And we'll be doing a sound check on the LiveStream, as per usual...
But we need the microphone...

OK, looks like the sound is good on the LiveStream. So, this is the beginning of the 4th Kids Knowledge Seekers Workshop, and welcome everybody on the LiveStream and on the Skype call, and we'll be talking with Mr. Keshe at the Spaceship Institute, and he will be showing us using visual and other means to describe some of the wonders of the universe, in a way that children can understand and perhaps even adults too. So, we will also be speaking briefly with Keyvan Devani, who will have a quick introduction here to the workshop, and then we will begin with

Mr. Keshe. OK, Keyvan, are you there?

Um, can I just do a short summary here?

Yes, Keyvan, begin that again, I didn't catch that on the LiveStream, so just...

Oh, OK. Now, I was just saying hello to everybody, to Mr. Keshe and everybody else. Let me just summarize what I remember what we did last time, that, first of all, Mr. Keshe emphasizes is really important, in what kind of language, what we say, how we say to the children, so that adults and teachers, now and in the future, can teach it in the correct way. Um, before we even speak about physics, chemistry and biology, meeting the world of matter, there is the science of plasma which stands, which stands on its own. I think that's a pretty good summary for myself. Could you, like, elaborate on that, Mr. Keshe? And, thank you very much, it was one of the most excellent workshops last time, from, you know, comprehending holistically the whole issues around plasma and magnetic gravitational fields. Thank you.

You are quite welcome. I hope we can still make sense by the time we finish, what we mean according to the world children, as this is the children's program. We don't know how many children at the moment listen to this, but in the future I think it will be enough of them to listen to what is happening. What is interesting for the children and what I call young scientists, is to understand the changes which this new technology will bring. One of these changes is in our time, and even our fathers', not our grandfathers' time. In our grandfathers' time you would have told them that, for our grandfathers, which was the first time in 50 or 100 years ago, you would have told them that you can communicate through telephone or have something called electricity, which is the electric current, that you can have everything lit. They would have laughed, and they would have seen it as a joke. But the man used to burn fire to have light, and then we had candles, and then we had oils, oil lamps, and then we came to electricity, and this generation onwards would rely on the interaction of the magnetic fields, which means they would not depend on burning something, as has been the habit of the man. In fact, what will be socially the

Transcript from 4th Kids Knowledge Seekers Workshop held October 29, 2014

(v1 2016-06-14) DRAFT (Transcription has not been verified. Double check info with video)

new generation of youngsters, will grow up with in a very rapid way, is that, as we spoke about different plasmas, as the plasmas interact, they will see the creation of light between the interactions. What this means is that, as the magnetic fields of, as we've seen these balls before, this is how we set magnetic fields flow, as the magnetic fields interact, the stronger or the weaker, the interaction between two will create the light, and the same combination will create the communication, in communication light. For us, even in my generation, I remember, in 70s, about 30 years ago, 40 years ago, we used to have to wait, to take time, that we are given a time that we could speak with our parents. And, now, in any point on this planet we can communicate by picking up a mobile phone, but mobile phones and picking up the phones in a very short time will be obsolete, because it takes time, it takes energy, and for you to be able to receive a telephone call. This means you have to charge a battery. This means when you watch a program across the world, you find out that they have to play again, to delay the picture that it matches the sound. Otherwise, the man's mouth move and the sound comes a few seconds later. What we have now, when we send commands to the satellites, which are orbiting like Saturn or the Moon, there is a seconds delay, few seconds delay, because we are using a man-made system of communication. In the future community there will be a universal language, where the universal language, which is your own, what will happen, eventually, what is going to happen is that the communication will be instantaneous, doesn't matter where or when you are...

Sorry, Mr. Keshe, speaking of communications, we are having problems here hearing you properly, and the call is coming through kind of rough. Maybe we can clarify the audio a little better there.

Yes, because I think we are not related with the headphone, that's why.

Right.

I think we have the one with the headphone, so we'll try to, what do you call it, I'll try, I'll try to speak in the microphone. Just one second, one second, we'll try to go to the other channel.

OK, thank you.

So, I'll try to speak with a... Is it better now?

I think so, yeah, go ahead.

OK. What happens, as I said, in our time of communication, in terms of time, what is developing is that, as we have entered and we explained the work of the plasma, what we'll do from now on, we can get on the line of the communication between the two plasmas. What this means, the field from this plasma, for example, in a very simple way, will interact, will interact...

Sorry, just...

Transcript from 4th Kids Knowledge Seekers Workshop held October 29, 2014

(v1 2016-06-14) DRAFT (Transcription has not been verified. Double check info with video)

Shawn, can you see this? Can you see this? Can you see this? OK, OK, can you see this? Do you see the ball? We haven't changed that thing from before, it's the same cubic. How do we change the magnet? How do we change the magnet? We will multiply the strength.

We'll have LiveStreaming to do, sir.

We'll have... on the option... OK, let's see what we...well, that's...Does it, is it better now? We haven't changed anything, it's the same camera, same thing we had up to now.

Maybe the problem is, is...

Yeah, I can see a pixel issue here, as well.

Rick, could you enlarge the picture somehow, on Skype or?

There it is...

Do you see the two balls on the table?

I see it, it's just a little, it's a bit blurry...

Yeah, we can see that.

... but I can recognize, it's two balls, two, you know, with fields that are coming out.

It's started to get a little better there briefly, I think it's just a LiveStream thing with Skype, and it will probably kick in as we work with it maybe...

Yes.

It's moving to left and stuff and LiveStream, because I think that's the...

I can see clearly.

... for LiveStream to...

Now, it's changed, now I can see it clearer.

It's clear, Mr. Keshe.

Yeah, it's coming and going a bit there, yeah. I am thinking you might be right about the LiveStream on the other channel, it's probably interrupting. OK, shall we carry on?

We tried... What happened, we tried to give you a full cover on the, in the lab, so we used all our, what do you call it, the storage capacity, but we'll sort it out for tomorrow, by tomorrow we'll be

Transcript from 4th Kids Knowledge Seekers Workshop held October 29, 2014

(v1 2016-06-14) DRAFT (Transcription has not been verified. Double check info with video)

back online with it, it's just, Marko is installing a new system, what I am hoping. So, what we, what we talked about is, at the present, to communicate between two entities, like the Earth and the Moon, the Earth or the Saturn, we have a time delay because of usage of whatever waves we use. But, in fact, with the new era in technology and this plasma technology, in the time of the youngsters of now, this problem will not exist. In two ways. First of all, now that we have started understanding the plasma, it means you will receive the communication instantaneously. So, we are reaching the zero-time communication. This has been a dream of manner of communication for decades. I was explaining to my children recently, in a, a few hundred years ago, to pass a message you had to wait for months for a letter to go through. The rich people managed, or the governments managed to bring, what do you call, marathon now, for people to run fast enough to take a post from one post to another for the next month run. And, now, with the new age of electronics in the past 50 years we have passed the point that we can communicate in a very easy way. Since 1944, sorry, 1844, when Bell made the first call, now we have come to the point we can send messages across the world's solar system, but it takes time, a lot of time, because we use the property of electrons, we don't use the property of plasma. Now that we understand the plasma technology in a much more comprehensive way, in the past few months, so, what will happen is that the communication reaching on the gravitational magnetic field of the plasma will be instantaneous, which means whatever this plasma sends out, instantaneously is received by this other plasma, because the magnetic field is already connected. You are not sending a message to be received, you are literally getting out the band wagon, which is going at the speed beyond man's imagination, in a magnetic field, gravitational field, and you reach to the other plasma. So, the communication time from now on is zero, anywhere in the universe, as long as you can link up with the gravitational magnetic field. What happens is, at the magnetic co-field, which is the field which is going out of the plasma, you get on a band wagon, or a magnetic fields of the other plasma gravitational fields, so it pulls you in straight away. And, when you send a message from this smaller planet, another destination which has a magnetic field with this place, automatically, as the field goes on the magnetic flow, which is the repulsion of this planet, it gets on the gravitational field, magnetic field of this planet. So, communication is instantaneous, into the man's age of understanding, even though in a plasmatic magnetic field it's slightly time delayed, but it's so minute that you can get instantaneous communication anywhere within the universe. So, now, as the youngsters, you will see the change, you will feel the change, you will understand totally communication different than our computer wizards and all the technologies which are available today. So, what it is? What does it implement? What does it mean to us? Today, and since yesterday, the Knowledge seekers in the foundation, two of them, have entered this line of work, this line of communication. What it means is that they, being like on this small plasma, in thinking to be able to get on the magnetic gravitational field of the other plasma, could, through their thoughts, decide how they wanted that this system, this plasma to behave. To go faster, to lose weight, to go up, or to go down. And this has been recorded on LiveStream. So, even to us, who we think we are on the edge of technology and science, from past 24 hours, the present communication technology has become obsolete. We have two people who have tested this technology, and in time for you, in the coming months and years, this will change a lot of things for you. As you are now with your age addicted to computer games and to, what do you call, different consoles, you will that find the games will change totally. Once the world of science and electronics of present find and become more expert in the use of plasma, then you will find out you don't even need the connections to your

Transcript from 4th Kids Knowledge Seekers Workshop held October 29, 2014

(v1 2016-06-14) DRAFT (Transcription has not been verified. Double check info with video)

systems. So, you'll find out you don't need to pay a fortune to buy a game, because you can literally link up to one game right across the world with millions of people on it playing, at no cost. Learning of different languages will become much, much easier, if you understand the use of this. Communicating and being able to be part of the new world of plasma communication will change for you. We have shown this, two of our Knowledge seekers in the past 24 hours, more than 36 hours, I should say by now, or around that time, have been communicating, have been carrying out the first experiment of man communicating through intention, through thoughts, not through electronics systems. And all this has become possible due to development of the new plasma technologies. People who have children will see the change. In so many ways, in my father's time, thinking of being able to go to the Moon was a dream for centuries. Now we send satellites up every day. Every day there is a, there is a satellite flying to Saturn, so something is going somewhere in this galaxy, or in this, or we are trying to get to a galaxy in this solar system. So, as I said very recently to a few children, the world for you has become the universe, but the world for us was the parameters and the restriction of what the Earth's gravitational field used to have. So, what this means? It means now you can open a plasma and literally... Marko, it's there, it's disconnected there. You've got to understand that...

Let's try this.

OK, we're just having a little bit of communication problems there, which seems to be the topic today of the workshop, strangely enough.

Strange, it's very strange, isn't it?

Well, it's actually perfect in a way, because it's illustrating the, just the, relatively outrageous problems that we have communicating today in our society when we shouldn't, really. It should all be easy, but it isn't. It's, it's complicated, specialized practice, just trying to get the video and audio broadcast.

I can hear my voice quack. Now, it's OK. Actually, Rick, it is better than the pigeon times.

Yeah, it's true. But, yeah, it's somewhat better than, somewhat better than smoke signals, but, yeah, you're right, we ought to move into instant communication-type systems that are relatively foolproof and duplicate things exactly the way that they are supposed to be in.

Yeah, you see, what is interesting is a lot of youngsters don't even, can imagine such a thing as going on, but if you live in countries such as Belgium, France, and Netherlands, they have still the pigeon races, they fly their pigeons, they take their pigeons hundreds of kilometers away, and they have to fly home, the way they used to send the message home, so they are pigeons. So, they still have the complication of the old time as a leisure, but they still use a telephone and the mobile phones. We used to find these pigeons in the fields around us, when we used to live in Belgium, because they all had their numbers on their foot, and then you call the centre and say: Have you lost a pigeon with this number?, and they say: Yes. So, you take it to the centre and the owners go and pick it up, because the bird gets tired of flying so long, and then it lands somewhere and doesn't take off again. So, this is even done today as a leisure, as a leisure time.

(v1 2016-06-14) DRAFT (Transcription has not been verified. Double check info with video)

So, what it is, it's important to understand what we've been teaching in the past few weeks. So, what happens now that we have opened the plasma? You can see this plasma. The interactions of the fields of the plasma, in getting on the line of the communication, shows the plasma still being there, if you can see it, and its fields interacting and communicating with other fields of the other plasmas. So, this is a very good explanation and demonstration of it. So, what happens is that the fields from this unit will come to this, and then, through it, to the field directly reaches this. So, the line of communication is the same way as it's set, so you don't have any... Somehow, we keep getting cut off. Where is the camera?

Camera is there.

But it's connected to this. OK, so we are back on. So, you can see the line of communication. It's, it's instantaneous, it's immediate, it's without any loss of information, without any interaction. So, in a simple way, in the past 2 days, past day or so, another addition to the world of science has been coming, through the understanding of the plasma. You've got to realize, what has happened is that we run the reactors which are here in the centre, very much like this in a very small size, they are very tiny, they are 2 centimeters, and then we sent two of our Knowledge seekers home with two keys of line of connection, to be able to, by thinking and their emotion, be able to change the characteristics and the motion and the release of the fields from one unit to the other. And we have seen the data. We have seen a very impressive data in the past 48, 24 hours. Some of you, some of your parents, most probably, have been on the foundation site, on the LiveStream, and they have seen it. So, what does this mean? This means that from now on, what, that this, from today, literally from today, because we can pinpoint it, to the 28th of August, no October 2014, the man's position in communication has changed totally. Where you had to speak to communicate, now you can think, and your thinking and your thoughts become command for controlling something else. So, in a very, very short time, the life and the way as human race communicate has changed. In the future, people will understand the significance of today, but as it was in 1844, Tesla or, what do you call it, Bell made the first telephone call: Hello, in past 24 hours the knowledge seekers Arman and Marko have made the same step, in being able to convert their thoughts in controlling the system from, not being near the system, but kilometers away from the system. To be able to do this it means more development, more understanding, but by the time you children of 8, 10, 12, 15 years old reach our age, forties and fifties, you will laugh how these, these people used to use these obsolete systems. But, you've got to understand, to get to these obsolete systems has taken thousands of years and millions of scientists, each one putting your break into the wall of the knowledge. So, now, in a very simple way, you have leaped into the world of plasma technology, universal plasma technology, and this, what we have started in the past 24 hours, 48 hours, here in Italy, will touch the total fabric of the society beyond imagination. But simply, as you remember, we started with explaining and talking about little plasmas, the eggs, if you remember, how the egg looked. We are setting up new communication lines, new ways of communicating without even talking. Sound, voice, talk is a habit, it's the physicality of man. And this is what is the ethos of the Keshe Foundation. Thou shalt not steal, because from now on man will start to learn that even your thoughts are understood before you act.

Transcript from 4th Kids Knowledge Seekers Workshop held October 29, 2014

(v1 2016-06-14) DRAFT (Transcription has not been verified. Double check info with video)

Because, from now on, man would start to learn that even you thought are understood before you act, so, even if you think you want to rob or to steal, your thought has already been read by the man you are going to steal from.

Can I ask something, Mr. Keshe? In between this; so, if you talk about zero point communication, you are not talking only about thoughts, but you talk about emotions that come, or would come, as I understood from the public health workshops, from the emotional part of the brain;

It comes from the emotional part of the brain;

Then how can I steal that?

You already feel it but you see, this is the problem I was explaining to the Knowledge seekers last couple of days; man has become a chameleon. You have so much become dependent on the front of your head, with eyes and ears and the nose, that you have forgotten the whole control system sits in the back, in the center of the back of the head. So, in reality, you have chosen the lazy way and easy way for you. With this new plasma technology, with this understanding of the plasma, man will start tuning to this understanding. Today, Marko was saying that, Arman was saying, that where of what they feel, what is correct, it has to be the behavior of being correct. Because now you stand judging your own thoughts because you know the others will understand and see your thoughts before you do. We have shields here which we can do. I originally showed this about few months ago, and by sitting the Knowledge seekers in front of the resistant, I knew what I had in my hand. I could see who was lying, who was not correct, who was pretending to be giving while actually they were stealing, and it came for me very clearly which Knowledge seekers will stay behind. Because you cannot lie to the understanding of the emotions through the systems.

Can I mention something Mr. Keshe, which you have said, I think it was sort of trying to teach it in a very slow way, you once said that, when two people shake hands, there is more information probably going, for surely going on a plasmatic level, right? From one being to another, just by a handshake? That was what I remember, and now this goes far beyond that, I mean, this is amazing.

Yes, but the thing is the reason why I brought this up with the children is that if children understand this at young age, we have achieved the space and process of what we ask for them. This becomes part of their life. This will become part of their living, the way of living. And what does it say? OK, close it down. OK, shut it down. OK, Rick, it will just take a couple of minutes for Marko to take some things to the lab. So, what does this mean? This means why I brought this into the children's teachings time, is that we have entered in the past day or so, into what we told you about years ago. That man's thoughts in space will be read before his action. And that's why there is a need for world peace and if the children at this young age understand this, they will be in the space not in the short time, very, very short time than we, as adults; then, as they learn to conduct their behavior the correct way, then we set up the scene for world peace; universal peace. Because they enter the universal community understanding that nobody there is to rob them and they don't need to rob from anyone. And this is important for me to teach this to

Transcript from 4th Kids Knowledge Seekers Workshop held October 29, 2014

(v1 2016-06-14) DRAFT (Transcription has not been verified. Double check info with video)

children at young age, and if they see this, they understand how this one is their brain, and this is the brain of the friend they are playing with; if they want to cheat, because they are on the same wave length, the guy will understand this, he will not allow it. Would there be the friendship? No, it breaks up. This is what we have to teach. This is what they change; a lot of people look for data and movement and numbers, on the screens that are coming from the lab, Marko is going to shut it down until we are finished and then he will put it on back again, the problem is not that we did not know, it is that we allowed it and we ignored it, to suit us. In the past 24 hours, we took a lot of numbers down; and this morning, when both Knowledge seekers came back to the center, I asked them: How do you feel? Arman was on the line, Marko was here, they can explain to you. These are people who understand now what it means to be correct. And it's very hard. You have to stand the judge of yourself behind yourself. It's two things: you want to have friends and be able to communicate with every creature in the universe, or you want to be a loner. This is the situation man has been for past centuries. This is the position where man has chosen to be, because stealing has become his habit. And he thinks nobody knows. Be it from the king, to a layman on the street, and this is what we are trying: you want to join, now you can read each other's brains, now you can understand each other's feelings; and to join the universal community, to be able to operate in the correct way, you have to see how it's come about. Feelings and emotions are built and created through interaction of magnetic fields in the body of the man, and so, they have strength, they have a line, they do not need language. This is the beauty of the universal language. As I always say, to start this discussion, years ago, how do babies communicate with each other when they have no language? You put the Chinese baby of two months old, one month old, next to an American child of the same age, to Mexican, to African, they understand immediately who is who, who is good and who is bad. There is no language. They understand what man has tried to ignore when he grows up, to use eyes and the mouth to cover himself. So, now we understand the potential and the changes which plasma technology has brought to man, and it puts the problem right in front of you, you have to do something about it; it is very easy from now on, that you don't need lie detectors. Only thing is, you can speak and in front of the machine your full characteristics can be detailed out, it's planned out. And then, if you train yourself, you can see what the emotions and what the thoughts are. And this comes back to one thing: if you put the tree of life right from the beginning, when there is a child, the foot of the tree will become perfect in adulthood, when the tree is mature. And now we have to teach this to the children. Even from now on, their thoughts have effect and the effect can be seen and it can actually affect themselves. If a child understands that from now on, that, if he thinks bad, or he thinks wrong, or if he thinks he can steal without anybody knowing, as you can detect the emotion and the condition and the people can reverse back to the original way they were born, it's very easy, the child is isolated. There is no one who will allow them to enter their line of communication because each field has to be of the same strength. So, isolation of human race has been because of this criterion of stealing and lying and killing. Now that we open and we show how foolish and childish has been this behavior, man will turn a god, will change to join a bigger community which can benefit by it all. So, in a very simple way, this brings one thing: science and ethics together in understanding how the conduct and ethic will behave the physical existence. When you need it, when you need help, the others feel you and give you what you need, that you are not in pain, and you survive and you can live a safe life. Now you have to steal a lot trying to stay alive where, at that point, others give you without you wanting, that you feel comfortable and you can find your position, and your comfort

Transcript from 4th Kids Knowledge Seekers Workshop held October 29, 2014

(v1 2016-06-14) DRAFT (Transcription has not been verified. Double check info with video)

and peace to be equal with them. This is what I explained today to the Knowledge seekers; you want to move the reactor, lose weight, to go up, but you've forgotten to explain your desire: I would like to be there; that the others accommodate you to move to the position you want to be. Demanding and wanting is different than desiring with the pleasure of others accepting. And this has to be taught in a very simple way; this picture on the table is a change in human behavior from now on. You were afraid of cameras on the streets, that they video you what you do, in the cinemas, in hotel rooms, now you understand that the camera is yourself, to watch yourself. Because now, your emotions, your feelings, what goes through your eyes, and what you intend to do, is becoming open to everybody else. So, this is the behavior of true nakedness in life in the universe. So, maybe our children will learn one thing from the plasma technology we started; zero communications through interaction of plasma's magnetic fields, and correctness in behavior, in understanding what has been wrong and they've done wrong, that they not hide behind things, but they confront themselves with their own problems in allowing others to see what the problem is that can be solved. Zero communications; and in time, in physical terms, you go, another part of the world, another part of the universe, another part of this planet or galaxy or, what do you call it, solar system, and you can feel like you are at home because the images, the feeling given by your parents or the ones you love, will be so real because it's on the same field strength as you, that you never feel missing home. This is what is the change, this has been one of the biggest fears of the man; and now, by understanding zero communications, and being able to transfer a lot of information through feelings, emotions, even through communication, man will not be alone anywhere in the universe. And this is for our children to learn; to be correct, to be the judge of their own conduct, as not out of fear that the other one sees what I do, but out of the pleasure that what I do can help others and that others can help me with what I needed. Not being afraid and being put to the line of punishment has never worked. But in being able not to be part of is the biggest pain for a lot of souls. So, we start teaching correctness and the, all the social problems in the future will not exist because all the social problems: murder, theft, drug addiction, and everything else which comes with it, has come out of the physical tangibility and what they want to get, that the others have and they don't have. And now everybody is equal at having whatever they need. I hope today we will be remembered as one of the most important parts of connections with the youngsters in the future. Any questions?

I've got a question, Mr. Keshe; you mentioned before the concept of free plasma, and in respect to what we see on your table top there, with the interconnecting plasmas, how does the concept of free plasma work in? And you had the plasma separated before with mankind in its own, sort of, shell, you might say, its own plasmatic shell, and now we are able to open that plasma more, to extend out and feel outside of that realm, is that kind of what you are indicating there? And how does this work for this free plasma? Is there a man working toward becoming free plasma himself, in a way?

Man as a whole, as a community, as a society of man, yes; because once you are given what has been your desire, your desire doesn't exist; it's like hunger. You crave for McDonald's until you get to the McDonald's, then when you have it, it's finished, there is no desire for McDonald's anymore. The desire for wearing, having a shoe, or having a computer game, when now you can access all computer games with no cost, there is no desire to have this, to go and rob somebody's pocket or steal a game from somebody's pocket. Free plasma, it means it exists because it's the

Transcript from 4th Kids Knowledge Seekers Workshop held October 29, 2014

(v1 2016-06-14) DRAFT (Transcription has not been verified. Double check info with video)

balance with the environment; that's what freedom means. Free plasma does not mean that you are encapsulated in a reactor, or in a body; when you have no fear of others taking from you or you giving too much, because it's your restriction, then you are free.

Mr. Keshe, can I just interject with that question? Would that mean, because, remember when I asked you, I think the first interview I did with you, I asked you whether everything is consciousness, so, everything is a plasma, I'm sorry, and consciousness is plasma too, so, is consciousness technology, or, what kind of additional technology would need that exactly for this kind of, I mean, evolutionary, scientifically, technological reality then?

What do you mean? Explain yourself.

Well, you are saying that, you know, I mean we're talking about zero point communication, so is consciousness of peace the key to that?

Where does the peace come from?

From my soul.

Peace of mind comes when you don't need, you don't create to have; where does the peace come? Where people get what they want and they achieve what they want? Most of the diseases with the youngsters we see, and in teenage years, and older now, come from the psychological pressures which they did not have when they were young; the next-door neighbor had two games and they had one; and then, the pressures which came to the parents: I want a game the same as the guy next door; and then, you understand a lot of things; the world today is based on the once which is created which to the man or the man cannot supply. Why do the people become thieves? Or why do the children go to the shops and put a game in their pocket and they walk out and they start criminal life for themselves? Because the games are put on such a high price that most of the parents cannot afford. But the child is still, wants to have the same as the other child in school; the parents, the companies, the society sets children to become thieves by making things impossible desires which should be free for everyone. This is what a lot of people would understand and what we did when we opened the patterns at the Keshe foundation; because now, there is no desire for anyone to see what we have, because now everybody has the same and equal. So, this is the change of the behavior, this brings change of behavior. A lot of parents don't have to work, or die, for children to have things which other children have. You know the example, it was a couple of years ago, a mother ran to a radio station, to be part of the competition that the child could have a console. We all know what console was, what they called consoles. And the only thing she had to do was to drink two liters of water in one gulp. And that two-liter bottle of water put pressure on her kidneys, the kidney failure and she died. This is the extent the parents go to provide for the children if they don't have the means. And when the means is not there, children are fine away, they steal, get in touch with other people who are wrong. So, with this way, with this new plasma technology, not only we've shown how knowledge is free, access to knowledge and life has to be free; but at the same time it has to be everything in life. There are those who abuse the system, but in the long term, the whole thing will settle correctly. But the whole structure is how you set yourself at the young age, not to do

what is done up to now. Because you understand, people will start training themselves, to feel the others. A mother feels when the child is sick even when the child is half-way around the world. A father feels the son to be in trouble even if he is in America and the child is in Africa. Because of this magnetic field connection with each other, because of the emotional connection with each other, and now we open the door not to have emotional contact with one, but with whole of humanity and the rest of the universe. This is where the change is and youngsters will see it, they will feel it, and they will enjoy it. Because, to us, even to my generation, and the generation after us, to children who are in their twenties and thirties, this cannot be done because it's been too much physicality. But the children at eight, ten years old, twelve years old, fifteen years old, that they understand this and they will start seeing the effect of it, they will start living with it. That's why we started the children program, not for them just to learn what plasma is, but to learn from now on the different programs we put on, how their life is going to be different. A president cannot stand on the podium and lie, to be elected, because his thoughts will be read by the people. A president, a king should stand up and being silent, transfer his feeling and his real intentions by thoughts in standing in front of the crowd, not through his mouth. And then people know if he is lying or is he there just to benefit from his position. These are all to come in a very short time; we have built a system and here we can show it; and Knowledge seekers, a few have failed in front of it. And those who failed are not here. It was very easy for me, now, that you see the plasma, who was here with the wrong intentions. So, we have already done this test; it's not a fairytale. And today, openly, the whole world has seen in past 24, 36 hours, how the intention of the man will decide how the man will fly, how will he increase the weight, how he will decrease the weight of his system, because now, you can show physical intentions in the system, even in lifting somebody, even in touching something, even in trying to move somewhere. The game has changed; as I said months and months, and few years ago, people would accept this technology not out of the love for it, but that out of the fear of it. And now they fear will be: What do they think of me? Can I serve, to be a better servant than the others, so, now their intentions will start to count? In a short time, companies will build systems that when you go anywhere, your intentions are known. I have come to wash the dishes, I've come here to clean the table, I've come here to help anybody who needs help here, but at the same time I need to eat and you serve the best food. Then, there is no intention, there is no damage, there is nothing to steal. Some societies have started living this life, but out of being frustrated in what the society has forced them, but, in a way, now we understand what the intentions are, this will start becoming a path on the life. And it's very interesting that the youngsters see this and understand this; it's two choices: become the human race for the past millions of years, because even though the lines are disconnected, as you think, magnetic fields never lose their connection. Somehow the memories of the connection sit there, there is still a connection.

Just one last question, Mr. Keshe.

Yes, go ahead.

Is that what we should be doing, is that what you mean going to the core of the plasma, is that it also? So we are more to the boundary, to the outer boundary, to the edge of plasma right now?

There is no edge to the plasma; this is you thinking as a physical term;

OK.

Because you have the body you think the boundary of your skin is the limit of your life? The plasma of the human race, even the body, reaches beyond the boundaries of this universe. So, it's you who got the habit of physical tangibility and limitation; there, it's very much, if you put the hot water in a glass of water, you are used to touching the cup to feel the heat, but, reaching the cup from the distance, you can feel there is a hot water in the cup; you don't touch it, you don't need to touch it to burn.

Exactly.

So, the field is the same thing; now, man has to understand this, that the heat depends on how far you go, there is the resonance, resonance left over from the heat of the cup and the water. This is what is gonna change. I hope we learned something today with the youngsters, and adults who listen to it.

We should wrap things up here, I guess.

We are just about that 40 minutes I promised;

Yeah, we are little over that, but that's OK. That was a great presentation, what a wonderful visual image that last thing that you put on your desk there is, I really enjoyed that and I'm sure many people did.

We've got to understand, we are the part of totality, as we found we are alone. Thank you very much, thanks Rick, thanks Keyvan, and hopefully we'll start another session 9 o'clock tomorrow, 8 o'clock tomorrow morning, a hard time for adults. And we can expand on this that the adults can understand too, hopefully.

And that would be for this week, only be at midnight, Pacific time, rather than 11 pm which is usual, because the international time changes.

Ah, poor, poor, poor, you have to stay one more hour awake.

Yeah, well, I sleep in the day time now and stay awake at night, it's a lot easier that way.

OK, all the best and thank you very much for your time.

Thank you too, Mr. Keshe. And thank everybody on LiveStream and the Skype call, and Keyvan Devani as well, for organizing this workshop.

Appreciate it, thank you. Bye-bye. And thank you, Mr. Keshe.

And that's the end of the fourth Kids Knowledge seekers' workshop.
