that is sitting there. The only thing for left for man to fight with is to go back to the swords and the martial arts.

K: we are back into the Stone Age. The only people who will enjoy this are the people who disclose how to do this on Thursday when they do it to each other for the fun of it because they are sick in the head. As I told you, we keep the knowledge very quiet and then we release it in such a way that you all know what to do. Go back on the teaching of this morning; it's the best 100 Euros our students have spent to learn: how to make atomic structure, magnetic gravitational field of any government in the universe. Now you understand what was going on this morning. You were happy with the taste of orange from a cup, but in a way you forgot about one thing. This cup you have in your tent with the orange, you played with the fields where you can create the fields of the orange inside the tent. You don't need to have an orange; it is available 24 hours a day when your body needs it. And it costs you a few dollars. (1.51.53 minutes).

K: The understanding of the technology is so simple and so absolutely simple; it's just now you have to open your eyes to it and see the possibilities. If the Keshe foundation supporters and the others sincerely decide to clean up all the mess, we have a very big job on our hands. It will take a few weeks and after that you are all retired and the only thing for you to do is to go beg for a job, opposite of what is done today where you beg for a job to feed yourselves. In the coming times people will beg for a job because of the boredom of having nothing to do because they have everything they want. Their lives have changed and the process is on the verge of the change which means you don't need to work any more. You work because you want to serve, because you enjoy doing something. You don't work and get taken into slavery by those who abuse the soul of the man. This is beauty of what is coming; you have to understand that we don't just teach you about the application of the technology and how to do it, we show you all the way how it is done. You do it yourselves.

K: We have seen doctors building units themselves for their patients, we have seen physicists building things for their work, and we have seen scientists in universities now developing to see

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

what happens when they do things one way or another. And, you are providing the scientific data. Nobody can patent anything anymore because this has all been taught in an open channel.

My deepest commiseration to those who lost their lives by the stupidity of the others who made the guns and the battlefields.

K: We said to you that we will enter the American elections by June or July and we are very much ready to take it on only on the premise of the road to peace and prosperity for the people of the United States and the rest of the planet. We have found a match and it is your job to find a match. We have a huge problem and that is how to teach this knowledge so rapidly. Our biggest problem is teaching now and not the technology. On Thursday the foundation will announce a new teaching program. We brought some of the best in teaching and organizing to be part of the Keshe Foundation. They will organize, they have done it and shown their work and we will show you how.

K: You can do everything yourselves and there is no reason for any one to tell you that you cannot. If you can boil water, if you can walk to the shop, if you can find a piece of wire, some electric cable wire you need and you have an old battery hanging around the house, you can make everything you need to live on this planet without every being a slave to anyone. We are proud to teach you and I hope humanity will not abuse the knowledge. That is all it takes. You can produce the gans of CO₂, copper oxide, CH₃, Zinc Oxide and on the top you produce the protein and put the protein gans into your core and now you understand how you create the level of understanding for anybody and then you understand the environment of the cascade and the capsule you made is for the human race because it carries your amino acid in it. Change it, you wish it, you want it, you create it whether it is a banana, apple, steak and chips or fish. The food will not be a luxury any more. We take what we need and if you want to eat physically then you have the burden of digesting it. Food poisoning will not be possible with the space technology.

K: it is very important for you to understand and once you understand the simplicity of the technology and the only you will need to do is teach it to others. Listen on Thursday morning. We are taking the teaching on a big scale and you will be shocked that you don't even want to go to work. The work will come to you as you deliver the knowledge how to serve and how to work it and then we will go step by step. Make the gans of zinc oxide in your reactors and throw

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

it in the waters of the ocean. Put it in the springs of Africa that no lion shall eat any deer. And no fish will be eaten by the others.

R: Am I allowed to ask a question (K's wife)

K: no you are not, you ask too many questions!

C: no this is to help somebody else. They want to know in a different language about the tungsten. What is the tungsten round? We don't have the right translation.

K: it is easy... find yourself an old light bulb and the element hanging in the light is tungsten. Now if you are the new generation you never see the old light bulbs common 5 to 10 years ago and now it is illegal to sell them. Now it is illegal to sell the old bulbs with tungsten because they sell the bulbs with mercury on the top. You hear my wife who asks me questions 24 hours a day! One of the biggest problems with the present light bulbs is the mercury and the others things they carry. If you break one they create huge problems. If you are quick enough and able to produce the right reactors you do not need these lights and if they break you can collect the mercury easily from everywhere. Listen to the Thursday teaching and you will understand exactly how. You will hear that we have a gift from the African nations with 2 or 3 presentations. We will explain many things. Please join us and broadcast the teaching of Thursday morning.

K: A lot of people understand what we are talking about and how we came to this point. They understand now a lot of scientists will understand that one man has been behind the killing of the scientists who have come out with the latest technologies in the past 20 to 30 years. We will show you how this man has been responsible with his own hand in killing children. It's all on the internet and we don't make accusations. Now we have brought the information together. The way we brought in Alan Sterling (pedophile in the US) now we have his boss. We explain how we set for Mr. Sterling to walk into his own trap. We set the trap last week for his boss and he fell into it. We will explain this to you on Thursday but come with a very big eye and big heart. London Tower, Antwerp will be burned down to the ground when this is released.

(<http://www.aviewoncities.com/buildings/antwerp/londontower.htm>)

Because otherwise...you will understand, we leave it at that. We have evidence of the first hand murder of scientists and massacring children. This is on the internet; we show how they are still

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

operating as a family business to bring in children and to commit murder. We set a trap like the trap for Mr. Sterling and they played the game. Now the game is free for us to play.

K: when this man murdered scientists he took their patents and then put them under his name. And now a scientist died in 2000. He died from the same poisoning that was done to me. Now we release all the names on the internet and we will give you the link so you can check them yourself. Please if you have problems finding tungsten, it is very, very easy. Go and find old light bulbs and if you find very old ones, especially if they are broken, the littlest spring on them is tungsten wire. When you heat the tungsten wire with a very low current, in a specific way...no wonder they are asking Caroline. They must be a bunch of women who want to make diamonds. You get the wire ... it took a long time. How many elements did Edison test?

R: a thousand different elements to get one that worked properly.

K: but he used it in a specific way. You have to remember that you have to nano coat it. If you go to look at the different color of the stones, diamonds or anything else, by the color and environment they are in, you can tell what metal you need to use to create them. This is true of any gem you want to create. You find the nearest metal that was in the environment of the gem when it was created. This means they can both live and exist in the same environment. You nano coat it and when you do that you create a shield that is like a jacket. (2.06.31 minutes). The nano-coating will seal the metal inside. Now you have the matter state and then when you put the current on it you create a field release which is matching near enough to the stone color of the gem you want to make. This is how you play the plasma game. It is so beautiful if you understand it. It is a game to play.

K: look at where the diamond comes from—it's from the eruption of the volcanic environment, high temperature, cooked and baked carbon that comes into the open. It opens up. Look at how the structure is in other stones. Understand that it is the environment that creates it and now you have the knowledge to see what elements are in it. What are sapphires made of? If you understand this, I have to explain this to you.

K: I went over this last week. The doctors will tell you that I asked the question and now they can prove it. In the skull they put the element of the seed of the cancer and they find the flakes of the calcium outside the head. If you understand now, this process, you put the system outside the gall stone, outside the stone in your kidney. (2.08.53 minutes). On the skin you will collect

Transcript from 21st International Knowledge Seekers Workshop held June 28, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

the elements of the stone and there is no need for the operation. Don't just look for making beautiful things; look how you can make the lives of the others with the new knowledge easier. The world of science for the world of medicine with the plasma technology is a gift for any true doctor who is there to help and to save a life. It is the first time ever they can stand for the oath they took (Hippocratic Oath) in totality. We don't need to create huge, expensive machinery. A few dollars will do.

K: we just add to the knowledge when you ask questions and for you to see how you can expand and apply. We all rely on one sun. We are going back to creation from the beginning of the universe. The central plasma has everything in it. It is you who decides what you want to take out of it.

R: there is a note in the chat that tungsten is also known as wolfram. It has the chemical letter W. The word tungsten comes from the Swedish language, tung stan that translates to heavy stone. It has a high density and is comparable to uranium and gold; it is much higher than that of lead. It is 1.7 times heavier than lead. It is the highest mountain point for all the elements so it would be good for filament for a light bulb.

K: now do you want me to fill you in with the rest of it regarding the diamond? Giovanni says yes! *It is not my problem if your wife divorces you because she will ask for the biggest diamond!*

Let me tell you exactly why we use tungsten. I have to bring you to the gold business.

R: it mentions that tungsten is the heaviest element known to be essential to any living organism. It says it is the only metal from the third transition series that is known to occur in bio molecules used in a few species of bacteria and archaea (?).

K: now look why. You started a fire so we better feed the fire. For the ladies who asked the question, listen. Why did we choose tungsten? It is the highest and to get the full conversion you have to give enough energy that it can release itself in a rapid way into the carbon and the carbon is allowed to go to its maximum. You don't transfer heat; you transfer plasmonic energy into the element that was just released as a nano carbon. As it comes off it is similar to what happens when you make popcorn. That is what a diamond is—the popping of the popcorn-like carbon. The more energy you give it, the bigger the stone becomes. That is why you can find 10-, 20- or 50- pointers very easily. These are at the heat that gets the 'popcorn carbon' going just a little bit. The bigger ones come right from the center and they receive the maximum heat and when they come up they call them 3 to 4 carats. So that is what I said, go back to the

teaching. What size diamond would you like? They can be big ‘caraters.’ Because it releases a huge amount of carbon energy which acceptable by carbon.

K: You can make diamonds of gold; I have done this. Go back on the pictures of Keshe Foundation years ago when we used to be Keshe Technologies. I still have it somewhere that I nano coated and made the diamond structure of gold. If you put enough energy into it you have gold. It took me a few minutes to do it because I knew where to put it in my reactor. This is what I did in Tehran; I told the people that I would make gold from fresh air. The material is still here after 8 years. You create the condition that allows the magnetic gravitational field of the gold to the nearest element’s field. You always go to the nearest element and then you allow what you want to be created. This is what we did; we created nano atomic gold. You saw it when you were shown it by Mr. Kung from Japan from Fukushima which is used now by the company there to decontaminate. We went to the nearest element and there was a financial interest for them to do this and they have done it. Now there is a discussion in Tepco of *what are we going to do with Keshe Foundation?* Now everything is in the open and it is getting done. Now we are delivering the waters into Fukushima for people to drink to get rid of the contamination.

K: in the next couple of days and weeks, it will be done. The material is already is made and it’s already in Japan. It is produced and we will distribute it freely across Tokyo for the people to drink it and be decontaminated. And what will be interesting will be if they digested radioactive material and mercury they will be having some gold deposits they have to ‘pick up.’ It’s very simple because it releases such a high amount of energy when you use the tungsten with the carbon and it energizes. You should not create any diamonds less than 3 to 10 carats. 3 carats should be the smallest. But at the same time, please do not block the box because there won’t be any more diamond. If you do a single diamond that is too large it is too heavy to carry and you can’t put it on your finger.

Have you seen a 20 carat diamond? You need a lot to carry it. You have to put it with gold and you can’t just wear it on your skin. You have to make a structure for it to wear it. And you need a very large finger to wear it.

Mario (M): I have a question..

K: you were at the teaching this morning. Now you know what to do.

M: how would the connection look like...?

K: very easy. Tungsten is one element and carbon is the other. Find out what current you need to use to produce a very slow nano layer and then it is done.

M: just connecting those two together?

K: find a way, yes. Don't forget what our friends told us last week from Russia. The man and woman from Latvia who made the cooking presentation (Arvis). They showed a very simple process and he explained in a fine way what to do. Listen to that recording 20 times. Maybe you will grasp the idea of how it works and for them it is very easy to make. You will see what kind of carbon to use to create the resistance. This needs a specific solution and a specific positioning of the tungsten. (2.20.36 minutes) it has to be far enough that it allows the nano structure to come out and you have to make sure that your system is nano coated. It is the way you use the copper. It allowed the high temperature to exist. Go back to the teaching in the past few years; I have explained this before.

K: in 2006 or 2007 (2008-2009?) we did a test with the professors in Ghent University Electrical Engineering department. We put a piece of nano material into the core and the professor in the lab went and brought tables of things. (2.21.52 minutes) he said if this thing could withstand one Amp it was very good. If it 1.5 to 2 Amp it is marvelous. He put the piece of wire the size of a writing pen on the tension and we could see it melting inside. We could see the molten metal through the holes of the nano material but they will not break or fail and you can actually touch this wire because it is cool. It is nano material. I could see the molten metal inside and when you heat the molten metal then you understand that part of the structure reaches the plasma condition. When it reaches the plasma condition it is free in transmission. If you put the right position, your carbon in the right position and in the right order as it released through the magnetic gravitational fields of what is created here (2.23.10 minutes) as it comes off it absorbs the energy and you have your diamond. The diamonds are not created in the volcanic eruptions as they are coming up. They are created the minute they touch the atmosphere because of the energy that the carbon has absorbed.

K: when I used to be in the diamond business I could tell more or less which diamond was from which river in which country and in which part of the country because I understood the energy release at the time of the volcanic eruption. I could tell you if it was from land, the river by understanding the structure of the planet and the flow of the plasma. I could tell you very much

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

what to expect from it and how much it was worth when I finished cutting it in the bush. I looked at it as it came and that is why I had to understand how I would be able to develop it in the future. You understand the volcanic eruption was very strong and very heavy at the time. When it was very strong and very heavy it threw it up and how far it was thrown, how fast it was thrown, if it was at the beginning of the eruption or the end of the eruption, by the size of the diamond you could tell the life of the diamond. You can tell how far and how it was done. If it absorbed enough energy and it was a small, powerful eruption you could tell where it came down in the river and how far it fell out. This is science if you understand the structure of creation it is the same with any element.

K: I studied the geology of most of the diamond producing areas in Africa, Russia and other places. I had no clue and I studied because I could see what carbon could do in the space technology because it is part of the elements of man.

R: one question: how can we produce gans for non-metals?

K: what do you mean by non-metals? We have seen how our friends made the gans last week from Latvia and Africa made the gans and our knowledge seeker Paul did it by the school of thought and how other knowledge seekers have shown making it by adding it to CO₂. Some doctors do that and some people making herbs gans in Rome. They add the energy from one to another and it keeps that.

R: here is a clarification. He means for calcium, sulphur or noble gases.

K: do it the same way. If you have a problem making a gans, donkey it on the back of something else. A lot of people are using CO₂ as the donkey to carry the gans of herbs.

R: question: I am surprised that if Mr. Keshe can make gold and diamonds, why is he in the Magrav business? I was going to suggest that you quit the diamond business many years ago.

K: I do this for humanity. The thing is this is not the first question. My children and my wife ask me many times. I used to be in the business of the big diamonds 5 to 10 carats. If you sell a couple a month you are a millionaire. So, the problem is when the knowledge and the work I did was just wasting time until I found the answers for gravity. I searched for understanding how gravity is made from the mid-60s. When I discovered how gravity is made systems were built

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

and it was more and more complicated. It took nearly 20 years. I started in the mid-sixties when I was 8 or 9 years old because I could not understand the way they were going to the moon...it was the hard way.

K: but I graduated and carried on the research. I became extremely successful in business. But, it is like a mistress having the business. You have a life where you live where your business is your mistress and your knowledge is the main course. That is how I discovered it and I remember the day. It was very hard but it was very clear how everything was missed.

I did not go to the office. I had offices around the world. My children say I could have managed them and I say no I couldn't because creating money the way I used to do is very strong when you make telephone numbers on every deal. We used to make money not in dollars; if it wasn't a million or two it was not worth touching and it would take us a few minutes. We ate with world leaders and we did trading and work with the most powerful men in the world. That was not good enough.

K: developing the understanding of gravity was very, very important. Had I stayed in business I would never have done what I have done. Unfortunately we fell into the hands of the murderer. We didn't know how they lured us. But now I have had a year studying Alan Sterling (from US who was just convicted for 25 years for pedophile charges) and we have seen how we were lured into Belgium into the hands of one of the biggest murderers man has ever known. He has with his own hand killed children, poisoned scientists and I am one of them. I told you that for a long time after I came back from Iran I thought I was suffering from contamination to radiation. It was not that; it was the time when I was writing the first book when I was poisoned. I sat next to my murderer the same as we did in Sosano. It was the same scenario and the same people from the same point of birth in Kinshasa (?). We have enough evidence and the authorities and the legal frame has accepted the case. I am not the only scientist. They have gone behind our backs and patented our work.

K: what we went through was worth it now that I have had Dr. Rodrigues tell me that a dog with two tumors are gone in less than a month. It was worth saving the life of a dog. We know how to make more gold than you can dream of and gold is very cheap. I know how to make most of the materials that the world governments pay billions for.

R: Cecelia asks how it is possible that Mr. Keshe's heart contains so much love and doesn't explode. It is nano-coated. Thank you.

K: now that we are in the totality of being ready to go into space man has to accept the peace condition. When you see it and enjoy it in the coming time man will change quickly. I have predicted, and most of my predictions have been correct, we will see the abdication of the Queen of England in the coming time. After what happened we see the election of the UK to go the way it has (leaving the European Union.) The next step is part of the agreement and it is the abdication of the Queen of England. We will see anarchy in Europe and then we will see peace. This will happen in a very rapid way, one thing after another. When you have all this equipment people don't need anything. In Europe you need more of this than anywhere in the world because when the time comes you need to be able to feed yourself. We see the result of the British departing the EU and now we see the departure of the Queen of England on the same basis as the other kings and queens have departed in recent years.

K: America will be hit with a different thing and Europe with another thing. Then together they come to the point of pay back time. Thank you for today. We will see you on Thursday. We have some closest allies from Africa and different parts of the world presenting information. in the latter part of Thursday we will show you information of the scientists and the children who were murdered at the hand of one man...one of the biggest serial killers among us and sitting next to me and then at night skinning children. We will show you the evidence; you will be shocked. You have to know where you are going. We threw the net and we caught him in the net. We don't know exactly how Mr. Alan Sterling admitted how the scientist died in 2000. Now we know. It is on the internet. His patents and knowledge (the scientist who was murdered) suddenly appear. The reason we went when we were approached last year was they wanted to do the same thing and take my patents to China. We are dying of poisoning and it was the repeat of the same thing as the scientist in Holland. He knew he was going to die so we patented his technology. That is why we are going to China. We will open your eyes to a lot of things. That is for the authorities to decide and we have been very open. If they were to 'protect' me I'd already be dead because they already killed another scientist in Belgium. One of the biggest killers of scientists and children sits in Antwerp, Belgium.

End of call.
