00:00:00

The special KS workshop began with Jorge checking that everybody was getting the pronunciation of his name right – which Rick then got pretty well – Khor-khay!

Then MK turned up very much out of breath prompting Rick to wonder if they'd been running up some stairs, or even had a bunch of Belgian Police officers chasing them – MK came back on – Nooo Nooo! That is for Tuesday – let them have their rest!

He went on to tell them that Armen when he got up – as usual he was 1 hour behind, would explain this excitement of the previous night!

They had tested the reactors for space lift, the first reactor from John failed due to leakage, and so they need minimum of 4 reactors to achieve lift. They put Marek's reactor into a vacuum and washed it with Hydrogen, and then they started the Iranian GM reactor, they added 4cm gas at 1 bar of 6mm tube- 4mm inside – everybody has same standard on the 7 tables. Then they released 4cms of gas into 5-6metres of tubing to expand it – all 7 platforms exactly replicated – so if one KS goes another one can take over – then they open the chamber to the core, another valve, and they released expanded gas into the chamber.

The position with Marek and Armen's reactor - they can explain – they went through the experience – even me a seasoned lifter of these systems it was still excitement to see a plasma condition so early in the system.

The reactor that Marek and Armen are using is a brainchild of mine which the Iranians built when I was in Tehran, a miniature of the earth – the fields and plasma condition in the inner core dictates the speed and position of the outer core. The core inside is independent

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

suspended inside the outer core; the only thing that can effect is the GMfield can affect the outer core, which is connected to motor. All the chambers are individually vacuumed and controlled through the special way they set the pipes out – the feeding channels are long planned and tested and retested with the KSs over the last months. This was Armen’s baby and he is not here to explain his emotion...

R: Aaahhh.. We need to start the live stream

MK: So I talk to myself all this time!

R: Hahaha - sorry

V: It will be recorded at this end don’t worry

MK: I pass the microphone to Jorge, while he’s waiting for Armen ...

Rick: OK here we are to begin and this is a Special Knowledge Seekers Workshop, we won’t call it number 8, we’ll call it the Special Knowledge Seekers workshop.... And we’re not quite sure what we’re in for tonight but you can bet that it will be something exciting for those who are interested in this kind of thing, which should be everybody on planet earth when you think about it – and so we’ve got the KSs from the SSI including MK in that and lets get over to them and see what’s going on there.

1037: MK: OK its me – first of all thank you very much for being available today which is a holiday, but in next few hours you will understand the purpose of this talk. This talk is not so much about the technology development but we just explain something that happened last night since we talked yesterday in the workshop. It’s been recorded on you tube but now I explain for the people on the Livestream.

We have started the loading sequence for the plasma reactors of the space technology. The core, what we call core B – core A belongs to John, he is building it – his reactor core showed some signs of failure after the first trials on Wednesday night because his ceramic has cracks and the gases seep through the cracks and though this porous material of the ceramic – so reactor A is on standby till John returns from Belgium. He says he’s going to build a new one.

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

Reactor B belongs to and has been put together – I have to mention that all of the reactors have been helped in one way or another by all of us – but the responsibility and the way its been finally put together and initially put together lays with individuals, so certain people are responsible for certain works. Reactor B is the Iranian double core, internally hanging central core which is loose suspended in the middle of the outer core with no connection except the gas feed – It's controlled by Armen and Marek and we all poking our nose in it to see if what happens with it.

Core C belongs – it's an original Iranian gravitational system – as a team I stay in charge of it because I know it very well. Reactor C is the energy supply system with 3 cores – I do apologize – this the system created in Belgium assembled in Italy in different ways, repaired over 6 months, it hasn't come into operation yet but we're going to use it once we have the three cores running as the mother base core when it comes into operation.

Reactor D is the Iranian gravitational system, half moon two cores storage capacity underneath for gases. This reactor has performed before if you have seen pictures of like 7kg down to 6kg, or you seen the 9kg to 8kg about 3 4 5 years ago – these scale measurements were measured when it was in action in Belgium.

We have a reactor, which Marko is still in the position of putting it together and should be ready today. We have a reactor which belongs to Yvan – its been tested lots vacuum tight but somehow we can't get the engine running –something happens with the eddy currents with the system or the winding. And the last one belongs to Jorge and Yukako and that should be ready today, so today by the end of the day we should have about 6 reactors running,

The order we started – John's reactor is out of way so first reactor operational is Marek and Armen's – we loaded the system with gases for the first time yesterday in the evening and immediately within minutes or an hour or so we start seeing reaction of the plasma and then we loaded up the D unit which is the Iranian gravitational system – two running simultaneously. We saw certain results because they were on the floor – we saw certain effects that we decided to move all the reactors onto the star formation panel which means we are ready to take off if it happens.

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

As we go further I will explain it further. Armen is not here to explain what was happening – let me give it to Yvan or Jorge to explain what happened because they were around the table when Reactor B came into operation and reached a plasma condition in a very beautiful way ... I give the mike to Jorge.

Jorge: 1611. Hello Good morning to all – (strong Spanish accent quite difficult at times to understand)

What I have to tell is that we have the first flight condition, but it wasn't a reactor. It was Armen who was flying! (hahaha - joke) I need to pick in the air because he was so happy that he had to stay on the ground.

What I observed was the reactor had a little bit increase of the weight during about 2 hours – about 80 grams or something like this and we can observe something like vibration – (pause with elucidation by MK in background) – oh ok, the weight was not the reactor we are running but in the middle because they are all connected to a plate so its not that we see each one how its affecting to all now because they are not working together but its only the first sight we have about the symptoms and we also see like changing in the speed of rotation, randomly, we can say I don't know how to explain it now but suddenly the speed is increasing or decreasing and we have the opportunity to stay in that condition.

It was amazing that the lights in the top of the lab are sparking – the plasma inside is reacting to the reactors and so we can see strange things like the condition when the ghost appeared (chuckle) ...ahhh we have also interference with the radio receiver – it goes down for maybe 20 or 30 minutes and it changed the frequency so we hear another radio station different in other language like Arabic or something, haha, we don't know aye – so at the end we came here again so we are still in progress to understand what is happening. It's not easy at this stage to understand because we only see movement from this point in time to understand – Armen is here, in 5 minutes he is in the table ...

Vince: I do have a question Horr-hay! The speed of rotation difference – was that in the inner free core or the outer core?

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

J: The outer core, we can only see the outer core, we can only measure the outer core with a laser so I don't think this was a very accurate measure because it makes something strange but you can see the difference. Visually you can observe that the speed is changing quickly, so its like slowly and then quickly accelerating, that what I can tell.

V: Was it a smooth acceleration or a hard acceleration?

J: It's a smooth acceleration – its not constant the speed, its between 250 and 420 maybe and the current is constant 1.6, and 3 volts – the current is always constant so we don't use the current to produce more speed, we are testing in the same condition all the time and the volts is slightly changing only 0.2 or something like this.

James: So was it dragging the motor along when it tried to speed up?

J: Sorry Marko is going to speak...

Marko: OK ... maybe when we started this reactor we set up voltage and we were observing certain current and after that the current went down a little bit and it was stabilized – then the speed of rotations go up and the current and voltage remain stable and it was then several times changing, going down and up without any changing of power supply like voltage or current and we also have opportunity to observe magnetic fields, we have a detector which measures magnetic fields in all 3 directions, x, y, z, and we can observe also changes in the strength of magnetic fields in each of the directions and it was very interesting how the strength of the magnetic fields is changing because we have only two operating reactors with 120 degrees between them and we can observe some kind of suction of magnetic fields from the part that these reactors are positioned in – and ...aahh... it's a very nice feeling that something is changing the parameters of the motor without changing the voltage and current! So plasma takes on its own position ...

Vince: I was just going to say if you are going to measure a “suction” of the magnetic field, a magnetic field would be inside of a motor, so the only way it can speed up without dragging is to decrease the magnetic field inside that motor – am I correct in that?

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

M: Actually plasmatic fields are interacting, and when we were putting Hydrogen in we put by stages, lets say at first we put 2 measures, then increase by, I don't know exactly, maybe 7 or 8 measures of Hydrogen, and every time we put more Hydrogen in we observed dropping of the current, the voltage stayed the same on the meter on the motor but the speed of rotation didn't change so plasma takes on its own – it's a plasmatic field interaction ...aaaah, there is nor change in the motor fields, so there is interaction of plasmatic fields.

I don't know how to say – with motor fields – motor doesn't change – so also Jorge said how we observed how we lost radio station, we just get noise and then suddenly we got another radio station in Arabic language, and it was very interesting observation also when we put Yvan's reactor into the operation table – no – into the plate. When we removed Yvan's reactor, even though it was not working, when we removed it suddenly the conditon changed – actually it was only vacuum inside his nano coated reactor but when we just moved it the conditon changed, the radio frequency changed, the speed changed and yeah – just changing condition you know – OK – also Armen can tell something now he's here... so maybe I pass the microphone to Armen!

Vince: Make sure he gets his coffee first!

Armen: I have it, I have it, I can't without it! ...Hello?

Everybody: Morning Armen!

A: Everybody's gone home! How are you guys? ...Hello?

Everybody: Hi Armen!

Ludmil: Still alive!

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

Armen: Still alive? Oh Ludmil, come on ... you should see yesterday what alive is about! You remember you know Rick, aahh... you know a few – Rick aahh... you know, remember first two workshops we have with the guys and we were arguing, about how simple this technology will be?

Rick: Yes

Armen: Aha yes it is truly and, you know, what we said, its Hydrogen! This is the start, and clearly we saw yesterday, you know, what interaction can do, magnetic and gravitational fields, you change a little part of it and it is totally changed, and you need little amount of Hydrogen to make that change. It's all magnetic and gravitational – we have to understand that without those fields nothing will be or exist, and if you know how to do the combination of, you know, Gases, you can do miracles actually! And its such an excitement there yesterday I couldn't sleep until about 4 o'clock, I was pacing in the house – up down up down – lol.

Rick: That's great Armen!

Armen: Haha – you know, we gonna show you a lot of videos! I took pictures, videos, yesterday was like Wow day! You know its 17th of April, lol, O my God, anyway, what I want to say, this is a really great moment (MK talking in background) what happened? I thought you already explained!

Marek: Our point of view. (they want yours)

Armen: What can I say, its very simple, you know, if you look at it, it's a combination of 4 reactors, one in the middle, 3 on the side, yeah, 3 on the side actually, and you just, its different reactors actually, one is a free rotating core which me and Marek work with, and the middle reactor we already know several times Mr. Keshe has showed it – it's a 3 core reactor which is in the middle – an Iranian reactor which is sitting on your right side and one reactor we are waiting who its gonna be – chuckle – Yvan's? or I don't know Marko keeps assembling it – huh? Jorge? Yeah he is doing great job actually with his piano – you know I think from this moment on I think we're going to go live, and every test we do you can see it and – I dunno, you can say

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

its very simple for me, you know, what's gonna happen after this we will do more tests and show you guys – that's all – if you have any questions I will answer it.

Rick: That's really good news, I appreciate that Armen, I think that we really going to like watching – you're talking about on the SSI live stream channel I presume primarily? And we'll also be doing some broadcasts on the live stream that we're currently also broadcasting on as well, so folks should know about the SSI Livestream we can put the link in so people know where to go from that one.

A: Even sometimes – you know, its Italy – internet is acting crazy in here so even if we don't have internet we are taking videos and I can download it from my home and send it to you guys, so don't worry the information will be shared in a minute. I felt the magnetic field actually, me and Marko were standing near and it's a really different feeling – it's a strange feeling for a moment but its beautiful – yeah a tickle factor! Ah hahahaha! – it comes and tickles you! You know! All our intentions were so good yesterday that everything worked! And we're making information for Marko to put up and I'm pulling my hair already, you know, with this guy going around and keep putting this and that – you know it's - Come on! Finish up! Lets move!

Anyway, a little change and you have to give your core a very little amount of Hydrogen – outer core we don't feed anything only inner core because we are creating gravity actually – so a pull – so if the middle reactor is going to be operational we will see the connection all 4 reactors with each other – interaction – and guys it is! I dunno, I cannot hold my excitement; I wish all of you had been here to see this! ...any questions...?

Rick: We have a question here, just a second, we have a question from Ben who is attending at our location right now.

Ben: Hi Armen, are you electro-sensitive? Do cell phone signals and wi-fi signals and radio signals bother you? Being near power stations?

Armen: Bothering?

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

Ben: Does that give you a slight headache? Are you electro-sensitive? Do you know what that means?

Armen: Chuckle – (MK explaining n background) Affect me? No! I don't think so – I affect them!

Everybody including Armen: Big belly laugh.

Ben: Ok thank you, thank you!

Armen: One minute I will pass it to Yvan.

36:28 Yvan: Morning this is Yvan! Well my reactor yesterday as we were testing it I got it completed but then it was giving us a lot of headaches to reach air tightness or vacuum tightness rather, and so we had to apply silicon all over it and when finally it seemed to be ready we put it on the platform and we vacuumed it then we came to the conclusion that the motor was no longer running and this had happened to Mr. Keshe's Iranian reactor as well. So MK said this is normal but it turned out that we could not get the motor running later on also, so I'll have to have a look at it today. I think that there is nothing wrong with the motor but I feel that something somewhere is touching something, and since the motor is very weak compared to the big disc inside, or rather it is a big disc that it has to activate ...aaahmm... if something is touching somewhere obviously it s not running.

R: Was that just under vacuum, or was that under atmospheric as well?

Y: Yeah well there are two reactors where the motor is in the vacuum as well – this is the Iranian reactor, MK's reactor and mine. The motor is in the lower compartment and it's sitting in the vacuum.

Rick: So if it's in a vacuum often it will basically short out because in the vacuum the spark can arc and cause a discharge rather than causing the magnetic field to work right for the motor.

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

Y: Yeah that may be – what I'll do now...

R: We ran into that as well trying to get a little plasma voltage supply that was inside the vacuum to work. It just stopped working in a certain vacuum condition and it died essentially and we couldn't figure that out for a while till we found out that it was shorting internally because the vacuum allows the spark to much easier short itself out.

Y: Mmmm – MK says that what he witnessed with his reactor, because his motor also would not run in the vacuum, but then with minimal amount of Hydrogen added it started to operate normally but not so with mine, so.... I think I'll have to take a look at it, completely release the vacuum and bring it back to atmospheric conditions and see if the motor is still running. It's still not running? Ok well I'll have to take a look at it – chuckle...

R: Sunna gita just had an idea here that may explain it, maybe you can tell us whether its true or not, wanna go ahead?

S: I was just thinking about brushes – could be the brushes inside the motor interfere or something? Maybe one motor has brushes and the other is brushless?

Y: MK says they're all the same – I think they are with brushes, I didn't open the motor but it's a straight forward DC motor, if you reverse the polarity it reverses its action, I think it's a normal DC motor with brushes.

R: Right usually if it has 2 leads to the motor it will be a DC brushed, but if it's brushless there will be 3 leads.

Y: Then it would need a capacitor – there are only two leads – OK that's it – so wish me good luck today to get it back into operation (laugh) I'll pass the microphone to Marek.

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

Ludmil: I can mention 2 things here. One of them is that when you are under a vacuum there is no temperature dissipation, so you can overheat pretty easy the motor, that's one thing, and the other is going back in the years, when we were insulating transformers – aahh... just paint your reactor with latex – that is going to insulate the air leaks.

Yvan: Ok ok, spray it with latex!

Ludmil: Spray it or just paint it, at the time we were just dropping the transformers into a bucket of latex, pull it out for 5 10 minutes and everything is perfectly insulated...

Y: That's more or less what we have been doing here because we applied this siliconised latex on the outside, we don't have a bucket of it but the end result is nearly the same – chuckle – OK – bye!

Marek: Hello, Marek. They want me to explain more about the Iranian reactor – the one which is half sphere and it has vacuum and in the vacuum is a motor running, and it has also its own water cooling system with water pump because its heating quite a lot so it needs the cooling, so that's one remark, and yesterday I had workshop – Czech workshop, and after some time Jorge came and told me I should run to the lab to see what's going on. I told people I have to cut it, I have to run – they didn't understand! Hahaha!

OK and so I ran to the lab and I saw the reactors already operating, rotating, and as they told you there were changes in the spherical Iranian reactor, which changed its rotation speed. I have measured it during some period of time and it was oscillating it's rotation so it went up changing let's say from, I dunno know exactly, but from 380 to 400, and then it came back and then again up, this period was about 1- 2 minutes, so it was oscillating as I could see and measure.

And we are also measuring the magnetic field, with metrolab weak field detector and we could see the changes of the magnetic field. It was not so big these changes but there is also some drop in the magnetic induction vector and also the change of this vector direction actually we have seen that this vector is oriented out of the running reactors, so something like

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

magnetosphere is being created around these reactors and as they have told we saw other things happening with the radio and lights, so some interaction is already ongoing and we have to do more observations and continue the loading.

Vince: did you have to shut them off or did they continue running after you guys were done?

Marek: Oh they were running overnight, we haven't seen them today morning – (comments in background) – OK so somebody saw them - they were greeted – so they feel very well!

47:30. MK: Its back to me again, so let me explain something. Some time it would be embarrassment about what happened last night, but as we don't have a live view of the lab at the moment because of the technical problems. If you were alive with us, when Yvan left we decided to, as they say, to remove his core from the plate, and when we remove it we said, we see what's wrong with it because we are very desperate to bring the 4th reactor into operation, and while we brought it up then the whole lot went into emergency room operation.

It was fantastic – we had doctors pulling the system apart, we had surgeons cleaning up, we had nerve system to be connected, we had one holding the reactor like a baby and pampering it – but – chuckle – at the end of about 20 minutes of emergency we managed to put the reactor back together and it's still alive! It was a very nice, wadayacallit – a view from outside – about five people working and holding the reactor together and putting it together.

This is a collective job. We do not look at who's reactor it is, what we do as a team, we carry on with the same thing, and it is very strange how soon – its not strange because as how I explained and set it out for the first time, people here have received the same feeling as I have – that within matter of very short time, you see your reactors reacting to the loading sequence. The single reactor cores usually don't react so easily but because we are putting combination, we are creating a condition of forcing the reactors to interact, and we see when we do how one condition affects the other one. So this is part of the process and this is part of what we'll report, I presume on a weekly basis and sometimes on a daily basis – so – Marko is trying to show me something he's received something from somebody, a specialist – let him explain to you because to him its important. Can you explain?

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

50:00 Marko: Actually I've got an email aahh... where one of the KSs from my country sent me electronic pictures of nano materials made with electron microscope. Well we can observe – I dunno – chuckle – well we can observe the structure of nano material. I am not used to this – first time I am looking at electron microscope pictures, maybe Marek can explain more – there are spaces, there's materials and spaces that – ...aahh...

MK: What material? Which material is this?

M: Nano-coated material

V: Does it have matter?

MK: Aahh – the gap is about 100 nanometers – it's like a coral reef as they said it – its like ice or – wadayacallit – like snowflakes, but close snowflakes with a lot of cavities – no orientation, there is certain plasma orientation. They orientate each layer in the same direction as far as I can see, near enough layers all end up in the same direction, and a gap and it's a very strange structure!

Lucien: Can we have a screen share so we can see?

MK: Marko has to post it...

Marko: Well actually we just got this email recently all right, so we have to look at these pictures more carefully, and we'll post this later on ...

[52:46 MK:](#) I think something that is coming up in a very strong way, what is emerging now, is that scientists around the world, or enthusiasts around the world are collectively working towards one target.

We see that everyone is using their own specialty to explain part of the technology and I have received a short memo note late last night and indication from the note, again the way it has been done shows exactly what we are expecting. The material is a CO2 Gans state but its

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

shows itself, as they say, we will release more data as we receive it. We know that different scientists around the world are putting the whole thing together in their own way, and the institute will stay in support and we'll see what we can do.

As I keep on saying, no knowledge has ever been shared so fast, so immediate in a matter of hours from the lab to the world population – and we know that the while following goes in different ways, people are participating as they think or they want to know.

The reason I asked for this meeting today – today is a special day in Christianity, in the world of Christianity and it's a significant day. I chose this day a long time ago, and things came together for this today! The reason for the presentation of today or the discussion of today has nothing to do with the work of the Foundation. It has to do with the way I have presented the technology in the past 30 years 40 years, and the reason it has been presented this way.

We explained this a long time ago in different ways through peace treaties, through peace conferences, through peace world message, through the messengers of God as a scientist. We explained this a few lectures ago about the Messiah and the rest. So today is the day to put a lot of things in order, why and how and where we are, and why the Foundation is in this situation, because there is a very high chance of me not being here very soon. We see it and our security people are informing us coming closer and closer. So I would like to put a lot of things in order before anything happens and the way the structure has gone.

The whole process with me, as a lot of you know, I started in the early 70s and early 60s and I knew my position from childhood, what I had to do, and it was very clear to me what has been as part of my life. I was born in an environment that radiation to me was part of my life and its still part of my life as today from the day I was born through my father. Secondly becoming a nuclear engineer I knew why I became a nuclear engineer, I knew what the destiny was to do. In pursuing the target, the purpose for which you are born, I knew I had to have a say in what is happening and understand it, not as engineer, but as a man, and the life path pulled me in that direction – to teach me about humanity. I was born to learn about the MAN and the man failures, and the man reasons for so much mayhem.

But at the same time, on the other hand it's easy to talk but you have to be part of the whole system to understand where the failures are that you can do something with it. With the

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

passage of some 30 40 years, I learnt about the weaknesses of the man, I learnt about how man has been abused, and how these abuses can be stopped, and how people have abused each other through the process of wealth, through the process of need, through process of disguise, and through every other channels. We have seen deception as the leaders of the world, we have seen deceptions in the cloth and the robe of the religion, we have seen every aspect, from the man on the street, how he's got into the habit of cheating, lying, stealing, and at the same time killing.

And I always went back on the process that the whole thing has to come to a proposition of understanding how people can have everything – there is no need! And there has been a passage in this process. I see and can understand every reason why I had to go through this process. I have eaten with the kings, I have eaten with the presidents, I have sat with the poorest man who had nothing to eat on the floor in different part of the world. I have traveled more than 60 or 65 nations and I have dealt with over 120 nations on this planet during my work in life.

I have come to understand one thing. All man live through greed. And all man live through one thing which I don't know, and its part of the structure of the DNA and the RNA – to kill, to destroy, to achieve, to have! It does not matter what we do. A king kills a child for his own sexual behaviour. A priest abuses a child through the name of God in the church – the same goes with every other religion! It's not in one religion or the other.

It's the same, it doesn't matter which nation or nationality these leaders are, we've seen them! They shout, they kill, and they howl when they're in the possession of the seat of power, and then they hide in a hole, rat holes to hide, to save their own meager lives, and we've seen them in the past few years in different parts of the world. But at the end it comes to one thing. Why do we need to kill to possess? And why do we need to destroy to have?

A lot of people didn't understand why we set up the World Peace Treaty and then why we set up the process of teaching so rapidly the way I have done. A lot of you, we know hundreds and thousands of people in their heart, in their paper, in their house, downloaded the world peace treaty and they signed it. And they try to live to it and they forgot what they signed in.

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

I kept the technology very close for the time when it's ready, and as you know we gave the technology freely to the governments. The scientific organisations around the world understood what this change is but the governments blocked the process because of their power and what they got abroad, but because of the birthplace I'm going to ask Marek to download a piece of Paper which I've given it to him. Its been sent to me by NASA. Can you upload that please?

1:01:01: If you read, this paper has been signed by the propulsion systems branch chief is Mr. Catharine Heinkel. It's 27th September 2012 and I read to you one paragraph you can read the rest of it. These are the scientists in NASA who studied everything we do and they understand how far we are, how correct we are, but the Government needs to keep us silent. When you say we are not evaluated, this is from George C Marshall Space Flight Center, Sept 27 2012. Paragraph, you read it yourselves.

'We would be honored to have you come and present your propulsion theories and bring the demonstration units to show us your technology and operation in a series of meetings between the 7th and 11th of October. We extend this invitation to you to come as our special invited guest'.

So you understand people at the highest levels have understood what we do in the scientific world. But unfortunately the world leaders because of their political strength are silencing the science of the Keshe foundation because scientists at NASA level are honored to have the technology to be working and how we are working, and there is a need for collaboration and not separation.

One of the reasons why I pushed ahead with the teaching and the Knowledge Seekers in the past few months and now we achieved it with having the knowledge seekers here, was my embarrassment and shame, and in so many ways unbelief (at the response to) what some of our supporters in the United States delivered to the White House, as a peace message and a World Peace Treaty message. What put me to shame is my own, what-you-call – misguided thoughts, that world leaders understand what this is about. What I received in response in a private letter from the White House put me to one thought.

Your Excellency President Obama I respect your letter of 24th of July. I sent you the peace message; you sent me a letter nothing but about killing and wars and what you have to do, to

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

kill, and to protect your nation through Wars and Armies. I would like if you can release that letter from President Obama. It reads – it's addressed to Mehran Tavakoli Keshe, its on the White House private letter head with no references, which means this is private between me and the President. This is shame for me in reading it. It says at the top, Dear Mehran, and it's signed by Barack Obama.

“The people who received this letter on my behalf in the United States, they wanted me to react immediately because this was not the purpose of the World Peace Treaty – to justify killing and support of nations. We looked to see if we can justify how we can change armies in countries to the armies of peace and support. This letter explains to me sacrifices of man for nothing. Why a leader of the strongest nation in the world has to justify killing to support National security. What has puzzled me is that the US alone in the past ten or fifteen years has spent nearly 2 trillion dollars in Iraq and Afghanistan – in what? In supporting mainly armies, and manufacturing tools of killing, and creating employment and wealth for who? If the American government had given something like, on my calculation 9 million dollars to each citizen in America – this would have created more wealth and jobs in that Nation, than all the killings which it has done and its still carrying on under different names and borders.

My message to world leaders is very simple, and my message to the soldiers who carry arms to kill is simple. The bullets you carry have all the ingredients for you and your family to live a very rich healthy life. The powder inside is the fuel for your currents, your food, and the cover of a bullet – open it up and use it for its nanotechnology and its nano material to feed your family – (long and pregnant silence.)

We have seen enough war! We have seen enough killing! And we have seen enough aggression. I've been to Africa, I've run business in Africa where a glass of water, clean water costs a lot of money. But European nations throw millions of tons of food into Ocean to keep prices. This has to come to an end, and with the technology we have delivered we have brought it to an end! This is the reason why a Nation like Belgium issues warrants for my arrest and warrants for me and my wife to appear on the kangaroo court declarations and allegations of fraud and for practicing medicine.

First of all we don't practice medicine – can you post both warrants with the Belgium Government please – both of them, yes. So – why? How can I be doing these things when I gave my whole knowledge freely to the human race? People pay for development and the

Keshe foundation is the only organization in the world, which has as part of it's research and development refunds anybody who enters his research and they are not happy with. There is no organization in the world, which refunds its own volunteers, which if they sign into it refunds it back to them.

Up till today we have refunded anybody who has asked for a refund according to what they wanted, except four cases due to the support of the Kf website, we have to delay and keep our supports for any further. We have spent hundreds of thousands of Euros in the past 12 months to stop the attacks by the Belgium government through IMEC, through Chinese servers – we can prove the whole package. So they attack us to bring us down, we protect ourselves, and then they say why you cannot pay because it costs hundreds of thousands to do.

And then the process is very simple. We will not attend the Police interview in Belgium on the 22nd and we ask for protection for me and my family, not only from the Italian government but through United Nations. This will stand, we have launched it, and we stay put in our place. We do not escape, we do not hide, we do not run.

From today the Gate of the Keshe foundation is open to anybody who likes to come and stay with us, to make sure the crooks and pedophiles and thieves of leaders of this world cannot stay and do what they've done up till now. They have put man against man to kill each other to benefit for a few hours and days they're alive on this planet.

We heard in the news that his eminence the Pope has said he's ready to meet aliens. Your eminence, the system for you to meet the aliens is getting developed less than 400kms 500kms from your residence in Italy. Come and have a look. We invite you to our center. The same goes for the world leaders. We invite you to come and see the change people will bring, not us!

Covering themselves in the name of the fraud or practicing – we do not practice health environmental development – I create a copy of planet Earth! If planet Earth gives you vitamins and minerals, and earth is criminal, so am I! This is what you did not understand about the Health systems we make. The Health system we make is not medical but is a copy of the geological structure of the Earth, the way they have explained to you even in this workshop today.

A small amount of Gases, which are not even visible can make changes in the structure the way for example you go to fountains in different part of the world and you drink the water to change the site or to change cancer. Now that we told you the essence of living, this is how these systems are made. The patents are out – anybody can do – in fact what has puzzled me is the fact that the worlds leaders like President Obama through their ambassadors, Brazilian government, the governments in East Asia, all have asked and they send delegations to us to collect the key or to deliver to their embassies. So how come the knowledge which was given free and is getting studied and worked by different nations now has become a criminal offence in Belgium?

This is deliberate act to silence a scientist. But I have a message for all of you. Be it your eminence the Pope, be it his eminence Ayatollah Khomeini of Iran, can you scan and post this on the site please.

1:13. You will read three pages. I do not read it for you, but in these three pages, even if they have the wrong English spelling – might be because it makes you happy to find a fault – this is the language of the Creator – the reason we are here today – the reason why the Keshe foundation and the name of the Keshe technology has been put on the map.

Very simple – I am ashamed of my own creation – if you understand what that means. As a created – as a human being, I had to live amongst you in your body, to be ashamed of my own creation (emotional long silence) I had to live your lives to know how greedy you are, what thieves you are, and how you kill so easily! And this has to stop from today! I have put it in writing – the ones who want to call it they call it – the ones who are the world leaders will read it – this will stay and in time will be understood. The way I have shown you how to make food out of fresh air, I have shown and I explained to the nuclear scientists in past two weeks how gold was easily made from the environment of the earth – Life has no value but to serve!

The Kf headquarters in Italy is open to public. You knock on the door in Desenzano – everybody knows where Keshe foundation is, they know who we are. Lake de Garda, located next to San Lorenzo. This is home of knowledge and faith, but peaceful faith. You can walk in, see everything, bring your system and ask and teach us and we teach you. There is no limit into what we teach.

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

My call goes to the people and crooks who sit in the seat of government. I had to eat with you in different nations to understand how you defraud your people. I had to pray in your houses of worships in different nations to understand how you structured and abused the name of God to benefit a few! Now it's in my writing, can you post that paper please? Post it. This is my way of doing things and I'm not ashamed or afraid of any people and world leader or any religious leader who tries to attack me. I have created you and at my wish I can end your life. (very long silence...)

You wished, and for years you asked for Messiah. Here I am, standing in front of you! (almost weeping) I'm ashamed of my own creation – the human race – and I've said that for years to my family and my wife. But I had to experience how you created things from nothing, and claimed to put us everything.

The purpose of today is very simple. You wanted to see Messiah and you prayed for thousands of years to change not only your beliefs, but take you to heaven. We have offered you the whole lot! And the panel of KSs on the table who are here today were chosen to be here for their deeds and their acts, and the deeds and acts of their forefathers.

My call goes to Vatican – to his eminence the pope. Meet us and we discuss everything in detail, and if I'm wrong I'm prepared to stand for my deeds, but the cleaning has to come from the house. Put olive branches in the place of the swords of the guards of the Swiss Guard and the armies, which you carry. And do the same to the followers of Christ around the world today and this week and next week and then on – that the arms has to be replaced with roses and with Olive branches, and the metals of the guns and the nuclear weapons has to be changed for producing homes, food, the way we have shown and shelter for the people who don't have.

The same my call goes to his eminence Ayatollah Khomeini, as Islamic religious leader you have had the foresight to be correct and bring this knowledge through your protection to history. A lot of people keep on asking why I'm talking about three exiles. I've been imprisoned I've been exiled. I've been threatened to be killed for my knowledge and nothing else! In my business world when I used to be a millionaire every door was open to me, and the best hotels!

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

Since I opened my hand in what I am, and most of the secret services knew of this declaration of today for along time, and that's why they set up to avoid this discussion and disclosure. They did not expect this to be disclosed today, but today is an important day in the world calendar with the death of Christ, and we chose the day as the Creators, as the son has to be linked to the Father.

I have no problem with putting everything to you – you are Christians, you are the Pope, you are Muslims, you follow different sects of Shia or Sunni. You don't need your change of faith, you don't need to change the way you believe, the only thing you have to change is the way you think about killing, wars, and you are now feeding it through these stupid games to the children of the future. The child from age of 2 or 3 he knows nothing but killing and running and shooting so you are ingraining this behaviour in the future of this race and this has to stop!

Something you did not realize, I told you yesterday that today we will disclose something, and you heard it and you didn't understand it. They told you we can interfere with the radio frequencies, same time we can interfere with any games which has been made which has aggression and wars in it. At the same time, the same way as the American plane was captured, though the same technology which you seen today which was explained to you when you could see the light flashing on the ceiling of the lab about 4m or 5m away from the reactor, we can interfere with any weapon technology across the world.

But this will not be! Because if we force you then you fight to get it! We invite you to dispose of it yourself. I say it again; I was involved in the peace talks in the whole work of the Northern Ireland peace treaty. As I said the IRA and the Sin Fein and the rest knew exactly our operation, how peaceful it was and how correct it was. The British government knew how I was personally involved and I thank them for giving me this opportunity to learn how peace can be done in a very easy way. We asked and we initiated the Iranian peace talks in different ways and we see the fruit of it today. Wars are no reason and there is no grounds for it! Within weeks people see what we are doing, the major military stations in whatever you want to call it, battleships, latest aircraft carriers, latest airplane fighters will not be able to move, because now people have seen and they have learnt it and they are copying it. They will force you if you do not follow the procedure.

You claim that the revolution and the spring uprising was done by the people to change the leaders of the Arab countries, now the scientists in the West will do the same with the western

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

leaders who do not follow the procedure of peace. The knowledge is in their hand, they are making the nano materials in thousands and hundreds of thousands in different countries. Chinese are teaching my books as part of their university texts, we've spoken with their scientists, they are teaching the people everything. The Arabs have translated it and using it in different ways to protect Syria the way its been announced, they have called me, and they received the technology as a Tesla of physics – which has no relevance – in a different part of the world people are testing it.

So the knowledge is in the hand of the Man, and from now on the way we have shown the reactor, just the first smallest reactor operation yesterday, which was explained by the Knowledge Seekers, has shown the power of this technology. A very few micrograms of gas can penetrate tens of meters. I ran a test on one of the reactors just to see the Iranian reactor in operation yesterday, I know it's influence.

And then the factor, which is still there, but I cannot explain it to my Knowledge Seekers. In the afternoon I asked them to walk with me in the garden and they could see the influence of the fields without them knowing, on the what-you-call – **chemtrails** – the way it was opened up. It never opens up that way without effect of magnetic fields.

So my message is very simple. Read what we have posted today and as today send it to as many people as you can because the message is very clear. For centuries and thousands of years in different names and religions you wanted to have everything to find peace, to find prosperity, to find the day when everybody has everything. In one lab come in and we show you energy, food, material, motion, and anything else you want to produce to have a comfortable life. There is no need for wars.

The reason for this teaching and this progress is very simple. We are opening the doors for this animal of the man in this jungle of the earth to learn the works and the ways of the Universe, and as you understand fully, his Eminence the Pope does not go out and say he's ready to meet aliens, because we are not aliens, we are amongst you and you know this is the time of reunion. The most powerful religious man on Earth does not make such a comment a few days before we show the reactors. They are fully aware of what we are doing and they understand through their advisors the potential of what is to happen.

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

Let me explain to you one thing very clearly. His eminence the Pope, within minutes after his inauguration was handed over the Peace treaty as a package. We have followers at the highest levels and they were on the floor of declaration and it was handed over to Vatican directly. As advisors to the Vatican they had the right to do so, so its not that they don't know as much as his Eminence the Pope, his Eminence Ayatollah Khomeini of Iran, his Excellency President Obama, and the Chinese leader and the Russian leaders know about the technology. At the same time they never thought it would come to affect them this way. Now we are here as people to check the course of humanity and opening up the doors into space, not for man.

Read the last paragraphs of the paper we released today. Man is just maturing enough to look beyond the wall, tall enough to be able to just have a glimpse, but to be able to jump over the wall you have all to give a hand, the way we do it here in the Institute. We work as one team we don't ask the time and the place so I hope I made this message very clear, and please, if you believe in what the foundation does and you do, post this across the universe, across the world, because people are waiting for something which they've been barred and blocked to understand.

You see the letter from the scientists at the highest Space Institute – it's an honor for them to have a scientist like me, and to the world leaders of their nation my travel had to be blocked. Now there is no block. Now we invite the scientists from Russia who have the same value for their presence here. This week we had new scientists of the highest level of the Italian government in our foundation and they understood the potential of what is to be delivered. The Iranian scientists the same, and then the others, so our knowledge is open and free for every man on this planet because I cannot steal what is mine, and I cannot take away from what I've created, and I cannot be different from one child to another.

The child of Adam, when they're awake, we open the ways to correct and now is the time to join in.

Thank you very much. We close this disclosure and I thank you Rick for allowing it to happen and moderating it and I thank all the Keshe foundation supporters around the world if they understood what this means. From today and tomorrow our doors are open, we have a beautiful big gate and a big heart and a big place to accommodate all of you.

Transcript from Special Easter Good Friday Knowledge Seekers Workshop held April 18, 2014

(v1 2016-03-06) DRAFT (Transcription has not been verified. Double check info with video)

Rick: Thank you so much Mr. Keshe that was a very strong statement, the last bits especially.

James. Thank you Mr. Keshe.

MK: Please send these messages and these documents across the world on every channel you know because if we do not do it, it will never be done the way we planned it to be done. It is very hard but this is the way it will be done – we done this before in a couple of other places and we always have seen the result, it's the way to bring peace, thank you very much.

Rick: that appears to be the end of today's Special Knowledge Seekers workshop, aahm... what can I say? That's it for now, thanks for ...

Vince: Please get this message out to anybody that you can and share the documents as much as you can, thank you.

Geert: They are already on my facebook page.

Rick: Yes, and they're posted in the Livestream chat as well, on the Keshe workshop channel.

James. Yes this message will be spread in China also.

Rick: Ok, thanks to everybody, we're going to end the livestream now – bye bye, thank you!
