00:00: Introduction Video

00:05: Rick welcomes everybody – One Hundred Workshops! Quite a milestone, MK has not missed 1 week in 100 weeks! Quite incredible!

00:07: MK: Good morning, etc. More details on the Peace meeting in Dubai – please bring all your systems, medical systems, flight systems.

00:25: Preparation for setting up the Universal Council – why have we chosen this time? – because this is the time for mankind to mature.

00:28: Position on Earthquake predictions stays the same – more scientific evidence around the Ring of Fire...

00:29: Rick reads a link on a dramatic increase on eruptions of volcanoes around the Ring of Fire and nobody knows why. Most of the eruptions (red points on the map) are around Panama. This is where MK expects the 12 – 20 Richter scale earthquake. The maximum red on the West side of the Pacific is just North of Australia in the Islands of New Guinea, Indonesia etc. – this is at the same level on the planet as the activity on the East side in Mexico and Panama, etc., and even at the same level on the African continent. This means the earthquake is imminent.

00:41: MK gives some details on the arms shipments happening at the moment – all financed by the Vatican bank and most of it is going to the Middle East. Belgians and Americans are involved big time in this trade also. He tells a story about the previous Pope having to resign because he took the Vatican Bank funds and paid it to Bonn, to support Portugal and Greece in the EU – certain elements within the Vatican did not like him taking their money like that.

00:45: More details of the coming change – earthquake in America, tsunamis in the West Pacific, Iran, England, Europe will all be hit – this volcanic activity we see is the evidence the change has been unleashed.

Notes from 100th Knowledge Seekers Workshop held Feb 11, 2016

(v1 2016-02-20) DRAFT (Notes have not been verified. Double check info with video)

00:49: There is a new development in power systems – this allows generation of power, not just savers of 30% like the Magrav units. Magrav system will become generators (as promised) – this will be confirmed in the Philippines in the next few days and shown immediately because of the coming disaster.

00:58: If you look at the shape of the continental landmasses it is like a bird that has its own life – it is time for us to see the bigger picture and the evolution of the change of the situation.

01:06: In the coming time we will teach heavily on how to make food and water.

01:07: MK goes to the drawing board and returns to the teachings on Tuesday (4th IWS) on how to create lift.

01:08: Fill 80% of your core with CH₃ or CO₂ GANS then the other 20% try to add Hydrogen, making sure the coils carry at least CuO₂ or heavier – then to add a full resolution of motion add a small amount of GANS of Lead (Pb) (looks like in the base of the larger coil)

The GANS of Pb has a 'sink' ability – it attracts and holds on to (draws a diagram putting the Pb at the bottom of the outer coil – very small amount – with CuO₂ on the top of the outer coil (not clear what is put on the inner coil). If the gradient is correct $H \rightarrow H_2O \rightarrow CH_3 \rightarrow CuO_2$ you will see a flashing light at the water point, the GANS point, and the coil point (CuO₂) – as the plasma expands and the interaction of the fields creates light. The rotation of the Sun is caused by the same principle, with the H in the middle creating rotation in respect to the Galactic field.

BE VERY CAREFUL WITH THE GANS OF LEAD – DO NOT TOUCH IT – REMOTELY HANDLE IT!

01:14: New Diagram – adding a sink to the base of the star formation to create rotation.

01:15: New diagram of 3 stackers connected to power on the left, and to a load on the right – the load is a 'sink' due to the difference of higher feeds

Notes from 100th Knowledge Seekers Workshop held Feb 11, 2016

(v1 2016-02-20) DRAFT (Notes have not been verified. Double check info with video)

lower.

01:16: New Diagram Now if you put batteries instead of the Grid and feed into your stacker then into your appliances , then you add a Pb 'sink' after the load which pulls the energy through the appliances. Then if you feed this back into the gravitational end of your battery through a diode system made up of Alekz type beads to make it flow the correct direction - you have a closed loop that feeds itself – you will get 100% savings...

01:18: So these are 2 elements to put into the blueprints to change from a power load into a generator – the diode and the Pb sink - please test them and feed back to us. This has to be built up and then you can disconnect your system from the grid.

01:21: Vernie from Philippines comes on to explain in detail how to make these elements – but not ready yet...

01:23: MK mentions that he knows about X-ray technology in which they have a Pb sink to absorb the rays. Lead poisoning comes from carelessness – you have to be very careful with mask and gloves. Lead GANS gives you a lot of emotional sinkage as well, draining your emotions. Ali mentions Silver Oxide – might this be useful as it's a similar molecular weight to lead? MK says try it but it's not just by numbers – it's also the behavior of the element. There are some synthetic materials similar to lead behavior but it easier to use Lead – you need a very small amount in paper as you wrap it - just need to use mask and gloves for vapour protection.

01:24: In time of disaster this is necessary – your flight system depends on it and your energy system depends on it!

01:29: Vernie comes on – Draws an Alekz bead double circuit and says this acts as a diode – huge resistance one way and flow the other way as measured by an Ohm meter set on 200K setting.

01:36: Vernie shows how to make an Alekz cell with CO₂ and CuO₂ GANS paper, then aluminum foil, and then Zinc foil, but the Zinc is not necessary. When putting GANS on paper you have to allow it to dry before wrapping.

Notes from 100th Knowledge Seekers Workshop held Feb 11, 2016

(v1 2016-02-20) DRAFT (Notes have not been verified. Double check info with video)

01:50: Connecting the beads into 2 connected circuits - 12 beads outside and 6 beads inside double circuit –

02:09: Using the system as a diode.

02:15: MK comes back on to summarize Verne's teaching ups till now and then draws how to make a 'sink' with the use of Pb...

02:24: Vernie explains how to make a Lead GANS and how to make a 'sink' with it – stresses again that you need to be very careful – if you are near it you will be drained in your energy – must be well ventilated. Douglas in the US experienced this so powerfully he had to put his GANS setup outside the house – it drains or pulls the plasma and this is why it works as a 'sink'.

02:30: Lots of discussion from various Knowledge Seekers around the world who have tried different ways of making Pb GANS . Armen says he has made it and if you put an LED diode on the circuit it will make a pure white heavy Pb GANS but if you put a voltage across it goes brown from taking the copper off the copper plate or wire... A KS in LA has made lead GANS that seemed to go into two counter-rotating galaxies in solution.

02:42: Discussion of seawater versus regular salt water – better to use sea water as it has all the elements in man.

02:43: Vernie: The diode connection is only for use with the plasma batteries – if you connect your Magrav system to the grid with a diode in line like this it will blow up the beads. NOT FOR THE GRID!

02:45: The Pb GANS does not settle easily or quickly like the CO₂ CH₃ or CuO – it takes overnight – still need to rinse it 3 or 4 times. Demonstrates how to make the sink with a lead GANS paper wrap on the nano-coated copper – and then puts a clockwise wound coil over the top (no different from anticlockwise as we are working with the plasma fields but this is to differentiate the sink from the capacitor/battery which is wound anticlockwise).

Notes from 100th Knowledge Seekers Workshop held Feb 11, 2016

(v1 2016-02-20) DRAFT (Notes have not been verified. Double check info with video)

02:57: Vernie presents another new development, i.e. the DELTA Y configuration for making a sinusoidal or fluctuating voltage – an AC generator.

03:03: MK explains if you add the DELTA Y system to the above power system you get both AC and DC supply for your house

03:08: In a further development you can take your plasma batteries away and put a GANS ball with a vacuum and GANS of Hydrogen – this will then become a true Wireless Universal Plasma Power Supply.

03:18: Kosol makes an announcement that people are learning how to communicate with their Magrav devices and some further announcements accepted politely by MK...

03:23: Rick shows the announcement of the Mike Nashif Plasma Energy workshop happening at the moment in Kauai, Hawaii.

03:25: MK: A Japanese KS has developed a technology that can measure Magravs... End of Section 1...

03:26: Section 2 is a Presentation from the Plasma Energie Team in Austria on their remarkable accomplishments in the plasma technology – worth a whole set of notes on its own – watch this space in the next day or so...

03:26: Presentation from Klaus in the Mother Ship of Austria, representing the Plasma Energie Team of 5 people in Austria, who have been focusing on making the Peace candle, a 3-stacker unit with crystal in the middle. Klaus shows several great videos and screen shares of their techniques in creating the stacker unit, then drilling crystals for the Peace candles, and the creation of the Peace Candles – beautiful work indeed!

03:46: Klaus presents their website where they have made a handbook including lots of teachings in the plasma technology in the German language www.plasma-energie.org

Notes from 100th Knowledge Seekers Workshop held Feb 11, 2016

(v1 2016-02-20) DRAFT (Notes have not been verified. Double check info with video)

03:46: MK congratulates and thanks them for their fantastic work.

03:47: Klaus shows a helmet design with 6 holes on either side for the coils – and also a sturdy frame all made out of copper pipes with copper screws, all copper, for the walk through healing unit.

03:50: MK embarrasses 2 other members of the Austrian team by wanting to see them – Sonia and Geert front up making 2/5 of the team according to Klaus.

03:52: Renan announces he has an agreement with doctors to test his standup system and helmets as well as the pain pens and pads, etc.

03:57: MK offers to put the Austrian devices on the Kf.org site for sale. Klaus asks what GANS to use for the helmet. MK says CO₂ and Zinc only – we only use Copper for neuro system in the red tissue – in the brain of the man you don't have red tissue. Also... if we use Zinc wire instead of copper the helmet system would be 100x better! Copper wire with CO₂ and Zinc GANS is good for psychosomatic conditions, for psychological situations we should use only Zinc wire.

04:00: Klaus presents his scientific question as presented in the picture with these notes – It is about the microscopic structure of nano-coated copper – there seems to be 2 types of coating one nano-copper and the other graphene. Klaus is thinking maybe the nano-layer grows with fire and the graphene layer with the caustic method?

04:02: MK says they both grow in both conditions – what we see is totally dependent on the condition and composition of the copper. You create a spectrum of heat in the caustic and then a spectrum of different type of nano-layer materials. You have to understand the difference between Graphene (SP₂) and SP₃ – and how the structure is seen – depends on the freedom of the copper.

04:04: If you take your nano-coated copper out of the caustic quickly and dip it into cold water, then back into the caustic – it grows a layer of SP₃ –

Notes from 100th Knowledge Seekers Workshop held Feb 11, 2016

(v1 2016-02-20) DRAFT (Notes have not been verified. Double check info with video)

Diamond. This is the first time he is disclosing this because he had given his assurance to (a Diamond Company/group) in Antwerp not to reveal this but now things are opening up he does not feel bound to keep this a secret any longer. You can actually grow Diamond, pure diamond, by replicating the natural process...

04:08: MK draws a diagram to explain what he means – what happens to the diamond is exactly what happens to popcorn – you have a seed in the center around which the material pops under heat and expands – in a similar way you have a seed of carbon which expands in a volcanic environment with heat on one side and cooling on the other, and pops out to become a diamond. That why diamonds are always found around volcanoes. Same thing applies when creating diamond from nano-copper – you see a graphite or grapheme form according to how you cool it – you can produce layers and layers of diamond of different colors.

04:11: The Russians have patented a process to create blue or pink diamonds using low quality diamond, pumping them with gas and then sucking the gas out under a high vacuum – the diamonds are colored according to the gases they have taken in them.

04:14: Now you can grow your own diamonds just like making popcorn – through heating and cooling.

04:15: MK thanks Klaus and the Austrian team and says they can join the teaching team. MK asks if Giovanni is on line. Giovanni comes on and MK asks when his Italian teaching starts at Barletta – Giovanni says March... Teachings will also be made in German, French, Spanish.

04:19: Kosol announces new work by drilling a tree branch and putting GANS and wood ash. MK asks why he wants to drill a tree – these are intelligent beings more intelligent than us – would he like to have a hole drilled in him? Kosol: No Sir! MK: Why do you do it to a tree? K: I do it to a dead tree branch – MK: Try it... But don't use CuO GANS as that is for red tissue in the horizontal walkers (people). Vertical walkers (trees) are more aligned with Magnesium...

Notes from 100th Knowledge Seekers Workshop held Feb 11, 2016

(v1 2016-02-20) DRAFT (Notes have not been verified. Double check info with video)

04:21: Next Thursday is agricultural blueprints day – regarding agricultural developments, including decontamination. Chinese colleagues have done a lot of work on agriculture. Rick has a presentation from David Contreras on this – will be shown next week.

04:23: MK asks people to bring all their knowledge and experiments to Dubai – please make all your bookings now – we have space for children as well...

04:29: MK welcomes his Lordship – Lord Stewart from New Zealand who will be taking over promotion of marketing around the world.

04:30: Rick gives more details on Mike Nashif's 3-day plasma workshop on Kauai – co-creating with the power and intelligence of plasma – everyone will be learning to harness the power of plasma to create freedom, sovereignty and abundance in our lives. MK warns about staying under the umbrella of the Kf and not branching off ...

04:40: For those who missed it in the Tuesday workshop MK repeats the announcement of Alekz's relative who became pregnant from using CO2 and Zinc GANS adjacent to the womb area – the first Kf baby!

04:41: End of a Great workshop with One Planet, One Race, One Nation Video...
