00:24:07

In teachings of the last couple of weeks, I have explained that in the progress of space we will lose our digestion system because we don't need to take anymore. We will lose our lungs because we manage to absorb energy from our environment.

00:24:31

But, what is important is that it's us who decide the level of change. Part of this will be forced on us due to the conditions of absorption. Part of this will be forced on us, due to wanting to be a free person, free from all the attachment.

00:24:56

One thing which is important is how we decide the evolution in the part which is in our hand, but we have already agreed part of it to start with. This means that it's us who will decide to what extent we want to evolve.

00:25:16

I was explaining to you on Tuesday's teaching, the evolution if you look at the plants is very direct. All the time a plant has decided that I want to be able to free every bird, every insect which comes across me will take my flower to someone else. Then I can produce and reproduce.

00:25:46

Some plants they decided they will act to have a thorn, that certain size animals they cannot come in. Some they decide to open their flowers into different shapes, and some use their flowers to feed themselves. So the flowers have decided the evolution which has not been open to men.

00:26:08

We have evolved mainly according to the structure of the environment, or conditions we have been forced into. Man has never realized up to now, that he can decide his own genetic **melt?**. He can decide his own evolution.

00:26:26

And with this new technology, this is in the hand of the man. And this is scaring to a lot of you. A lot of you who listen to these teachings, you are getting scared, what is going to happen. Because you have lost the trust in yourself that you can decide what the evolution is going to be.

00:26:46

You can decide, I want to be attached but how much I want to be attached. You can decide if I want to lose and how much I want to lose. And according to that, you adjust your systems.

00:27:06

Adjust your system in respect to your interaction with the environment you are flying. You adjust your system in respect to how much you want to change it.

00:27:23

I want to be no more than a certain distance. I want to be in certain environment, and then accordingly your body will evolve.

00:27:37

For the first time, we have just managed to become, just about, just a little bit to the level of the plants. The vertical people.

00:27:49

You can see how far behind we are, even though human race they think they are the king of the animals. They might consider themselves as the king of the animals on the what we call the horizontal people. But in respect to the verticals to this planet, we are far far behind.

00:28:12

We have not managed to decide the corrupt of our own eyes. We have not decided by the height we want to be. We have not managed to decide in what shape we want to appear fat, steam.....

00:28:20
