K: Today I would like to welcome the 7 or 8 groups that started to work rapidly after last Thursdays teaching for creating systems for emergency. We welcome you and we go straight into the teaching and I know you are on standby to create these units and any clarification in respect to the oyster system. As you are aware we announced months ago we expect massive earthquakes around the world due to the separation of the South America and North America. In that respect we see a lot of activity with the governments especially in Russia and America and other countries which are going to be affected. For this reason we put the information out on the oyster unit for a number of organizations around to start working on it. There are 7 or 8 in one country who are concentrating on building them and are looking for new insights. To make this very clear we will open the total overview of the system not just for rescue on this planet, but what we call flights. It takes time to decipher this total knowledge and you have to understand where we come from and today how we bring all the knowledge which has been accumulated these past years. We will divide what is important into 3 sections.

K: We started with the GANS system with the coils that are both circular and semi-circular. We used the mass or matter state of the GANS. With this we achieved and tried to use what we call alpha radiation to create a plasma. And then we illustrated the rotation of the cores in totality in creating double magnetic field with the interaction of the gases and interaction with the coils. In some cases we used a mixture of gases, if you remember. And in some cases we used what we see as two internal cores. What we saw with the first and second ones we developed what I started in Iran 8 years ago and then we tested it. In that process we achieved plasma and what we wanted to achieve. Then in Sosano we used nano materials and we started the process where we needed alpha radiation. A lot of you had a problem with my going through the nuclear science but this is a natural process as I am a nuclear physicist.

K: I had to find an alternative where there would be no need for the creation of plasma. We went through the process of producing free plasma; this has never been done and this is a major breakthrough in the world of science and this led to the creation of releasing the nano material for the matter state again. Remember we started and we produced what we called gases in nano state (GANS). Then using this led to the creation of plasma. Now we are going through the process that we have achieved plasma so what are we going to do with it? In the first case with the dynamic systems. We came to plasma in two directions: nuclear and non-nuclear. But now in the plasma condition we come to the next step. How do we manipulate plasma? We started this in the last few weeks on the side of the non-nuclear. What we did with the plasma created, we used two different directions of materials. We carried our different connections and production of systems in the first approach.

K: In the second process we chose two different ways: 1. we went through the coil system where initially all the coils were made and we filled them with the GANS or we went with the double magnetic system of the double coil. One was choosing the plasma internally and one was choosing the plasma externally where we nano-coated and GANS-coated the coils. Now we come to the new understanding and this is to bring the two together in one cycle. This is where we start the process of communication and protection. Now that we come to a new path. It is very simple. You created two

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

kinds of coils—the 90 degree coils and the coils we started last week with filling in the water of the GANS. We went from the GANS using itself now and we have to come to the plasma or the water of the GANS. We are no longer relying on the matter state but now this is a new opening—we are relying on plasmatic magnetic gravitational fields without the dependence on the matter itself. So now you create a composite field of GANS of the plasma.

K: What does this mean? You have the copper and whatever you keep on adding and it becomes part of the plasma totality in the structure itself. They do not amalgamate to become one but the total magnetic gravitational field becomes one plasma. This changes the game. This changes the game totally. Last week as was shown at the conference in Dubai we managed to create a sound barrier within the central system. This will be shown later with Armand. We have created a condition and you have to go back to the teaching of the last 2 years when we started looking at the GANS and we loaded the GANS (GANS throughout) onto the coil. In that process if you remember we managed to establish a rough data where the maximum 2400 to 2600 of luents per minute and you will not get any more performance from the GANS. It was the maximum release of the property of the plasma in both gravitational and magnetical. You came into the coil. We realized that by changing the plasma strength we can release different plasmas.

K: From today we start a new cycle. From today we go into a totally different direction that is an accumulation of both of the two. You know you have a limitation of the plasma. You know you have no limitation on the plasma if you can release the totality of it. Last week we introduced the GANS within the structure of the GANS water of the material inside. So we have become independent of the matter state by using the water of the GANS. We established and we need gravitational GANS water and we established that we need magnetical GANS water. Armand added 2 ml of GANS of lead oxide and it increased the boundary absorption of the fields and the reactor is totally silent. We showed the video in the class last week.

K: But, we know the limitation was around 2400 to 2500 to release. How do you change the game? You bring the two together. If you remember, you had the 90 degree coils and now you bring the 90 degree coil inside the core of the GANS water. What you create –go back to the beginning of the teachings with the coils—when you had the coils it was easy that the core was filled up and GANS was put inside and we saw a circle of water with the hollow center; nothing is inside. That is where we said the maximum would be. The rotation of the coil at 2500 gives you the maximum production of the plasma centralized in its own. Now you have the water. This is your limitation and why you could not achieve higher strength because there is a friction and the total interaction of the internal construction of the GANS itself when it is in the container. Now with the water with the plasma, what we call liquid plasma, you don't have this. Now you have to create an interaction with all the fields inside your core. What you really need to do is to create a dynamic environment inside. It is the only alternative you have. You have two or three choices: what you do you create the coil and you place the 90 degree coil inside your core. Nothing, just by increasing the speed of rotation of your coil, inside the GANS plasma of the water you now find out you have a highly energetic new tool, highly powerful and can now create fields beyond the imagination of the man.

K: Now you are not only stirring up the fields. The same process starts –remember when you made the coils you had the center; when you made the 90 degree coil you had the center. Now, this is where we even put the GANS, the balls of GANS in the center of the coil. Now, this GANS in the center of the coil is the free plasma which was created by the original GANS. So now you have a

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

totally new dimension in the space technology where not only can you control the gravitational, but you control the magnetical also. This is the tool at this present time with your knowledge that can approach lift, motion, production of whatever you like because now you have a GANS in control of all magnetical and gravitational. The choice of nano-coating, of the material and of the GANS mixture gives you the variability in your forces. Now for the first time man has access to what you call the full energy spectrum of we call the principle energy. This is what used to be called the 'black hole.'

K: We now condense both the gravitational-magnetic field of the GANS itself in rotation and the GANS itself in motion internally. Now you created a condition that you have control over the full force and you decide the speed of rotation by the choice of GANS, by the choice of material content and how and at what speed you can control and how much you want to expand and to what level you want to expand. This is an ultimate design for the space GANS. This is one of the ways you will control the whole spectrum of what happens, how it operates. Let's look at this in the bigger picture. You have a plasma, you have the coil, and you have the 90 degree coil in a way in both systems you have created by rotation a matter plasma state in the center. This is how the stars and galaxies create.

K: Now we have the liquid plasma of the water itself as part of it to make it easy in the whole structure of the container. You are rotating your core as you have at 2500 and now you have 2 choices. You can rotate the first core (of the 2 at 90 degrees) or the second core or you can make the 2 rotate at the same time. This will give you a total option because there are extensions of applications of the nano coated coils inside the core which now by the speed of the rotation between the physical structure and the central structure and you start creating shielding, gravitational magnetic positioning, lift, and total color. You can use the same for the production of the plasma to the strength of any cell of the human body. You can produce the gravitational-magnetic field strength of any matter state you would like to receive in space. So you become independent and now you become in control of the full plasma in every sense. You can dictate the gravitational pull into the system and you can dictate its magnetical boundary. You have achieved a total and complete conditional service which means you have a central core forever which absorbs energy from the environment not only through the condition that you introduce but through the condition which itself absorbs its own field and feeds back to itself.

K: This is how the stars and planets keep their motion and they keep their materials to themselves for billions of years. It is the conservation of plasma magnetic gravitational field. In this position you are reacting totally the opposite way for what have done up to now. You started with a matter state to the nano and then you went to the GANS and you went to the plasma and carried on. Now you have become the controller of the plasma because you dictate what the plasma gives out. You go from the plasma to the GANS to the nano state to the matter state. So now you get the power to create whatever you need, the condition you need and which reactor of your star formation becomes the pull and which becomes the push. You decide which way to float or not float. This is what you need to step up to. We are on the verge and we are delivering the technology in such a rapid way for what needs to be done in the coming weeks.

K: Don't forget you use the matter state to contain the plasma and now the plasma decides how to cross the boundary of the matter state. This is the unique process; this is the easiest way to be able to produce what you need. At the moment what you use is copper coils and other things. But go a step farther. The group that is sitting on the side and getting translated will speak to you directly. You

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

send me pictures of the crystal bowls that you have created you need to place the magnetical and gravitational coils in the center. You have two options: using coil matter state or you will use crystals. In these conditions you can create a condition where the crystal is piped. What this means is that you can dictate what GANS of the water you want to inject in the pipe but now you don't depend on copper limitation and you stay totally independent. What does this mean?

K: If you look at it you have the coil. (39.40 min.). The coil you chose which I have seen in your pictures is in crystal. Now, you can do this two other ways. Choose a system which you can insert with internal crystals in which you can control the gases of the plasma liquid (in the center) or you control the liquid of the plasma (around the outside of the center). If you manage to achieve crystal coil condition that you can change the GANS of the water which we call liquid plasma at will then you will not be limited to the copper or anything else. It means that if you go back to what we saw with the innovation/research center where they showed you two glasses inside each other where there was a rotation of the plasma, a rotation of the GANS. Go back to independent. At the moment you don't have the tools to create this, but this is your option.

K: So, what happens is that you put the crystal ball inside a crystal ball and you decide the rotation of the central coil crystal. As I said this goes back to the teaching if you remember, the core inside the core, in the systems which were produced in Iran. This is bringing the knowledge together. Those of you who created double coils and you are rotating them, now you have the advantage point that you can create lift very rapidly through the systems you have. Now you don't need to use radioactive material; you use the liquid plasma. What we call this new reactor is the field plasma because now you work with the fields. Field plasma is in development with Keshe Foundation for space travel. In due course it will be opened up in all the groupings regarding plasma lift will go on this channel. Because now you work only with the fields. The structure is very simple. Now every man can produce any kind of fields they like—anything in any shape or form.

K: Go back to the medical systems which you produced with the panels with the wall. We see a number of these. We have seen the panels which you produced with the coils (6 to 8 coils per rectangular panel—43 min). Now replace the coils with a core where you put the GANS in the middle of the coil and now you can pinpoint accurately which cell you want to change, which cell you want to treat and you can do it totally on a plasmatic condition without the matter state. So what this means is that we bring the total knowledge from the beginning of the teachings to now to one point—interaction of the total knowledge. You have the rotational core, you have the rotational coil, you have the GANS within the structure, you have liquid plasma, and you have the nano technology and the science of ocean. In fact what you do is the rotation of the inner two coils and the inside of the outer rotational core create the double magnetic field necessary for motion. (44.09 min). This is how you rapidly increase your speed to lift. Be very, very careful how you rotate your system.

K: Those of you who build the double core internally using the vacuum system which is a large number of you, now you can fill it with the GANS which means that you do not need to rely on the vacuum system. You can change the center with a coil or change the different liquid of the GANS inside the internal coil and by changing the composition of your GANS water or what we call liquid plasma you should be able to create the state of whatever you need. We will start mixing and understanding the operation of combination reactors. Our friends who are here as a group of 7 or 8, you have enough support within your leadership to acquire all the materials within the organizations of your process to create these kind of reactors. You have a problem – make your coils of 24, 36

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

gauge---very, very fine wires. You don't need 14 gauge. Make them with very fine wire. They can stand the torque and in torque they do not split open and place it inside your crystals. Control the rotation and start with one or the other. You can still use the ping pong ball and the computer cooling system. There is no problem. The system is very simple. You have an alternative. (46.34 min for drawing). The alternative is to put two computer cooling systems opposite each other. Put your crystal ball glued on one and put your coil onto the other. (47 min. for drawing). Your system within hours is detecting, creating, and doing whatever you like it to do.

K: What you do is simply with 2 cooling system you are able to fill up the GANS but I don't know how you are going to control the feeding of it. This is very simple—you can do it and test it. Open it up and change the GANS, open it up and change the liquid plasma and then start the spinning. You should be able, if you understood how to do this, and don't forget to connect. It's a very simple process to seal and one connects to the other. For less than 10 to 20 Euros you have the system running. Look at this system with the 2 fans. You have the base system which you had and I have seen the picture of the crystal you have been working on. Make a hole in the center of the crystal (ball) and place a nano coil inside (with the 90 degree angle coils) and set that coil onto the other computer cooling system. (48.26 min). You can dictate the speed of rotation on either side of the coil so you have 'forward and backwards' until you see the light. If you have a crystal you should be able to see a light inside the crystal.

K: Do not do the two together when you first start. Start with one and master this. There are a large number of you across the country who are testing this now. Do one test; then do the other. If I tell you how you can control this, the alternative to crystal is lead glass. You can make lead glass tubes in which you can change the liquid plasma inside it. If you go the fairs there are glass makers who make tubes with lead. They will blow it in the shape you like. You have access to this in Europe, America. They can make you a tube of glass which is connected in the shape of the 90 degree coils. All you have to do to feed the GANS liquid, the liquid plasma into this so it can continuously change. If you don't have a crystal you can use this in the same way. Very simple, very cheap and very effective.

K: If you use crystal or glass with lead in it you create a full plasma condition. As I said when you start these things set a radio, a camera, and a number of lights and then we show you what was achieved by Jackie which was shown in the conference in Dubai in detecting your plasma boundary. You can see it and detect it and in time I'll show you other ways of how to see the interface of your plasma. All you need to do is to set another system that is the same but of an opposite loading (configuration) of what we have here (51.23 min). The other system with the point of interaction will give you the gravitational, magnetic field boundary. So you run two systems next to each other and you see the power. You can change the parameters and you use the same liquid plasma that you used in the coil in the core and the one you used in the core in the coil. Then you will find it. The point is if you manage to create glass plasma tubes, then you are not dependent on the coil; you are not dependent and you can change the speed of the flow and the liquid inside your core system so now your cores are not wound copper wire but just the tubes. So you dictate what would be in these tubes. Now you have a new dimension, new power into dictating everything.

K: Your limitation was the copper. Now with this system you have no limitation. There is nothing that cannot be produced in the world of creation once you use and understand this. If you want to rapidly descend you increase the speed of rotation and you increase the gravitational field liquid and you descend instantaneously. You want to create borders, hundreds of meters, it will do it

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

automatically. You can make jars to create specific boundaries. You connect this to a specific jar of liquid GANS and that system may give you 20 meter boundary in a point of disaster. This liquid on its own gives you water and everything else (you need in time of disaster). So for the first time you see that the Oasis system becomes the liquid plasma. In your container, you decide the parameters.

(0:53:46)

K: What does this mean? This simply means that you had the crystal ball, you have you crystal coil, and you can connect the coil to the reserve predetermined in characteristic. We were looking yesterday at an interesting phenomena with Fabio in the lab. The nano copper coated with the zinc is producing both CO₂ and copper oxide at the same time because of this connection. The mixture of the strength was put through the copper. So the copper plate you always produce copper oxide with one copper plate nano-coated and one copper plate non-nano-coated. But the condition created through the strength of the plasma which was through the current which was spread to the plate—the same plate produces to the same. So, you see this and you can do this the same in any of your reserve tanks.

(0:55:24 min.)

This will give you water -- 3 to 5 meter parameter. In the reserve tank composition you can decide amino acids, vitamins, any kind of anti-bacterials in a totally clean environment. You decide the food in the containers so your system is pre-fixed. This is the true Oasis system—you decide the whole combination. Total cost is under \$50.

K: These new plasma systems to the group of 7 people who are online—please translate correctly. The translators are online and please translate correctly exactly what is said. We are talking about glass tubing, a glass ball and you are talking about the energy of the plasma of the matter state. If you have a plastic ball you have a problem. Some of the fields at the edge will not cross. But, if you have glass tubes there is no such thing. You can use containers of all the matters as you saw before to keep a constant supply of the fields into the water. Remember you put the CH₃ and the cooper oxide and the amino acid and you had the taste of the orange? Now you keep a constant supply and you don't need to keep on changing the water. By changing these containers you change the composition. Go back to the beginning of the teachings 2 and 3 years ago. We always said that crystals are the key to the space technology. It's the only way you can keep and because of the structure of the crystal in releasing energy, in the different dimensions of the strength of the plasma it becomes irrespective of the matter state of what it is made of. This is why if man can understand and create a crystal out of the carbon he has achieved the production of everything which is capable in the universe of this structure to be achieved.

K: Do not forget what we say: nano material going to the structure of the gas which the gas itself in crystal structure becomes sp³? If you can produce in the time to come the crystal out of carbon which is transparent, which is literally the diamond structure in a different orientation, you will find that you can achieve and produce any matter state, any magnetic –gravitational state with the combination of the coil and the core. Now you see three years of teaching comes to its conclusion more or less. Everything we taught now comes together and it is in the reach of every man to be able to produce. You don't have a crystal; you use a copper coil, and you still achieve the same. You have the possibility to dictate and create. By advantage this goes to our military in Chinese Army. The past

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

technology has become totally impregnable. 1:00.45 min. You cannot penetrate anywhere. When you look at the development you can dictate the GANS and the rotation but nothing can penetrate the _____ of a nation. The nation has become one and it is the planet earth. You need to become one. All the nations as we had in the conference in Dubai of one nation. You can create the shield in case of a meteorite, a large meteorite. The man dictates the shielding of the planet.

K: If you understood how to apply it means that all the military forces on this planet, we have become a peaceful planet, and they can enforce such a condition to take over the magnetic-gravitational shielding of the planet. This was the purpose of the one planet, one nation, and one race. At the beginning you can protect you part of the earth. But if a meteorite hits behind you protective field, then we need a total defense and everybody has the same access to the same defensive technology so we don't need to have the difference and the armies. We need to create a defense on this planet to protect what is to come. When you are in space you can create such a shielding. Rick would you pull up a picture of the ship on the screen? Some of you know what this picture is; some of you will be shocked by this. This picture is important for you to understand. How did we get this picture? This picture of the ship is of Europeans trying to get to Africa during the last war.

(1:03.25)

S: The ship is actually Albanians in 1990 trying to get to Bari (?). The ship came from Durazo.

K: What we are trying to explain is to replace these ships (filled to the gills with people) with the space ships when the time comes. Every man will try to get on the boat. When you get hit by meteorites or you have the problem with continental movement which is coming ships are of no use. You see it is irrespective of color and race. In the photo you see Africans on the boat; you see every nation on this boat. We have seen the same thing in the Iranian revolution. We have seen these over and over. This time when we get hit and we have the continental motion, these ships are useless. People will call to get on anything at any time. The only thing you can save yourself with is the space ship technology. People will crawl. You see the same thing in the Caribbean, in the 2nd world war and in the past changes. The same pictures repeat themselves against and again but this time these ships are useless to the man. We become the refugees. There is no where you can crawl on. If you go with the present world scientific understanding when the meteorite hit the earth in such a vast strength it destroyed the dinosaur and changed the climate.

K: This time with what we see coming up and that is why you have seen these teachings, with the changes that should come in the process of the continental move, with the accidental interface with a meteorite or whatever comes to the planet these ships are useless. Secondly, with this technology you don't need shipyards. The understanding of the shipyard is totally meaningless. How can we make boats for 7 billion men? You build your structure the same way as we said before. You go in this line of thought, the same cores, the same control, the same structure and now you decide the star formation. Now you have full flexibility in how you shape the structure. Armand, can you share with us the 2 videos you made? We want the one with the silent motors running.

K: So I will explain what happened and I talked briefly at the beginning of today. What Armand did a couple of weeks ago; he started loading the reactor with liquid GANS, what we call it the water of the GANS. In that process he started rotating and he has recorded the whole motion of the cores. This is a very small core, the ones you saw on 1/29/16. There were 4 small cores on a plate and he has taken one of them and has filled in this tiny core with the GANS water. What has happened, I asked

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

Armand to start loading the reactor with the GANS water? What he has done in loading the reactor, he put the camera looking down onto the system, connected to power supply and he increased the power to 20+ volts with a high rotation in thousands of revolution per minute. Then as you will see in the second test all he has done is to change the water content of this coil by 2 milliliter.

K: Se he took out 2 milliliter from the core and added 2 milliliter of GANS of lead. This means that lead is the absorber; it is the heavier gravitational field extractor from the environment or is the holder the gravitational magnetic field. When is the first loading before we added the lead water, as Armand speaks because voice itself is part of the GANS state, the voice of the man is not a matter state, it is a GANS state. Part of it is a GANS vibration because it comes from a vocal point box of the man which is created by the GANS itself. When he speaks, the interaction of his voice with the strength of the GANS fields which are created in this unit breaks the barrier, we hear the motor. When he increased the GANS by the amount of the lead GANS water, the interaction now had a combination of both, but heavier amount of lead and you will the interaction of the two cannot break in because now even everything is at the strength that the voice cannot get through. You hear only silence.

A: at 5 volts you can hear the motor. I am going up to 10 volts and now to 15 volts, then 30, then 40, 50, when I talk you can hear me. Now to 24 volts. Now I will slow this down. Now 15, now 10. now it's 4 volts. Now I start the test again with the 2 milliliters of the GANS of lead. 5 volts, now going up 10 volts. Now it is 9.15 volts. I go up now to 20 volts. The motor is very loud then the noise stops. Then he goes to 12 volts and it's very loud. He slows it down and stops it.

K: What is interesting you will notice something very effective; it allows the sound of the man to carry, but it doesn't allow electronic or electric motion to carry. This is exactly what we saw with the American naval forces. They could hear each other but no electronic system was communicating or working on the ship (that the 2 Russian planes flew over). They cannot transmit that kind of system communication. This is important in space technology where your shield continues to be operational but you can communicate internally. The reason for this is because part of the structure of the GANS that is used to produce the liquid plasma contains copies of the amino acid which was in the liquid which was created with the GANS. If you create a total, pure GANS and you don't take any GANS from the top and there is no possibility of the amino acid to mix with your material you will find out you will not even hear the voice of the man. But, there is an interesting point. Replay the 2 tapes. Replay the tapes many times until you see what I am talking about.

A: Adding the lead and you move the hand you could not hear.

K: What is interesting, if you look when the noise comes up, just before the noise is recorded or when Armand thinks an intention to load, or thinking, you see the creation of the noise. In a way the strength of the intention before the physical move of the change or the talk is already interfering with the system. This is what I explained. Your intentions will be detected long before your physical behavior. Play this many times and watch just before Armand speaks and when you hear the noise. It is very interesting. The intention allows the voice to be heard. This is what will be fundamental and for those who understand it will be shocking news. What it means is that you can create liquid plasma that measures the intention of the man. His intention before he moves and before he talks that he is going to move, if you look at the hand it is not moving. Just before he increases to higher

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

voltage you start hearing. So, this becomes frightening for those who have the wrong intention. Now, in the process in adding the plasma of the amino acid you can create to understand the conditions of intention. Then you can do the same in creating systems which can create via strength of the soul of the man that you can see the intention of the physicality long before the man does a physical move.

K: Go back in the process of cancer. With the system it took 2 hours before we saw the physical drop of the cancer cells. If you can understand the strength of the soul of the man which is measurable now that we have access to the full spectrum of the gravitational magnetic field of the universe in creation, now we can create conditions that if a man stands as a president and says, "I want peace," but his intention is to sell arms to create war, you see it directed. I wonder how fast the 7 group which are listening can come up with the intention system. I think Armand should be doing it in the next few days as the master of the technology. He understands how to do it and he has the understanding to extend it. When I asked Armand to make this coil at the beginning with the GANS of water it took him a week to get the core made and now you need to go through such an elaborate system.

K: Get yourself a ping pong ball or a crystal ball and fill it up with the GANS and then change not the GANS but the liquid plasma and then start testing. Change the parameters and keep in mind that you know what you have and then change the parameters slightly. Change the GANS of the water. Put a container of the GANS outside and change that. Change the strength of it and the quantity of it. Or, even what you can do is very simple. You have the reserve tank. As I said you can put the GANS outside and try another direction. Keep the GANS aside and put the liquid plasma outside where you had the GANS.

(1:28:48)

See if you transfer with the liquid plasma without the matter. In space you do not need to carry a fingerprint. You have the water of the fingerprint. Then the standard will not change because you have a reference point that you use water of the GANS. Remember in the test in Japan with Keshe Foundation Japan. Remember they tried not the GANS in the contaminated water, but they used the water of the GANS and they showed the same result.

K: Now if you have one GANS, go back to the same process of using the water of the GANS. And then in the process do we come to the point that we need to have water as the carrier? By putting the GANS of the water on the outside of the reserve tank do we need to fill that environment with any liquid of water or do we operate totally from now on with the fields of the plasma. And all we need to do is to pump it into your coil or into your core. This is what we call field plasma technology. This is becoming totally independent of the matter state, totally independent of the liquid plasma and now it is working totally through the plasma. Because, if you understand in that container, in that structure is the same liquid and the same field of strength and it will take you time to understand how to create the motion of the sucking or feeding of the material in the reserve tank into your coils. In what strength, in what you need, in what combination you create that you create the motion and the field of strength changes. I said to you that I put everything on the table. Now is the race among the knowledge seekers to see which one of you will come, show and deliver part and part from different groups, the lift, the emotion, and the new health systems without the coil or core but with the field plasma technology and this is the ultimate system for saving man for this planet. The faster you deliver this and it shouldn't take more than a week to two weeks, especially the group that is sitting

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

today, you have enough scientific resources and enough resources in the background to be able to deliver this new system. We thank the scientists who put the group together in the past week—you know who you are. We thank your government for doing so.

(1:33:00)

K: It is important to be able to deliver a total technology. My talk goes to the medical people and the space agencies: when you understand and it can be done, you will understand that with less than \$20 and going back to the system which we showed you with the wide open U-shape and you have 5 reactors on this and 3 GANS combinations, you can control everything from the communication to lift to production of materials. While 3 systems in combination create lift, 3 combinations will create food and the others. But at the same time the system stays at the gravitational-magnetic field strength to one G which means that you do not become weightless.

K: The defense application is so important because without defense and protection you cannot go into space. You need to be able to move the whole structure in a different direction. The structure by using crystals, by using glass, by using lead, there is a company that is all over the world and they are fantastic for this technology. They are called Swarovski. Go to them and ask for crystal balls. They will not know where to get their hands on how many so fast. They might be expensive but tell them this is what you need. They are in every major city around the world; they make crystal balls. They have the knowledge to be able to deliver whatever you need. Understand that with the coil and with the cores you saw the strength of the plasma. Now Armand showed you that the strength of the whole entity. We will show you something from the last conference in Dubai.

K: Can we share your video that you showed in Dubai? In this video we showed a specific zone that you can set up and see the parameters of your plasma; this is one of the ways. This is done because he uses a plasma system to feed the light and the light energy system is in plasmatic condition. What you will see is very simple. You can for the first time change the strength of the crystal, the strength of the liquid plasma in the crystal balls and the cores (coils?) and then you will see the possibilities. This is one of the possibilities: to be able to see the boundary of your plasma. This will give you an interesting understanding with a simple system that Jackie has done you will see the structure. What you see in this process is that this is very much where the camera is moved and you see the boundary of the plasma and this is because of the matter state interaction. You can see the curvature of the plasma. And you can do these with the systems with the system opposite to the loading you can find the interface of the system. You make a twin system. One is gravitational but it becomes the magnetical of the other one and in that process you should be able to see the boundaries of the plasma that you have created. In Armand's system if you go towards increasing the loading of the lead, liquid plasma you have two options. You absorb so much energy that as I said in the conference, you sink in and you break the plate because of the weight of the gravitational field extraction. Or you get another opportunity where the absorption is so high that it has to feedback and leads to the creation of a very strong shielding. What this means is that you absorb so much the system through the lead that it cannot hold onto it and it just bursts open to rapid shielding. So your magnetical field becomes huge.

K: Look at the video. You see a curvature that looks inward. You see the sides and this disappears. This system is spread with the GANS energy. So you see this system is coming back and you can see the curvature. In a way with a small camera we can see the curvature at any point. This is a GANS system and the system was loaded through the GANS energy so you are not looking at only electrical

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

current. We are looking at plasmatic too. This is the difference when you have a system that uses the matter state to create light and you have a plasmatic supply. So you create two kinds of energy at the same time. You create two kinds of atmosphere at the same time. We see the light from a distance but the plasmatic boundary is limited to what is released in the matter state. We can see the interface of the plasma through the curvature of the light. When you run this to repeat you will see the full curvature as the camera moves up and down and side to side. The curvature is very clear and this gives you a boundary more or less to the back and the front to the top and it goes down and the curvature moves this way. So there are ways now that you can see the boundary of your system in a very simple way. You change the GANS ingredient, the liquid GANS, the liquid plasma and then you take the same structure and then you see you can measure the parameters of your system. Mark it as to how far the boundary was before you added GANS of liquid of CO₂ and then how far it expanded if you add CH₃. Some of you might be interested in a very simple system.

K: Make a very nice, simple system. High absorption, high radiation. You get the liquid plasma of lead and liquid plasma of CH₃. Don't mix anything else. One is a fuel absorber and one is the fuel radiator so you have a massive gravitational field absorb through the GANS and you have a massive emitter through the CH₃. See what the response is. See how your system reacts; do you need in the case of high shielding to increase you lead liquid plasma so that you get higher shielding? Now you have created a carbon link and that carbon link is important because your lead in conjunction with all the structures of the carbon itself becoming crystalline allows the full transition. Then this is how you test: You make a balanced mixture of the lead water and a balanced mixture of the CH₃ water. Then add in different mixtures and put it in your core and in your coil in your core and see how you change the boundaries, how you stop the voice and how you stop seeing and how you can create zero time communication by packaging it.

K: You saw with the system of Armand's intention. Put the camera on and don't speak but INTEND that you want the system to go higher, INTEND that you want the system to go lower; I want to interact with the system. See if you hear the noise of the camera or the motor coming on. Then you can hear your intention. This is where we go from now on with the space technology on the edge of creation. This way your intention is the creator of that shield and immediately you achieve it. You have observed the tank with the GANS liquid plasma of lead or CH₃. *I am hungry*. You tank into the water of what your desire is. As we saw with Jackie if you want water, food, a steak this is what it is going to be from now on. On demand you tap in. this is the change and I am sure within the coming weeks as I said before when we brought the nano technology there was a lot of concern and now it has gone to the GANS and it has gone to the coils and now you understand everything and it all comes together: The coils, the nano, the plasma, the liquid plasma, the GANS. It now gives you the full capability to deliver the whole spectrum. Different groups of you will do different applications but the essential point is how fast?

K: The group sitting that is invited today can deliver to us with all the resources you have at your disposal to deliver a total shielding system by interaction. There is a twist in the whole of this discussion. My point goes to our military heads who are our listeners and will be the listeners to the teaching. You are talking the nuclear centers, the space and technology, the space organizations, and we start teaching exclusively for the space programs and the space agencies and the military from next Wednesday. The Keshe Foundation will teach directly to the military structures around the world on an exclusive basis which is pre-arranged. If you are pentagon, naval military officers, or Russian or Chinese, from next Wednesday we start teaching as pre-arranged to the military and the

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

space centers. This means if you are with the Pentagon, Russian or Chinese military systems contact us and we will give the private access to the setup. You become part of the ministry of technology and defense and we teach all of the governments and the countries at the same time.

(1:50:38)

This is prearranged thanks to the Chinese ministry and army. We invite the Americans and we teach the technology to all the ministry groups and space groups every Wednesday morning. If you are part of the structure of the American services or defense, Lockheed-Martin, Boeing, military aircraft on the defense side, Russian military, please join us next Weds. And we give you exclusive access to the line that has been arranged with our groups in the Chinese ministry and space. We teach all at the same time. The Chinese nation is a peaceful nation and they have taken the lead with the technology with peaceful application. The only organization we will not collaborate with is the Swiss organization as long as this man sits on the board of directors, due to his criminal activities. The Americans and the rest are welcome.

K: The process is very simple; we deliver peace through education and application. Armand in a very simple way with his very pure heart has shown how simply voices can be drowned (?). Now we are asking that the American government become part of the organization for peace. We do this irrespective of nation or color because we are one nation. The Americans will need Russians as they need water to drink and the air to breathe. American forces will not be able to meet the disaster which is forthcoming. This is to prepare beforehand and the hand of Keshe Foundation is extended in friendship with our friends across the waters. We teach the military in a very rapid way because they are the only people who can deliver the rescue system.

K: We create the shielding system and we deliver the technology which allows man not be trying to get on ships that are going nowhere. You have to understand one thing: the picture of the ships showed people that were going to land somewhere. They will get into the waters. But with the pending disasters, and now we know the American military forces are preparing for massive shakes and the same for the Russians. Nuclear reactors will create such mayhem with the radiation as we saw with Fukushima, that creation of these shields with this system is essential. Even the waters will be contaminated. The only protection left is the creation of the plasma shield which can cover you for everything. This is how bad the situation will be and it's not up to us anymore. Apparently from what we see from the national communications leading nations are waiting for the shaking of the continents as they see the massive increase in earthquake activities.

K: So this is not just taking man into space, but creating an environment that radiation will not be a problem. There is an opportunity that we will discuss with the military discussions next Wednesday in the application of the nuclear technology and in the production of the shielding. This is not for civilians and that is why we have separated the civilian teaching from the military starting next week. This brings in the operation of the structures which has to be in the hand of the military to guarantee peace and stop any unnecessary and dangerous moves by any groups or nations to try to lead in one way or another, the other nations. The knowledge will be spread equally. The military application in the hand of the man of the military is a tool of peace and as we said, we have gifted that to the Chinese nation and the Chinese government and it is up to the other countries to take the step to be part of it. Those who pointed to Keshe Foundation as a terrorist organization like the American government and the Canadian foreign office have done, it is now for you to change your documents into the reality which does not exist right now—we are a peaceful organization and we deliver the

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

tools of peace. Those who do not attend the military teaching on the plasma technology starting next Wednesday, this is the only way we can enforce that you understand the information. If you are man of peace and you are part of the military we have nations at the table next week with their military who can share knowledge next week. When it is shared, there is no fear.

K: The way we got the collaboration of all the Keshe Foundation supporters across the world is Jackie in Switzerland, from the States, the others of you in Ireland, Kenya and many others. Now we bring the collaboration of the military forces to bring peace through the education of the technology. My thanks go to the Chinese and to President Xi as a man of peace. The structure is very simple and we will deliver a technology which will deliver such a system. There is a lot more still to learn. There is a lot more for the space agencies who come to the teaching next week on how to create the absorption of the fields from hundred of thousands, if not millions of kilometers away and to create protection at the high speed. There is one important thing: learn how to manipulate the plasma, not the GANS anymore. Learn how to manipulate the fields and not the liquid. If we reach that position then in the universe by absorbing the fields we create the condition in the center of the system where this system, not only dictates what is absorbed in the center, it dictates what we have shown to be released. The process is the simplicity of it; a farmer can achieve the same as a man of science.

K: The process has to be understood and to be methodical and to be in a sequence of what is expected and how much of it in what direction. It is important that we understand the totality and the strength of the elements we would like to create. There is no use creating our ammonium (?) when you are expecting protein. You have to understand the interaction of the fields so you can create protein from the attraction of any fields. The culture of plasma is very rich. It is for man to unravel its richness. It is for man to bring apart the understanding of the totality and how you interact and deliver and create sharing at the point in what you want to share. When you understand this interaction of the fields and of the plasma, then you understand the totality of the interactions and you decide what kind of things you can produce. What is produced in the pictures we will show you in a few minutes? When you see the box you have the GANS of copper in one place in the box and then you have GANS of CO₂ in another place in the box.

(2:02:00)

K: What does this water carry? Do we get the GANS of CO₂ and copper oxide in separation or the attraction of the two and then what is in there? you have to understand the gravitational-magnetic fields so you can use the interaction of the waters of the liquid GANS plasma at the strength to create the fields and the strength of what you need to absorb or to reject. Would you like it to be seen in the color orange or the color black? A lot of you have noticed motion in your GANS. Why do you get motion and why do you have that motion? Analyze the data: You dictate the speed of the rotation of the GANS within these glass tubes or within the glass system and that itself will create the speed of rotation. You do not need motion. The speed of the rotation of the GANS liquid plasma of what we call the field plasma will dictate the interaction and outcome. In the space we don't have water. What happens if you break the glass and you need a new system? Do you want to come all the back to earth to get some water to make the liquid GANS?

K: You have to learn the application and the implication of the interaction of gravitational magnetic fields. You have to understand how these structures with the fields created in interaction with the body of the man can change cancer and can feed the man and can change diabetes, and change the problems of Parkinson's disease. Now you have total capability so measure what I explained with

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

Armand's system with the emotion. If you can measure that emotion, the strength of it, then you have found 90% of the solution for any disease for the physical body of the man. 90% of the problem includes the emotion. Find out what the emotion level is of a person and then satisfy that field. Then you will understand how you change the man by satisfying the fields or giving to it what it needs that it can expand within the dimension. Now you understand your patience in the past 2 years and now it is coming to bear fruit. We had to teach. The process is simple. What about the man on this planet? My worry is not about the man on this planet, but every creature. Feed the dog, the fish. Man always looks at how he can save himself, but my job and your job is what we can save on this planet that makes the totality of it. Not just the man is for saving. With this structure you carry the knowledge of the planet across the universe. If the forthcoming generation decides to have a tree they can make it look like a Christmas tree on planet Zeus. Now you carry the total knowledge of the information.

K: When you are British and you go to Spain, you still go for fishing trips. When you are Italian you go to Australia and you order a pizza because it brings you 'home.' Now with this knowledge you carry the whole essence of creation on this planet across the universe. That is what is called the universal council. In time you will understand. What is achieved in Dubai is the cornerstone for the next one. You have to realize exactly how you can now manipulate. Do not come and say you have seen this and what it does. Of course because now each one of you become master of the play. Now you can deliver energies in through the field interaction and not the liquid interaction. It is a rapid jump and we have no choice. There is no choice; by the time you develop these in rapid condition and then you can implement it and then we can see how many of the man on earth we can save. When we say 'man' he is from the ark and he needs the totality of creation on this planet.

K: Now we will see what we are talking about with the interaction of the fields. This picture is important because it brings to you a lot of understanding of the other condition. What you will see is how we create a condition that we can produce any kind of shielding, motion, food and peacefulness within the same structure of the 'spaceship.' Now you decide very simply in a simple way how you are going to control the gravitational-magnetic field starting with the liquid plasma and some of you will jump directly into the field plasma. You create a small gravitational field on the top and 3 equals on the base.

(2:10:20)

In feeding the totality you create the elusive, what you call the 'spaceship'. You have to understand how to control each one. Now you have a given gravitational magnetic field GANS pot to the side which feeds the 3 balls on the base that are equal. Instantaneously you want the change slightly in a different field in one of the 3 balls on the base, then you change to dive or to increase shielding or you ascend. A lot of people send pictures of what we call spaceships. You see a lot of pictures of them that are opposite to the present space ship technology, the present flight Technology.

K: If you understood how you create shielding and we have covered this many times before, at the moment you have aircraft and you see the vapor trails and you know there is a craft. Take the space ship technology and your craft 'sits there' because you are creating the fields ahead of you to protect yourself. It is a different school of thought and different understanding and this is what is important. Now you are protected. It is you through the mixture who decides what the strength of the whole shielding. You are highly protected because you are going matter density. 2.12.37 minutes. Or you can make the shielding long where you can go at higher speeds. Now this can expand millions of kilometers.

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

(2:13:13)

K: A video shows the boundary of copper oxide and further out it's another boundary farther out of CO₂. The two interact. There is a boundary that is the boundary of the two. The 'outer boundary' is the zinc plate and the nano-coated copper plate. You will have a boundary inside the two boundaries which is the balance of the two boundaries. So you will be able to understand more. You can take the water from the container in that central position and measure its strength. See what shield it creates. If you look with a camera, and then what do you see when you add another material? Then you will understand that you have built a strength you did not have, but at the same time it is as it should be. When you look at the structure it is very interesting. This is the actual boundary – see 2.14.59 minutes. It is roughly like the wave pattern of the yin and yang, the balance of the fields. Where we see more push from the copper oxide and in that container you don't have only CO₂; there is a third element there. Somewhere there you have zinc oxide and zinc and copper are very near to each other; when one gives the other one takes. On top of it you have the pressure of the CO₂. In this container you have the composition of 3 field forces which in them create a new condition in the waters of the structure.

K: In these plastic boxes which you created the GANS in, there is an influence from the plastic on your magnetic gravitational field. Look at that; a lot of time you see a huge amount more of CO₂ on the boundaries and it piles on the sides of the box and less in the center. That is because the gravitational magnetic field of the plastic which is a carbon hydrogen bond has an influence on the production of the zinc₂, copper oxide production and the CO₂. You should have seen that when you had the copper oxide in the containers and you see the boxes on the walls are always full of oxide. You have the same condition with CO₂. This is not to teach you about the GANS but to teach you about the gravitational magnetic field of the GANS or the water of the GANS which we call the liquid plasma. This is enormously important. 2.18.07 minutes. That is how the fields here are. What if you take water from that center part? Is the water taken from the center of the box the same as the water taken from the corners or edges of the box? Are you taking more of the yin or the yang? Are you taking more of the balanced energy? Are you taking more of the understanding of the totality of one of them? Remember something important: this will come for you to understand more clearly in the coming time.

K: If you go back in what I explained previously where you have your coil (circle) and then you have the core (the 90 degree interior shape) and you fed copper oxide around the 90 degree core as field around the coil and then you fed CO₂ or whatever else in the coils. What I explained that when you have the copper coil and the copper core and you fill up the core with the copper oxide and the other one with the CH₃ then you create another system which is totally the reverse. You put the CH₃ around the edges and the copper oxide in the coil.

(2:20:45)

What do you get? The balance of the two creates the twist. What one gives the other takes. This is how in space you allow another craft to enter or to exit. This is what we call the portholes of the space. The power of the system creates the opposite of you but in equal measure because of the same you allow entry and portholes. These are the gateways to enter and exit in any spaceship technology. It only allows what is to be there because it matches yours. In a further development you can always keep a constant condition but allow walls which create different shielding. So you can increase your shielding even against aircraft. You don't harm; you don't destroy but you don't allow what happens.

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

We have seen this in a number of tests; if you see an aircraft approaching but you don't want it to be near you find out that the craft will go up and over the shielding and continue on. This we will teach the military in the coming weeks. This means that there is no threat or possibility of any nuclear attack or intrusion. We make space so safe and you need this because when you go in the deep waters there are different densities of water at different levels. You need to keep a constant shielding but you need to change the other shield according to the environment you go into.

K: On earth you are in the condition of the liquid water. What about in other galaxies, dimensions of field motion of the universe? This technology allows you to travel in the full spectrum of the universe in any strength as long as within the structure you don't forget to put the registered record of the amino acid of the man in the texture of the plasma. Because the plasma changes according to the strength it receives, now your reactor dictates the change in the plasma of the amino acid of the man. So, if you understood what I just drew on the pictures here now in your amino acid core you will receive a new dimension of energy. The amino acid is part of this structure. You are the satellite. You are the other part. Your field changes with the other part of the pair which means the human can live anywhere across the universe and it doesn't matter what field changes there are because you have embedded the base value which is the amino acid of the man. Even your DNA is amino acid based. It will rotate according to the strength of the boundaries. So, man can live in any position in space.

K: The totality of the knowledge is understanding the balanced interaction of the fields. If you understand this part you can develop technologies that can easily create the conditions that you want. The conditions of what could and what can be. You have a condition of Alzheimer's and it is an emotional condition. You cannot understand; you have the field of strength, you strengthen the field of strength and man will remember everything instantaneously. You satisfy where there is a lack of emotion. You have a condition of Parkinson's and you do the same. You have to realize that now it is you who decide. We start the trials with the doctors already and next week we start teaching men of medicine on Wednesday afternoons. In the mornings we teach the military and in the afternoon we teach the men of medicine. If you are a doctor, for the next two weeks we open a channel and you have to pass our security structure or we can give your details to the military to check if you are 'real' and they tell us yes you are, and then we will teach you as well. It is good to work with military people as they have access to everything. If you claim you are a doctor, we give you to your country to confirm that you are. So this is collaborating in an open platform. If you give an American's information to the pentagon to see if he is a doctor they will say yes and then we will teach you.

K: Then you help the Chinese or the Russians in time of disaster or you help your own nation. As I said we can force peace through the understanding of the technology. So, if you are a man of medicine, a man of true health, not in any other way claiming to be a doctor or a man of medicine you can join us on the health teaching. By teaching in the public we will gradually reduce and increase in this specific direction for specific groups. Space personnel and military will be taught at the same time because it is combined and the health will be done separately. These will be for a man of health or a man of peace—we don't call them the 'army.' Use this knowledge for peaceful application. I will repeat what I have said: military costs are the same if it is the time of war or the defense or you are doing nothing. You have the soldiers on reserve to sit in the middle of nowhere in case someone might do something. Now, use this same military to build the schools, the roads, and use the national expenses in peaceful application. This is where we trade the guns and bullets for peace.

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

K: This is how the technology will be used and a number of world leaders have started to understand. We do not need huge armies to be able to defend when there are no borders to defend. We can create the condition where the budgets of the military can be used for the peaceful application and development in every nation. It is strange in how this will shape up in the coming weeks. We have started certifying the process of health application; what we launched as the health, the plasma, as what we now call the materials which we will be using for the upcoming development and testing of the trial cases of what we call the food supplements. We are acquiring health certificates for the application. By the time we have the trials we will have the certification, the materials to use. This is part of the process when you have good friends in good places. So all the materials which will be used in the upcoming tests carry certification. We have two choices: for us to create mass of material will be difficult to do. What we are planning to do is for these trials you are submitting to, we give you the blueprint and you become and you accept to become part of the recording of the trial.

K: This is important: the way you created the Magrav system and the health system, now we give you the blueprint. If you want to become part of the registration of the knowledge of the man, we give you the blueprint of how to make the products for the man, for the lotion of the body, and how to get it. We don't then become accused of practicing medicine. It is you who practices on yourself and we just give you the blueprint. You understand that this way we do this collectively. Those who are sitting and trying to create mayhem, your hand is glued to the table of your health. What this means is in the coming days where you sent the application and paid, we will give you an option. You can use the blue print and follow us or you we tell you how, we get you the material that is certified by health application. So, nobody is practicing medicine, but everyone is practicing for themselves. When you decided that the orange juice, lemon juice and honey was a good thing for your cold, now you decide and they can't put you in prison because you tested it. We gave you the blueprint. You create the material for yourself. We run the massive trial for saving humanity for those who want to change their position and for those who need to catch up with their knowledge which is release. There is one important thing for us: delivery of the knowledge as fast as possible in every aspect and we will do it from our through government apparatus as much as possible. The promise is to be kept with the collaboration with the structure of military, the structure and the space and health systems set up by humanity in the past century. It is to be used here today for the peaceful application.

K: The problem is not a problem; it is now how many solutions can we find to overcome the problems. There are millions of Keshe Foundation supporters and we pass it on to you. You opened the channels and it is for you to test. I have put the whole knowledge of creation in this for the past months. Each one of you decided what to do: some made the coils, some made the units, some made the GANS, some made the coils for the health units and now this is one of the options of creating the plasma from the fields and not from matter state any more. This is the beauty and how you can create such a condition is entirely up to you. It is entirely how simple you make the systems. We will produce the Magrav systems; we will still produce the belts and everything else because it needs to reach the man who does not understand. It is for you to come to the platform of the Keshe Foundation as a whole world wide and how easily we can help each other to produce systems and it can be done. We are testing and starting the process of the night and day panels. We will see how much more energy we can produce more at night than in the day. We already have achieved this in the daytime and now we want to increase production of the energy at night without burning fuel and by using the magnetic gravitational fields of the planet. Once we see the data we will collaborate with other scientists who join us and then you will find out you don't even need to burn fuel at night.

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

We can use the energy plasmatic condition as you see in my last example on the board on the planet itself to create energy for the man itself.

K: In a way when you walk on this planet you absorb energy; when you sleep on it you absorb the energy. Now you are creating a simple system to absorb this energy and change it to whatever you like. Heat, light or anything else is the process in the ongoing development. For those of you who have produced the GANS materials and the copper coils, and the big coils, and who have managed to create the GANS liquid plasma and the fields, the challenge is very simple now. Now it comes to a simple understanding: how do we use the systems to absorb energy from the planet without burning any fuel and understanding the properties and structure of the nano material and understanding the new process which we just showed you. Can you clear and develop the technology by using the nano material embedded in the earth on the surface of the planet? You have the earth---we have a system that is so close that can absorb anything which comes out of the planet. You can move it anywhere. Don't forget you created a system and you called it a solar system. Now we are looking for the earth magnetic gravitational systems. You can embed coils inside the planet and they are nano-coated but you have to understand how. You can create field detectors with the plasma GANS systems which we just explained that only absorb certain energies and you can run your energy system. 2.39.11 minutes.

K: The solar gravitational system according to what the planet releases you adjust it and you absorb the energy at night. The magnetic gravitational field from the planet is constant and you cannot change it just because you are in Washington, Beijing or Moscow. It is the same. The same kind of fuel strength comes up roughly same in each place. So, we should be able to create systems in which the magnetic gravitational field matches with what we need to create energy, food, light or whatever. We don't look into deep space for what comes out from the stars or the solar system. This technology now that we understand more of it, we can rely more on the structure of the planet itself. We have started this process here in Italy. This is what we have started in the last couple of weeks. Now we are going to understand how not only using the nano technology or the GANS technology, what we use is the liquid plasma and the field plasma to create conditions that we absorb from this planet which release so much magnetic gravitational that you can create as much energy as you need at the point of demand. We looked to the stars but we forgot that the planet itself is the creator of huge fields that gives it its atmosphere.

(2:41:30)

K: If you understand the work of the herbs and the plants according to where they are and their position what they absorb, now we make the herbs condition according to our needs and the atmosphere of the planet itself. It is simple: I know our friends in the group of 7 or 8 will produce these with the crystals that you are looking at. I have seen the pictures of them. embed them in the ground and in different positions in the earth and feed them with the liquid plasma to start with and then see what extra you get when you put more in and measure it and create the condition of the demand of the flow that allows absorption from the fields of the planet. By putting them in just one position you will not get what you need. You have to create a demand on one side that allows the attraction of the fields on the coils (buried in the ground).

K: In the past few days we have seen especially those who came to Dubai, people showing you new systems and new structures. We have seen a beautiful system from our Chinese friends when we got into the health application systems. Show us the pictures we got from China. You see all you need to

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

do is to add the knowledge. We have seen this with our people in Austria, the Philippines and America. It's very simple what you see is the Chinese model. 2.45.06 we allow the Chinese group to make these systems and sell them on Chinese eBay. This allows them to finance their activities. You see how they work and in the coming time teaching centers will be allowed to use these to bring financing for themselves for teaching and not for commercialization. This is what you see. Now you see how simply the system is applied. This is how simple. Now if you take and change to the reactors we saw today you see how simple the proposition becomes. You have the helmet. It is psychological, emotional and physical. There are 'dumpers.' It is amazing how knowledge seekers around the world are having the same understanding according to what they see and they add to the knowledge. This is the same structure in the cups that I used for years. We are expecting for what we call the Austrians to give us an answer in the use of the helmet and system in Austria. They are working on getting the scan of the brain.

K: There are a large number of you doctors and scientists building these. If you are a man or technician who built this work in conjunction with the doctors. They have full knowledge of the man's physical being. You built these you understand them and we will start the collaboration with doctors and we will meet with scientific delegations who are actually coming to Italy. We start the collaboration with the world of scientists who understand and they want to test the products. We do not disclose any more names and addresses for those who are paid by governments to disrupt. They can get a payday by helping humanity and not destroying humanity. And we see a lot of these things around and now we bring this as nano-science technology to deliver the technology which is tested by the man of science who understands the certification. Let's see how much we can develop this to the next step. These systems you build and if you change and develop into the next step into the GANS system and to the field reactors and how you fill them, you will find out the interaction and operation will be very, very rapid. Some of you at the moment use the salt water here. If you understood the process of the whole structure why don't you use and you understood that if in the reactor you added GANS of lead, you extracted fields to a very small container with the line connected to lead water. No more. You don't need such a bucket as a salt. But a human body, if you need it, you just add to the container the GANS of sulphur. You don't need the bucket and you just put the GANS into the GANS of the sulphur and what you need to dump it will dump in there because it is s an absorber. If you do the same to extract and this means nano science is developed fully.

K: The safest way for you at the moment is the salt water; but if you understood and developed you can use GANS of liquid plasma or the field plasma of the field in which you extract and want it to be going across the system which is not needed, into the field power. This brings us back to what we explained and into how this technology will be used in the support of what we set up and what we calla the Universal Council. As a lot of you know, the Universal council first gathering was selected and we have 71 members of the council in 21 languages and in time the 71 will become 71 languages. At the time the meeting of the 71 is to be built to 144 and will take place on Sept 9, 10 in the City of Rome. We announced the meeting point and the limited numbers to the conference and we close applications very rapidly. Now in Europe we know a lot of people will want to come in. The total capacity is limited and we have booked a place. The 71 members of the council will be present. From that point on the council will make the decisions on the future direction of how they want to operate. We can share pictures from Dubai and what people learned. The members of the council will work on the universal council and have created universal.org and .com for the members of the council to be able to work according to the foundation. Recordings will be kept in archives.

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

K: We will use in conjunction with the core team and the universal council with the help of the military to deliver peace. They will deliver the message of peace and the workings of peace to each language nation. This means you are Spanish, Greek, Chinese, Arab and you become one on the council and there are no borders; we all live across the world. There are Chinese in Africa and South America. You see the core establishing with the 71 members and in time you can reach them according to the language. It would be Spanish@universal.org. So each language has a member. There are all colors, races and religions. You will meet the 71 in Rome on the platform and they will be the decision makers of the world. There will not be any voting. Decisions are made by the countenance of the soul. They will learn how to operate. This is an explanation of how the council will operate and how it will expand to every language on the planet and in the universe. 3.06.94 minutes.

K: The sheik of Dubai has a villa in this hotel. There were some government representatives there to see what we do and how we act. Dr. Mota in Kenya will head Keshe Foundation Agricultural division. Benjamin and Alex set up the structure in Ghana. They have people helping each other to help these three in Africa to bring the knowledge. Alex is working through the public side. People came from nations with 21 languages. The other 50 will come. The spoken language will be the soul of the man and not the word of the man. You will see that Chinese had 12 people there. In time they will spread to the Chinese speaking languages. There are different native languages.

K: The candle of peace was made by the Austrian Keshe Foundation. It is connected. There were 144 in the audience which we needed to establish the 144 languages. In Rome the numbers are limited to 400 from the public. World leaders walk and live in this hotel—there are 3 world leaders who live and walk among the people in this hotel. Their representatives were with you in both presentations. The Rome event is set totally in a different way; it is set in a way that more of the public can attend to become part of the council. We allow a large number of people to attend and then they become a member of the council.

K: people were sharing knowledge day and night. It was shared so equally and freely among everyone. Some of them brought materials and information to share knowledge. The Rome conference will start on Friday at 9AM and Sunday the whole place will be left open for sharing knowledge. We hope to see the flying systems to be seen at that time. We have the whole ground floor in Rome and it will be open 24 hours. You can attend from Thursday afternoon and leave on Sunday night. You can bring sleeping bags and sleep on the floor. There is so much knowledge, friendship and hope. We changed it as there were many security restrictions. In Rome you can ask and hear what you need and want. The financial resources of the Keshe Foundation will be available for the process of peace. No council member can speak on behalf of the council or other members. Caroline: I want to thank every person who wasn't there; there was a lot of feedback coming from the outside. Everybody was working somewhere in a corner, in the gardens, walking, talking and sharing. The ones in all the hotels for the conference were working. People were going from one thing to another and they talked about what they achieved and what they have not understood and then pointing to where they can get help. A lot of you have not seen any of the tranquility; it was trying to achieve as much as we good. Everybody can stay in the conference that is in Rome in September. There was no language barrier. Somebody always knew someone who could translate, even with the Chinese people. I saw no country or language barriers and everyone could find support; everyone was calm, peaceful and happy. That was from the beginning to the end.

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

K: china has a number of languages and is 1/5th of the world population. Everyone carries the equal amount of input according to their souls. Next week we will start the booking for the world conference and put a limited time on it. September is one of the busiest times in Rome. I had to make sure we have the accommodations. There are 200 beds in one hotel and 200 in another. We saw a lot of clandestine activities going on. The number of people there to cause problems couldn't even find which hotel this conference was in. We kept it safe as there are who are the enemy of humanity.

K: Now we have someone who built a system and wanted to show his system. He is collaborating with the doctors and he was at the Dubai conference. He is from Norway. He has built his own system and he made a booklet he brought to the conference. The system was built by the Norwegian foundation. He has developed and is testing it.

F: I bought this in Dubai. This is sea water GANS. I bought this in Dubai and when I put this water it doesn't go down. It's a snow globe. When you shake it you get the particles to rain down. But in this the particles are raining 'up.' This is to show the gravitational field.

K: If you leave it does it settle?

F: It goes down.

K: We see the blue and green lights in the water; it is the interaction of the different materials in the GANS. You are showing us what the people running these new core reactors should see. I said to Armand last week to get a crystal glass ball when you create this and this is how you see the light in the sky or the shine. It is the interaction of the plasmatic magnetic fields inside the bowl with the interaction that gives you the release of the magnetic fields of the light in the vision of the man. What you see are the stars in the ball is the demonstration of what I said this morning. Now you show the beauty that by using GANS water, you have the collection of whatever GANS is on the planet. I showed you this morning the GANS water of the copper and the CO₂. In the seal water you have the full spectrum of materials. In one way or another they react and that is why you see the light. This is beautiful and I had said you will see the light in the crystal ball first. If you mix the colors it is the combination of the GANS and the field of strength with which they interact and this interaction creates the field of the lights. This was originally shown in a way by Douglas. With the water of the sea GANS you have created a mixture of the gases and GANS within the structure. The field positioning dictates the lights. You will see these lights in the crystal balls. Each one of us is a messenger of his own time.

Richard: I was creating some lead GANS and I had a very fine crystal structure and when I shook it, it gave the same effect. Is this what we are looking for?

K: Yes. This is the magnetic gravitational positioning of the different GANS plasma. You will see this when you go into the crystal ball configuration. The light inside is what you will see and it will expand and you will see the boundaries. You see the different colors because of the GANS you have used. We will teach the military the specific use and range of this. What it means in a military application what you see as a light, we can create systems that repel any nuclear based material. This means if you are a country, if you understand these lights, you can create a specific condition within the GANS of the ball of your system that would not allow. The light moves to the top with the

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

specific GANS and it would not allow any nuclear warheads to enter any country's borders. This means it makes the nuclear weapons technology obsolete. This is part of the understanding. Many of you can create new toys with this structure. If you move the GANS out and use only the GANS of the water you will not have what you see at the bottom. All you should see is the lights and no other material. If you empty the GANS from it and keep the water and if you still see the lights then it means the transfer of energy.

R: What do you mean by lights? Because as far as I know these are plastic particles that are part of the snow globes.

K: No. the water inside these balls behaves as a GANS water. It is not a water any more. Do you understand?

R: Yes, but what lights do you mean? Do you mean these plastic particles?

K: You see daylight and shining lights like the white lights. You will see this because I have seen it many times. Bernie: let me correct you on this. You are right about talking about the light and the fields and no one will penetrate the fields. I have seen this one also and I met Dominique and those reflecting lights are like plastic strips.

K: Yes, but they reflect the lights because they bring it to the matter state.

B: correct. But Dominique pointed out that after he put the sea GANS, and after presenting the sea GANS the plastic strips no longer fell down below.

K: I understand. This is how it will be; this is playing the same game as the crystal in deflecting the energy balance. What it is now---they did not shine before. Now because of the environment you create with nano-coated matter in the plasma and that is why we call it the liquid plasma. If you mix different liquid plasmas together and create motion they will start interacting and you will see the lights. This is what I said when we showed the core rotating inside the coil. You have seen the specific lights and the specific layers. This is exactly what happens. If you look at it another way this is very much like an aura in that spot. It interacts with the field of the plasma of the entity so you don't see it across it; you see it at given position when the GANS itself at the bottom and/or in the position that it reduces enough to interact with the matter state plasma which is itself now part of the structure inside. It creates reduction in the strength of the field to manifest itself in different strengths of light. So, a lot of you should be able to see it with the GANS material without the matter state.

(3:47:51)

K: These are certain particles because now they become part of it. Now everything in that ball is in a GANS state. It is like a human body. We showed this motion originally with D... system. If you mix the mixture in a different way you start seeing the lights and now if once you start producing the rotating GANS coils and the cores with different materials you will start seeing all kinds of lights. You will see the lights we see in the cosmos. I did this maybe 7 or 8 years ago in the coil of what we call the spikes. Let me have the camera back. Let me have the white board. Let me explain something. If you remember in the system which I showed before with the spikes (3.49.51 minutes), I think it's about 37 spikes, this was inside a coil and each one was connected to a platform. You have seen before. What I did, I changed and I filled this originally empty unit with water of different

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

structures. What you see is that we see with the same structure at night different lights in different positions. When I used to go outside and looked at it in the dark, when you moved it you would see different lights in different places. The interaction of what was released as a GANS inside these nano-coated materials in the water turned the water in the GANS state because of this dimension. We see the lights because of this position and they float around.

K: originally I could not understand the totality of this. It become apparent that where there is a huge difference between the fields. Sometimes you could see them near the specific pins. These pins which I used were nano-coated in different ways and for different purposes. If you look at the ball this is how you start seeing the first color balls. You will see colored rings. Or you might see the pink line in one side and a green line on the other side. It all depends on the material that was mixed as part of the plasma. That is why I introduced what we call the liquid plasma, to make it more homogenous. This way all the GANS is sitting at the bottom. It creates its own field interaction but in respect to the matter point when you look at the GANS liquid at the bottom it becomes the sun and those lights are the matter state in the GANS state. They become like the earth and the interaction leads to the creation of light because of those matter states inside of it. These are the things and people come with the knowledge and it has to be dispersed and now we have seen it. A lot of you will start seeing that now when you are not using the solid coil inside of the crystal glass balls, you will start seeing a lot of these lights at different speeds, different interactions and you will see layers outside. That is how you know what you have created. Now with the glass especially if you get lead crystal balls you will see this very much; you will start seeing different lights very much like your aura. Different materials in the body create different colors in the aura because of the reaction of the GANS in the body. It is a very simple demonstration and it brings forward a lot of things that the man will see.

K: as I have said this comes exactly at the right time. Thank you for sharing that knowledge. Anything else you want to share?

R: Delia wants to speak about the Dubai conference.

D: I wanted to say what it was like to be in Dubai; I am one of the English speaking council members and it was an amazing meeting of beautiful people. A lot of us didn't know why we were there at the beginning and that became clear as the two days went on and it was a great honor to be part of what was happening with people from around the world and to be with people who are totally committed to the practical application of peace on earth and to represent the earth peacefully in the universe.

K: If you are or if you are aware or if you are in contact or if you are part of solar system farming in Europe or around the world, that is if you are your own solar system farm, if you are part of an organization that plans, designs and delivers as a manufacturer solar system farms which support natural energy production, we are not talking about those who work with solar system panels on the roof of the house, we are talking about solar system farming, please contact the Keshe Foundation. There is a meeting overnight only for the solar system manufacturers and the farm owners. In the Keshe Foundation in Balata (Italy?) on May 20, contact through the webmaster and title it 'solar cell' and we pass you on through that you could be present for this presentation. You have to prove that you are a solar cell farmer and you have credentials to be part of this meeting on May 20. We only allow people who we check and are in high level production producing 6 to 10 Megawatts of energy per day into the power units and the circuits of the national grid. We have organized this meeting and

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

we will use the Keshe Foundation facilities to interface with governments and organizations. You are invited to the meeting on May 20. We have to have clearance that you are a major producer.

K: around May 28 or first week of June we have the meeting of the press for the release of new knowledge of the new technology for the major energy producers around the world. This will be organized in Balata conference Center. There are many who work as manufacturers. This will be a closed meeting for the manufacturers. This interfaces with the major corporations and in that level with energy, space and we have allowed in the coming weeks that those of you who are manufacturers especially pharmaceuticals, there will be a meeting in the last week of June or first week of July to understand the use of the new technology for health application as a medicine. This will be submitted for certification for the use of the material because this technology has to be shared by all the pharmaceuticals. The materials will be submitted by the pharmaceuticals or the health organizations that collaborate with the Keshe Foundation. There will be trials for the proof of the products. They will supply to the markets in their own brands with their logo and the Keshe Foundation logo across the world. The test material will be provided to the world for the people who want to collaborate.

K: We are an Italian based organization and we work through Italian manufacturers on the development of these technologies and products with the licensing. So, if you are as part of the pharmaceutical organizations or food and health supplements we are organizing a meeting for these people sometime in May or June. There will be a release of these materials with a full license in the world. We are taking the steps that everything we do is within the structure that we can operate worldwide. You can still go to the Keshe foundation and be part of the trial and we will supply you with the data and the blue print upon your acceptance. You can decide if you want to use the blue print yourself to follow or if you want us to deliver the material that follow and become part of the evaluation of the knowledge in respect to different diseases and conditions.

K: We are bringing in to collaboration the pharmaceuticals who start their procedure for the licensing of the products worldwide and how they see the materials should be marketed on a pharmaceutical level. The pharmaceuticals are heavily financed by the Jewish from Israel and we welcome you as much as the other nations who want to support the elements and become part of the commercialization in the open market.

K: Does Benjamin have anything to show us? No? Thank you for the group that is translating their work on the crystal balls. Please go back into the understanding the way that I explained. Go back to the understanding of the interaction of the fields when you are making the systems. I know that you are working for disaster conditions for rapid response. So one of the first things you have to look for is creating light and shelter. As I said, create the system with balances in absorption and then one in repulsion. This means if you create massive absorption with lead then in absorbing so much you create a channel for what I call the release of the material. You will find that one leads to another. The gravitational become magnetical and you will see the creation of the shield and you will see the creation of the light. You have to realize and I explain this as I know you are working on it. You have been working since last week to develop this very rapidly. Don't forget the use of the 2 motors. And use the very small ping pong ball sized crystal.

K: Now I have shown you the new system and if you can do that, apply it. 4.08.07 minutes. You will achieve very rapid interaction. If you can, use lead in the internal tube. And then use the CH3 on the

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

(v1 2016-06-08) DRAFT (Transcription has not been verified. Double check info with video)

outside. The CH₃ because of the hydrogen GANS condition releases very rapidly huge amounts of energy which can create light, a boundary and a shelter. And this is your aim. If you want to do that, or insert a crystal ball inside another and fill up the two and create the rotation of the two different conditions then you don't have any more problems as we had with the vacuum condition. You don't need to spend a fortune to create water-tight and seal-tight. If you can, develop it to the next step. We have a professor who is coordinator for these groups. If you need additional explanation we will do a special teaching. You should be able to see the light, the field protection, and the magnetic gravitational protection system in this configuration. So your system will show the light and the field condition. You have to find the point of balance and you have to find that balance point. It is magnetical and gravitational. You create the condition where you have both the lift and if you want to go for the light and some other interaction. You can create a triple boundary and the way you do this is you chose the magnetic gravitational field balance somewhere between the lead and you create the strength.

(4.10.37)

Then you create another condition for creation of using the medium or the intermediate between the three to create specific condition and layer to lead to the creation of anything you might need.

K: What happens is that you have you core of the CO₂ or CH₃ and then you have the lead and somewhere halfway between you will see the interaction that leads to the creation of the specific condition. This means that you pull back in what the CH₃ is releasing as the plasmatic energy to the new dimension of the strength of the magnetic gravitational field in the center, but not of the strength of the lead. Then if you have it wide enough in your glass tubes and crystal balls you can spread it of the light of the system. You will find with this system if you get it the right way you do not need the rotation of the motor. The interaction of the field difference will create a rotation in all 3 GANS so there is no need for any motor that you might need to use. So what happens is the plasma will create its own rotation and its own light. These 3 layers are part of the essential part of the creation of other motors using plasmatic condition. So if you get this right the ball will be steady. Your ball will not rotate; you don't need a motor. The creation of the right balance will create the rotation of the speed and light that you need to add.

K: This is the development that some of you will test; this is freedom you have with field plasma and the freedom you have when you use liquid plasma and some of you can mix the 3 very easily as you master this. I know our colleagues will show us new dimensions in this field in the coming days and weeks and I collaborate with Armand who is very good in these things to show this rapidly in the development of the liquid plasma technology and what I call the field plasma. The group listening please translate and we open the door and we answer any inquiries. Send you question and we will answer them. We can set up a zoom meeting. Thank you for your collaboration and help and support. We have done enough public teaching and I will do the Tuesday classes for Knowledge Seekers. The Keshe Foundation scientists have to deliver the tool of peace to the governments in their countries. You are part of them and they can understand you. And the government understands the technology is in the hands of the other nations. You become part of the totality and part of world peace through the technology because the knowledge is equal among all. From now on all the Keshe foundations in China I advise you work with us to teach the government operations and in time with the military because you speak the language of the nation. They need to understand how you built it and they can implement it rapidly. You are the scientists of the plasma for their nation. All the work you have done on the GANS and the plasma are for world peace and you become the scientific ambassadors.

Transcript from 111th Knowledge Seekers Workshop held April 28, 2016

K: Brett and another member of the US are asked to deliver a full packet to the American government through their contacts in the organization that we have in the structure.
