Transcript courtesy of Lynn Schmaltz

Video link: <https://www.youtube.com/watch?v=q70fyGhPiN8>

Keshe (K): the international teaching is our last international meeting on Tuesday and we will do the international teaching on Thursday morning and Thursday afternoon is for space agencies and military in a closed section. It is more secure than the doctors' session. In the process we will try to achieve gravitation of a cardboard. Thursday is an open day for this special technology for anyone from any language. We discussed this today and we will show how you can achieve lift and motion yourselves and we will guide you. Hopefully we will have a system that has taken 2 to 3 weeks to build for demonstration and showing the basics. There are a couple of other tests going on with the Keshe Foundation team and we will share the knowledge as a blueprint and the technology will be available and how you will develop it yourself from now on. It brings total integration of all the knowledge we have shared with each other in the past 2 to 3 years and before that in different teachings and development.

K: it is important that all of you who have come to this point sign yourself and people you invite into the world peace treaty act. We gave the governments until July of this year to start the process and now on Thursday morning we will explain the whole process from A to Z. Thursday morning session is in 2 halves as we have to separate the 2 parts of the Keshe Foundation from it. There has been a lot of development and changes; those of you who have been around us, the work of the foundation, all of us, you will see the building of the cores, the making of the gans, the making of the health and Magrav systems. All this in the next week will come together hopefully on next Tuesday when we close the first international meeting. From then on we only add knowledge on Thursday morning.

Paul from Togo (P): (you tube 12.26 minutes, showing flowers he has treated.) I put this in the CO2 gans and you can see the flower you have on the right. I used white color in the CO2 and what I have done, I have used it because Mr. Keshe was talking about the field interaction and I wanted to use the field interaction of different colors. The plant changed its structure to give us these results with the red flowers. This morning Mr. Keshe was sent the interaction and the results. I tried to use the red one on the flowers on the middle. It was a white flower in the middle. After 15 days I saw the color of these flowers had changed to the color that I had put in

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

the gans. Here in the on the right (13.51 minutes you-tube) changed its colors to white. So, the interaction of the different fields we have been taught is perfect for the plants. You can use different interaction of the fields to change anything on the matter state. This is the result that I have for using gans and different colors to change the structure of these plants. This is what I wanted to show today.

K: it is not changing and it is staying there. You have opened another Pandora's Box for people. First of all the one which is red on the left hand side, is that the true color or did you change the color?

P: before I sprayed the flower and when I spray on the flower after it comes to the day to give the flower. He did not give the red flower before I used it.

K: so by spraying CO<sub>2</sub> on it you allowed it to give flowers and decided when to give flowers.

P: I decided the color of the red flower. This flower is naturally a white color. So I used gans and color when the plant was plant and had not flowered yet. I sprayed once with the color I had mixed.

K: so your gans was in red color and you sprayed the plant with the red gans and this is the color the plant flowered.

P: I put the white color in the CO<sub>2</sub> gans on the white plant to the right of the red flower. The leaves started to change and want to become white.

K: so you changed one plant to the white and one to the red by spraying the color of gans in it?

P: yes. I sprayed on the plants for 7 days, every day. And when I saw the flowers start to bloom I stopped spraying because I wanted to let the flower to come. I didn't want the color to be sprayed on the flower. I stopped when I saw the small buds.

K: so you decided the color of the plants.

P: yes.

K: so for the people who listen to you and with what we see, if you are growing any plants and choose any color you like—black roses, purple apples. Can we know from the people who with the people scientifically and who know how? Scientifically we can explain this. The gans is the same mixture and the same structure as the inside of the body of the plant so when the plant takes the gans energy from the liquid, the water, it is like your wire is attached to it to dictate the

**Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016**

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

color. This is a clear indication of what the knowledge or technology can offer. It would be very interesting is if we do what we talked about before with the skin problems for people with different colors if we add what we learned from the doctors in Iran, add the color of the gene for the skin and put it on their skin to come. Now add that to the gans of CO<sub>2</sub> and sprayed it on the body, would the body change color too? Would this have the same application? Paul, you come up with different controversy. You have already done enough in the last 2 weeks! Thank you very much. This is fantastic knowledge.

R: some people are wondering on the chat what the material was that created that color. Was it a dye or some sore of coloration material? What made the red color and the white color?

P: the red color is the flower and we have the seed of this flower so if you can see, it is something that you take and plant again you will get another plant.

K: no, Paul, Rick is asking what color you choose, was it natural, synthetic or from another plant.

P: I went and bought a color. I think about the color.

K: is it a natural color from another plant?

P: I am not; they are selling this plant with this color.

K: where is the white one from?

P: were they selling it in one shop and I bought it.

K: can you go back to the shop and see what is in it? I received the email you sent and I will respond back to it. The structure you chose for the flower, if you buy a black color you will have black flowers, or if you buy orange you will have orange? What is the question—how come the other plant has everything white and on this plant only the flowers are red.

P: I said the flower we are getting that is red. I put in the gans and sprayed on the plant with this color. Then I put the white color and sprayed with gans with the white color. The plant on the right side does not flower so the gans was only used for the coloration of the leaves. That is why the interaction of the fields has changed the leave of this plant. If he is going to give the flower like the red plant, we will also get the white flowers. He doesn't give the flower on the plant with the white. We used the interaction of the fields and the gans changed the structure of the plant leaf and gives us these results.

K: do we have anybody in the audience who is an expert in plants?

**Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016**

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

P: I will go to our university to search; we have one department for the plants and see what we can do.

K: that is beautiful; this opens a lot of doors as what you did with the cancer and the other materials you brought to enlighten us. Join us on Thursday and I think you will be adding a lot more.

P: if Mr. Rick can go to the next step you can see the white color, the white flower.

K: it looks like Christmas with snow on it.

P: the next picture shows the red flowers.

K: thank you; this is beautiful. People in the flower shows will have a field day and come up with colors for flowers man has never seen before. You can make the flowers any color you like. It takes years to achieve germination of new plants and it a simple stroke Paul has changed everything. It will be nice to see if we can take this a step further with the doctors as this has huge application in medicine that I can think of, let alone agriculture.

P: I was thinking that if you take the \_\_\_\_\_ of the plants and put in the water like I have done for nuts they will start coming out, I think we can come to a similar result.

K: please do and let us see. We can ask the others to test this and come back and see what we can learn and how far we can add to the knowledge. Thanks for your help.

K: we meet you in Ghana in October, Paul.

P: I will be there.

K: we will start asking for a passport for you.

K: we have a couple of pictures from Douglas; is he online? Rick I sent you some pictures of vegetables from Douglas. Douglas can you explain what you have done and the results?

D: the pictures that are about to be presented are plants I started indoors earlier this winter with gans water and controls with tap water. Then when the weather warmed up I moved the plants outside and I have been taking care of them outside and continuing to water with CO2 gans once a week around the base of the plant. (Cucumbers 27.35 minutes on you tube). Just the water and not the gans itself was used about 25 Ml once a week around the plant. On the left you see the CO2 cucumbers and on the right are the regular cucumbers. We had a very dry spring and I actually had to water the plants from the tap. Some of the CO2 plants did get some residual

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

water from watering the other cucumbers but you can see there is a huge difference. Those are ceramic tiles that are 12 inches that the cucumbers are sitting on. These are organic seeds I started a couple of years ago that I have saved. I started them with lettuce, cantaloupe, squash and more.

D: the squash you are called yellow crookneck squash. (28.55 minutes on Youtube). On the left you see the ones that are CO<sub>2</sub> watered and the ones on the right watered with tap water and rain water. Same conditions and parameters with 25 Ml at the base of the plants. I'll show you the plants and you will see the difference in the size. The smaller squash plants are in the lower part of the yard where runoff goes and they still came out smaller. This is absolutely amazing and my neighbors have commented on the size of fruit that I have yielded so far this spring.

R: was there another picture or did you have something else to show? I only have the 2 so can you do a screen share?

D: give me a moment and I will pull up the plants for you. That way you can see how the garden is set up. (31.02 minutes on Youtube). The one on the far corner that is visible is the yellow crook neck squash and this is far corner, the lowest corner where the run off happens. Above them are the CO<sub>2</sub> gans watermelons which are doing wonderfully. The next picture makes me laugh. These are the CO<sub>2</sub> gans squash plant and you can see the slope in my yard. So they would get more watering or rain water. I didn't water these two as much as all the rest. You can see the lettuce with the CO<sub>2</sub> gans is as tall as the squash plant and it is Romaine lettuce. I have had wonderful production and I've been able to give a lot to the neighbors and eat all of this. The plants are beautiful and are quadruple the size of the others. I have given the other ones more attention. My CO<sub>2</sub> plants are overtaking the corn and towering over the corn stalks. I wanted you to see the size of the plants. I just transferred them outside and after the 2 weeks' of transitional shock and slow growth; after that they took right off. The same was with the watermelon, red romaine, carrots and more. This is just one lettuce that laid on the ground and spread out.

R: would you mention the feeding system again, how you fed the plants?

D: earlier this spring we presented this in the agricultural workshop they were indoors because of the weather. They have to have at least 70 degrees in the soil. It was late spring before I could set them outside. They were indoors in CO<sub>2</sub> nano coated tubing and they were watered by CO<sub>2</sub> energized water. The others were watered by CO<sub>2</sub>. When I moved them outside they were rained on and the ones that had more water are not growing as healthily as the CO<sub>2</sub> gans plants. I had to give them extra attention even though the run off went to that part of the garden. I

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

thought they would be better with the extra water and the nutrients. The CO<sub>2</sub> makes its own conditions and takes advantage of it. My neighbors have never seen squash plants that tall.

K: do you have any other food to show us. Are you growing melons?

D: yes, we have tons of baby melons that are about the size of a baseball and there is an unbelievable amount. I started the cantaloupe earlier this year and so far the one in CO<sub>2</sub> is the only one that produced any fruit. The one with tap water on it has not produced any fruit.

K: there is another side of the whole structure. It will be interesting to see for those of you who test with CO<sub>2</sub> what if you add a small amount of CH<sub>3</sub> into the process. All of you only concentrate on CO<sub>2</sub> but if you test CH<sub>3</sub> added to CO<sub>2</sub>, the composite gans. Don't use copper oxide as you will destroy the plants. Or see which plants respond to copper oxide. The process is simple and you create an environment. Look at the structure of these plants; you changed the environment with the water. The plant receive the energy of the gans, and you changed the environment in the garden and the where the plants feel the want, they receive. Something we do is to create the condition that the wish comes true. Plants don't have arms and legs but if you create a condition for their comfort they create their own tent and they expand and grow to it.

K: In so many ways we see this in jungles and the limitation is not by what it is but what environmental fields that are created by other plants that gives them restrictions to grown in. In the jungles and woodlands we see certain trees grow and nothing else grows because the field strength of the tree dictates the environment that is good for itself but not for the others. We go and take the things that are in our way that we don't want. If we don't like furniture we move it; if we don't like a neighbor we build a wall. Plants don't do that but they create a field which for the others to grow in it is not comfortable and that is why they don't grow. You move it and the condition changes. We have seen this in the First World War. It was puzzling to a lot of people that no one had seen poppies for some time, a long time, in Flanders' fields in the First World War. But, after the war, because of the chemicals and whatever that was used, suddenly the fields were filled with red poppies, the color of blood and that is why they say it was the blood of the soldiers.

K: that is why if you look at the British on November 11 they always carry a red poppy because of the poppies that grew. It changed the environment and the poppies grew after many decades where whatever was used to blow things up or kill, a new environment was created. Now with the gans you do the same thing. You change the environment. A plant can only grow into an

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

environment as it is allowed to or you change the environment that it grows and in that environment it has a bigger field and you reduce the gravitational field and increase the magnetical and the plant grows taller. It is the growth of plants and the structure of vertical people like human beings is very much dictated by conditions you dictated and created. You have given it CO<sub>2</sub> and it has changed the environment and it means there is less gravitational field attachment to this area. So it grows into the field of it and it is shielding. At the same time material which is in the gans creates a condition that brings nutrition because the gans water is CO<sub>2</sub>, amino acid NOCH, and the plants live off the structure of the amino acid that is on the skin and they absorb and transfer the energy to themselves.

K: So with the existence of one oxygen and one carbon attracting nitrogen and hydrogen to them in a way that amino acid is like the CO<sub>2</sub> box that you made. In a way you can see if there is enough energy for the transfer of the water to themselves then nourish themselves and this is reason why we see huge growth with vegetation with the CO<sub>2</sub>. It is part of the equation and structure. You change first of all the fields. It will be very interesting when you finish with this plant, uproot it and look at the root structure and the structure of the plants that had water. We have seen this with the Chinese. Most probably what we will see is what we have seen with the Chinese who had the seed in gans water for awhile, then no gans water, and then water the plant with the CO<sub>2</sub>. Is Benjamin around? 43.07

K: hopefully Benjamin will be with us tomorrow as they have started seed profile study on soaking the seeds. This is for a food chain that can make their nation independent. We extend this to the university and to Kenya with Dr. Ghatta. The agriculture will be the backbone of the application of technology to make Africa self sufficient with their food. In desert conditions hopefully in a short time we will see if and how we can grow seeds in deserts and dry conditions so the Sahara can become fertile again using the gans in the short term that it creates its own food. It is interesting what is coming with agriculture. If we look at the psychology of the growth of the plant instead of just the growth of the plant and how the plant sees itself and how it uses and then after soaking and watering with the CO<sub>2</sub> plus CH<sub>3</sub> application and/or the CO<sub>2</sub> with NAOH and CH<sub>3</sub> of these kinds of mixtures is huge. It is unbelievable if you start explaining what can be done. We are finished with teaching and we all know what to do. If we add the amino acid (NAOH) plus the CO<sub>2</sub> plus CH<sub>3</sub>, these are gans waters, plus ZnO this is given to the plants and then we feed the animals with the foliage.

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

K: What would be the effect of production of vegetation which we control the emotional effect and we give them to the animals or us as human beings consume it. By adding the gans of ZnO we have seen with the doctors and others who bring agriculture can we satisfy through the food chain the needs of the man on the emotional side? Caroline is not here but some of you have seen what Caroline has posted on the internet regarding the food that we eat. With the gans do we need to eat the food? Do we need to eat the animal or do we transfer the energy of it and make a condition that changes everything in the structure which we have seen? These are the factors, the ZnO, CH<sub>3</sub> and CO<sub>2</sub>. CO<sub>2</sub> is the communication and environmental condition; CH<sub>3</sub> is the growth condition and ZnO is the emotional condition and the NAOH (amino acid) is the connection between the plants and the man and it uses the same amino acid as the blueprint of the spaceship.

K: But what if you want to explain to your child and grandchild how the banana tasted? We don't carry bananas. Because you carry the emotion of the banana and the field and understanding of the banana you can recreate it so the child sees the banana. You want to explain to a man from planet Zeus that we have something on earth called a banana. You imagine and you restricted your understanding to the apple and the orange. All of you have done this. You made the cup and put the amino acid, the CO<sub>2</sub>, the gans, the orange and you transferred the energy of the orange. We talked many times about this. One thing you did not realize was that there was more emotion and more understanding of the environment and with the DNA and RNA they transfer it to us when we eat it. These are the extent to which man will come to respect the others.

K: Do we need to consume and is there emotion involved. Or were you just interested in the taste, the feel and the energy of the orange but it has amino acid in it and it's alive. It has emotion and it can transfer that emotion. Did we pick it up by shaking the tree and dropping it on the ground or did the farmer have a tender hand and rub the orange when he put it in the box and later you served it. Here is pick it up and eat it and smile but why do plants which you go to buy that are organic with no chemicals, no biologicals and taste good?

K: You have to understand the guy who picked it up has amino acid in his hand and carries his emotion. He respects the food and it is not mass produced. He has handled these one by one and you see how we treat them. We have started in a way to respect the food, the plant and the emotion. This carries to the food and when you eat it you feel good. It means that we have

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

understood and respected the emotion and the product that was given us. Man has become too passive to understand this and now we see it. how much is the gans of CO<sub>2</sub> and you do it because you just want to see results or you give the gans of CO<sub>2</sub> and say what a beautiful flower you will be. When you pick it up you don't need to talk to it; you carry your emotion to it. You have given more freedom to the plant to have the environment that it likes and it will please you. This is help the birds with the new way and the birds help me and satisfy my emotion and I satisfy the birds and give them more food. This is what a lot of you are waiting to be shocked with. ZnO or CH<sub>3</sub> and ZnO plus CO<sub>2</sub> plus the amino acid of the air to our cows and the sheep.

K: would we get a different type of animal? Yes we would. Would we get a new type of animals that are much calmer and will grow in a different way? You have seen it with the plants. Do you think it will be any different with the human race? The understanding of the technology of the plasma is now coming home to roost that a lot of you will come to understand that you have to respect the totality of the environment the way our ancestors did. Do we need the assistance of the plants as we do the animals or do the animals have a new system? Some do and some do not. So when you start, now that you have come to be able to do, in the coming week you will understand more that even the the cup is obsolete and the growing of the plants is obsolete. In the next few days you will see how the whole world of science has been revolutionized and how with medicine or application of the food you don't need even to be near the food. You can reach it and the whole world will create homogenously according to the environment. All the apples will be bigger or whatever you want to do with it.

K: in the next week or two we will open the true world of the plasma and then we produce so much food that the man does not need to harvest by pieces and then destroy to control it. a lot of you who will start this process of using the gans and the new technology which brings down the gmo modified seeds which will not exist in the next few months. If you understand what to do in the next few days and how to apply it, gmo becomes history and it will be something man did wrong to himself some time ago. Because through the structures you set up you reach without actually watering the condition the plants would like to be in to grow to their maximum capability.

K: join us on Thursday and I start opening the door on a new dimension in plasma physics in creation of thought, matter and fields. Then you understand this correctly. Look at what you have on hand: you have gans of matter state, CH<sub>3</sub>, and the gans of the life NOCH (amino acids)

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

which makes the decision to exist. The plasma technology will change your lives in the next few weeks and months beyond what you can imagine. We show you how and we bring it to the plant in the way you can do it and it does not need mass production. All it needs understands of how to make it possible for everything to exist the way you want it.

R: there is a note from Jacky in the chat that he has a great advancement to show on feeding.

K: yes, I know I have seen the pictures and he is working on feeding himself. Let him come on; I have been following his work in what he has set up.

Jacky (J): hello. I want to share my screen. I made the translation into English to make it easier. This is what I showed last week and I make a different list of what the body needs for the elements and you have the 8 essential amino acids, the omega 3, 6, and 12, sugar, fiber, Vitamin A, B1, B2, B3, B5, B6, B9, B12, C, D, E, K, potassium, calcium magnesium, iron, zinc, selenium, phosphorus, sodium, chromium, copper, manganese, iodine, silicon, liquid CO2 plasma CuO. I tried to find some basic elements totally natural but with this idea and with these natural elements you have what you are looking for. If you take some Moringa, spirulina, nettles, rosehip, kombu, hemp, lentils, lemon, chili pepper, sugar, olive oil and coconut oil you have approximately the food spectrum of what you are looking for. I just add some different olive oil, coconut, sugar, lemon to augment and make the nano coating of the elements stronger. With all these elements you have the total list of the Vitamins, Omegas and minerals listed above. When you mix all with your CO2 and CH3 and a bit of CO2 to keep this liquid, only that and you mix it to get the stronger fields of the CO2 and the different liquid plasma you will get something like that. You have all the energy and the amino acids, structures in the energy of the gans. (See picture of bottle at 1.00.18 Youtube).

J: here you have separation on top.

K: can you explain what is in this bottle?

J: in this bottle is all the mix of the elements that I listed above.

K: was this from plants or roots?

J: I will show you what I used because my concern is to find something in case of emergency if you don't have liquid to feed yourself. So what I made, you remember the medical unit for the hands with the coils on either side? (See picture 1.01.30 Youtube). When you put your arm in

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

the middle you feel so well. When I have my liquid from the bottle of gans, I put the liquid in a spray and I spray all my coils with that liquid. In one hour you can see all the coils because they are nano coated and they take all the energy and you can see on the coils that they change and take the energy of all the substance and now with the plasma batteries you have the potential between 1 and 2. When you put you're the hand in the middle you are the transferor of the energy. You can feel it in your mouth and it is exactly as if you have eaten. You have that feeling and you start feeling something in your stomach exactly as if you had released the energy when you eat. I feed myself and it gives me so much energy for so much time. Yesterday I could not sleep until 4 in the morning because I was so full of energy.

J: and you have all the elements, vitamins, amino acid, all the body's needs in this and you can have a simple system like this and you can feed a complete balance with it in a few seconds. Just put your hand for 2 or 3 seconds and you feel the energy and you can feed yourself.

K: thank you very much. This is very easy. For those of you who know or don't know, Jacky has become the head of education as of this week and we hope we will see new ways of teaching and understanding and new concepts in teaching the knowledge. What you have shown is the transfer of the information of the energy from what we have done before and what the material can give us. I know a number of you have started or already use the gans of CO<sub>2</sub> and CH<sub>3</sub>. It is very interesting to be able to translate the knowledge in a way that it works and not just with what we see and we think it is there. The translation and transfer of knowledge may be difficult at the beginning and in the coming time we will find out how most of us can logically think of what to do and the way we want to do it. Is there anything else we can learn?

J: there are so many things but not for the moment.

K: how is the growth of your bucket going?

J: it is wonderful.

K: have you seen an animal yet?

J: no, not animals. I have a different set up and I learn so much. When you start playing with the amino acid, the magnesium, the calcium, the acid, the elements and start understanding our life is working. When you can start creating life and understanding how the life is working it opens new horizons because you understand what you are doing. This is why I can make this liquid food system with all basic, natural elements because you understand that your body needs amino acids, minerals, vitamins and the interaction. When you start playing and put some fat and then you add some other element into this fat you see it is a different that you put directly

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

into the liquid. This is how your understanding of life becomes bigger and bigger and then you can start making some new things because you understand what you are doing.

J: This is the beauty of what you give to us; you gave us our freedom. We can't be free if we don't understand. The people can abuse us if we don't understand how things are working. When you start understanding the life, the creation of the matter, the creation of energy it becomes beautiful because you have reached your freedom again. You start creating some wonderful things. I made an experienced on the pH level and made a solution with the foods, the vegetables and wanted to make the translation. It is to say how simple your technology is. It is red cabbage. If you take red cabbage and you cut it in small pieces and add boiling water into the red cabbage you have an acid pH. Then you have a solution like this: 1.08.34 minutes you tube. Then you just add it into your container some vinegar and lemon (1.08.45 minutes Youtube) from different things. One is acidic and the vinegar is alkaline. You can start to make colors. You want to make, then you can make the red colors. This is beautiful because you start being able to make what you want. It is so nice and then you start understanding the acidic environment or the basic environment and you know how to change this. You know if you change something in your bucket you will have a different reaction and a different kind of life. This is the beauty of your technology: you can test and have experience.

R: maybe those colors could be used to color the plants like we saw earlier with Paul.

J: perhaps, yes. Then you start creating some new matter and it's beautiful. I have some yellow matter like gold.

K: they use it for their patients for changing the condition for the body of the man to find its balance. These can be used as we said and we will show more in the new dimension in the whole structure of the technology from now on. We came for matter state and for months we have shown different kinds of gans, cores, coils and from now on we go into the deeper space technology. This means that we will not work with the matter for absorbing and creating conditions. This part that get man ready to be part of the space community is the bridge between what and who we are as mankind and how we open the door into space. I start teaching this on Thursday and you know all of it and its putting it in a way that you understand how to do it. A lot of you will try to test it and a lot of you will achieve a lot with it.

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

K: the next step which is up to now has been inertia based technology will become gravitational based technology from this week on. We start on Thursday and we create the condition where we have brought gravity and inertia together and that we can replicate totally the field of the environment we go to. We can create the matter state of the environment also. As I have said in the past two years earth has a composite magnetic gravitational field. One is the gravitational field that is created by the plasma state of the plasma inside the core of the earth and the condition is what is converted to matter that they create their own gravitational magnetic field according to the state of the matter state which we call inertia. All the flight systems up until now that man has created levitation is limited to the inertia of the planet. Now we go into the magnetical and inertia together and we see the Magrav systems that can deliver technology where not only do you create the magnetic gravitational field of the destination planet but you create the structure of the planet and you create the matter state. This creation is what Jacky has been showing you.

K: then your body condition is something which is there. The Keshe foundation receives many offers form many organizations for different parts of the technology. We have seen that they spend more time interacting and delivering the technology than making it and building it. Contact the Keshe Foundation and you can go through any support we have. You can go to [doctors@keshefoundation.org](mailto:doctors@keshefoundation.org) and tell them this is the material you have. If it is substantial we can ship it through TNT at the cost of the Keshe Foundation. If you want to ship yourself we allow you and give you the direction where to ship goods. In so many ways we control everything before it leaves. And we know exactly where and what is going to be shipped.

K: We are looking for Indian Keshe Foundation supporters to be able to support people who have made gans and we will be there from 19<sup>th</sup> to 20<sup>th</sup> of this month for several weeks. The more material we have available that the team can deliver to the public in the area, the better will be the total evaluation of the technology. We would like to thank the Italian connection that put us in touch with the Qatar officials and with whom we are working. It is important by this to open the next step of the technology into the Middle East and we will explain once the trials are over. We were approached and offered the opportunity that we accepted. If you are from Italy or you want to spend time in Italy we have 20,000 square meters of land where you can test and try in Italy for the next 1 to 3 years and there is no time limit on the 20,000 square meters of land. It is as long as you want; you can plant it. We have 10,000 hectares which is another opportunity now on the table with the Italian people. We are meeting them Monday.

## **Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016**

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

K: There is opportunity to test for no more agricultural biological products. The organization has approached the foundation in Italy making the 20,000 hectares of land. They showed it last week. We have to go in as is our ethos. When a group reaches develop then we add to it and this is the position that we have. So if you are agriculturalist or you want to test any effects of seeds and growth get in touch with agriculture@keshefoundation.com. Then Giovanni in Italy will allocate the time for you far on the land.

K: We start looking into solar systems in Italy now that we can prove the Magrav system can increase production and this has been evaluated scientifically. I have seen and heard the report that how the Magrav system can increase 30% minimum increase in the power production using Magrav system with solar system farming. A plant that makes 1 million can then make 1.3 million with very little expenditure. That is why we don't withdraw the Magrav systems from the market because there are a lot of people using them and a lot of application with them. If you have a Magrav system you have built or you want to purchase one, do not stop purchasing because they different application than the generator. In the time to come the Magrav systems will deliver conditions which the generators cannot do. As we said by Sept of this year we will release the generators and you can see the process to change them. We are getting a lot of orders for the generators with respect to Sept delivery. Understand that the Magrav systems deliver different properties, conditions and applications that are just producing energy.

K: anything else to add to the knowledge?

R: I don't have anything else.

P: this is Paul. Mr. Keshe I have an experience about the entities of the universe but last time you showed us transferring patches to see the universe. I have made it in my way.

K: what have you made?

P: I tried to see the entities in the universe like you said with how to use the glasses to see the entities.

K: have you made a unit?

P: I don't make the unit but I want to share the way that I have done it. I just want to talk. What I have done is that you have told us to use patches. So everything you are teaching us I am trying to see how we can use the body in the same condition to do that. This is everytime that we

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

get new knowledge that I try to do. I am to see what you tell us to do with different material and make it so the body does it. We have a lot of things that we have to use in our bodies. What I have done I have asked for the life of the entity persons to come by the mouth and agreeing. So I was thinking that if it can find a way to deliver and to let our energy to go out so we can find a way to get energy and stay in the stable environment. What I have done was I tried to close from other sides to not let energy go out. Then I try before I use the matters I make with the CO<sub>2</sub>. (garbled) I have used the body to produce energy. When I start that from my pineal I was connected to the universe so I took my right hand and closed totally my right eye and I tried to close the left eye. And I tried now to see out to the universe; my intention was to see Jesus Christ. But what I saw first was someone moving but it was too dense. It was like sun and it was moving in the universe coming to me. It was approaching me and I could tell it was a man by the lights. When he came he stopped at 10 meters from me and you could see the aura like the sun. They tried to move their hand and flow the lights on me. I think my energy was not enough to support the energy and I was thinking they wanted to open the canal of communication with me. So when you see and try to close the eye the brain will become like a transfer so you can use. It will be the same and the body of the man is in the gans state. When you look according to all these realities we don't need extra gans to see entities but we must need specifically to 'close' the body so you don't waste energy and to use the body to produce energy so that you will be able to see the universe and interact with them. The patches transference, when you close the eye some more you will see it almost the patch transference you have made. When you close some more the energy that you have produced in the body will try to work by these eyes as if they are open. Then you can find the way to see the entities in the universe. This is better than what I made. They are not using spaceships; they are only using their bodies to move. Now I want to know how we can use the body to jump to be with them in the universe. You have told us how to convert everything and I will be happy to get more information; I want to use my body to jump to the universe to be with them. It was very nice and very beautiful. The speed was very high.

K: let me explain to you as I was explaining in the universal council with the Germans this week. A lot of you are becoming aware that more and more as we are finishing with the development of the technology and opening to space, more powerful politicians are opening a lot of things in respect to life beyond this planet. As you know on the 28<sup>th</sup> of June the head of the European government, the EU, in a communication has announced that they have been in touch with the people outside this planet and he explained it and he translated and sent it to the heads of state. It is all of us that we delivered the technology and knowledge freely not just to eat but to share and enjoy that we have done something positive.

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

K: And if we carry on this path we are more or less the only group of people and we will see most of you have reached the point of the ability to be able to control the fields within the structure of the brain of the man which reaches the emotion and the soul of the man, you will start interaction with the universal community as one by one we build the strong relationship and the opening of the space to man becomes a normal thing. The way we travel across lands from one state to another, from one country to another, from one continent to another, now the time has come for us to travel from planet to another, from one solar system to another and from one galaxy to another.

K: the knowledge we have gained here brought us and changed us from the donkey to the car and the jet and now we go into the plasma space travel which needs no craft. It is we who have to gain the trust of ourselves that within ourselves we have enough energy enough control that not only can we travel in the deepest part of space but we travel and come back to where we want to be and we interact with the others. It is the understanding of the technology that will bring the change. A number of world leaders and they can explain to you that they have said and they have changed their minds because man is not ready. But we see a large number of the world leaders are gradually coming to the same direction.

K: Don't forget it is the first time an organization wishes to open the space for man for peaceful application. You have all signed the world peace treaty and your soul is committed. For the totality of those who committed themselves to world peace, by signing themselves into it have started the motion. We have no choice. You as people who wish for peace have opened the door for communication and interaction with the universal community. It is very much that we are ambassadors of space for man through our conduct. By our own benefit and we show how mankind frees himself from the shackles of control and freedom of the space, this is what Paul speaks about seeing with the 'eyes', go back and read about most of the world leaders tell you that most of the most powerful men in the governments who could be trusted and been given access to and contact with and they cannot deliver the peace. It is still on the table until man can deliver the peace. The leaders of the world cannot deliver the peace.

K: We see that in one or two nations that they have committed themselves into the peaceful application for humanity and the governments and we have seen the prosperity and the wealth of

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

their nations. On the other hand it is the totality that has to come to be able to open the door for the totality of mankind. As I said would we do it when these governments are not in power or they destroy themselves through their own actions? Or, do we carry on with changing the course through the correct conduct across the planet, this earth of the man.

K: It is your wish for peace and you have been given the tools of peace and you have manufactured, developed it and you call it the gans. You relieve yourself with the pen from the energy of the soul. Where you wished you signed yourself for peace and the emotion was set for peace. Is it the time to deliver the peace and I have put that to the core team of the Keshe foundation last night in the meeting and it is their decision. If the core team decides to take a step to bypass the governments to deliver the peace, we shall do this on Thursday. Most of you know the core team and the sense of purity that Paul has reached to be able to open the door to space and the universal community.

K: We will be able to see and to understand and communicate the way your world leaders and governments are explaining one by one. Go across the internet: President Putin, the leaders in China, the head of the European commission, most of the South American governments have committed themselves in communication with and all of them know where the problem sits. We have 2 choices. We open the door and finish with those who are on one continent and the cause of 99% of the problems by turning over their hands and how they operate. Or at the same time we deliver the technology to be able to open the door to mankind into space. So, you members of the Keshe foundation around the world, the millions who listen, transfer your wishes to the men of the cores of your own nation. You all know who we are. The core is not in what we call the universal council. The core team is sacrosanct and it has been blessed as the cornerstone of the development of the technology through not the physical but the operation of the Keshe foundation. It is your intention they will receive in their souls and then we declare our position on Thursday. We have opened the door to the rest of the community and one by one as you reached the promise of your own physicality with the soul, you will start interacting and we will gradually open up the door.

K: as you know when you go to a country you see one person and then you write back, and they write two of you and then there is communication and the ambassadorial level starts because you start interacting with each other. There are so many of you and you put the rules of conduct who can come, how you come and how many can go. The same thing will apply to man in respect to

## **Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016**

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

the universal community and how we conduct ourselves. You are the first ambassadors. You will see in the coming time from Thursday onwards that we open the door of the universal community to mankind and we show the systems, how you do this, how you transfer yourself across and how you develop the energies that holds on to your soul and your physicality and the physicality of the position you arrive in and step. I started this teaching in the private teaching of the Keshe Foundation. What is comes to and what we heard from Paul, Jacky and world leaders is the beginning of the opening of world peace and the opening of the communication between the two sides.

K: The frontiers of this opening are you as the members of the Keshe Foundation and those who have not even heard of the Keshe Foundation but live through the ethos of the Keshe Foundation. When you give and understand and bless any members of the Keshe Foundation supporters you give part of your soul that enhances them to be able to give more and in that process you reach other mankind as well. We understand the process and we have seen how the process has been abused and we bring termination to the work of these people who are mainly raised in certain positions of powers in certain parts of this planet. On Thursday we open the hand of the root of the problem and the families and people that are involved in this. In the second part of the teaching we open the door and show the problem that you have and we open the door for the solution to terminate the positions that have been created by them. The Thursday teaching will be in two sections.

K: The first part is what has been set and what has become the trend to kill and destroy and the people who have been behind it. It does not matter if you are a scientist, a child or a nation, planning to start wars years ahead by intention is a criminal act and from now on it is you who will change. Give your support to the core team; you know who they are. The core team of the Keshe Foundation is sacrosanct and it will stay the same because they are committed in their souls and not with their physicality for the change for humanity. And then in the second part we teach you the tools; every one of you can open the space for yourself, your family, your friends, and your nation and for humanity. A hundred years ago if you wanted to go from Europe to America you had to get on the boat. That is on the water. The planes and jetliners came in and your travel is a shorter time. What is strange to us is why are you afraid to go from Europe to America in 2 or 3 minutes?

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

K: Is it that they have put restrictions on you to understand the advantage to man and the advancements in science has led into the next step. Or is keeping the status quo to kill as many as possible will give them a few free times for the time they are on this planet. I have made the decision that I put this to the core team and it has to be the whole core team of 11 members in agreement. There has to be a unanimous decision and if they take that decision we will change the course on Thursday. Everything is there on the table and when you see it you will be shocked; when you understand it you will understand more. We will change a lot of things and it is up to the core team to decide which way we go on Thursday. We meet on Thursday before the beginning of the Knowledge Seekers at 8 o'clock and the workshop beings at 9 o'clock. At 9 o'clock it is for humanity.

R: here is a question about regenerating eye disease and genetic hereditary involvement of the rods and cones of the eyes.

K: a friend of mine in England years ago became blind because of this condition and was a young man in his early 30s. We watched it day by day. I suffer from this same kind of degeneration and as we said hopefully this week we get the certification so we can start bringing the materials to the different gans to test for the eyes. There are 2 aspects in eye degeneration and condition of the degeneration. One is if it is genetic as we have seen through MG \_\_\_ the degeneration or what is to be genetic can be handled in a very easy way from now on. Partially this is done through the emotion and partially it is through understanding what is needed.

K: So when you have an eye problem you have to consider what has led to what it is at that point. You have an eye and through your eyes you see the world. What does the eye do? It transfers matter state to the emotion of the man and to the physicality of the man and what the man will show with what he sees. Do we want to see more murder and abuse? No. Do we have a choice in it? No. Then I would like to be blind. (1.43.32 minutes on Youtube). Eye (I) shall not see. It is a shame to be born in the skin of the man and be so abusive in what it does. So your eye has to be treated in three different ways: you can use the gans of CO2 for connection between physicality and emotion. You can use the water of the gans of CO2 and Zinc and what you see through the emotion of the eye can satisfy the soul of the man that needs support. You need to give energy to the production of the cells that they want to support the change in both so you need CH3.

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

K: as you know I always give a percentage. With the CO<sub>2</sub>, maybe 4 to 5 drops; one drop of ZnO; and for the need for the growth, 2 drops of CH<sub>3</sub>. But you have to understand this is to do with the vision and how you have placed the change in yourself genetically: *I do not want to see and I make myself blind*. This may have come in your ancestors and in past generations that they have seen such horrors that they did not to see. Their wish was *I wish I was dead so I could not see this*. So genetically what you do is you blind yourself to the reality and *I wish I was blind so as not to see whatever* and that becomes part of your DNA or RNA. It's the conversion of the wishes of the man.

K: but there is a physical part into the eye that has muscles that position it and bring focus and retract. In that process if you partially you have emotion and the muscles have retracted to themselves you need a bit of CuO<sub>2</sub> to support the muscles also. Maybe ½ to 1 drop. 1 drop is too much. So support the communication, emotion, the growth as the energy needed for conversion and you support the carriers of the eye. When you deal with any part of the human body for change you have to consider all aspects: the physical, the emotional and the line of communication.

K: If you have eye cancer you don't use CH<sub>3</sub> because that is growth and energy. If you are growing a plant that you want higher or better, you consider CH<sub>3</sub>. The other thing is to consider a little bit of the amino acid from CO<sub>2</sub>, not where you made the copper oxide. As I explained in the teaching for the last couple of weeks, the amino acid on each container is slightly different. If you have, when you test your eye, and you feel weakness in a muscle of the eye that is not pulling, you add half a drop of the amino acid from the copper oxide because that amino acid is in mass connection with the muscle system. If you want to support the neuro system damage (cut finger, damages nerves, Parkinson's') you use amino acid that you created from Zinc.

K: every amino acid has connection between it and the physicality. When you use it as a water in different aspects for growth it is different. But when you target for a condition you target for the efficiency and effectiveness very rapidly. What you use for the eye as a gans of copper oxide is not needed for the brain. Soon you will be dead. If it is then it has to be considered. So if you are looking a degeneration of the eye you are looking at the causes of it; if you are looking at the connection of muscle tissue damage then you have to consider it. These are the things that I teach in the medical side to the doctors so they understand how to balance the patient in the

## Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

application. With eye degeneration I suffer from this. I tested this and could not see properly about two months ago. I used the CO2 on its own for about 10 days and the sight changed.

K: A couple of days ago I said to Caroline that I wanted to change something in it and go to the next development because what could be done with CO2 has been done. Now the muscle is weak and the emotion and the regeneration are needed. So in the next few days I will test something new and do this correct way. I can see better and I don't have the pressure I had on my eyes for nearly 10 years; that is all gone. I can read from a distance which was impossibility. Sometimes it gets worse and I don't see at all; but most of the time I don't have the problem. Why do I need the Zinc with the oxide? Because I have been afraid of looking at man killing each other for a long time. I preferred not to see and my body responded to what I did not want to see.

K: has the work of the Keshe Foundation and the technology in what we see in opening the door to the universal council satisfied the emotion? That is to be seen. Do I need the eye to see when I can see the soul of the man? If you have eye degeneration this is one of the ways but you have to look at every angle. You see, everything is supported. Any other questions?

R: what about the question that there is no globe earth and instead we live on a flat earth with no stars or universe like NASA cells us. What about the true earth like in the bible. The fist man who said the earth was round, they hung him on a church. I have been there and I have seen the church. It was St. Peters and the church was where they hung the guy who said the earth was round. I tell you one thing: if the universe is flat and the earth is not round then I want you to fly from NY to Rome on parallel lines or at different altitudes. If you arrive in NY at the same time it means it is flat line. If you arrive in a different time because of the curvature of the earth it has a different meaning. So it is very simple; you don't need NASA to lie to you. Maybe they lied to about what they called 'going to the moon' but I don't think the earth is flat. I haven't fallen off the edge yet. So we will leave that.

K: It's good for story making but it needs common sense. I have traveled around the world and I have not fallen off the earth yet. So when I find the edge, maybe it is flat and we need to fall off it. What is interesting is that you see on the flights to America and Canada they go across the north part of this flat like piece of paper and then it flies across and you have all daylight with

## **Transcript from 22<sup>nd</sup> International Knowledge Seekers Workshop held July 6, 2016**

(v1 2016-07-09) DRAFT (Transcription has not been verified. Double check info with video)

no night time while you travel. If you travel at the same time at the bottom of the 'flat line' it is all dark night time. I have done both and you understand if it makes you happy to say it is flat, then it is flat, but it needs going back a few centuries or because NASA says it's not flat. What about your own common sense? It is very easy to decide.

K: we are nearly 5 o'clock and we are finished for today. Please understand on Thursday we open and close some books and we start some new books for humanity. And, if the core team decides, we will take action according to their decision. They make the decision for humanity through their souls and then we see the next step. It might be revolution but it will be the revolution in the science that will force the revolution in the common man's life. If the decision is that way with the core team on Thursday we will carry on Monday with total teaching and following up until one or some of you has the Magrav system achieve lift or motion or anything else creating fields. Because from then on it should be very, very easy. Everything is there and all the knowledge is with you. We meet on Thursday to start the process of taking man in space. We do it collectively as one group, one team and our soul wishes become the wishes of humanity and you will see how it will change. Thank you for today. We will meet the agriculture team and medical team Wednesday afternoon. Thank you for today.

End of 22<sup>nd</sup> international knowledge seekers' workshop.
