Keshe (K): there are a number of people from China, America and New Zealand online today. We are an international organization and we have to create new conditions of communication. There is a conference in Rome on September 9 and 10, 2016. We are setting up a new family and we create our own new rules. A new way of doing things—we are opening a platform and when the council meets it is in the open and you can be part of it. On Thursday after the council, as head of the family of the human race, if the council agrees, you can be part of it and make suggestions you want to see implemented. The new solutions are set up by the council members and we want you to come with solutions and not problems and positive input. We are not here to solve the problems but to support solutions. We are not making a court of claims and we are not calling a court for moaning and groaning. You come with the solutions. The work of the council becomes the work of humanity. This is a new dimension of work in such as organization. We have to be able to support and up to now setting up organizations means the process of peace through plasma and application of plasma technology. In a way we are finished with arms, defense and armies. We have created a new cycle which is through plasma. We behave, act and use every application of the new plasma technology to create peace and lasting peace and not talking peace.

K: in my talk with governments we have set up and are setting up a new criteria. That is that we use what we call armies are used for peace through the plasma technology system which means they are here to feed the man and not kill the man and to support humanity with a hand on it and no carrying of bullets. This principle will be seen in the coming time and we will deliver technology that governments see there is no need for defense as we all have the same thing. The governments see the peaceful application of the technology is the only way and there is no need for armies. We do not go and fight with the technology systems; we create conditions that defense has no meaning in the structure. Fighting takes energy. Creating an environment doesn't take long and is the delivery of new technology and knowledge. The strength of the technology brings us peace. From now on now that the council is set and will meet in the coming weeks and their work is to serve man and peace and you will see activity in the Keshe Foundation and the council to deliver peace machines. Technologies which can bring peace to man, his environment, his soul and his community are among them. We are not going to go head on with opposing defense technologies, arms, armies and the rest. We are going deliver so much that one nation does not carry an army but since all countries can defend themselves (with the technology) there is no need for armies.

K: we set up peaceful plasma and we will release so much information and technology that it will force the condition of peace. On the other hand as we said the conference in Rome if you will notice, there is no booking. If you don't pay for the event there is no place for you. We are not

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

going through the same situation that we had at the first meeting in Dubai. There were people who booked first and they waited until the last minute for the conference. This way, as you book for Rome, you pay and if you have booked and come later, these are not applicable. You will be in 2 hotels in Rome and the conditions are made for the conference of peace. A lot of you who came to the Dubai event brought and shared a lot of knowledge. A large number of you hardly ever step out of the conference area.

K: We try to make these events twice a year to share knowledge and have you able to do so with people who share your language. It is very direct and interactive and you can be involved as part of the peace program world wide. We carry the foreign language titles at [universalcouncil.org](http://universalcouncil.org) and French, Chinese and the rest. You can communicate through your own language and you have your own translators. The language should not be a barrier as we are all one family. We will teach very rapidly and bring the progress of the knowledge as well as the process and we bring the conditions that enforce the delivery of the technology.

K: Last night until late we had discussions with the German manufacturers. They have gone into production as of today. I said they don't have to produce the same thing we produce in Italy. They can produce new technologies and new ways and we can all support each other in delivering new knowledge. In the coming weeks we will see the delivery new energizing pads beautifully done and supported by the German team. In the next couple of weeks we will see the same with new products being manufactured by the Keshe Foundation groups. There is a lot of work in the background and we will deliver through technology. Keshe Foundation Italy has made an agreement with the banking system where the banks have become partners of Keshe foundation in delivering the technology to the public. In the next few weeks in Italy you can buy a Magrav system that is financed by the banks within Italy and you only pay 10 euro a month for a Magrav system. So you don't have to come with the 500 Euros donation and you get the benefit of the reduction of your bills immediately and the banks will finance everything in the background in conjunction with the Keshe foundation. We have received confirmation and signed the last documents and we are delivering 9 million units to the banking system. This creates a huge number of jobs in Italy and at the same time it creates a cycle of the saving of the nation. Only Italians can do this and you can go to [Keshefoundation.org](http://Keshefoundation.org) and go to the Italian section and in the next couple of weeks you can sign the agreement and when the agreement is signed that is sent to Keshe Foundation distribution center in Balata and you will receive your unit.

K: You keep the agreement of 10 Euro per month and this allows the distribution of the systems in Italy as we have come to this agreement. The funds provided to the banking industry start with 560 million and then up to 9 billion. If you are Italian and you don't have the 500 Euros you can purchase the unit for 10 Euro a month and you get 30 to 50% of the utility bill immediately. This is how Keshe Foundation around the world will provide the units. The Keshe Foundation will increase the work force in Italy by 3000 to 5000 as we have to deliver massive numbers into

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

the infrastructure. This is important. We have become part of it and we have moved our organization to Italy and this means we have a beautiful team of collaborators here.

K: As we promised by May we will start the contribution of 300 Euro per unit; any order after June will pay 499 Euro plus the shipping and the contribution of 300 will be withdrawn. If you want to give the 300 Euro to the foundation, the option is there. The production of plasma gans waters from Japan has gone into production and in the coming weeks will be distributed to those who want to be part of the trial test of the plasma. The certification in Europe is on course and we should have it in a couple of weeks. We will be able to these locations. These are first-stage development that you volunteer to be part of testing the material to expand and understand the knowledge. We hope the production in Italy will start in June. This allows us in a way to enter a new manufacturing cycle.

K: There is an important point which I was trying to explain. It is the way the innovation center and the scientists at the foundation understand the technology. That knowledge has to be transferred rapidly. We have seen it and our biggest problem is the excitement of having the knowledge and then putting it up by the teams of innovators. This can create fast movement without total understanding. It is necessary for us to share it so that you can expand on it. On that level as you know the Keshe foundation doctors' team is being put together by Klaus and the first teaching starts next Weds. May 18. We are asking for the doctors getting accepted please come with cases so we can discuss and see the cases and we bring a number of our innovation center team to be at the table. They can build the system and ship it across the world to you. Then you can apply what we have taught you with the technology. I know there are a number of doctors listening today and when you come on Weds. afternoon teachings bring the patient, the translator with you. Language should not be a barrier. Please book in advance with Klaus. Show what you will bring and what subject you will cover and we can choose an illness we all are concentrating on as well as two or three other topics. We will become the center of delivering this knowledge to other doctors.

K: the first generation of doctors and through the knowledge you have, you become the teachers of the next generation of people. We will teach you in depth and as before, the students become the teachers. Please for next Wednesday we will start with 10 or 20 doctors with full security clearance. Bring cases that you want to see how you can help your patients.

K: the universal council has appointed the secretarial, the person who becomes the spokesperson for the council. This position has gone to Sandy who has been with us for a year now at the foundation and is now the head spokesman for the council. She used to be on the Keshe foundation teachings and has been in the background. Ali has taken over the position of webmaster and the control of the site of universalcouncil.org. The only thing for the council is to serve humanity. We are putting a detailed plan for all the sections of the council.

K: back to the doctors: please bring your cases and we learn and add and then bring live teachings to the meeting. The teachings are secure and only for doctors. Klaus has asked that

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

only doctors can provide the information. There is a procedure and we vet the doctors for the sessions.

K: back to the teaching and we are trying to explain to the students on the courses and in respect to what we thought up to now and what we have shown about the systems. We created a star formation with the systems and put 4 reactors (28.14 minutes) with one on top, 3 on the base, to be able to create the field to see the lift of ascension and descending. This is how we started and this was to create this physical barrier for you so you could achieve what you wanted to achieve. This was still working on the interaction of 3 fields in specific configuration. We went to the understanding of the spherical reactors. Everything we did was to expand the condition where a number of different of fields' interaction led to the creation of positioning or creating a service. You have seen the interaction of the 3 fields. You have seen people who set up the systems who could feel the field force even if they could not see the field force they created. We had the same structure in the coil system where we did the coil system to create the same condition where we put the field plasma. (30 minutes) In so many ways in all the conditions the three field interactions are the manifestation of the physicality as the skin of the man does. You have 3 layers and these 3 layers lead to the manifestation of the structure of the skin of the man. (30.30 minutes)

K: in a way this is what we have tried to achieve in every step. Now here one we use gans, the gas, the coil, and the configuration of the man's skin. In the process now what we thought in the last week we have explained the creation of the core with two magnetical/gravitational rings (31.17 minutes) where this creates a field in the center. If you look there is no difference between any of the 3 systems. Each configuration gives you three layers exactly where you want. You have a condition where with the core and the two coils you have field one which is in the center, field 2 which is the 'vertical' core and field 3 which is the 'horizontal' core. The interaction of the three leads to the physical skin of the craft. This important and now we have a dynamic system and we see a new structure where the sphere with the coils inside it will create the interaction of the 3 layers and lead to the manifestation. This is what I taught on Tuesday. Very soon you will see the structure—but how you get into and out of it is your dilemma. In that process you can do several different ways. At the moment we have tested and chosen the coil system and we fill different gans in each. You nano-coat the gans on the coils inside the core (33.12 minutes) and the interaction of the core with the interaction of these two cores (33.17 minutes) creates the mixture of the fields which then leads to creation of the physicality.

K; we have seen the rotating cores and we have seen the core structure and we have brought the two together. Now there is a next step. We said in the teaching last week that you needed a laptop fan motor at the bottom and a laptop fan motor at the top of the core/coil for the rotation. We can control the changes of the rotation between the horizontal and vertical coil (34.06 minutes) and the liquid here (34.08 minutes) so that the interaction of the fields leaves the viscosity of the matter in respect to the gans liquid plasma and the gans coated on the coils. The coils then have to interact and they create the plasma condition. As these rotate (inside

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

horizontal and vertical coil) and the outer part of the sphere, you create the interaction of the three field forces which leads to the manifestation of the physicality of the structure. This is how you will see in getting the combination right and the nano-coating right, a system that will give you what you call the space ship. A number of people are on their way to achieving this.

K: there is an alternative: as we are not and cannot hold the matter state all the time where we can carry liquid with us, then we have to move into the field condition plasma. Now you can use liquid plasma to create a condition you want. There is another way to develop that is very simple. The construction of is simple. In what I have shown you, you have to have motors to create the condition of the rotation. This takes time and you can go a step further and add to the knowledge. We don't see motors, no rotating systems in space. So where is the power, how can we go and how can we develop the next step where we use the interaction of the fields for two or three different purposes. This gives us another opportunity: no motors at this moment. What we can do is take the containment and we can do what we saw last week with our Iranian colleague, Armand. (Armand showed a system with small plastic tubing placed inside larger plastic tubing which could be filled with gans in whatever form -- 37.00 minutes). What you do now is you have a set of 2 double coils. You feed each coil on its own (for explaining purposes he shows one blue set of double coils and one red set of double coils) and you feed these cores on their own and you don't need rotation and you don't need to run a motor. You feed the system and you decide the speed of the rotation of the gans of water of whatever mixture you like within the sets of coils. This system is cheap and effective. The speed of rotation will give you immediate reaction.

K: the meat of the feed of the gans of different strength will create conditions of interaction without rotation in it. This is a step toward another step. Once you develop this we change the liquid plasma in these tubes with the fields. You replicate the process of the generation of the entities. Understand the reality part: you can feed CO<sub>2</sub> gans and in the center you put zinc or lead outside and when you want to change you can do so. You could not do that with the solid coils. With this new system you can change very rapidly whether you want to ascend or descend very rapidly. All you need to do is change the speed from the mixtures you have in the reserve tanks. The immediate interaction is instantaneous and rapid. You have access and decide the mixture and you can always withdraw the mixtures and you never lose your mixtures. You always bring it in, separate it, put it back in and you will learn how to do this in the future. In this process you will see that the field pressures, choosing the right material for the interaction will create for you the skin of the craft.

K: those of you who are in the coil condition play with the coils. Those of you who are at the next step play with the field gans. And those of you understood, go with the field plasma and not the liquid plasma or the coils. Bernie is doing the field plasma approach. Armand is doing on the other side. Giovanni is doing this on this side. We will see a lot from China. We will bring everyone together so that you can see the development of different systems. In the next few weeks you are getting to the point that each one of you will feel more, see more and then get to

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

the point of delivery of a total field plasma technology with the control. There are points of importance that you have to understand. There are position and knowledge that you have to consider when you do these things. This brings us to a point of the teaching of the medical. If you understand this and I explained this in the other teaching, and if you understand the interaction of liquid plasma, field plasma and gans plasma of different strengths this will create interaction between them. This is very much like when you have different clouds of different energy coming together. What do you get? Thunder and lightening.

K: In the plasma technology you get the same condition when you bring the plasma of the given strength that you decide on, with the matter state of it, or near matter state of it, you have the same thunder and lightening. You will hear huge bangs and see huge interaction of the fields. The first time it came across it was a big bang; now it shows if you can create and control the interaction of the gans plasmatic strength and the interaction of the field strength of the matter, you will get the thunder and lightening as you do in the matter state. But now the matter state is the strength of the 3 energy plasmas. What are you going to get? There a lot of cracks that tells you the plasma is coming into operation. The plasma will start making noises, click and clack, and that will show you that you have started creating fields of different strengths that are coming together. It is very much what we called the boom when you pop the sound barrier and the speed of the air compacts the natural condition and you cannot pass through it so it absorbs the energy and releases it as noise. If any of you have heard the boom of the sound barrier being broken you know what I am talking about. You get the same thing when you are playing with these gans. This might sound strange; the problem is we go back to the knowledge of your old thinking as the first man making nano material. Then you realize the caveman was the first when he first put nano materials together to cook. The Chinese are the best with nano materials because they cook on the fire on a metal plate and they nano coat every day; they put salt in it and release the energy of the metal which you are eating back to you.

(00:45:03)

K: If you understood that with all nano technologies from the beginning, now you understand the most important function in the human body: the human body is made of gans which interact and at a point these gans of the human body have to interact with the strength of the environment they exist in which is the plasma of the higher order and the lesser order. But it has created a circulation, the same as the circle inside (the coils inside the core). We call it the heart. Now for the first time you understand the heart in the man and where it comes from. The matter of the gans state of the plasma of the liquids –your blood is the liquid plasma. In interacting and releasing energy at the boundary of the body of the man which is the fraction of the matter state you create noise which is fed back to the heart of the man. Now if you hear this and you control it and it controls and is continuous you will hear the heartbeat of the man. This is how the planet creates the heart beat. This is how the stars create their heartbeat. This is how the galaxies create their own heartbeat. Where the internal flow of the plasmatic condition in the inner sanctums in interaction with the lower strength and the higher strength fields of the environment

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

of the matter state creates and leads to a transition that one has to accept the others and this itself releases energy that in the ear of the man become what you call the heart (beat?). Now maybe for the first time you understand how the beat of the man is created--the noise of it. This in so many ways reflects back to the inner chambers and you hear that noise because it comes through the blood itself. Don't forget your blood is a plasmatic flow and is always connected to one place. So all the fields at a junction of your plasmatic condition internally reaches a gans state; with a matter state it reflects back to the center which is your heart. This is where in the teaching we said is the center of the feeling and the emotion and now you understand how you control the system through the power of your emotion.

K: the center of your flight system will create a heartbeat in respect its surrounding. If it is high speeds it becomes the noise of whistling. And because the plasmatic condition is very sweet it is the exactly the way your heart comes together with a swish sound and then in one way all energy is gathered and it releases it (?). This is why in the teachings of this last week I explained very simply that if you can keep the energy of the plasma flow within the gans state in the liquid plasma of the blood as it is given strength you will find a man who is 200 years old or if he is ten years old it will have the same aspect. Now you feed it through the emotion and through it you feed it to the soul of the man which decides the strength of the physicality. Now you start seeing different parts of the teachings coming together.

K: Now that we are going further the body of the man has to have its totality in respect to its plasmatic magnetic gravitational field of the liquid plasma which is the blood in the interaction with the slower but stronger which is the lymph which leads to the creation of the totality of the man and his strength to create a heartbeat in respect to his surrounding. If it is high speed it becomes the noise of whistling. And because it is in a plasmatic condition it is very sweet. It is exactly the way your heartbeat comes together. Then in one way all energies gather and then it releases. Now you understand how your organs are and now you understand no matter where you are and you feel the right condition man will create the animals and this condition will lead to the creation of life.

(00:50:20)

K: now you understand if you can divert that the man can from Africa, that theory does not hold. If you understand what has been explained you will find out why man was created in different locations in different positions in this planet around the same time in the evolution of the planet. What we the human race today is the amalgamation of these groups coming together? It was not that the race of the man was created in one place. You call man Homo sapiens and the others. Where did the other come from? The others came from the position on this plasma where the flow of the plasma within the structure created and lead to life in understanding the creation of similar structures. Maybe now we understand where your blood types O, A, B and AB come from. Is it from the interaction from the amalgamation of the migration of the tribes around the planet? As they interacted and as the more dominant strength of the plasma could take over it became the water. When they mixed with the interaction of these they might look

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

slightly different than the other ones, more monkey than the other ones. At the same time they are the same monkeys. The interaction and the reproduction have led to a new generation. Don't forget when you speak to scientists and doctors they tell you that all is generality. AB is different in strength of what we call O. It shows how many different races were created and led to the creation of man. The heartbeat of the man dictated the strength and which one would dominate.

K: the different blood types came from different parts of this planet. This shows the whole assumption of the present science of what we think of (the origination of man in) Africa is different that what the reality is. We have accepted a huge number of people because we understood. Now that we understand the interaction of the plasmas, the liquid plasma and in a short time some of you will reach to the understanding of the system that works through the power of the gravitational/magnetic fields independent of matter state, you will understand that you can create the human structure anywhere in the universe if you create in the right condition. When you interact and when you put together the interaction of the different fields that we see you come to understand the next step of the development. The next step of development is that you have a condition and you have the position where the stronger gravitational-magnetic fields in interaction with the weaker gravitational-magnetic fields are creating the heartbeat, the sound, the condition of the stable manifestation of the physical life. The older you get, the weaker the heartbeat becomes. The feeling of the skin, the touch and the mentality change. Don't forget that your skin is part of your brain structure. If we can feed you with an energy level that can give you the same strength as when you were 10 years old and you are 90 years old now, your skin texture and your blood flow changes women in menopause go back into full monthly cycles. We have seen men who are 80 or 90 years old being able to walk and do things they couldn't do for 20 or 30 years.

K: these changes are done in very slow steps when they are introduced. But this comes into play—why did I bring up this subject? You change with the strength they cycle of the strength of the plasmatic condition of the body of the man and with it you bring a very interesting point into operation. You age by time; what if you can control the transmission? Then you understand it's a new day. This morning I wrote to the team and said that they had managed to enter into the time machine. What does that mean? If you understand the interaction of the fields and you can control it, then you understand with one to the other and back to the position (56.47 min) you have created two phases of interaction converging from one to another and back to itself; then you have the existence of two fields. If you have the interaction of one field, where you can convert one to the other and take it back, where one is of the lower strength and the other is of the higher strength, you have managed to create a time machine. You have created a plasmatic time machine. We have seen this for the first time in the innovation center.

K: it has been felt and I explained to them this morning what they have seen and what they are observing. So, if you change the gans of one and feed it on the loop of another one and keep it constant you create two plasmatic conditions which is the interface flow and you keep one in the matter state condition of what you want and the strength of what you want to go. You enter the

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

dream of the man, the time-machine. But, time around you gets disturbed and now you live in two dimensions of the gravitational-magnetic fields. But because you created the gans flow in the cores or coils it takes forward the environment that you are in. So now you have become part of the time capsule. This is important; those of you who are entering this phase will understand exactly what I am talking about. This should not create confusion in the time and the space for you because now you understand that you are in charge and in control of it. It is you who fed and created the systems with the solid state coils, which Armand did, and the solid state coils and system which the innovation center has done. You are playing with fixed condition matter state plasma with fixed condition preset plasma. With the new systems which are coming up and we saw the first stage of it last week with our friends in Romania and Austria and now the setting of these systems with a flow you will understand. You will feel the interaction that continues to stage plasma strength each one having their own speed of transfer interfaced between the two that will lead to the creation of what we call time zone machines.

K: You keep the one in the red on the left (59.54 minutes) as a point of reference of earth which is your matter state. The blue coil is the state where you want to go and the time generation separation which you want to achieve and reach. You keep one as a point of reference. This is what you do—always keep a track to back home. This is what you do and on the other side you have the destination magnetic-gravitational field and the time of travel. In this process according to the man's time and the matter state according to role attached to the matter state of the plasma you are in the speed of light in the left side but you are at the speed of thousands and thousands of times on the right side (see drawing 1.00.42 minutes). In the earth condition your maximum speed is the speed of light in the matter state and on the other side you travel speeds beyond the imagination of man. Because you use the structure of the whole plasmatic condition yourself, you dictate the speed. You can cross the expanse of the universe in the man's time of thousands and thousands of years, depending on the strength of the other side in seconds. But, because you created the environment and you are inside it, you are still in the environmental condition that you are living in. So you do not feel anything; you do not feel any changes because your internal structure of the body of the man is made of the gans and it goes accordingly to fit into the environment which is created. We have entered the true space technology and the interaction of the man with the nano universe that I am teaching now. We are the creatures of the universe.

K: you have to understand the totality of the structure. You have to understand how these interactions lead to the conditions that you don't understand but you can feel and observe. Is Douglas on the line? Is our colleague in the Philippines available? He has heard the noise of the interaction—the bang, and Douglas can explain the same to you. What we teach now you see that the innovation center people are experiencing. As I guide them on the way to do things we see more and more of the interaction of the phase of the plasmatic condition in the matter state and the plasma state of the same matter. Two days in a test we were doing in the factory blew a hole in the structure. The field strength is so strong that the physical structure was blown into pieces with a large opening. You have to understand the interaction. It is just a plasmatic barrier

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

interaction which when you reduce the speed it is so strong that it creates noise and if it not understood properly and leads to the reduction of the strength in the matter state and it physically pushed them out. We show you these pieces—this is important. I bring this subject because this interaction of how fields come and create between the different states of matter the plasmatic conditions, the matter condition and this is the field forces. The man puts field forces on the matter state of it which leads to the rotation of the planetary systems, the stars and the galaxies and the rest. Now we understand how the conversion of the plasmatic magnetic field energy directs itself into a physical matter rotation.

K: this is why when you create the space of the physical matter of your space ship you will find out that the boundary or the matter skin you created will have its own rotation. This is understanding interactions of field strength of different dimensions of the strength, slightly stronger in gravity, slightly weaker in magnetical, slightly moving in a different direction so that it gives different twists and turns as to why Jupiter is one way and Saturn is another way and Venus rotates another way and why we get the earth and the others moving at different speeds. The speed is created by the interaction exactly as you see it and you will see these in your space travel. You will see this control is out of your hands if you do not understand interaction. If you get the right mixture of strength in the pipes of the coils that rotate and you will understand how you will see the speed of the coils rotate. It is in the structure out of your hands. You control it with the field plasma.

K: Those of you who go into the next step of the field interaction will see more. Then you will the interaction of these with other strengths around you. Then you even might understand the next step of interaction with what you call the stars in the sky. How they appear to you and why they appear to you and stand exactly as they are and not as there were 180 or 200 million light years ago. The interaction is present and instantaneous. This way we unravel a lot of mysteries, assumptions and hypocrisies in the world of science of man created by pieces over the centuries and thousands of years. Now you have the knowledge to test it and understand it and you don't need to sacrifice a virgin girl to stop the earth because they never understood where the earth came from. We never understood where all the overtaking of the light of the sun by the moon will lead to darkness and it is not very different than the rest of the operation of the Roman peoples. Now with this new knowledge you understand the work of the gans and the field plasma, liquid plasma, magnetical fields of the plasma, a lot of hypocrisy is in the past created by the scientists served to get us to here.

K: then the next step is the simplicity of the knowledge. It can be understood and applied by every man. If you understand the totality of the attraction, now it is you who dictates everything which you have done. Let's look at this way; you have two tubes. (1.09.04 minutes) The liquid in the in the outside tube can be feed at a different strength and the liquid in the inside tube can be a different strength. The field interaction will create the central point and the interaction of the three if you do it the right way leads to the interaction and the manifestation of the field. Now you have not only the coils you have another which is superimposed and is at 90 degrees to it.

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

So, the flow is constant. Then you have placed yourself in a bigger container and you have all the dimensions of the field plasma which should be very easy for you to create a (space) craft. I told you the number of you have seen the plasma and what we call the sound barrier; it has been tested and seen in several locations on this planet. We will not release the knowledge of how it done, but it has been achieved and people will tell you. They will not touch you every second, but you hear it. It will not touch anything else. And, if you go into total plasma condition then you will see the time change barrier and feel that barrier.

(1.13.42 minutes)

K: can you explain what you heard?

S: can I show a video?

K: I hope at this moment you don't show the structure of what you have done. You repeated the same thing as Douglas.

S: yes. I need to find a pie plate.

K: I don't want you to show how this is done as we are not ready for it.

S: the sound I heard was a big sound.

K: explain what you heard; did you hear a big bang?

S: yes, it was in the circuit. Nothing is burned; even the cups did not burn.

K: so we see the interaction from the matter state to the plasma state in what we call the plasmatic traffic jam and turning to itself.

S: yes.

K: how loud did it sound the first time?

S: the first time it was very, very loud and my wife was shocked. I told her it was okay that there would be no problem. The thing is I cannot fully test because the electricity went down. It was like I removed the breaker and it followed to the grid. I didn't have to do that here.

K: but you put a huge amount of energy into the grid. What the governments realize with this technology is they could take the meters and the circuit breakers off people's homes.

S: I have a second battery and it went up. I placed another and it works again. I don't what happened with the breaker as it is not burned.

K: the field passes the system.

S: yes.

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

K: if you compared the noise you hear with the clap of a hand could you give us an idea?

S: it is not that loud. It is not that big; but we were surprised with the noise.

K: compare it; how loud is it? Is it as loud as a circuit breaker opening?

S: it is more than that.

K: is it a bang?

S: yes, it is like the electric circuit that has shorted—a bang like that. But before that there is a zhoosing sound.

K: Caroline asks if you can compare it to the sound of the breaking of the sound barrier. Have you ever heard one of those sound booms?

S: no.

K: what happened afterwards; did the noise stay or don't you hear it anymore?

S: I just shut it down; I can't afford to burn the house system. I had to cut the system. If I do it again, we have to use the filtering using the liquid plasma.

K: is that working?

S: yes, it is working with the liquid plasma and it sparks. You will see this in the video when I can show it.

K: in the coming weeks we will show how the system works. In the moment let people catch up.

K: Now you see that the process of conversion and the use of plasma is on the way. It is for us to come into understanding of the process and it's for us to understand how to put things back in order the way they should have been and the way they should be. As I was explaining to some scientists recently, we can't say we have done everything wrong up till now or everything was wrong. Everything that was wrong brought humanity to this point of knowledge. We have to respect our peers for bringing us to this point and now we have to add to the knowledge. We should not become part of the hypocrisy we know better that everything was wrong but what we assumed has to be put into order. What we assumed was the wrong assumptions. But those wrong assumptions have brought us to the point of knowledge collectively where we are today.

K: This shall repeat itself in space. This process, understanding and path of gaining knowledge will follow man into space. The others will teach what they know and as I have said in a private teaching they have learned a lot from us. It is not a one-way street. It is not that the man has to learn; the man has a lot to teach too. In the deep space we will come across a collection of scientists. It is the same as on earth where each of us at some time has put something on the table of knowledge. The same thing will happen in space. The reason to bring this up at this

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

point is not for the man to consider himself as inferior compared to the others. The human race carries the knowledge that other parts of the universe need to know because it allows them to elevate in their cycles of the knowledge too. As we share the knowledge of space with man, the man will share the knowledge of earth in space. It is not that everything is good because it was made in America and has to come from America. It is accepted by man today that the best comes from China and is shared equally among us. The same process we carry on even if we consider ourselves a long ways for this planet and the universe. In understanding this it allows us to correct mistakes in the process of the understanding of the man who has considered himself separate. The man is equal. Understanding the knowledge does not limit man's behavior on this planet but now when you enter the universal condition of the interaction you have to understand your position too. You don't enter into space as inferiors; you enter into space as part of the universal family and as a bringer of another flower in the bouquet. Nothing has changed.

126.35 minutes

J: could Klaus make his presentation on health units?

K: in that process you understand that the knowledge of the man is needed in space as much as the man needs the knowledge of space to complete the process. We enter into space technology and the spaceship program with open eyes where do not consider our knowledge to be inferior to the knowledge of space. But we have to go through this transition time now to teach that we bring man to understand what the space men have understood that when the enters the horizon of what I call the universal community he does not go as subordinate but an equal sharer in the knowledge that he has. Where do you think the knowledge of space has come from? From one race or from one port, entry or planet? It has been collected over billions of years from collective knowledge of the others. And now man thinks he has their knowledge. According to the environment which they are created to add to the knowledge of space. You have to realize that truth and the reality of creation: we are all created from the interaction of the fields, the differences of strength according to the position and condition of the creation at that point.

K: now with this knowledge you are learning how to duplicate the others' condition of the creation. So as we were created from these conditions ourselves and they were created from the other conditions we are all created from the same instructions of the fields so we are all the same and one. In reality we are the unified field creations in different strength of packages and different environments which leads to the creation of response of what you call life, the cycle of existence. Life is not exclusively of this planet and has never been and it never shall be. It is not exclusive of any other parts of the universe and if you create the right condition and the right position in that condition you can create anything that you like.

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

(1:26.25)

K: today's teaching brings the knowledge to a different speed. It brings the sharing of the knowledge in a different dimension. As I said 2 or 3 weeks ago, now the cycle of teaching is going to be very fast. There is so much to teach and at the same time there is a reason we teach the way we have decided to teach others. We bring the knowledge of space to the man for the man to understand that he has already been part of the space, but he chose to close the doors. Now build systems which are peaceful systems and which interact not with a bang but a whisper that you can understand the transition state. Do steps of transition and don't go from one to another. Do the progression and development in the way that you can understand the totality and not as a monkey copying another monkey. A large number of you will expand your knowledge in a very rapid way because the knowledge touches each one of us in different ways and different points in time and space. Some of you never touched the gans and now with this technology that you see you might set up and do something and then you become masters of it in the coming time. Understand the principle and the rest is the interaction of the fields. Understand what interaction leads to what and understand in that interaction what creates the condition to lead to the process that you want to achieve. If you understood the teaching of today you understand that now man is entering the condition that nothing is impossible.

K: in the next 2 or 3 weeks the knowledge will expand so rapidly that we will force the condition of the peace and the condition of understanding and the ethos of using the technology collectively by all of us in the correct way and none of us is different from the others. Each one of us brings knowledge to the table of the knowledge seekers and the others use this according to their understanding to add to the next step. Now we are entering the next step and in the next few you will be in the establishment of your dream which is the spaceship. The spaceship is the tool to escape from the shackles of this planet. At least that is what you think, but don't forget that you enter in the 'shackles' of the conditions of the universe. If you don't understand it you will say that you wished you had stayed on your own planet. If you go back to all the teaching from the beginning I explained that we lose a large number of people in space due to the lack of understanding and the condition of the totality of the knowledge. What we try to do is bring enough of you to a level that can change the condition very rapidly. It is not just releasing the Knowledge but maturing the intellect to understand the use of the knowledge.

Giovanni (G): there is a special science in the gravitational rotation because it is important...

K: what gravitational rotation?

G: when we have the 2 pipes with the water gans inside it needs to move with the pump. So, we need to know the degree of the tubes...

K: you can do it vertical—90 degrees to the center and then you do not interfere. You know the cross you do to find the 4 corners? The position in building the liquid plasma system of the coils is that you will see different interactions and different release of energy. Let me explain

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

something very interesting. (1.33.42 minutes). In this here (the drawing with the two sets of coils in a circular pattern) if you continuously create due to the bend or condition of the pipe (tubes) the specific gravitational-magnetic field near the top of the structure will reach a point where you cannot react with the center. This plasmatic condition near the top of the tubes moves out of the system because it is continuously fed and it is taken to that position. What it means is that maybe you understand the development of the moons and the system to the moons. You understand how satellite systems in some planetary and star systems are created. You understand how even in conditions you have two electrons, a proton and an extra electron because the system creation of the interaction of the fields in a given position reaches a point that the environment is created and it leads to the separation and finding your position in respect to the center. This is how in your system you create satellite spaceships from your system which matches yours and is always in touch with yours and you can always bring it back in. So this is part of the teaching that we come to. You don't carry a number of systems of the spaceship on 'standby.' You create your spaceships which are connected to the central control and to your reactors which are exactly what you need. This is still connected; you find the position and send it to a destination and it can always come back.

K: this is how atomic solar systems create their moon conditions. It is not all created out of absorbing energy from the outside. Some are created in respect to the interaction of the center which repositions itself to the different position outside. A number of moons and stars, if you look in the solar system are created in this manner where you see similarity but totally different conditions and where you understand the position lock or the rotation lock. This is the fundamental interaction of the fields. You have to understand that if what we just spoke about sounds like the interaction of the plasma if you make it in the condition that we can change the matter, now you create matter conditions from the same. How you speed feed all these you will understand very soon. This is a transition time and you will come to understand that you can create different conditions in different parts of the coils for what you want to create. (1.37.24 minutes) this is why we put satellite reactors around the craft because you dictate the condition and the position and energy transfers for the plasmatic moon.

Mario (M): I am from Canada originally and now in Bangkok. I don't know exactly what I have here...I think I have figured out how to make a crystal tube reactor without any crystals or tubes, just with the behavior of the plasma. (1.39.56) it looks like a pyramid reactor, but it is really from the Flower of Life and I have some drawings here. I did this last and my understanding is that I am trying to get an interaction of the fields to cross in the center and open up a central core. From my understanding did a star formation and I did some smaller ones? Using this flower of life drawing at the 12 o'clock position, 8 o'clock, 4 o'clock and the one in the center and more star formations around the outside of the flower. (1.40.45 minutes) the reactors are offset 30 degrees and I believe that dictates the polarity. The star formation is upside down.

K: Where is the energy supposed to come to feed these?

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

M: I have liquid gans here; I just took coils off and I had coils. I found some crystal balls. I know the plasma is blocking the fields. What I have done in past few weeks is to remove the coils because I cannot un-coat the coils so for now I have 12 of these balls and I left them here for now until I get crystals to drill holes into. I put lead gans in 6 of them and CH3 in the other six. The lead is in the center of the reactor and the CH3 in the top and bottom of the pyramids (1.42.06 minutes).

K: you didn't nano-coat them, you gans or liquid plasma coated them.

M: the balls have liquid plasma.

M: I know how to measure to get the ratios right and it has to have the ratios in the Flower of Life drawing. Then I took out a bit of the lead in 2 of these in the center and put some CO2 in there (142.42 minutes).

K: are these embedded or drilled into them?

M: they are hollow plastic balls that I drilled a hole into and then filled them with the liquid gans and then glued over the hole. They are just little balls of liquid plasma. They are hanging on wire. I just took this apart two hours ago. I had the coils in the wrong location. I have been experimenting to test the ability to control the rotation. I have a counter clockwise field in the center and a clockwise (1.43.35 minutes) going another way. So I have gravitation move in the center, the magnetical move outside the center, the gravitation move up above and the larger magnetical move (1.43.46 minutes) and if I can get them rotating fast enough and get them locked in and that will give me the superstructure of the spaceship. The center core has the entire universe field there. So I just look at the triangular structures as the way to open the central core I am fooling around with changing gradients and I was painting on with a brush and found I could change the direction.

K: can you feel the existence of the fields?

M: I can see them and feel them although with the coils there was a much bigger field. But I couldn't control anything. So I had to take the coils off. The middle one I was in Hung-jo China when I did this and Max and Leonard and Mr. Changtze and I worked on this together. I had my amino acids and I put my amino acid fields in these. I did it accidentally the first time. I made another set with Max and there were no amino acids. I opened the central core but I couldn't feel or hear anything. But the first one and I told Max that as soon as started spinning the little one (triangle) and I had copper oxide and CO2 and CH3 and when I spun it at 200 rpm it felt 20 times faster than the pyramid. So the fields were whizzing around and there was a wave over me that filled the room. I think the entity or being that was created was a higher form of life. It kind of overwhelmed me. I loaded the back unit because it drives the fields of the one in front that I am showing you. I turned that on with the coils and I think I'll get the rotation but I have to have the back one spinning. I feel like with all the motors and wires I have a donkey pulling my spaceship. I want to get rid of that part.

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

K: maybe you need that 'donkey.'

M: well, I do. I have to have it because I can't get the rotation (without it).

K: let me explain to you and maybe you can add to the knowledge. This is how an electoral and a portal work. This is how a moon and a planet work; this is how solar systems and the moons work. Each one releases the fields of the rotation of the other. When the donkey is weaker this causes the mother to feed it. This is what you saw in the 1/29 (2016?) system. There is a need and even if you look into that amino acid hydrogen is in need and the demand to feed that single atomic hydrogen and the amino acid which is so strong and the others are bigger by the order of magnitude which creates that flow. This is why you need the donkey as part of the star formation. One is always creating a condition for the others to feed and that is strength breeding creates the motion and the existence.

M: I think maybe you misunderstood. I need to turn the motor off. I feel like the wires in the motor are the donkey pulling that little one.

K: you could be quite right. (1.49.00 minutes) that motor creates a specific magnetic field in the matter level.

M: how do I get it to spin without the motor? I can't go into space with a motor plugged in to an electric outlet.

K: you need to create a strength difference system.

M: you mean another system, even smaller,

K: smaller, or choose a weaker strength in one of your coils.

M: that is what I want to do but I think I need to keep a balance with the yin and the yang and the hydrogen and the lead. I think I probably need to put hydrogen in one of those that has the copper oxide and I still need to know what direction I should have this going in.

K: let's put things in order. How do you now decide which way the fields go?

M: I do it randomly. I feel that I want the gravitational one to go counterclockwise. It doesn't matter the perspective because if it going counterclockwise it is going away from me. So maybe I am answering my own question. I had it going clockwise and the magnetical here (1.50.37 minutes) would go clockwise ...

K: so, you are in the stage and the step of playing with the field plasma. But you are using the matter state plasma and the matter state itself to create that field. Now you have to look at how you create this condition; you are in the field condition. Is there a way to bring these fields together to use the fields in another step? Or you can leave it just as it is. You cannot be random. You have done something that gives you a specific rotation. Understand how you set it

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

up. Look at the strength of the matter you have in each ball and each core and maybe fields of the core. You should be able to lift or communicate or create light. If you see the fields or you can hear the fields or you say you cannot speak because no one can hear you, then you have created an environment, a gravitational-magnetic field which is the same as your voice which is the amino acid of your body. There is no interaction. It is not strange; if you understand it, we have seen this before with Armand. It means even if by accident wherever you put your amino acid, the field is strangely created in that environment and is equal to the strength of your amino acids so as the voice which is in the matter estate is the gans estate of energy then the interaction is balanced and we don't hear you. You can do this at an atomic (?) level and atomic systems don't work because there is no interaction or communication. What you have done is very correct. Now maybe you understand the way you are seeing these features. The process is to try to understand how you create the speed. How did you create the original speed? Try to understand what does it create if you increase the speed or you reduce the strength?

M: I had multiple gans available but should I mix mostly the lead and the hydrogen?

K: I don't like the use of lead. Let's look at something else. Once you have an atomic mass of lead can somebody go and kill us if we are all lead?

M: actually this particular gans is lead and tin alloy. I was using a composite and I was going to get some lead for the gans but if I don't have to do that it would be even better.

K: what is the lead? What is the atomic mass of the lead? Giovanni says it is 400.07. What do we have that is slightly heavier than lead and has the same kind of behavior? Silver? I have been brought up with lead around me all my life and I don't like the material. My father used to make systems to cover radiation with lead sheets. I always had a horrible feeling when I got near it. Go to another material. We see silver.

M: what about tin?

K: tin has its own plasmatic field problem.

Q: what about bismuth? It is has a standard atomic weight of 208.98. It is the next element of the lead.

K: I tell you what. What is the atomic mass of silver? 107? What is the atomic mass of gold? 197? Now 107 plus 197 gives you what? 304? What did you have in lead? 207? Now you see the combination of 2 gans gives you a safe material much more powerful and that is why silver is used for disinfecting and many other things.

M: if I make a liquid of the 2 together the plasma will create 2 layers, right?

K: yes but the total mass will integrate. This is what we have to add to the knowledge; you don't use materials. I remember the first time Douglas created lead gans and he said it was horrible. Renen tested it and said it was horrible. So I said to myself why are these guys not using silver?

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

It is 107. Then look at the combination of half of 107 and don't forget there is a 15 to 20% variation in the gans state. You will find that silver and copper work perfectly. You will find that silver and zinc work perfectly.

K: This is why the mono atomic silver is called the cure for a lot of things. Because it is the ratio, the gravitational magnetic fields of the two is 2 to 1 and silver feeds the copper and the copper demands the energy and in that process in the body of the man they take everything out that is extra or what needs to be fed. That is why mono atomic silver is working for diseases. You create a flow with the copper at half mass is 1 to 2 and it creates the wind flow of the fields of the plasmatic level. If you understand this now you understand how you have to mix. I have never been happy with lead. I had this question about the lead from the Chinese in the past few days. These answers are for the Chinese in the background. Understand that your emotion interacts with the system also. Try to add gans of the heavier...look; there is a very simple way. Go back in the present knowledge and see what materials are used for what purpose. Then use those materials for the gans for the condition you want to achieve. Next week we will show a new product by the German Keshe Foundation manufacturing. It's a new energy device and the man who did this will explain to you that for the first time when you buy these pens you are given the option of different stones which interact with different chakras. So, if you want the stone for chakra one, you can order the stone that goes with that. The copper coil inside connects with the physicality of the man. Then the stone connects it to where the strength is in the chakra. 2.01.11

K: you do the same thing in your system. Armand and Alex are perfect in creating gans of these things. So, create the gans of silver and of gold and then you can do the simple composition of the two as your center to create the heavier gravity much faster. You have to understand which one is a giver and which one is a taker and what gradients you create. In your center coil why do you use lead? Maybe it is not absorbing enough. Silver is safe.

M: I thought that it had special properties that I didn't understand so that is why I used it.

K: what was lead, 207? Yes? Divide 207 by 4 and that 51. And consider the 15% and then consider 56 or 57 and if one of the fields in the lead is like 215 because it is not always made up of the same electrons and protons and the same energy as the composite. At that point you have copper, iron or zinc which are of lower strength collectively but they behave as one and then you see how lead interacts with the body of the man; it interacts with your blood. If you take 57 or 52 and 15% on one and the other one you have a bandwidth and one is  $\frac{1}{4}$  of the other one. The field is very heavy so you feel the drain. You feel the pull. You can go up to a higher strength. Start making gans of different materials for the knowledge. But you have to remember a point of reference which is your blood or your physicality. If it is the blood your point of reference is 56 or 57. if it is your emotion because it is close to it and they have to interact with each other then copper is 60 or 61 and your physicality is 57 to 59 and then you have the zinc/. You see how emotion which is connected to zinc is a stronger tie than copper. Then you see the connection with your materials. Then you create the condition of the absorption and the feeling.

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

If you feel good with one, or don't feel good with one, is the balance flow created in the atomic molecular structure with the emotion which is plasmatic and the matter of the silver which is the matter state of the field?

K: now that you have gathered the knowledge of liquid plasma start mixing it and understand what you mix as what you need and then you create plasmatic field. You start creating magnetic wings and motion of the fields as you like. This is a beautiful system; I have seen it before as you had posted it. Now you have to take it up. There are a lot of people sending a lot of things around and we look and don't interfere. Max is a genius of these things; he understands it and stays quiet in the background. But the Chinese group you are working with understand because they bring the emotion of the yin and the yang, the emotion and the physicality to it. If you bring the Chinese teaching into the west most of it will not be understood because to the Chinese culture it is bread and butter because their thinking is different. So, go back and change the lead. This is what side: monkey see, monkey do. This is what we are trying to stop. Start changing the gans and Alec is very good at this. Make gans of different roots. Why does ginger work a certain way? Ginger absorbs certain fields from zinc and copper that interact with certain materials in the body of the man. Understand the content. Most of the content and elements of everything is on the internet. What are the composite materials of the ginger? Look into it. See what it is and don't ignore the smallest amount. Why is it the smallest amount? It is enough to balance or it is there to create the flow of the energy of the plasma. Don't forget when you hold a root in your hand it is not a matter state; it is alive. It is a plasmatic condition with a flow and a reason for things to be there.

K: this is very important; you made the lead, now look at the silver. You make the silver and then look at the composite of 2 or 3 different properties with the silver. What do you usually mix the silver with? What is the effect it gives you? Why did people use silver for medicine in ancient times and now it is forgotten? Go back to understand. In Bahrain (?) where you get the natural pearls from the Persian Gulf if you grind it for 30 days on a continuous basis it releases energy that you can use to cure anything. Why does it do that? Cultured pearls don't do that. In that way pearl was made from the calcium and the saliva of the protein of the animal. So, you release the energies on the calcium base which affect the immune system of the man. That is how it works. This is what we have to understand; we have huge amounts of knowledge. Now with the new understanding we decipher it in a way that it works and not what we assumed. Walk away from lead; I never liked the material. It is the extractor of the energy. Go to silver and create gans of silver and plasmatic liquid of silver. Also use gold and I will teach you how to produce gans of silver and gold out of fresh air when you are ready. We have shown the Japanese how to make gold out of radiation.

K: what you (Mario) have done is beautiful. Just change the gans and in a way create the condition of the flow. Maybe 2 conditions of the flow. Create 2 balls, one weaker and one stronger, and the field reactions of your structure works inside. You don't need more balls or coils if you have managed to create the field flow.

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

M: thank you.

Lucas (L) from Vienna: I have a question on the plasma fields. I created two \_\_\_\_\_ with the ping pong balls on the opposite sides and I have it drying for almost 2 weeks and I want to know if it is okay to just fill the ping pong balls with the liquid plasma and how I can check if the field is working or not.

K: the easiest way is to go inside and feed it; you are made of plasma and you create the conditions and the flow.

L: I have placed the ping pong balls 5 centimeters opposite each other. When I had the first one I had the impression it was destabilizing and the feeling was that the whole field went to the left. Now I experience when people are around 50 meters or 100 meters they feel better. Can it be from this system?

K: yes, you create the flow and you have to understand what you have created of the flow. Now you create a very strong flow.

L: what do you think the diameter is of these and how far and how can I check this?

K: is Bernie here? Would you like to explain how you have gone from a few meters to a few feet?

B: from the initial design we were able to feel 1.5 feet and later on we were able to 1.5 meters in distance. Yesterday we changed so that the gans must only interact only with the coils even if it is only on one side. We were able to get to 3 meters in distance. At 3 meters it is the moment we see the reaction from the load. This distance can be increased no matter how you arrange the gans and coils with each other. Each one interacts and helps and feeds one another. The field will grow dramatically. Since there is a load nearby it automatically connects to it and at that moment it will expand farther magnetically especially when you increase the load. It is very important for everyone to understand the field interaction. Even if you don't see it you have to visualize how the field of gans react. How does CH3 interact with copper oxide? We have to have this understanding so it will be easier for us to place them together so they will work together. Without this understanding we are just guessing.

K: you are developing this sense of feeling of the plasma—you are one of the leading guys in this in the way you work and understand it.

B: we used the car to sense the plasma. It is no longer us but we use the matter state as an indicator to know how far the field is reaching out.

L: explain the matter state to us.

K: the gentleman wants to know how he can determine how far the field is and what the strength is.

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

B: when we are using the car we are putting the field. When we put device next to the car near the fender. By revving the car in a consistent fashion at a certain distance and then moving the plasma device near the car, the moment you hear the engine changing its response and its reading and this is the moment it interacts with the plasma. It's the distance from the side of the car to the device and that is how we measure the field. The car is in matter state and is able to get energy from the field. When the combustion process of the car enters the energy field there is a condition of the plasma and there is a different energy field. Somehow it helps to improve the plasmatic condition. (2.18.17 minutes). I am explaining one way of knowing the distance of the field by using the car or any combustion device that reacts to the field. This is our way since our application is for the car system. We use it this way. We are not directing the device directly to the car; we are just having it near the car to know how far it can start influencing the car.

K: how does it influence the car when you bring it close and you are sitting in the car?

B: there is more power to the engine and there is no gap in acceleration as if you added more fuel when you did not add more fuel. We keep the pressure of the foot the same. When we put the device near the car it becomes heavy to press the accelerator with the foot because there is an increase in engine vacuum and it is as though you added more fuel. But this time the 'fuel' is plasma and it is more powerful when it is corrected with the device. If you test drive the car you measure the miles per gallon or the kilometer per liter and you will get more because you adjusted your driving style. It is more powerful than if you continue your previous driving style. You have to adjust that you will use less fuel this time. The savings is because you adjust.

L: I placed in Vienna a couple of these peace generators and we tried to create the peace field when I know how big the field can be. I can imagine that the field is increasing when it is running. It has been running 1 or 2 weeks in different places in Vienna.

K: let me stop you there. Repeat Lucas what your system is.

L: it is a simple ventilator that is running at a speed of 2900 ppm I think is the expression. There is a ping pong ball filled with the 3 gases a little bit of amino acid of the zinc in the ball. I placed two of these ventilators above each other where the two ping pong balls have a distance of 5 centimeters and I let them run.

K: so there are only 2 ping pong balls and 2 computer fan motors for laptops.

L: yes. There are normal ventilators that are not only for computers but for cleaning air.

K: do you have a picture?

L: I don't know how to get on the camera. This is how the two ventilators look. (2.23.35 minutes) there are 3 or 4 in Vienna and I don't know if the field is right.

K: you expect through these devices that you make the people of Vienna much calmer?

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

L: yes.

K: do we have anyone else from Vienna?

L: I recognized and this was the first one running, that it is getting more peaceful in the area of my environment. But I don't know how far this goes and if we should do more. I don't know the next step or development.

K: thank you for sharing.

R: there are other things to share. Is Klaus there and would he go through that presentation you discussed earlier?

Klaus (K): I am online and I can do it. There have been a lot of health units that have popped up around the world build by innovation seekers. (2.25.30 minutes picture of standing health unit). If you built one so you can be part of the collective improvements. What you see here is the picture of the first one built by Bernie and Rennie. The blueprint version is Chris Young's from Taiwan and Rodrigo's version from Mexico City. You can see our first version in Austria. In the last weeks there have been a lot of units that popped up from China by Knowledge Seekers. We got pictures from Hong Kong and other parts of China. The units are becoming more professional. Last week we showed a unit from Norway and he gave us some cases that he has gone through. He made a huge health unit for the Norwegian people who are so tall.

K: in the next weeks we will see units not only working with coils but without coils using the gans and liquid plasma. We will see professional units ready for hospitals and rehabilitation centers which will be used by doctors as part of the medical teaching starting next week. As Mr. K. said we are asking doctors to prepare cases and I am asking you to fill out forms so you can document the cases. I am looking forward to starting the medical teaching next week with the doctors listening and I will keep in contact.

K: it is important to know that you sent the email for being part of the doctors and he will send an email that only doctors can only respond to with specific things. There has to be a security check.

Rick: Lisa ha the Zhang Reactor. There is also a remainder of the health system from Norway.

Lisa (Li): there is a huge system to show. This is from Mr. Chong. (2.31.43 minutes) 4 double core Gans reactors filled with CO2 gans. Each reactor is inside a copper ball and then surrounded with the triple wire coil. The four coils are connected in series and connected to the out reactors and coils. In the middle also there is a coil made by wire strand. All wires and copper balls are nano coated.

K: so this is CO2 gans used with a copper ball?

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

Li: yes, it is like the star formation. This is a 'fat boy.' Inside the big ball there are 4 reactors inside the star formation ship. The next photo (2.33.15 minutes) are plasma reactors. They will form a regional version of "fat boy". He did a triple wire coil (2.33.40 minutes). See the arrangement of the reactors at 2.34.53 minutes.

Li: our Magrav system uses the double coils and he has connected six of them together. Connection is shown at 2.36.25 minutes. He has 3 fat boys in series and in parallel and connected to the four coils. He has had this running for 2 weeks and there is not much effect yet. He wanted to fly and create light. In this picture the coils show some copper, but they are all nano-coated now as are the balls.

K: there is a flaw in this system. The flaw is that he created a lot of leakage of fields from the system. The leakage comes from the way the coils are put on the cores of his structure. (2.34.45 minutes) secondly the 6 reactors ... one problem a lot of these designs have. Look at the reactor coils that we set. Everything is based on the symmetry of the field flow. (2.39.40 minutes—3 balls on the outside forming a triangle and one ball in the center above them). You have just what we saw: the big fat boy and the others of the same height. The field flow is flat and you have not created a dynamic flow but a rotational flow. When you put a strong and a weak and strong and weak and you go from weak to the stronger one, they connect but you open a gap to the next one. You have to learn to compress the fields inwards. You don't consider that you are looking at a flat level.

K: You need to create a field with 'above-below.' If you put a camera on the system you will find out the system is not steady. Everyone now and then there is 'leaning' of one of the components. (2.41.12 minutes) that field flaw creates a gap and allows a field release. If you want to create field compression you have to contain it and maintain it. You must even do this in the single coil designs. A lot of you have started making the liquid gans with liquid plasma and you find it doesn't work because you left it open on the top (2.41.57 minutes). You must have a closed loop. These small things affect your performance. The system is beautiful that Mr. Chong made, but it is a flat plate look. He has created the flow with a lot of gaps that leak the flow. Don't look at system as flat but at 3 dimensional and in the sphere of the plasma. You are dealing with a sphere and not a flat surface. Even if it has a flat flow the fields are not interacting with the walls, the base, the top and the ceiling. You have to bring everything to containment as that is 90% of the substance of the lift.

K: you have to increase the fields to the point where you can contain it. When you develop the containment then you can manipulate it. I have said not to build huge systems. Build systems that are very tightly packed. And then as you see the result change the balances one at a time and let the parameters grow. Make it very tight at the beginning and then as you separate it gradually you increase your fields. Bernie told you that he started with one foot, then 1.5 and now 3 meters. You have to build the field first and then increase the dimension. Build it compactly and you have control over it. Building the coils and putting them so far apart and then getting leakages that you cannot control, if you look at the star system we put 3 down and 1 up

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

and contain the flow, the height and the positioning. It is your responsibility to do this; you have to learn. You cannot copy and build systems and then find out they don't work. A lot of you have a lot of workable. 99% of the systems built by all of you are workable. You haven't managed to understand the working based on the gas reactors, the coils, the cores and the gans. If you look at this from the beginning you have gone through evolutions of different races of the universe who developed systems for themselves. All of them managed to get to space but you have to understand how to control it.

K: I always say this: you think on planet Zeus there were birds that man watched and then they all had aircrafts? Creatures of the universe standing on the planet where they looked into the sky and saw the motion of the planets, the stars and the galaxies and understood the process. It is the same for all of you; man has gathered information that helped him to make physical rotational systems called the motors and wheels. Not everyone in the universe has gotten to that point in the matter state. The majority of the creatures of the universe look at the motion, the condition of the stars, the position of the stars and the elements of the environment. We looked at the bird because to us it was matter. What would happen if we didn't have a bird? Man would never have figured out that he can fly? Understand the way the stars move and the position of the stars. Understand how these positions are created. For century we looked at Saturn, Venus and different stars. We never understood the real position and motion of them. Now that we understand the plasma and the field flow, start analyzing. It is you who writes the true story of cosmology and not the cosmologists up till now. Tell me according to the present understanding why Uranus is working sideways; why is Venus going the other way? Would you accept that if you were running and I hit you with you a stone that you change your direction 180 degrees or you run faster to get away from the stone. It doesn't make sense that Venus is going because it got hit by a meteorite and it changed direction.

K: now that you can set the structure in your way and see the change of the flow of the direction as we just saw with the gentleman in the Far East. He is Canadian and working with the Chinese. He tells you that he can see field flow. Start looking into the sky and look at the plasmatic flow of the fields. There are flow fields in the sky exactly like rivers on the planet. I see those flows and I see it from the interaction of the other fields. You look at the stars and you see a star in a certain place and a moon doing a certain thing. Why is it doing this: how can we reach that? We can replicate it in our systems. We have no choice; now we have opened the Pandora's Box of the knowledge of the universe and we have to continuously add to it and comprehend it. We have to understand it and follow it in the way nature does it. This is where we have to be and it is important for us to be able to develop the true knowledge of space. This is reason I am not flying.

Li: thank you Mr. Keshe.

K: thank you, its' been a long time. We don't see that much from the Chinese community at this time.

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

Li: we are out to shine and to show the work. So we had to push a lot and then they will show their work.

K: yes, the Chinese are developing new dimensions in the knowledge. Tell them not to be share. We need to share the knowledge.

Rick: Rodrigo is calling about his health system that Klaus was sharing. Do you want to see the upgrades?

K: yes, please.

Rodrigo (R): Thank you and now I will try to show the photos. This is the original one I showed you. I haven't received the confirmation.

K: yes he will join the doctors group.

R: I have more boxes and I will explain those to the doctors. (2.55.26 minutes) this is the unit for the whole body (2.55.43 minutes). This is the one you told me to make for bone marrow stimulation. We can lift the bottom one up to do the hip area. We can adapt everything in the unit. Denny and Mark helped me to understand these changes. I hang the helmet because it weighs 8 pounds. So I use a fishing rod to control the helmet. There are batteries on the frame that can be adjusted. There are zinc batteries. Some people want to use the helmet without the body unit. So I created a separate stand for the helmet. The helmet and batteries can be removed and put on the other frame; it has a fishing reel and we can use a chair or wheelchair and use the helmet. There is another one that can be adapted for the size of the person. If a person has to stand for a long time, I made crutches. I have a patient with tumors who is doing very well. There was cancer for 2 months in the left leg and in 5 days they have disappeared 90% of the original size.

K: how do you see the reduction in the tumors?

R: this dog had 2 surgeries 2 years before for massive cancer tumors in the left leg. The tumors when he came in were the size of golf balls. In 2 days those tumors reduced to the size of a little green pea. The second one took 7 days and both are the size of the pea. It's incredible to reduce those tumors. I will use plasma for the rest of the treatment.

K: do you see much difference in the behavior of the dog?

R: yes, incredibly. This dog is 13 years old, an old dog. The owner said that after being in chamber he started chasing animals and is behaving like a young puppy with a better attitude, eating better and running better than the little brother.

K: so the system affects the behavior, the emotion and the physicality. This is what we have said from the beginning. This is very interesting for you doctors who have joined the session. Don't observe only physical changes, but observe emotional changes. This technology as I

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

have said interacts with both physical and emotional. In the coming time we will see more and more of this.

R: the people who have come to visit me and share this chamber and have pets, they said after they went home, the pets in the car start behaving differently, even better. Not inside the house here, but in the car after they leave here.

K: I think Dr. Klaus can tell us as well as psychologists, do we according to your understanding, emit or receive different fields once we go through this? And we see different aspects of life, the security of life.

R: people are coming and they feel the difference and when they go home they feel different emotionally, physically, and they go through different changes. Some people just want to come and spend a little time inside. A lot of people—I get calls every day from neighbors and friends who want to come and be inside this field. I shared this experience with people some for only 10 minutes or 20 minutes. There was a patient I showed you with brain tumors on the right in the temporal lobe and the frontal temporal occipital and the cerebellum lobe, and the liver and bones. 5 days after I started using this unit, she had an MRI and a scan and they could not find tumors in the front, temporal, occipital and only one on the cerebellum. They couldn't find anything on the liver. I have everything to prove that.

K: do you know why that tumor is still there?

R: I don't know and you asked me to do this for 2 weeks and she does 3 hours a day, morning, mid-day and afternoon. She will finish the session on Monday. You gave me more instructions about using plasma.

K: it is interesting to look and follow the patients in the months after. Because now you are putting them with a whole body and will we see the rise of secondary cancers? Or due to searching the emotional and the physical the cancer will not re-appear at all. Once of the things we have seen when you get immunizations you get a small amount of virus to build your immune system. What we see if you get this right the body creates a new dimension and structure that does not accept any more production of cancer cells which means that it locks itself to variations that cannot be accepted by the body. We should not see re-occurrence of the cancer with any of these patients. We want to create a track record. Does the cancer come back? We see these kinds of cancers increasing in the use of mobile phones—brain cancers are increasing rapidly due to the field of the radiation from the mobile phone. This can be a solution. Hopefully we see you on the Wednesday teaching. A few doctors like you can build things like this so we need our innovation center in the background to build these units.

3.08.07

Norway video-Thors—medical unit

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

N: I am feeling good when I am standing here. I will tell you about the experience after this.

T: I want to have an explanation as to how I made the plasma batteries. I prepared a drawing and the batteries were connected in plastic tubing. I was training on these to see how this is actually done and I made a few adjustments to the 20 batteries and they were shorter and they look better. These that are being shown were for training purposes. In the gans that I made I was making 5 different gans containers to begin with. I could see the technology leaning to what we call intention. This is a very physical approach when it comes to intention. I made one container with zinc, one with copper, 2 with steel and one container with brass. Then I made sure that my final 'soup' would be 40% of zinc, 40% copper, and with the last 20% I was getting more conscious. I knew I could draw the iron and zinc from the copper side of the brass. I mixed two different irons together and one is 'stiga-iron' and it went out to be a complete orange color. The other was older steel and it was a dark brown-reddish color. I put them together to make the 20% as strong as possible. The leftover from the copper side of the brass I knew would end up to back up the steel part of the gans in this 20%. There is an interesting incorporation here with the gas in the nano state. So the nano material is working. All the 5 containers were made of plastic so you appeal to the silicon side that has an interesting play under the production of the gans. The 20% are actually consciously pushing its strength with the steel and the left overs from the brass. (3.16.07 minutes).

T: The copper gans turned out to be a pentagon shape with circles around them. I could see on the photography that the distance between the pentagons were not equal. There were many pentagons and they were in all different directions in the photography. I asked myself what was in between them. I thought that this is gas in nano state so how can it detect the nano material and the other part of the 'glue' which would be the silicon. The silicon and the sugar is called 'Arabic gold' which helps to bind this 20% stronger and better with the 80% on the genetic and the emotional part that creates the 80%. I was thinking that even if I got 40% and 40% of zinc and copper I could add a small zinc plate in the batter between the gravity layer and the magnetic and underneath the magnetic field in order to press as much zinc from the gans side of the battery to the more physical layer of the zinc in order to try to get from 40% to 50% or 60% on the conscious side of the mixture from the zinc gans to the zinc pieces that I made sure were on the battery side, the physical side.

T: of course the end product of the gans were showing up to be as I expected, much lighter than the Magrav unit. In the Magrav unit we used as much heavy metals as possible. It turned out to be quite dark in color and I knew from the brass and zinc and copper sides that we had 3 light mixtures compared to the steel. And so the end product was getting very light and that was what I wanted as this was aiming from the health sector more than imitating electricity. That makes the difference between the health batteries and the electro magnetic batteries to electro batteries.

K: how much of the video is left?

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

R: 10 minutes

K: is it on the capacitors? If it is there we can carry on and finish the video.

T: that is what I wanted to share with the gans story. Then I wanted to talk about Nacim Hadid's work in the new geometric patterns and it is very interesting when it comes to mutation and language. If you keep the cylinder structure and you combine the cellular structure to the molecular structure, then you realize that if you change your point of view from the water side of the body for example, compared to a similar structure then you have the molecular structure and the cellular structure side by side. It is in one cell and you have one DNA that is referred to when it comes to the intention of the gans mixtures. There is obviously since the copper gans are showing pentagrams, then it might be the scientific backup that Mr. Keshe is talking about. It is complete when it comes to the reference to the building blocks of the universe. You would be surprised if finally the haps (?) particle or the 'god' particle has nothing to do with geometry compared to the results of the gans. So, I spoke to a fine scientific man in London who was anxious to take the photography now that we know the output of the copper gans and how it would be shown from zinc.

T: We have reason to believe the zinc is not going to show up as pentagrams. If the presentation of the pentagons in the copper gans is shown to be two-dimensional then it will be a great surprise and breakthrough if the zinc gans mixture is making 3-D and 4-D patterns aiming for the big goal of the Metatron's cube. If you look into the memory of the DNA and the memory of a molecular structure of water then you will find there are 2 types of memory and they don't think like humans. That is what I meant about the muting of the language. If you talk about water and see this from the water angle, we would call the water with its structure molecular. The water doesn't see it as molecular. There is a language from terminology called emotional. When I see water from the emotional side and not the genetic side I discovered that the molecular structure of the language had the same language as the cylinder structure. The cells through their history are waiting for the brain to obey the orders which creates our story as humans.

T: The cell itself has its own language and doesn't understand the emotion or genetics but it does understand the orders. The least we can say is that it has a neutral language with a zero point understanding. It doesn't see if you mean according to all the misery that happened to you that you deserve cancer which is happening in your unconscious part. So consciously you can find all the reasons to be ill, such as having cancer. But if you see it from the cellular perspective the cells are just picking this up because you asked them to. It is what we call illness. I have reason to believe that plasma and molecular cells don't understand the human being and it seems they have the same language. For us this would be quite 'cold' to understand as they don't have a particular point of view. They have an outlook. So the mutation in language for example in fresh water and salt water, and when inject copper gans it has this reaction building up. So the water from the molecular side is saying look what happened to me now. And on the genetic part it has its memory to heal itself. So if you put 50/50 copper and zinc that is what the

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

water needs to remember in its memory to get back to its original shape. And the genetic part is the result of how it works from one molecule to another, collectively and subjectively. This is the same thing with cellular structure if you talk to one cell trying to forget that you are ill because the plasma molecule doesn't understand what you are talking about and there is balance. Language is interesting to be seen from the plasma side because it takes what it has and puts it into balance. So there hasn't been any 'enemy' in the first place except for in the head. That is what I wanted to share with Mr. Keshe and his wife Carolina and the beautiful team surrounding the heart of the plasma technology and to all my friends in Norway.

K: I would like you to experiment further in what you said. First of all the mixture is important and when you mix materials and fields you create the gapping. Develop this further; I think the way you are going will be very interesting to start seeing the dimensional bodies. Look for the combination of glows or lights and I think you will see the interactions with the physicality but in the dimension of the lymph or muscle tissue. You understand? What it means if you follow it then what you will change is the salt in your system. If you can create the gans with salt and add to it you will find yourself in the physicality of the light of the gans.

T: do you mean sea gans?

K: no I mean sodium like salt. Marco has built such a system and we have shown it step by step here in the lab. What is interesting to do this step by step and increase this step by step to making small variations? Go back to what you explained about the copper pentagram and add the salt and you will see hexagons and other formations. If you add the right combination the material will create new dimensions full circle. It is very interesting the way you presented this. Try to do pictures of it and come back and teach us.

T: with pleasure; this is so exciting the body is jumping.

K: yes but what you are finding is how our body creates its volume. Let's say the salt used for the construction of the kidney you will find out these pentagons will have 3 dimensions and you will see structures and you will start seeing those gaps between them. It will take you a few months to go through it. A faster process of this has already started here in the lab. What you are looking for here is the batteries are running and the power supplies are running and still producing, the brain has found its maximum volume and now we see the structures. Thank you for sharing the knowledge with us.

Armand (A): I have a system; here are the 4 balls. You can transfer the field of the plasma into the empty space of the ball. You can close it. Then you have the interaction of the balls with 3 on one level and one up. There is no matter; it is a field and you can do combinations of fields of the gans and try the interactions in different ways. But now you don't deal with matter any more. You are working with empty space and the transfer is the plasma tube, another empty space.

K: you are going into the dimension of the field plasma.

## Transcript from 113<sup>th</sup> Knowledge Seekers Workshop held May 12, 2016

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

A: yes.

K: now you have started so go from the beginning.

A: you can have your mixture...

K: you are too advanced—take it step by step for the laymen. I know what you have done and what you are doing.

A: we understood how we created nano material and then we created gans. If you have a copper gans you have a copper field essence.

K: where did you get the gans? Is it in the balls?

A: I produced it' it is not in the balls. It is not transferred yet. I am explaining what I want to do. To fill the tube where it goes into the container. Here is another sphere and half is filled with the water of the gans and your nano coated material is at the top. It is absorbed from the fields and you can transfer this to another container which is another of balls. (3.43.12) now you have your field transfer into the empty ball. There is no water.

K: oh, you have a tube connection between it. Remember Armand that you have to nano-coat that tube in a way to absorb the energy in a field matter. You have to be able to create a gradient of that plasma that reaches the ball space. How are you going to create that? It is not a matter state any more. It has already crossed the worlds and the matter state doesn't exist.

A: it transfers with the nano tube.

K: yes but on the level that you work now the tube is not needed.

A: I can put it in the middle. (3.44.36 minutes).

K: When you create the interaction you transfer the energy as you like. We have seen this and if you nano coat the tube you pinpoint where you want it to be if it is in the center ball controlling the plasma fields of the other 3 balls. You pinpoint it to where you want it to be. You create the pull from one to another. We create the coils to where we want to hold the gans on the field. With what you have done you dictate to the pipe where you want the fields to be concentrated. The field in principle is transferred only through the matter state of the ball.

A: yes, you bring the plasma back to the matter again.

K: if you want to do that, yes. It is very nice. Thank you. Armand will have a very big surprise for you in the next couple of weeks. He is working on something very interesting and you will be surprised. We don't know if he will be inside or outside when he develops it.

Rick: here is the NZ Magrav health unit. (3.47.22 minutes). We received this at technical support and they have built a health unit and would like direct comments from Mr. Keshe.

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

*A step forward: design strategy: this is essentially a development unit. Even so, it is our belief that these units will need to become less 'experimental' and more ergonomic if they are to be accepted by practitioners. We have therefore tried to design it to be aesthetically acceptable to any practitioner involved in clinical development and for it to be sufficiently robust for him/her to be happy to have it in surgery or consulting rooms. We think it will also give patients a less intimidating feel of being experiment on.*

*Although still somewhat 'industrial', the unit is also tending towards a 'therapeutic' look and for this reason the frame is powder coated. We note that other development units have used a single, wide Perspex protection sheet in front of the coils, but we have elected to protect/locate the coils with white, opaque, vacuum-formed 1.0mm thick, 150mm dia., PET and PVC plastic covers which will discourage children from trying to reach the coils whilst also reducing the CH matter-state mass in front of the coils and allow easy cleaning. 150mm dia. Protective covers at the circuit side (rear) of each board are similar, but transparent for inspection. There is not much to see when one is between the coil-boards. We admit that the circuitry could be tidier and we intend to provide full length, enclosing, lightweight rear covers for the circuits on both sides, for protection and cleanliness.*

*3.50.58: coil support method: Shown in our non-coated 'trial' Magrav coil located in a coil-board to show coil support discs, front and rear. Grav. Coil is located in the vertical plane by the disc horns and in the horizontal plane by PET protection covers front and rear (not shown, see photos). Mag. Coil is located horizontally between coil-support discs and vertically by seating in 105mm dia. hole in the coil. board. In this way both coils are positively located in X and Y directions without impingement on the central spherical plasma-generator area.*

*(Screws shown are only for demonstration, actual fixings on the unit are plastic push-in studs which hold support discs and PET covers to coil board, both sides, four per side). We welcome any comment relative to the possible effect of retention/enclosure of the coils in this manner. It is likely to be a problem.*

K: I am looking at it and I don't understand what could be the problem.

Z: so this should be okay as long as the holder is nano-coated?

K: no problem; they are trying to make a fixed system.

Z: yes

K: no problem.

*Specification: 1. Frame: aluminum square section and channel frame, Tig. Welded. Coil-board upright carriers are designed to slide in four-frame channels. 4 x 13mmdia. Aluminum tie bars with M12 nylon washers and nuts. Finish—powder coated paint finish, nylon top-covers to*

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

*frame. Frame is not nano-coated. All bolts and fitting, frame to coil boards—M8 nylon. There is no ferrous material anywhere in the construction.*

Z: is there an issue with a non-nano coated frame?

K: no there isn't.

*Max. opening between Coil Boards: 1000mm. Min. opening between coil boards: 290mm (between coil protectors). Top of highest coil position from ground is 1700mm. Bottom of lowest coil board to position to ground is 500mm. Vertical board adjustment intervals: 80mm. Overall length of ground frame: 1600mm (could be shorter) Overall width: 740mm. Disassembled package size – 1600mm x 740mm x 200mm. (excludes coil-boards).*

*2. coils: material – 14 swg. Bright copper (1.63 mm); mandreis – large, 9mm. small, 4.7 mm; no. of turns—Mag, 144. Grav., 90. turns ration (large/small) 1.6 Length after winding (includes extension to obtain correct O.D. of coils), Mag- 300mm, Grav – 210mm. Outside diameter as fitted to boards – mag. 106mm. Grav 80mm. Coil width-12.5mm; treatment-nano coated by caustic, three applications. Not GANS coated.*

*Connections—spiral-wound. 14 swg. Nano-coated, copper 'push-in' inserts. Lightly crimped on assembly. Application of cold caustic to all joints to repair possible scratching and cut-point on wire. Each Magrav coil unit has a direct feedback line from Magnetical output to Gravitational Input, (as per instruction on KFSSI W. 107).*

*3. support boards: low density PSP 'Multiboard' integral skin, hard foam PVC, 12.5 mm thick. (machined one side only, from 15mm to 12.5mm).*

*Semi-gloss hard skin was fine-sanded to obtain 'wetable' quality. Nano-coated surfaces by Caustic. Board is nano-coated on all surfaces including 6 coil insertion holes. Mag coil insertion hole size 105mm dia. Coil restraint and support discs – 2mm PVC, 150mm O.D. Nano-coated by caustic immersion after fine sanding both sides. Grav. Coil, horizontal location and protection covers, two per coil-opaque to the front, clear at the rear. 1.0 mm PET plastic, vacuum formed. Not nano-coated (but could be if thought necessary). Retention studs per coil position-8 per coil, 5mm dia. X 8mm nylon 'fir-tree-push-in clips, 4 per side of coil, Nano-coated.*

*We note that Philippines, Austrian and Taiwanese units use Perspex coil-boards. Even though relatively thin, Perspex is a high density, high mass plastic. Although thicker we have chose to use a low density, hard-foam PVC for the coil boards, the extra thickness giving advantage for the vertical restraint of the magnetical outer coils, whilst we hope that the thicker, but lower density material will not impede the performance any more than thinner Perspex would.*

K: in a way it does not matter that much with the field levels. This system is trying to use not such dense materials. Try to use only what is CH-bound soft which means interaction allows the field flow. What they suggest is good but what the others have done is fine. These walls will help

filter. Anything you use with a given mass acts as a filter. If you use copper ball, the ball is your filtering mass. If you use Armerium, then the gravitational magnetical field of the Armerium becomes the filtering mass. The matter state is filtering in the magnetic strength.

*4. Feed-back cables and plasma-drain line: 14 SWG copper, 4.8mm dia. Annealed and nano-coated spiral, 1.7m long, encased in 6mm x 10mm, clear vinyl tubing, nano-coated by caustic immersion.*

*5. Base load plasma cells (6): -central nano-coated Cu. Pin (Neg.) 14 SWG. -GANS coated paper, first-stage GANS-one third CH<sub>3</sub>, two thirds CO<sub>2</sub> (made by distilled water/salt method) plus crushed quartz crystal. - 5mm dia. 22 SWG nano-coated inner coil -grounded to central pin -GANS coated paper and quartz, second stage -70mm x 70mm nano-coated aluminum wrap. -5 turn, 14 SWG, 12.5 mm dia. Nano-coated feedback coil; grounded to central pin. -9 turn, 14 SWG, 12.5mm dia. Nano-coated output coil, (Pos.)*

K: they are describing the production manual? They are describing what they have done. Can we see the end product and put this manual on the website. If Brennan and the innovation team approve it they can put it on the blueprint on the website.

*6. Coil Plasma cells (6) -central nano-coated Cu. Pin, 14 SWG; - CO<sub>2</sub> GANS-coated paper to 9.0 mm dia. With crushed quartz; (GANS by seawater/caustic method).; -50mm x 50mm nano-coated aluminum wrap; -5 turn, 14 SWG, 12.5mm dia. Nano-coated feedback coil; grounded to central pin; -9 turn, 14 SWG, 12.5mmdia. Nano-coated output coil, (Pos.)*

*7. Circuit: we have elected to deviate from the sender board circuitry of the Philippines Health Unit as it seem to us that in the case of one or more cells, is or becomes weak, or malfunctions totally, then the adjacent Magrav coil might produce a weaker or no field. Our aim is to have a uniform and equal field from all coils on the sender board at all times.*

*Circuit: see 4.01.36*

*We have mounted six split cells/capacitors together in parallel at the base of the power-board to ensure a uniform base voltage output and high capacitance to the circuit at all times. For the same reason, we have added a split-cell across each Magrav coil on the power-board circuit to try to ensure a smooth, uniform and equal plasma DC flow to each coil. (Whether this results in a uniform plasma at all times, we have no way of knowing, nor do we know if the strength of the plasma field is proportional to the max. voltage measured on a DMM or oscilloscope – so it is just a ‘probability belief’ related to typical electro DC practice, which might turn out to be not at all appropriate for plasma technology, but we felt it worth testing unless Mr. Keshe already knows a reason why it may not be feasible). There is no provision for separating (switching on/off individual coal pairs on this unit. It is currently permanently operating on all coils without any switching and has been for several weeks.*

(v1 2016-06-07) DRAFT (Transcription has not been verified. Double check info with video)

*Hypothesis. If the mv. Reading on the oscilloscope is inversely proportional to the plasma field strength in some way, and if the signal supplied to the antenna from a signal generator were a clean square sine wave of constant mv. Strength on the oscilloscope, (this signal strength always being used for a datum point for comparative measurement)*

*then it should be possible to detect and make a comparative measurement of field strength by reading the drop in peak voltage of the square wave as the antenna is inserted into the field. Bigger the drop, bigger the field.*

*What is not known is whether the relationship between the mv. Reading and the field strength is simply inversely proportional or based on an inverse square law or some other relationship. Possibly based on a square law related to the expanding surface area of a sphere? We suggest that this is an area to examine further in terms of field detection and measurement.*

K: there is not much difference; you just have a homogeneous field.

*Receiving Side: the receiving side circuitry is similar to the Philippines unit. We have used a 'three way' version of the 'spring' slide-in connectors for the first time for us on both boards and the connections seem to maintain good voltage transfer and contact as we can measure an electron DC voltage across each coil on the oscilloscope and it remains steady and about equal one each coil. As far as we can tell from the electron DC voltage readout on our oscilloscope. The field on this board however, as detected does appear to be less than the power board when detected close to the board.*

*Topic – field Detection and measurement: possible plasma field 'comparative measurement' hypothesis. If the signal received by an antenna in free space, at a broadcast constant signal strength (mv.) is displayed on an oscilloscope, when the antenna is then inserted into the plasma field, it is observed that as an antenna is inserted into the field and moved closer to the source of the field the observed electron mv. Voltage reading of the oscilloscope diminishes. A factor of approximately five to one has been noted. This is a useful range for measurement*

Pictures from the oscilloscope: 4.05.06 minutes.

K: they measure the field by comparison. You don't create two and I will show this in the coming time. We move from matter state to plasma field state.

K: the blueprints are the amalgamation of what everyone has done, not just the foundation and the innovation center. We share knowledge and not just with what we develop.

K: last Q and A session; she is moving to the universal council as the Secretary General. The council has to be headed by a woman to get it right.

Sandy: there is a Q and A session one hour after this session.

K: thank you for being here today and don't forget our aim is to deliver peace through new technology. We are on the path and we are going rapidly to the target. It is for us to deliver the peace and not wait for others to talk about it. We are delivering the technology to man. We are proud to be able to share the knowledge so freely. We will close the booking soon.
