Knowledge Seekers around the table (KSs)

Armen, John, Marek, Marko,

Rick doing the Live stream

Vince on the Go To Meeting

Ahmed in Boston translating into Arabic

Charles into Chinese

MK welcomes everyone, today is the first time we present as original team of Knowledge Seekers in Italy – promised a long time ago in Belgium – it has taken almost exactly 1 year in Italy to set up the institute to teach all of mankind. We have released the patents and informed the governments, and now we are teaching the teachers of the next generation.

The procedure we have put in motion is KSs to introduce themselves - from Day 1 nothing is withheld from them – they are already producing the first batch of materials for Fukushima – now we are developing the nano material to ship to Japan to be tested.

To give some history we have been working with the nano layers since 2006 – IMEC - the Belgian institute testing this accused the Keshe Foundation of using plutonium and uranium and then tried to keep the technology for themselves – hence we have now released it to the world.

Since July 2006 we have been producing nano materials but have been closed down and the tech tried to be robbed by the analyzing company

Transcript from 1ST Knowledge Seekers Workshop held MARCH 6, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

GANS (Gas in Nano State) was produced and confirmed by IMEC. Last week re Fukushima we proved that Gans materials can absorb and deactivate radioactive materials, but we have had this since 2006 when IMEC and people within the structure of the Belgian government forcibly gagged the Keshe foundation through legal means and tried to steal the tech for themselves.

Today we produce documents that the tech has been well proven and tested in the Belgian government – but the people in there have tried to steal it for their own profit – we kept silent mainly due to fear of assassination at the hands of Mr. Hans Bracquené – who has caused the death of several scientists who would not turn over technology. This man is the lawyer for IWT – the Belgian Government agency that funds science, and also the Nuclear agency, and he is now on the board of the European Space Agency – now we will see the assassination of numerous scientists around Europe if they will not hand over their tech. He has been given a special police force within the Belgian federal police to assassinate scientists. Mr. HB is director of numerous companies associated with space research – he has done this with threats of assassination, and tried the same on the Keshe foundation.

He also calls himself the gatekeeper of the previous King Of Belgium. As a scientist who has been threatened by this man MK is calling upon justice to get this man out of the European Space Agency – he is a criminal – people go to him to help develop their technologies and he uses his position to secure these technologies for his own profits. MK is calling for the arrest of Mr. HB for murdering scientists etc etc. Most of the politicians are aware of him but afraid of moving against him for fear of their own lives or their families – he is a criminal and has to be removed from his circles of power.

We also release the name of the police officer who organizes Mr. HBs assassinations, and has twice personally attempted to assassinate MK – a rogue officer who has been responsible for many assassinations and murders, his name is Mr. Delanoir. MK is publicly calling for the arrest of these two murderers – calling on the international court in den Haag – his hands are tied in Belgium because these men are protected by the past King of Belgium.

One of the reasons the K of B abdicated last year was because he had to give blood test for a paternity suit by a girl in England – he preferred to abdicate rather than give the blood – but the real reason is that there are so many cases of child abuse and murder pending identification of a blood sample that he would be implicated in these many child murders if he gave his blood test so he preferred to abdicate – MK is calling for the arrest of the K of B – he is as much guilty of child abuse as Saddam or other African leaders who are under investigation. He is not a king

Transcript from 1ST Knowledge Seekers Workshop held MARCH 6, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

– if a father rapes his children he is not a father – this man is the father of the nation but he has murdered many of his children – the girls under 10 -12 y o he has raped and murdered – MK is calling for the arrest of all these criminals.

Hans B has connived himself into many of the Belgian companies into space and technology research, now he has connived himself into the ESA – we will now see German French Dutch scientists go missing.

Last year MK accidentally met the K and Q of Belgium in a café in the mountains – this area in the mountains is where the K would do his murders – I don't think coincidence. Or actually it is the same sort of coincidence as when we released the space reactors on the 3rd of December 2011 and the following day the American drone was captured (by Iranian space technology) and on the same day the following year the second American spy plane was captured. World governments are aware that this tech is correct and the change has to come and be shared with the world's population – the KSs will share the info publicly every week from now on ...

There is now another plan for my assassination so I ask the people who support the Keshe Foundation to write to their governments or to write to the International court in den Haag – When people complain that there is a threat against them in Belgium, their plea goes to the very man who is responsible for the murders and assassinations.

President Obama – you have two daughters – you understand that this so called King is a criminal.

This technology to create materials to supply the needs of mankind is now in the hands of scientists around this table. Whether you are a Rothschild, Illuminati or so-called Mason we call upon you to join us. This technology is not to destabilize the world but has to be used to advance the technology of man and not for gagging and killing the scientists who are developing the tech.

My message to the Islamic world is simple – you too have lost girls to the King of Belgium – many nationalities of girls have been murdered by him – when the king has finished the crumbs are handed to people like Mr. Bracquené – I am prepared to stand in the court of den Haag and

Transcript from 1ST Knowledge Seekers Workshop held MARCH 6, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

testify to the truth of this if I am not assassinated in the next 10 days – there is no diplomatic immunity for the murder of children by a king and his entourage – we need to open up over 50 cases of abuse and murder against the King – we are releasing 46 pages of the facts of this case attached to this workshop –

Mr. HB is now one of the 5 directors of the European Space Agency, Mr. Delanoir trains other police officers in the arts of murder and assassination – recently a Russian female scientist was shot and her house burnt down by Mr. Delanoir and his team

These documents are entitled ‘The Unknown Truth about the Keshe Foundation’

Part 2 of the 1st WS

Lucien asks about the Gans material that is growing in the pots of the knowledge seekers.

MK: we can use this as a fertilizer for growing plants – CO₂ Gans was used to grow certain seeds and herbs – also CH₄ – it has a value as a fertilizer – allows us to transfer gas into matter to feed the plants – conversion of energy into matter – this will now be taught to the KSs in the next few weeks – also can transfer gas into other matter, e.g. gold, steel, other materials – this process will be shown to the KSs – this is about being independent in space – we are not bound to the mother earth anymore – can convert gas to matter – this process can be used for cleanup in Japan but not developed yet – in space we can convert energy to gas and gas into matter for energy and material production – this is the whole purpose of the institute – MK is now retiring and the KSs will now be taking over – (laughing from KSs)

Lucien: – when you start showing how the nano material is done, 1st thing is making copper hydroxide- then the hot water copper oxide – then to leave it covered for 24 hours – is this correct??

MK: Yes in a way – if you can add potassium salt to the sodium salt – this will produce a K4O structure and will guarantee – (coming in and out) another process is to cut the top of a coca

Transcript from 1ST Knowledge Seekers Workshop held MARCH 6, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

cola bottle and add that to the caustic – that will provide Carbon 14 (lost connection for a period)

20m back on the skype – MK: they have jammed our whole system so we use skype –

Lucien: – in the last workshop putting copper – attracting 6 molecules of water – then sodium 23 released from the hot water – then close the box and leave for 24 hours – is this correct ?

MK: you can add another potassium salt that allows the process to be carried out in a perfect way – he uses a mix of K and Na and this guarantees the process because partially you receive K40 in a minute amount – you have to put the material when you introduce the hot water – you have to introduce simultaneously – or you put the copper on a mesh and introduce the caustic from the side – use a mesh with plastic coating and underneath put the caustic – then introduce the hot water – the heat is enough to do the job and the process starts – also can use the tops of the coca cola bottles to provide C14 – radioactive carbon allows the production of nano material on the electrodes – hence the coca bottle tops can speed up the process – repeat the process once or twice more – etc etc (some technical stuff that is difficult to understand) ... you are able to produce a stable continuous supply of energy from your reactor – if this doesn't work can add argon, helium, hydrogen – but the nitrogen has to be 3 times as thick as the argon – then a continuous supply of plasma in the core – this is a solar system condition multi-layering of plasma

30m Ludmil: – how many layers? MK: as many as you can there is no limitation – depends on what atomic nuclear material you use for separation.

31m Nederland group with stainless steel reactor – do they need copper layer? MK: – Armen is working with trying to coat a SS reactor – 1st try to increase carbon content or cavities in the steel in which you can embed copper then the copper carbon oxide - but seems to be difficult to coat the SS – otherwise you have to do the copper coating first if you use a SS sphere. (glue a copper layer inside the sphere)

33m MK has been explaining for a long time if you have 2 mobile phones anywhere in the world you have enough energy to make anything you need – the secret with this is that you open

Transcript from 1ST Knowledge Seekers Workshop held MARCH 6, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

the batteries inside them there is a 3- 5cm block of pure copper as layers – copper and aluminium layers – use these copper layers to line inside the reactor and oxidize and start the whole process – you glue the copper layers and make sure there is no gaps inside and then the same oxidation process – you need to glue it on the wall so when you put caustic - you have to be very careful not to expose to air because then you get the copper oxide with high levels of radiation – (talks about special glues)

36m Q - how far do you have to stay away from reactor??

MK: - when you see the shimmer stay at least 3-4 meters away – if it is within the frame no problem – but if it expands beyond the frame you have a flight condition – the first thing you see when the reactor achieves balance with the earths magrav field it goes through a violent shake – it is trying to find balance point.

MK talking to Diva in the USA who later posted MK's disclosure State of Humanity address –

MK asked Diva to please extend hand of cooperation to NASA – Mr. Nelson initiated the invitation for a lecture (which was blocked by others) – MK now inviting NASA to the KS house. In our centre we have two buildings and the lab is in the white house – so invitation going to the White house in Washington. MK sending clear message to Pres Obama - Bill Clinton would never have shaken hands with Jerry Adams Shin Fein without Keshe's input into getting peace in Northern Island. (some mysterious secret involvement with use of technology this sounds like) Also offering help with Hillary Clinton if it is true she has a brain tumor we can help – he

Transcript from 1ST Knowledge Seekers Workshop held MARCH 6, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

also offered the coma tech to Shimon Peres when he was in a coma – now also the hand of friendship and cooperation extended to the White house.

MK has personally initiated the process for the arrest of the King of Belgium – and we have another reason – the K of B does not come and see a man in a small café in the Mountains of Belgium – this is no coincidence – they had a 1.5hr meeting – this is his habit to see his victim before they are killed – that's why he came into the café – this is his fingerprint – one of the victims of abuse is a very close collaborator to the Keshe foundation – all MK is asking for is a drop of blood to be given to Den Haag court

Dave: – what is the story with the power units ordered by people?

MK: we have given this tech to the Italians and now they are working on this – and the same thing will apply to any nation that wants to cooperate – the gift is on the table and it is warmly accepted by the Italians and they will deliver the units to the 40 - 50 people who put down deposits – soon at the KF we will have the first flying system and then they will go ahead and build the first space ship before the end of 2014 – the situation with the K of B has been discussed in detail with the Italian government – has been put in hand of Italian police and government – to protect Italian scientists also from the hands of Hans Bracquené and co.. – this tech will bring peace and unity – hand of friendship is extended to the dear friends in Moscow and China as they were with the Iranians. (in 2007)

Energy is not free but available – the same as space and medicine – this guarantees international security without need for armies – police might still be needed for rogue elements – we are talking about no borders prosperity of all people of the earth The way we capture CO2 the same way we will soon be able to capture any weapons that might cause damage or death for man except for those used for security against rogue elements. Nations do not need armies any more, but we need civil protection systems – spending money on tanks no longer necessary – building shelter for people is necessary – my companies have been elements in actions which led to the peace talks in N Ireland – British PM Mr. Tony Blair who collaborated was fully aware of our part in these peace talks – now we want the same peace throughout this planet. How come the nation that produces most of the raw material for the technology of the west has the most poverty stricken people in all of Africa?

Transcript from 1ST Knowledge Seekers Workshop held MARCH 6, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

Any attempt on MK's life there will be many papers released which will embarrass many nations. (sounds like one of them will be the details of how the Northern Ireland peace talks were forced on the unwilling participants!?)

0100hrs Lucien: – in the second part of the Fukushima video MK is putting iron meshe and wires with copper oxide, and after five hours discharging the wires - the question is why the iron meshe? Is it to act as a common ground? -

MK: Yes in a way – I demonstrate this in the Fukushima video but not always understood - when you introduce a voltmeter you introduce a drain from the core.

Lucien: I was assuming the iron meshe you was putting on the bottom of the 2nd box was to increase the potential to increase the production of GANS materials – correct? MK – in a way yes – the wire mesh on the base created a new environment in the core – in a way you close your core – the iron meshe creates a new plasma condition in the container – you have an enforced condition when you put it in the hot caustic – the enforced liquid condition – when you put it on a wire mesh you soften the process –this applies to reactor creation as well - when your liquid is in the core the growth is harmonious over the whole area – this has an advantage when you run your reactor the plasma stays stable as well. This serves the process further on – (talk about upside down reactors with the same layering top and bottom) –

Lucien asks more questions – MK explains about the nano material formation in the copper wires or in the copper cores – long container – you will see coating near side is different from coating in centre – Lucien asking about the process of the CO₂ going into the water – when it saturates does the process stop?

MK: First off this is not water in the containers, the process is the same as your body producing the skin or fibers of muscles etc etc through the experiments we have learned things – first of all the wires from one cell to another are not the same – then if you hang the wires in a way that the Gans material falls to the bottom that is good – if the wires turns white from the caustic you have blocked it – you seal the holes that lead to production of the CO₂ – so if you make a system like a tube where the material sinks to the bottom you can use this system for ever for whatever you need ...

Transcript from 1ST Knowledge Seekers Workshop held MARCH 6, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

See book 2 - CO₂ production in a 5litre container and misty cloud in the bottom – if you can keep the wires away from the new material you can carry on for years and still produce energy – the KSs will video this process for you...

0112 Ludmil has a problem he is doing the process with copper wires and KOH and always ending up with some kind of white material at the bottom of the container – is this kind of a GANS? MK: No that's your salt (laugh) – if you see crystallisation on your electrodes you got too much salt –

Vince: – same process for aluminium? –

MK: yes – look at the Fukushima video – but a problem is that process is very rapid and eats into metal – when we open the batteries to separate the copper foil from the aluminium foil and we put the alum into the caustic when producing material – so get a composite oxidation layer – so if copper allows you to make CO₂, then the composite layer might allow you to make CH₄ – and maybe something else like a poison – so composite layering should be a first step – then analysis to see what you have – the size of the PN junction in the copper makes it go to CO₂ – because if you get the atomic weight of the copper and look at the CO₂ and then understand there could be a difference the difference in the gap could be CO₂ or CH₄, but when you have a copper and aluminium coating you absorb a bigger spectrum – then you can add zinc or anything to your coating process – so when you strip the copper strips from the batteries, use the alum layers and use them in the composite materials - the wafer of it attaches to your material for absorbing poisons or whatever from the environment ...

0117 Vince: – so it's in the combination that dictates what you make?

MK: exactly – same applies to the reactor setup - star formation we have set up this week – 1 in the centre and 3 reactors at 120 degrees – the magrav field between the satellite and mother reactors we can change the energy into O₂ or for example extract aluminium - these are the techniques we start to teach here, the way you use composite materials we also use composite fields to create matter in space – and its easy to do using the mother reactor and the satellites – one is a static system the other is a dynamic system – this is like the universe and like your body – one reactor is the kidney and one is the liver for example – even though they are separate they still interact with each other – the same system explains why a certain type of cancer can go specifically to the hip – in the institute the way we work we don't talk about space

Transcript from 1ST Knowledge Seekers Workshop held MARCH 6, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

technology how the reactors work for motion or lift, instead we look at the same concept to be used in the medial side, to be used in materials, to be used in energy production – so we learn a spectrum of similarities so we don't become narrow minded – in the future we need to know everything so we can survive in space, or in jungles of Africa or in the city of Brussels --- 0120 - so we teach the spectrum of the teaching ...

Lucien: – CH₄ can be sequestered in the land or used as fuel? MK – all Gans materials can be used for different forms of fertilizer- at the moment the fertilizer is mainly Nitrogen – the N is used to speed up the use of Hydrogen by the plants ... Lucien: – worried about safe disposal of the CO₂ and CH₄ from the production – MK: no no no it is safe – Lucien: – OK we go into this on the next workshop – KS: - next week is the festival carnival time – the KS will be working and I am on holiday. (laughing from KSs)

0123 Question? Chinese group wants to know if the layer in the reactor is hydrocarbon layering – MK: no it is not – it is copper – you might find some H, O or C in it, but it is made from under layer to the top layer – you don't paint it on you build it from underneath up

Next question re the KT liquid – MK: the KT secret is out – no longer secret – we showed it in the Fukushima video – in China you can use this for cleaning up the rivers – works like a fishing net – we are working with contaminated water with fat etc from yoghurt making and we will demonstrate that the water can be cleaned up to put on land or as drinking water

0126 – Q: what is the element of the nano material on the first layer? – MK:- its copper – Q: if you use gold will it build up Gold? – MK: - yes it will – your gold becomes nano layer of gold – they say you cant do anything with gold as it never oxidizes, however, we have shown silver and gold being oxidized – to oxidize gold you have to use different composition of liquid – we have also shown you can coat w zirconium and it will coat with flawless diamond – some of the diamond merchants if they hear this will have sleepless nights – you can make diamond in vacuum with different colors from the different Gases within the diamond that create new colors – these are nano layers, we cannot yet build blocks but we will show you in future how to make kilograms of diamond.

Diamond lattice is a way that stops the conductivity. Certain sugars and vitamin carry diamond lattice structure – the neuro info is then blocked by consuming the diamond structure . when the carbon in your body becomes a resistor it behaves like a diamond, but different pressure it

Transcript from 1ST Knowledge Seekers Workshop held MARCH 6, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

behaves like a conductor – the same carbon but different orientation – this is how the smell sense works as well

0133 – Q: how do you make the nano coated crop seed? MK: maybe you can make nano layers on live entities, but this is in the future. What we were talking about was feeding the Gans CO2 and CH4 to the seeds...

Going back to nano coating of gold and silver – we don't coat it- we allow the matter to be separated enough to take a crystal diamond structure –

0137 Q: You talked about re-writing book 1?

MK: this will never be done – no time – whatever knowledge is gained we will compile it and publish it in these workshops

0139 Q: Asking about retarded children – can the tech help them? – MK: we have done trials since 2005 2006 – the knowledge is not deep enough but a number of cases we can say you can change in certain cases the condition - needs further R and D – we are working with Cases in about 6 places – it depends on what caused the condition – we have a case of twins w autism – we see positive changes but not full recovery – autism can be helped – we have seen significant changes.

0141Q: is it possible to have an internship at Keshe foundation during the summer holiday? – MK: - we are going to accept new KSs in the next few months – we can take 10 or 15 – but thinking of more later in the year – I don't see why not – we have received a lot of requests but we have to make a distinction – some people wanted to learn about the energy system only so they can go and make lots of money – they are not around the table – others with PhDs are not around the table, others who wanted to take knowledge as spies back to their govts are not here, others working for news and press – not here either – from now on the team here will decide who else comes in – I am retiring – the team around this table will make decisions on who comes in and with whom the knowledge is shared etc etc The whole structure of the institute is based on equality – whoever comes in is equal with all others around the table – (someone is yawning) (haha) These KSs left around 0100 and they were back at 430 or 5am – they are putting a lot of time , usually here till 10 -11pm – not on holiday – (this is hard work)

Transcript from 1ST Knowledge Seekers Workshop held MARCH 6, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

0150 Q: could MK give more info on how to create a vacuum, as the pages in Book 1 on this are difficult?– MK: let me think of a way to do it – I will address this next workshop

0151 Thank you thank you – end
