

Notes from 114th Knowledge Seekers Workshop held May 19, 2016

(v1 2016-05-23) v1 (Notes have not been verified. Double check info with video)

Notes courtesy of Cornelius van Dorp @ Keshe Foundation New Zealand

Video link: <https://www.youtube.com/watch?v=hFPVJx-gGqI>

The photo is of an orange cut through the middle, which MK uses to explain the structure of the plasma as it should be in the reactors we are creating with inner and outer cores to replicate the structure of an orange, a planet, a sun, etc. etc. Many thanks to Anke van Ziel for making notes on the intervening International workshop, I think I might just have enough time to spare going on to make notes on the Thursday's Knowledge Seeker workshops...

0005: MK: Good morning etc. 0007: We are going into manufacturing in Ghana in collaboration with Government agencies, and this is a pattern for other Kfs around the world to follow – working in cooperation with world governments. 0009: The first MOZHANs have signed up and we have received deposits.

0013: The purpose of the Universal Council is to bring Peace to mankind but we have already seen people creating division on the internet – this activity has nothing to do with the KfSSI or the Universal Council.

(v1 2016-05-23) v1 (Notes have not been verified. Double check info with video)

0014: We have started the doctors teaching on Wednesdays – these teachings will become available online eventually with patients' names deleted etc.

0017: MK recaps again the teachings from last week of the development of the plasma technology – 1. First of all starting with rotating cores filled with Gas or GANS and now Liquid Plasma – 2. Double copper coils at first non-rotating with Nano coating, GANS coating and Liquid plasma – with applications in medical tech, Magrav units etc. – Now 3. We have moved into a combination of these two, modeled on the planet – the inner core of coils rotating and interacting with an outer core rotating separately, and interacting with the outer core creating a GM field and for example giving the 1G Gravity of planet Earth. 0022: so to replicate this you have to create a rotation of the outer sphere independent of rotation of the inner core.

0026: You can see this scheme in fruits – apples, oranges, pears – but the inner core has to be connected with the outer core at both ends – needs a pin touching the outer core to create the plasma flow. 0027: Shows a photo of an orange cut in half and demonstrates the fruit's plasmatic field flow the same as the planet's, with this particular orange showing creation of another complete small orange inside the outer orange with its own orientation, but the main point being the plasmatic field touching the outer core at both ends or poles. 0034: Same applies to the structure of the pain pens – the central pin goes all the way to the tip with the plasma flow. 0037: In summary you need to set up a pin that goes all the way to the outer core to create the field flow. 0044: Demonstrates how in the same way the interaction creates the gases of the atmosphere, C, N, O etc. – you should be able to do this with your reactors – check the dust on the floor!

0045: Armen is on the verge of demonstrating the first flight system 0049: Armen shows his system with transparent glass spheres with a 90 degree opposed coil set up that he can rotate independently inside. 0055: This will fly because it replicates the situation of the earth and solar system.

0106 – 0130: Difficulty experienced getting Benjamin in Ghana online to present the ongoing experiments with water purification in Ghana. 0130: Mossed (sp?) in California asks MK to explain about the effects of mono atomic gold on the DNA and on the brain. MK explains that the idea of only 10% of the brain being active is a misconception. Every cell of the brain is essential to the full function – every cell of the brain relates to a point on the human body – the brain is a replication of the physicality of the body. 0135: Mono atomic gold and silver can be produced – silver is grey/silver and gold is whitish – making mono atomic gold is very easy,

(v1 2016-05-23) v1 (Notes have not been verified. Double check info with video)

Armen can teach you.

0142. Benjamin has now sent his PowerPoint to Vince and Rick to overcome the bandwidth problems in Ghana. 0143: He describes how the CSIR (Council for Scientific and Industrial Research) in Ghana is made up of 13 research institutions including the WRRI (Water Resource Research Institute) – he introduces the scientists from the WRRI – describes the process of experimentation – essential to wash the salt out of the GANS then dry it properly so that accurate weighing of the GANS can be done with very accurate scales for standardization. 0201: Next step is to mix the GANS eg CuO 0.1015mg/10msl of distilled water. Then 15mls of water from different rivers were tested with various parameters before and after adding 1ml of GANS solution – then tested again after 24 hours

0207: Conductivity was tested to make sure no salt content introduced. Bacterial and mould colonies were identified through membrane filtration – total coliforms and faecal coliforms. THE CuO GANS was effective but not 100% - the level of bacteria counts were significantly reduced – the final recommendation was that the concentration of CuO GANS may be increased.

0223: MK comments that we have now moved from using the GANS to use of GANS water. Tests in Tokyo have shown that use of GANS water is just as effective as GANS. Also would be good to test the use of CO₂ GANS water as well as CuO. This research shows the CuO GANS water can be used as disinfectant – this is the first step of the research – more research is needed to further define the effects. This adds to the research that started in South Sierra Leone University on treatment of Ebola virus – this research was shut down by WHO. 0241: You used the powder of the GANS, which gives a different result from liquid GANS – would be good to test the difference, and also to do some more research on radioactive contamination. Can we test the effectiveness of CuO and CO₂ on radioactive contamination? We already know the results but the research needs to be replicated and Ghana is a perfect place to continue the testing

0248: A question about how to standardize the GANS water – MK says not really necessary - talks about mixing the GANS with a mixer that has nano coated blades – mix it at 50 – 100 rpm and it is possible to test the plasma strength by mixing with chilli for example – you will taste the difference! 0254: Benjamin talks about mixing GANS with liquid and solid soaps – preserves the fragrance of the soap. 0300: Research presented by Dr. Nash on reducing radioactivity is in fact in process 0307: Benjamin talks about the great success they have had with reducing power consumption with Magrav units in Ghana. 0313: MK says manufacturing in

Ghana will soon be set up – thank you very much to Benjamin and the team of scientists – we will have an update in a month's time or so.

0314: We have started the doctors meetings – 2nd meeting yesterday – what was discussed yesterday is that we are re-opening www.health@keshefoundation.org for people who have medical problems and wish to have help – they will be answered by the doctors who are getting involved with the foundation. If you're a doctor who is interested in getting involved with the plasma/magrav technology then email at www.doctors@keshefoundation.org

0326: A comment from a Chinese KS about a Chinese doctor named Dr. Xia who is able to feel the plasma – with a medical magrav unit with pain pens (as presented before) it made a difference whether the magnet was turned north or south pole out – one way felt like beautiful colors and the other way felt like a grey ball – which is the best to use? MK says both are good, not forgetting that what is called south and north poles we call entry and exit – are you giving energy or are you trying to receive energy?

0332: A question about the eye drops in the 'Gans participation project' – the health product available on the website is available for testing by people – this is someone wondering if they might need more eye drops than just the one bottle- and the donation automatically taken for getting a bottle of eye drops is 135 euro – so will they have to pay more for another bottle? MK says no they wont need another bottle as this is for testing - if no results then no need to test any more...

0336: Question – can herbal doctors from Africa join in with the doctors' workshops? MK: Yes with the greatest of pleasure! Send an email

0337: Question from Angelo about white GANs floating on top of the water – can you explain? MK: Yes you will get separation of different GANSes with water in between under certain conditions – (in this case very quick production of GANS by addition if voltage from a battery in the circuit.)

0345: MK: All American orders from Italy have been shipped. Repeats last weeks announcements about Italian units being available for Italians at 10 Euros per month – and probably available for German addresses as well in the next few weeks. There is also another way for Italians – a deal has been struck with the biggest bank in Italy in which people can go directly to the bank with the application form – the bank will supply the funds to buy a unit and then people will pay the banks back at 10 Euros per month –

0353: Some details about Kf France website being set up with Jackie. – Teachings will be available in the French language. 0355: We will close places for the Rome event soon (so make your bookings now!) We are approaching the achievement of lift and flight. Thank you very much for today

035833: End.
