Presentation on GANS soap-making with knowledge seekers of Ghana.

(Transcript of introduction portion missing)

Keshe (K): We will carry on teaching the technological aspects of evolving new systems and new directions in teaching. We are getting ready for the space excursion; there are a number of systems in the background and we are working with a number of governments in the background with different aspects of the technology and private groups. It took some time for people to go from core to coils, then plasma and GANS, and now we expect that people who understood the technology are going to come up with new understanding of the fields. We see a number of people have understood the principle of the field plasma and now that we see the development we bring new understanding of the plasma aspects in space technology.

K: Deep space technology means independence from this planet and knowing wherever you go in space you are safe irrespective of space or of time in the life of the man and in respect of field strength across the universe. Man has evolved and been kept in a very safe nursery called planet earth. We are protected, we are held on to and provided for and mother earth has nourished us for thousands of millions of years on this planet. In a way human race has become like a teenager who tries to go out and see if he can survive in the society. This is where we are going and the (next) step of the man is to come to enter the universal community. We have been nourished and we have been looked after. We have been fed, protected and given the light, the energy and the heat and everything else that could guarantee the existence of man on this planet. This is where the spaceship changes position. Man has become a teenager and as usual even the key to the house as is the tradition in the English culture if you understand it, that you are an adult you can come home when you like and go about life in society.

K: The spaceship program is the key to a teenager who starts going out; going out into space and knowing there is a home if he wants to come back but having enough training that outside in the wide world of space he can survive all the good and bad and come home or make home wherever he likes and to feel safe and able to look after himself and his family. This has been part of the teaching of the Keshe Foundation Space Ship Institute: to teach how to do what you need to do and the way to do it and decide when you have a teenager at the age of 18 on the birthday, you give him the key to the car for him to start learning to drive and go trouble around and then come home safely. We give them the keys, the car and instructions on how to drive. We are in that stage—we are building the car, we have been given the car, we are given the key

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

to the car and now we are training from now on to teach man how to drive in the universal space of this solar system, this planet, the space of the galaxy and the universe.

K: It will take time to progress from one to another but we have laid the correct foundation for man to become the driver in space who can come back home safely or if he decides he wants to 'move out of the house' and find a new place and become independent and see new places. We have done this for millions of years and that is how we came from one tribe to another and as we moved out farther from the families we started the cities and small villages, countries and the rest. Now we start the excursion to space the same way and now it is for us to learn the rules of conduct of the space travel. It is for us to understand where to 'tank' for fuel and what restaurant to stop for food and come back home. But this time man has the opportunity not only to drive the car but to build his own car, how to make his own food, how to make his own shelter and as they did in the 60s when they became the hippies and the campers. Now we become space people who start camping across the universe and we need to have everything and be able to produce what we need and not having to wait for the next fuel station or the next stop where we get food and water.

K: The process of the Keshe Foundation teaching is not to enforce one path of thinking but opening different paths of thinking so everyone can participate and bring their own knowledge and collectively as we gather knowledge together make it easier for the human race collectively to find different ways of getting to space according to our intelligence and understanding and giving everyone the same chance. This is what we have achieved; we have gone across races, countries and every possible way and we cover every country on this planet and no foundation or organization has achieved such penetration ever in the history of man in such a short time. It took Christ 300 years; it took Mohammed more than that. And because they used the belief of the man to control the soul of the man they got off balance. This time it is your soul and the soul of the man to decide there is no limit to conduct itself in space the correct way so man is not harmed and does not cause harm and not to take advantage of space as man has done on this planet but within the space and the fields of the universe that is welcoming and nourishing.

K: In so many ways we have to become part of the universal community. We have said this many times—the behavior of man has kept man from entering the universal community. Now as we see internationally a large number of people have taken up the ethos of the Keshe Foundation trying to create peace among men and systems that make man independent of conditions that have brought man pain and suffering for centuries. When we can't supply all the needs of the man, then man understands and changes his habits and with the comforts of having everything it changes the position. In being able to see clearly the perception and the work is changed. In understanding the technology of how to survive and how to be peaceful, man is allowed to enter the universal community. As we saw in the last video, we are preparing the last stages for man to enter the space community. But entering into the space community with a man who has been so violent for thousands and millions of years is not easy. We will see reactions and interactions and in time we will see the process of the healing of the man to

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

change his process of killing to peaceful actions. So, in totality, one by one we have taken the steps and part of you are developing the space technology to make the 'car'. Some of you are developing the food, energy and material side and some are developing the health side. Collectively we are working in the same direction. Some may look strange and some may look far-fetched but it is working. Gradually in the next three to six months, we will see millions of the human race working this direction. We have made the 'ground' ready and the teachings are spreading. We see the knowledge coming from all corners of this planet to share knowledge freely. This has never been done; we became a threat to multinationals and to those who structured the world to be busy with wars (as) they take advantage of wars.

K: We see the Keshe Foundation which is viewed as a threat and in a way we don't need us anymore. We see a number of scientific and influential groups turning towards the foundation in a tentative way to start working and understanding, maybe to be with us or maybe to find a way to penetrate and disturb the flow to carry on the behavior of the past. I give you one warning that the knowledge has spread so much that there is no camp on either side. There is only one camp of the human race to go forward. We received communication from a number of these organizations in different ways, and they have been accused of penetrating the Keshe Foundation in different ways to control it. The control of the Keshe Foundation is not in the hands of one man or one nation; it is in the hands of humanity.

K: So, what we hear, what we see and what communication we receive, we have become impenetrable because the people have done their jobs in the past centuries to control though war now they are part of the colony of the Keshe Foundation. We are touching them, but not at one place, one man, but across the planet. You are building the Magrav systems, the health systems, the GANS plasma health systems and there are thousands and millions of you across this planet. Up until now they had a target and now the target is spread and they became the minority. The old habits of trying to be in control so they could have some 'crumbs from this cake'. But this cake is intact. We see the human race going for peace and the beginning of beautiful relationship among men themselves who are sharing knowledge but at the same time, not having those who would like to be leaders as they call themselves. We are all equal in sharing knowledge beautifully and the more of you establishing different approaches, paths and avenues into the Keshe Foundation, the stronger it will become.

K: Diversity is the strength of the Keshe Foundation—diversity in knowledge, sharing knowledge and the way we are growing across the planet has become our strength. We are on the verge man traveling into space on the principle of the space technical knowledge, the work of the universe and without damaging the universal condition. As I said, in the coming time, very soon, once we achieve given numbers including the governments who have part of the knowledge, but with the full knowledge, will be given access to the universal energy. We know that we can mention nation by nation that have made contact and approaches and have tried for the last few decades to develop this space technology which they have been given to was due to the conduct having been withheld the final pieces. The final pieces will be given en masse so that

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

no nation or country will be any different. In traveling to China with the help of the Chinese government supporting the Keshe Foundation, we will open the space technology with the leadership of President Xi and when the nation stays peaceful, the man becomes peaceful. This is a gift from us to humanity. In so many ways we look to the other world leaders to join step by step and now collectively we can add to the knowledge of man and we have given you the tools. Now you need to learn the methods and you need to understand more and more. I said that my teaching will come to an end because I created a condition where you, the knowledge seekers and the teachers of the knowledge seekers will start teaching in every language. We have reached that watershed. We have seen the Italians, Germans, French, Spanish, Chinese, Japanese and you name, you are doing it. My job as a teacher is coming to an end and I will step down very soon. In the coming time when I am ready for space and when we put the man face to face with the creatures of space, we will create the friendship handshake across humanity with the earth community, then I have achieved my goal and I will step down.

K: In that process, we have to understand one thing—we have to change from war, war mongering and destroying to achieve having things. In the next three to six months we will achieve this due to the allies and supporters we have made of you. We will see a number of nations become one nation. Everything has been made ready for this over the centuries. Now it makes sense to bring it together and we have united the states. There were 50 states or nations that had their way and made one nation out of part of one continent. We have seen the connection of the Europeans together as the European community. We have seen African nations on the same path. We see the Asian continent joining the same. Our job as Keshe Foundation is to make one nation out of all these groups. We are achieving it very rapidly. Then you understand to make one planet, one nation, one race, the work has already been done. It is just bringing the last pieces together that we bring the trust and unity.

K: We see in the news in the past 48 hours that the Russians and the Chinese have settled in peace and if anything is done against Russia or China by the United States, they release all the papers and dump the economy of the United States. It means that China has taken the leadership of peace as they own most of your assets and now they dictate the peace conditions. That is why we sit with the Chinese. Peaceful behavior brings peaceful reactions. In so many ways we as Keshe Foundation have been given all the opportunities for the development of the technology and the delivery of the technology to change the pieces and bring the last of them together. The jigsaw is already on the table. All the pieces need the connection and when the picture is of all the pieces connected, the beauty of the picture is the beauty of mankind and with it the prize of the opening of the universal community to man. Is it worth it to have bigger space to look and travel and learn more from the men of space than to fight for a piece of land which is worth nothing when the physical life of the man is over?

K: We put the hand of peace across the table as we did with Iran and the American nation some years ago and led the peace talks between Iran and the United States. Now we put the hand of peace across to the nation to all the world leaders that we give you time but we stay on the

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

path. We have the tools, technology and the manpower of the thousands of Keshe Foundation supporters to deliver the rest step by step. At the moment we came from the center core of the fuel. Now there are thousands and each one of you are adding additional parts to the mosaic of the beautiful creatures of this planet which is mankind and the rest

K: I have been told there are people creating divisions in the different parts of the Foundation. Why not—it is your freedom. As you carry the ethos of the Foundation which is to bring peace to humanity, open as many websites for Keshe Foundation teachings, children, different languages, whatever you like. The more you do the more beautiful colors are brought to the table. There is no dictatorship or leadership and we are here to guide each other and whatever we do leads to one thing and that is the education of man, the kind of world peace and the tools for that peace. We see better and we act better. I said this from the beginning: part of the development of the space technology is not the physical reactors; it is not the Magrav units, not the health units, or growing more lettuce and cleaning the waters of the rivers of Africa. It is with this process that you bring peace to humanity. We start learning and teaching and it is beautiful to learn from every nationality with the common language of peace in the soul of the man.

K: From now on, we don't spend time on seeing and developing systems. We have done that. We are at the point that man cannot understand any further. At this moment in time, even reaching the field plasma, we have reached the pinnacle science for man. Now we know the point we have to achieve and we have to fill in the picture. Some of you will develop and bring different methods. It is for different applications and no one is wrong. If you put the double coil together, the GANS together, the nano-material together—they have all come through the teachings of the Keshe Foundation. None of you have brought anything new to the table but you have brought the knowledge of mankind to the table. So those who try to claim they control this, or have that, or control the decision-making of the country or nation or whatever, it shows a lack of understanding of the teaching and you are getting lost again in the same process of mankind that goes against the direction and the understanding of the totality by the foundation. . If winding a couple of pieces of wire makes you the leader, if stacking the coils makes you the 'head' it means that you have no knowledge and no understanding of the work of humanity. Put as many systems, amalgamations of systems, bring the GANS plasma, the liquid plasma, the nanotechnology, the matter technology together and use the beauty of it for man to achieve peace and enter the condition to be able to be the teenager to have the keys to go on an excursion of his own.

K: It is very easy to get lost but if you have good beacons of light you can always find your way home. I have explained many times how we can change things and how we can allow more and more people to access the technology. We have come to the point to extend knowledge and today we go to Ghana. Benjamin at the Ghanaian Keshe Foundation and Ghana Atomic Commission has done a lot of work in the background. We will see a new material and a new approach developed by Ghana Atomic Commission. Today I teach you something new—how you can understand the technology in a very, very easy way. It has been on the table but none

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

of you stood still to listen to what was said. Go back to the beginning of the teaching, the very first videos we made of making nano-materials and the GANS.

K: If we go back to the understanding of the very first teachings, you will understand that what we have been teaching the last two to three weeks has only been always on the table. It is us who didn't look deep enough. At the beginning the knowledge was not understood.

(00:40.34)

Let's go back to the original teaching: you have the matter and you have the nano-materials. We said and we have shown many times the original pictures and videos which Keshe Technology put on the internet 8 and 10 years ago, a beautiful collection of different materials with the diamond which showed the behavior of every material. If you can find it on the internet, you see different materials using the testing shows the behavior of the diamond. So we know how to make crystals, diamond crystals already. Diamond crystals come only when a specific configuration is achieved. With the bands light (?), the acceptance and the rejection of the field is created.

(00:42: 13)

K: What we do in the matter state with the nano-materials we have today? With the dark color on top of the nano-layers, we only are looking in and we are not looking across. If you could look, not this way where you see the darkness where all the rays are absorbed, (not above at an angle but above looking straight down) but look this way and you will see the most beautiful crystal structures man has ever known. That is why when you put the tools which you know we see 20 MΩ (mega-ohm) this way (from top to bottom) but this way (along the nano-layer) you see super conductivity and this is the behavior of perfect crystals and the behavior or creating perfect crystals. So, now you understand how to produce crystals; you have already been there and you did not see the knowledge. Go back on the extension of the knowledge; the way we spoke about using composites. If you still use composites from different materials, you created the bigger and the smaller spacing in the various nano-materials. Then you understand you can make this basic space gravitational magnetic field positioning and with it now you can decide the size of the crystal.

(00:43.29)

Each one of these takes a position in the crystal, with perfect spacing in the structure.

K: You have already been crystal makers, perfect crystals. The crystals you have been making of nano-layers are so thin and you don't have the tools to see these are the most perfect crystals man has every made because it is made by allowing nature to do what it is happy doing and without any damage by taking the position it likes. If you understood this, those of you who were looking to make perfect crystals missed the point. Don't forget one thing: you put this

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

nano-material (liquid) into liquid of another field strength and you placed it and released it as a GANS.

(00:44:55 minutes)

If you understand now that in creating a condition to go from attachment to freedom, you can create a condition where you can bring the freedom of the material in the spacing it the correct way, you can create any crystal size. Now you have to look for a medium to be able to not let them loose to become the GANS, but create a condition that in becoming loose they found the position—you can have a diamond the size of a planet. We have seen the diamond structures in the universe. There are stars which behave and are the same structure as the crystal of the diamond.

K: it has been ordered by NASA years ago. Now you understand the space of the universe allows crystallization in the dimension. It is the matter and the combination of the matter that you use that dictates the spacing. Now you understand how you have been doing perfect crystals and you have been releasing them. Now you have to develop the technology where you can control the freedom not loose in the GANS but collected as crystals of the GANS. This is the space crystal structure. Then you can decide to make any material in space by controlling the fields. Lets' add more to the knowledge. Go back to what we talked about with the CO2 box. The CO2 box which I developed and you followed and a lot of you make your GANS is the operation of the universe. None of you understood. You were too busy to see that the world of the matter of the man blinded the man.

K: Let's open the knowledge; go back to when you make the CO2 GANS. You put the nano-coated copper and you put the zinc plate and then you immersed it in the water of the salt. Go back to the teaching and understand what I continuously emphasized and many of you were too busy to seek (?) out the CO2.

(00:48:36)

If you remember back on the teaching what we said, the gravitational magnetic fields that are created by the nano-material in respect to the matter state created the field of the carbon and where this field of carbon, the interaction of the gravitational magnetic field which you have now created in here has made the magnet for the carbon in the space around the system to attract it comes in to match up. It joins forces with oxygen of the water that created your CO2. Understand the terminology: we did not create CO2 absorption; we created gravitational magnetic field of carbon by choosing the appropriate materials in which the division and difference in some of the isotopes lead to the creation in the environment which has gravitational magnetic fields of an entity.

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

K: In this case of the choice of the matter, the nano-material and the matter just give you enough to create the strength of the fields of carbon. So what do we talk about for the past two or three weeks? Field plasma technology. You have already created the plasmatic field because the plasmatic field you created led to the creation of gravitational and magnetic field in the strength of the carbon which attracted anyone passing by. What you collected as CO₂ is what falls on the bottom.

(00:50:24)

This field never changed and what you see after a while is that your system doesn't work anymore, doesn't produce anymore, because the reason is not that the field has changed, you have consumed all the oxygen that is in the water. That is why your process stops. This field never changed. You change of the oxygen into this container and you will get CO₂ for the rest of life to come. Understand that you have already worked with diamond and been creating the most perfect diamond in the universe in your nano-layers and now you have the knowledge and you were too busy looking at it to land in the bottom where you already, all of you, have been working with the field plasma.

K: We went into detail of how that field plasma of carbon is created even if you put copper with copper, how it is created and how you allow the fields to flow. Now all of you understand that all of you from the beginning have been in the diamond business and all of you have been in the field business. Now let's this a step further and add to the knowledge a little bit more. It's very simple. Bring the understanding of the crystals, the understanding of the GANS material and now put an entity in the middle which has nothing but has the field of the plasma of the carbon and you create magnetic gravitational fields where now you can and you have the ability to use the fields to create the crystals.

(00:52:41)

I see Giovanni's mouth opening.

K: This is the truth that all of you now understand the technology in more depth and now you bring everything together. So, if you understand this and you can follow the principle, all of you can make any diamond, any size and color, the size of your intention. Would you like a 2 carat or a 2000 carat diamond? I give my condolences to the diamond bursars of the world. The total cost to make such a diamond is less than 5 cents. I used to be a diamond trader (?) and I broke my own business. That is why I moved away from that business because I realized what I had developed and what I had in my hand was worth nothing. When you are looking for diamonds of certain carats, I can make a diamond of 1000 carats. If you understand this sooner or later you will start producing diamonds and crystals like nothing. I have seen the innovation center in the Philippines is in the process and they have not understood it fully; they are not very far off. We have a beautiful team in the Philippines run by Renan and Bernie. Douglas in the US will join soon.

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

K: Now you can produce crystals that carry unified, uniform fields and you understand exactly where this leads. If you understand this, then you can extend the size, shape and dimension of the crystal go back into my teaching. I always said that the future of the spaceship program depends on the crystallization, on the crystals and now you understand why. You make your reactor out of one crystal. Then what you have is mono-controllable and if you understand further you would see the 3-crystal star formation below with one above.

(00:56:00)

They are unified and never lost, and the positioning of your crystals has to be the crystal itself. Then you decide the shape, the color and the strength of what you call is your ambition to create unified field protection which to you, you would like to call it the space ship. Now the race for space is getting hotter.

(00:48:36)

K: Now you understand how simply in 10 minutes I changed the course of humanity... if humanity understands what is on that board. This is the beginning of the teachings of the true space technology. What we have done in the past two years is to walk you through the alphabet of understanding the knowledge of the universe. Now we come to Berlin (?): words, letters and sentences to be able to survive in space. You have all the tools and if I had tried to teach this to you two years ago you would have been lost, but now you have gathered the knowledge step by step. A lot of you made the whole process, nano-coating, GANS making, field making and crystal making and now you see where you sit. If you understand this, and if you start creating conditions—you see I don't tell you anymore: 'copper plates, zinc plates, this or that' because now you are graduates of the University of the Keshe Foundation Knowledge Seekers – all of you.

K: Now it is for you to bring your knowledge and collectively start working together on the internet. You have the best tools. Do not dictate but try to share. Try to understand the plasma crystal technology, what we call the field technology, can create any diamond structure. If you create the right diamond structure of the GANS, you can create anything across the universe. You need to understand the totality of the structure. Many times this knowledge has been given to man and man never understood. The only part man ever stuck with was the knowledge of making matter out of what you call pyramids. This is your pyramid. The knowledge has been shared many times and those in control of understanding never understood and those who understood how to build it tried to become the pharaohs and the other leaders.

K: A number of world leaders are in the capacity of the nation's scientific and the development of the military and have access to those who have taught man in the path. As they don't understand, they cannot fly. Now you understand more collectively that no army and no nation will be superior to others and it is taught right across. This was taught once before and somewhere along the line the greed of the man took over.

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

(1:00:35)

The greed of the man is very strong, but not this time. This is why we see pyramids in every corner of this planet. The knowledge was shared but because of lack of communication in totality it was cascaded by those who used it to rule. This time, there are no rules and the knowledge is shared correctly. This is why you see pyramids across this planet. Those who understood the knowledge took it and used it to rule and to be better than the others.

(1:01:27)

K: We see pyramids across this planet and now you understand very simply (that) if you look at the pyramids, in different structures are the domes of their own spaceships. But man only made what was important to him and not the rest of the knowledge. Now for the first time with the mass media, we have allowed it to develop this correctly. Then you understand what I keep telling you—we are making you ready in totality to join the rest of the universal community through understanding of the technology and not just by nano-making or twisting wires or adding some plasma. I have told you that even the Christ, bless his name, or Buddha did not do this. They were guardians of the physical conduct of the man. We have brought the full knowledge of the ethos together which means that we teach not only the understanding of the physicality but the use and the ethos of this use in space. This is energy, health, material and food.

K: I have taught the full spectrum of every need of the man in the language of the science in the ethos of the universe. So you understand as universal messengers we complete our work totally when the condition is ready. We have not taken to make one nano-material for whatever. We start teaching you how you can use the knowledge in totality to be able to survive. (I have taught) the basic needs of the man in space and the ethos to use it correctly, now we can stay alive and spread the beauty of the human race in the rest of space. Every flower brings beauty to the bouquet on the table. Even though man has done wrong, man is another flower of the creator and brings beauty to the bouquet on the table when man joins the universal community. It is for man how long that flower will last on the table according to his understanding his own strengths and weaknesses and not using the weaknesses of others but using his strengths to add to the knowledge the way we have done. We bring you in and allow you a platform for you to share and you shared proudly with the other users.

K: Now today in a very simple teaching you understand how all of you are in the position to be able to become passengers of the universe. It is you who is choosing the level of development according to your understanding. I have given and taught you everything. It is for you to start deciphering the teaching in the past 10 or 15 years. Read the books, the papers and lectures. In each lecture, I have given across something has been released and it is for you to bring them totally together and start deciphering. I just siphoned a very, very small piece for you this morning and you have seen how everything has changed in this world. You have been in love

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

with diamonds; now diamonds are for your use. You have been in love with energy and the fields; see how simple it is.

K: If you desire to go into space with the spaceships, you can guarantee that survival when you are not made of aluminum (?) and titanium but evolves according to the environment it is in. Now I will not teach for hours; we teach a few minutes at a time but the knowledge is so deep it will take you years to decipher. If you can decipher it correctly, for those of you have reached the understanding with maturity and in totality, you should be on the verge of the creation of the first spaceships. Chinese research people are on that level. You have to understand that the Chinese government and the people within the Chinese organization at the highest level have had access to the knowledge and contact with the universal community for some time. The same has been with Russia and the United States and a number of the African nations.

K: We know who and how the knowledge has been transferred but we are waiting for one of the responsible world leaders to commit humanity to peace and then we open the rest of the doors. I think we have given a clear indication of how the knowledge has to be developed and the knowledge we expect humanity to respond to. We start making tools of these... of these... and which can guarantee that every man can have food or what we call energy without enslaving him and his energy for you to have it. I always objected to things to be made cheap in China so that the 'best' can have the best things but the man who makes things in China has to suffer the separation of his children for the year to go home for a few weeks for the rest of the people to use what he makes. And then when they use it, they say it is 'Chinese made'. What a disgrace to humanity.

K: The energy of the man irrespective of his race or his color or position is the same. The respect for man has to be the same. It is the lack of understanding of the white race in thinking he is superior because of the last race like the last child in the house kicking to be the most important one. Where the man, the first child of the black race has been so humble because he knows he possesses all. When we stop this color division and race separation and the Keshe Foundation is bringing all the races together, then you will find it is the key to space. Don't save man for space, energy or health. Then you understand the crystal of life is the same wherever you go in space because in space you cannot be a slave by anyone or anything because you have the knowledge and the insight. As I have said and written many times, we bring the knowledge of the man to the point that when we bring you to the universal community, he does not become the slave or the feared creature—he becomes equal. And this is the path of teaching. For years, I have declared this and it is for you to do the same on this planet so we are ready to go into space. If you go as a divided, you will be a slave. As a full race, you have two choices: stand on this planet, do not attempt to leave and understand the consequence of what this planet is due to come to, or collectively understand the past teaching for the past half hour to become one race who understands, respects each other and understands that you have been watched all along by the outside. It's just waiting to see when you mature. This is the process of Keshe Foundation teaching for us to collectively mature and understand what I have

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

put on the table, how to use it and how simply you can change things because it is so simple. If you understand one fraction of what I just put on the board, you would understand it is very simple.

(1:12:17)

K: Let's say you understand how to turn the bucket upside down and create the fields to make the crystal for the head of the man who is so precious for him to hold, put the brain of the man and now create the crystals, the conditions of the plasmatic crystal in the brain of the man when he was damaged through a stroke. You build a cell in the confinement of _____. You build what we said and put the man in the right position and build the GANS crystals of the structure of the heart of the child who was born with a hole in the wall of the heart. The child does not need to die. Now you have the knowledge and understanding and you understand now how simple it has become. The medical team, the doctors working in the background, this is a gift to you, Dr. Rodrigo.

(1:13:58)

You build systems to help humanity and now you see how. It is just extending the knowledge that in your system you make the walls (with the coils) but understand you work with the fields and if you can make the right crystals, you dictate the point whether it is the brain cell or the heart of the child.

K: Field plasma technology leading to creation and conjunction with crystal structure. You don't need to see it; you don't need to see the crystal. You can use the field of the balanced crystal to lead to the creation of any entity within the crystal field forces plasma or matter state. Now you understand how simple creation is. A lot of you got lost when we showed the first coils for the Magrav system, if it was the right-hand turn and the left-hand turn and those who wanted to discredit your integrity and the knowledge of the Keshe Foundation they weren't playing with you but it gave us a chance to see our weaknesses and where you were weak in understanding how easily they are still abusing us.

K: I was talking to Sylvester last night and I explained a simple thing: he said to me that we had this problem because we did the catalogue wrong, the reactors are not fixed. I answered that we are really here to help humanity with the technology and commercializing it so everyone can use it. These are the first systems, this is the way the Italians do it and not how you do it. But at least you have shown them; do not build on something that is wrong. Build on what you have, how you can improve it and how you can use the knowledge of the others in the improvement of the development of the technology and sharing that. Commercialization is to share knowledge in a technical way that those who do not understand it can use it but benefit by its beauty. We don't take time off; you don't take time off. We work irrespective of time and position. Today is a national holiday in Italy and everything is closed. The men who want to share the knowledge are

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

here to make sure the cameras run, to make sure the screen is there and the knowledge can be shared.

K: Are we going to have 365 days of holidays in space because now that we are one nation we celebrate a holiday in Italy, tomorrow it will be a holiday in Canada and another day it will be a holiday in China? So life in space is a life of celebration of holidays. We can work and celebrate every language holidays and best time. We can only do that when we all what we need and we share the knowledge and the technology the same way. I share it freely; I wonder if you are strong enough. We know governments at the highest level have access to the spaceship program. They see it but they don't understand it. They have been on the tables of the national governments for years. So, we invite the national governments to bring what they have in the space technology that they have been given and you don't understand and we will unravel the secrets that you don't understand. Then all of us become passengers in space.

K: All the world leaders when they take positions, some of those who are in the strongest position as world leaders are given the secrets and the knowledge is to be shared by them, by their country or nation, by the men of space. But they never stood still to ask the question: why don't we get all of it? The answer is very simple: you have not committed yourselves to peace and until that day, you will be shown the cake and you cannot eat it. Now we show you how to eat the cake because we brought the tools, the plate, and the candles to celebrate. The world does not need leaders who spread animosity, race and color separation and everything else for them to try to enforce the decisions of those who put them in their positions. We need world leaders who understand the capability of their power, the power of their decision-making to bring peace. We see two world leaders at this time—President Xi of China and President Putin of Russia.

K: In America we see nothing but hate and murder producing killing machines of the youngest infant to be the most powerful one. As I said before to very high-ranking politicians: do you know why the Iranian nation is so peaceful? We had the empires and we realized that nothing comes of it. We did our conquering and nothing came out of it. It taught us one lesson: killing does not bring advantage—it brings disadvantage because you have to pay for the souls which you have destroyed. The understanding is very simple: try to use the technology in a very effective way. People like Dr. Rodrigo, Benjamin, Bernie, Alexz, and the rest—Douglas in the US—are all committed to one thing and that is to bring knowledge as fast as possible to humanity to change the course that man can become peaceful himself and find peace with others.

K: How many of you will start making crystals? If you understood, empty the bucket you made the GANS material in. You will find out the bucket still carries the field plasma. You were looking for the CO₂ but if you look inside and test it, Giovanni has tested it and said there is a field in the bucket we empty. We said yes that we knew that and we had known it for a long time. So we came with the message we already said on Tuesday: the empty bucket. Because now in your plastic bucket you have confined the fields. Throw the water away, throw the plates away. You have created the fields that will stay and then you will understand you have a field bucket of

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

carbon. Try to bring another bucket that had copper oxide in it. Put them together and see what you are going to get. Now you understand the field plasma technology. Once you create it, you never lose it; you were happy to see it in the water and now you have it in the fresh air.

(1:22:57)

K: In what you call your containers you have the field plasma; test it.

(1:23:17).

Put your empty container and put whatever you like in it. Test your water before and then place it in the container. Then test it for CO₂ after. Here is another piece of information. You use the liquid plasma to create the fields that you wanted to create. Let's say you have a system and you create the CO₂ fields in it and try to make a pipe for water to come through one end and goes through the pipe through the container and out the other side.

(1:24:09)

When it goes in, it is fully contaminated and when it comes out it is clean water. Field plasma technology is contained by the structure of the nano-materials and it never loses its strength. Do you need to produce GANS, liquid plasma and then vapor or do you create the condition of the fields and contain them and do whatever you like with the fields?

K: In space you put the field into it and the other end will come out with concrete blocks, steel because you have predetermined the size of the crystal, the shape and the organization of the crystal and by putting the right way field strength as you did with the patches of the CO₂ and you created the smell and the taste of the orange. But move from plasma into the field operation and then you start understanding that this is essential for you to understand this process because in the universe you go through the conditions that you don't see CO₂ fields but with the environment of its hundreds and hundreds and thousands of kilometers, we are seeing the CO₂ and you end up in the CO₂ because the fields of the universe have created it. CO₂ is the last thing you want; you don't want to walk into a wall of crystal—not there. But your presence becomes it. Plasma field is the essence of creation in the universe and now we start teaching it. Now you understand how simple it is because you have the other knowledge and we can manipulate, contain it. But as humans you needed the confirmation. I put the orange on the top and I put some fields of gasses here and I tasted the orange. Look what happened. If you emptied the water and breathed the air, you still get the orange taste and smell.

K: Make the glass vacuum but keep the same condition in the vacuum you feel that you are smelling and eating the orange because man is so physical he always needs something to do. You have done nothing different.

(1:27:00)

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

Those of you who understood but got lost in the process—see what you have done. You created the fields with the protein around the box that brought you the smell of the orange. You looked for gases and you have everything to collect it. Empty the water. Taste the air; you still get a full energy. Taste energy in everything. But you had to have liquid to confirm that you had something. So you have already been using the plasma field technology.

K: This is important for our medical people to understand. Do we need to give children anything for immunizations other than putting them through a field which embeds the information in their body that measles and the rest cannot develop? And then we find it. And all these pharmaceutical companies are putting mercury in the vaccines to make the children retarded. This is very simple. Now we don't teach anything, but understanding the technical aspects of what you have learned for the past two years. Teaching is easy now because you have seen and done this. Now this opens a new door to look at the whole structure. I said when one of you comes to a point, I will teach the rest. When somebody comes doing something, with understanding I give the guidance to be able to finish it. Do we need liquid plasma for the systems which are being developed in the Philippines? You know exactly what I am talking about, those who are working on the research on that side. Do we need to carry energy as a fuel or do we carry energy through the understanding of energy as fields? When it comes to the engine, it releases the energy and it satisfies the need for man that something moves. In the coming time, the pistons will go up and down and there is no fuel at all in it. But it still converts the energy of the universe in a mechanical rotation that can carry the man. This is what our friends in the research center in the Philippines have been doing and they could not understand it. Maybe now it enlightens you as to what is going on. If you extend the power of the plasma to become equal to the matter state of the cylinders, you will find out your car will run without fuel. My deepest consideration to the oil-producing nations. We have just written off the whole oil industry.

K: As I said, those who understand the teaching will develop very quickly. Our Chinese team headed by Professor Zhu, you are developing mass production GANS systems for oasis (?). For the Chinese team working in the scientific section, this is for you to understand. In the mass production of the GANS you are doing try to create homogenous GANS.

(1:31:32)

Try then to use the field of the GANS to create the condition of the structure of the crystal in it. You have to learn how to convert the energy using the position of the GANS to interact with the crystal condition of the energy. Your space people in the Chinese space agency understand exactly what I am talking about. You use one to contain the other. We use the matter to create GANS nano-material and contain them; now you use the condition of the GANS to contain the plasma and then contain the fields because it is only way you can contain field plasma--not by matter, but application of the fields which come from the liquid plasma which themselves are controlled by the nano and the matter state. If you understood this, it should be very easy for you to use the matter to create the crystals of the matter.

K: If you want the color of the copper to be a diamond in the color of the green you are used to seeing in the CO₂, now you can do that. The knowledge you have to understand is easy but it is for you to extend the knowledge. Is Benjamin online?

Benjamin (B): I am here.

K: Are ready to share us with the understanding of the holding of the plasma within the matter?

B: yes I am ready to share and Daniel is here.

K: You are achieving beautiful dimensions in the plasma technology. Let us understand.

B: Today what we are sharing with you is a soap we made. Daniel was able to do the microbiology analysis in this lab and the results were amazing. The estimated bacteria killing time was within the 50 minutes range. After 50 minutes, when you opened the containers the bacteria was gone. He was really amazed and he said this will sell on the market and he wanted us to more work on it. We are going to share the hard one and we also have a liquid one which is sitting on the table.

(1.33.52)

Keshe Foundation Ghana Nano Soap Microbiology Report

Ghana Atomic Energy Commission

B: He has done a lot of work with us. Everyone has used soap before.

Basically a soap is a substance used together with water for washing and cleaning. It is made from compounds of natural oils or fats with sodium hydroxide or another strong alkali, and typically having perfume and coloring added.

- *Soap has been used by humans for at least the last 6000 years in some form or another.*
- *The first soap was made by Babylonians.*
- *Historical references points to that fact that, soap making were for the use of soap in the textile industry and medicinally.*

B: Here in Ghana our medicine is soap driven. It is put in as an enema to wash the intestines.

Medieval Europeans built soap-making factories in Marseilles, France which spread to Genoa and Venice in Italy. The British also joined the booming soap business. In Britain the first soap factory was situated in Bristol as early as the 12th Century. Another factory was established in Cheapside in London around the 13th century. The soap-making industry was a great source of revenue for the British government that taxed it. During the era of Napoleonic wars, Government tax inspectors would lock up the soap-boiling parts to stop illegal production at night.

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

World production: 10 billion pounds per year of which the U. S. makes and uses about one third.

Per capita consumption in US is 25 lbs; the Netherlands 24 lbs; UK 20 lbs; Japan 7 lbs; Brazil 6.8 lbs; world average 6.6 lbs; Russia 5.7 lbs compared to less than 2 lbs 20 years ago); British India, 4 oz.; China, 2 oz.

Uses classified: World- 92% laundry soap; US 85% laundry soap, 12% personal soap; 3% miscellaneous

B: In doing this I formed a team of several people. Here is information of ingredients from the chemistry lab:

Ingredients: sodium hydroxide; soda ash; coconut oil; palm kernel oil; glycerin; shea butter; cocoa butter; fragrance; nano-material; water

B: I will go into details on why I chose these materials to use the making of the soap in the first place; it has a lot of medicinal benefits.

The skin of man is the largest organ of the human body. The skin does not only protect only internal organs and systems of man, it also gives visible and emotional feedback if something is wrong with one part of the body. It is exactly like a vehicle's instrumentation panel.

(1:40:55)

B: It is easy to be poisoned through the skin. You can easily get into mono-carbon and it can seep into your blood and you can lose your life (carbon monoxide poisoning). When you have rashes on your body, it is like the instrumentation panel of the panel. It gives visible signs of what is happening on the inside. Those who are the GANS partners have learned that putting a cotton or paper layer, you are able to mimic layers of the skin—epidermis, dermis, and more. If you understand this, you can easily look at this structure and restore the health to the body. The whole body is gravitational and magnetic. As you see the hair follicles, if a bit of water sits on the body it will seep into the blood stream as created by nature. Bathing even with good water adds to your total well-being. We chose the materials very carefully and we believe that coconut oil has many good properties because coconut is a plasma with the water in the center. The coconut is very much like the earth structure.

Coconut Oil

Coconut Oil consists of health fats called medium-chain fatty acids (M.C.F.A) and these are unique fats.

1. Caprylic Acid; 2 Lauric acid; 3. Capric acid

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

This composition makes coconut oil easy to digest. When it is consumed, it is not readily stored as fat. Coconut has antimicrobial and anti-fungal properties. Because of its MCFA properties, cell permeability for immediate energy release is possible. Coconut oil is easily processed by the liver, which means that they are immediately converted to energy instead of being stored as fat.

B: Let me show you the evidence of the MCFA. If you put two oils on fire at the same time the coconut oil burns faster and is easier for the body to digest and consume. It is difficult for the liver to process some fats and coconut oil is best for your body.

Cocoa Butter

*The cocoa butter oil has Anti-Aging properties
Cocoa Butter helps improve hair quality
It is good for maintaining skin health
Cocoa butter can be used to reduce inflammation
Antioxidants: cocoa butter is high in antioxidants which help fight off free radicals
Cocoa butter is high in fatty acids and hydrates the skin deeply*

B: If cocoa butter is infused with the proper medicine it can heal the body very well.

Palm Kernel Oil

*Zero Cholesterol
Loaded with Antioxidants
Unsaturated fats
Rich in Vitamin K
Zero trans fat
Contains Vitamin A
Long shelf life
Filled with nutrients
Improves hair growth
Provides naturally soft skin*

B: We are working on some GANS for treating eczema and help with skin diseases. We have many of these trees in Africa and when Katrina occurred in the US these trees were able to withstand the storm. Most of the trees fell and were hit by the hurricane. In Africa nothing in the palm tree is thrown away; everything is useful from the roots to the fruit. We use the whole thing for food, fuel and so many things. We have also seen that it has zero cholesterol and is good for people with Alzheimer's and reducing cholesterol.

We can use it with diabetes. The energy is released from it and it has Vitamin A along with a long shelf life.

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

Soap Making Process

Step One: Measure out caustic Soda (NaOH) and dissolve in water

Step Two: Measure all oils and melt; then pour into a mixing bowl;

Step Three: Add soda ash and slowly stir; then add the NaOH and continue stirring until a thick measure is obtained; then add fragrance.

Step Four: add the GANS and then continue stirring until the GANS is evenly mixed in the thickened mixture. We added the fragrance. The GANS was easily mixed into the soap mixture. We have CO₂, CH₃ and Copper Oxide for our nano-GANS. We did a lot of configuring. Palm kernel oil is a red fruit. The white oil is coconut oil. We had controls in the soap making. You can do different configurations with the GANS depending on what you want to do with the soap.

B: Coconut oil has anti-aging properties. When the face starts 'folding' we can use the coconut oil and the cocoa butter which can penetrate into the skin and enter into the damaged areas and increase the overall health of the skin. It can also add good quality to the skin and scalp of the head. I recently had many students from different countries of Africa; most of them bought huge quantities from me to take home. A man from Rwanda said it was very expensive to get cocoa butter there. They carried a lot of this back home. You can reduce inflammation. You can use cocoa to cook and it will fight free radicals.

B: Making the soap is simple. We measured the oils and poured them to the mixing bowls. If you have understood the science behind the plasma you see that CO₂ controls the emotions and CH₃ controls the energy flow and copper oxide controls the lymph system that has to do with your physical well-being, your physical structure. When people have deep pain on their hand and you apply the GANS in the 3 layers, these people go to sleep quickly and immediately. If Nash was around he would confirm that. He had pain on his hands from a burn and we put some on his skin. He said that he felt so good and after one week the pain was gone and there was no scar in the skin. The skin looked beautiful. If we are looking for something that will make you happy and improve emotions we use the CO₂ and CH₃ GANS. When we are dealing with pain we mix the copper oxide and CO₂ GANS and CH₃ to amplify the fields.

Allowing the Soap to Cure

After the last step, when the soap is finally hardened in its mould. The soap is removed from its mould. The soap is cured for four to six weeks. During this time the water in the recipe evaporates. The advantage here is the cured soap is a firmer texture and lasts longer in the shower.

(2:00:11)

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

B: We allow the soap to sit so the water used in preparing the soap evaporates. You use distilled water. Curing simply means you allow the soap to sit. This soap has CO₂ GANS. The coconut oil is still having a liquid texture even after weeks of sitting. The one that appears white has the GANS in it and is the palm kernel oil. They almost look the same but when you feel them you find the difference.

Preparation for Microbiology Analysis

We packaged the cured soap in Ziploc bags and labeled them with codes and handed it over to the microbiology lab for testing.

B: After the six weeks' time we packaged the soap and sent it to the microbiology lab for analysis. We wanted a blind study so there was no influence with the results. You see bottles in the picture and we will show next time how the bottles are looking. They are collapsing on themselves because the energy of the GANS is so much that they are sucking and the bottles are collapsing on themselves. We gave Daniel samples. We had to look for more Petri dishes for him to be able to analyze for us.

(2:02:02)

As you can see, the Petri dishes were all set up. I will hand this over to Daniel as he is dealing with the microbiology aspect and we will see how effectively the GANS behaves on the packages. We are dealing with E.coli, malaria and more. That is what Daniel will share with us.

Daniel (D): Test culture

24 hours standard pure cultures were used to evaluate the efficacy of the antibacterial stock solution; these were Escherichia coli (E.coli), salmonella typhi and staphylococcus was isolated from fresh beef.

Staphylococcus aureus is a type of bacteria. It stains Gram-positive and is non-moving round shaped or non-motile cocci. It is found in grape-like (staphylo-) clusters. This is why it is called staphylococcus. We have streptococcus and staphylococcus and that is how we different them (the grape-like clusters of the one).

Escherichia coli (or E.coli) is the most prevalent infecting organism in the family of gram-negative bacteria known as Enterobacteriaceae.

Salmonella are a group of bacteria that cause a wide spectrum of diseases. They are able to cause significant morbidity, and in some cases, mortality in both humans and animals. Salmonella Typhi can only infect humans.

Preparation of antibacterial stock solutions

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

Three concentrations 10%, 30% and 50% were prepared from each soap by dissolving approximately 10, 30 and 50 grams of the various soaps into 10 ml sterile distilled water in a 250 ml container, covered and left over night to ensure a complete dissolution.

Antimicrobial susceptibility Testing

1 ml of each of the test organisms were aseptically transferred into the various concentrations of 10%, 30% and 50% and left 15 minutes as the killing time. Each concentration was re-suspended with the aid of a vortex mixture to re-suspend particles that may have settled out during the killing time (15 min). A twofold dilution was obtained by aseptically transferring 1 ml of each stock antibacterial solution into McCartney bottles containing 9 ml of peptone salt water. 1 ml of each dilution was aseptically transferred into sterile well-labeled Petri dishes (double trial for each dilution) starting from the highest dilution. About 15 ml of XLD, BP and EMB agar were poured on salmonella, staphylococcus and Escherichia coli respectively and swirled gently to mix and left for about 15 minutes to solidify. The plates were incubated aerobically at 37 degrees C +2 for 24 hours.

Various Concentration in Percentages

HS-LA 50%, HS-LA 10% HS-LA 30%

D: These are all pathogenically diseases for Ghanaians. I was surprised with the killing time of only 15 minutes.

(2:07:14)

Checking for Results After 24 Hours

Pure colonies of salmonella appear red with or without a distinct black spot at the center on KLO.

Typical staphylococcus aureus colonies appear black with a clear zone surrounding on BP agar.

After 24 hours no colonies were found.

(2:08:04)

D: Lab results too small to read. We prepared 3 concentrations, 50%, 10% and 30%

Conclusion

The performance of the Nano-GANS Soap has proven to be effective. The Microbiology lab is currently carrying on another test. The amount of GANS used in making the soap

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

has been reduced. Test on the Liquid Soap is also undergoing a similar test at the Microbiology Lab.

K: Please go back. What does this mean with the application after 15 minutes? It is showing no E.coli, salmonella or staphylococcus and it doesn't matter which soap you used?

D: Yes. It does not matter which concentration or which soap. With the liquid soaps in the lab, we are going to reduce the concentration with the 5, 10 and 15% to see if it is still effective. We will reduce the concentration of the GANS added to the soaps for the minimum effects. For the tests we already did the minimum effects were 10%.

K: Your total residue was zero and you couldn't find any?

D: Yes, that is correct.

K: Can you tell us your conclusion?

D: From the results it is very obvious that the soap is very effective. With the next test we will reduce the GANS to see how effective it will be. The first had 1 ml and in the next analysis we will use 0.5 ml of the GANS.

K: That is beautiful. Thank you.

B: The conclusion is that this is proving to be effective and we are doing another test on the soap. We have samples in the lab of the liquid soap doing the similar analysis in the microbiology lab. We are reducing the quantity of the GANS used and we want to try the effectiveness where people wash their hands with the soap to analyze the effectiveness. The best place to do this will be at the public toilets. We will take samples of the soap and water there and analyze it before and after. We will give some the water to use. We will test the effectiveness of this.

Next Project

For the Treatment of Various Skin Ailments

GANS based Coconut Oil Ointment

GANS based Palm kernel Oil Ointment

K: Please go all the way back in the presentation to the beginning. Go to the frame with the soap-making process where you speak how you produce soap. What did you do? In your talks you showed us that people add caustic to the fat, to oil. If you start with the present knowledge we have, man has been in GANS and nano-making for centuries. You add caustic to amino acid (fat) and now you understand. You get the water from the sea and you add NaOH to it to make the sea GANS. Man has been making protein GANS for centuries. Soap is a type of natural with

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

amino acid. If you understood this, now you understand that we have all been GANS makers and nano-makers for centuries without knowing. Do you understand this Benjamin?

B: If you watch the movie 5 Club when the main character was talking to his apprentice he went to the lab to collect the fat of human beings. The 5 people when they got to the clinic, the fat was soaked and he used this to sell the soap he made from their fat at his beauty clinic. They didn't know the content of the soap. The apprentice asked why they used the human fat and the main character said to make the best soap you need tallow (fat) from humans or animals. The Asian people discovered that in the rivers they were able to wash the clothes properly. Why? On the hills where there was a reverse flow was where the human sacrifices were done. The ashes mixed in the wood ash and they used it in forming soap. They didn't understand why the rivers foamed at some areas. Many people refuse to learn and you tell people about the technology and it looks so simple they doubt it.

K: They doubt their own intelligence. I asked you to show this frame and expand on it as you did, that in fact soap is a GANS state of protein (the fat). Now it should have been no surprise why when you add another GANS to the present GANS you increase it higher than the protein itself. That is why when you added CO₂ and when you added CUO or CH₃ or worked on salmonella and the other bacterias, because the foundation of the soap you made was already amino acid based. All you need was to add additional energy in a way and you created a new 'virus'. The amino acid GANS is still there that made the soap. Now you have made a virus which is stronger than salmonella and everything else. Now you understand why your soaps work and kill bacteria. It's because you made a new virus which is the energy of the CO₂ added to the present GANS amino acid that you created. This is why it is so effective in this new energy package that you created by adding a GANS energy to another GANS energy and it is more than what is held in the body of the man as viruses. That is why you see this structure. You can go to the minimal amount of GANS. Don't use GANS in your next test—just use the water of the GANS. Because now you have added to the energy of the GANS of the amino acid that you call soap. So this for a lot of you becomes new knowledge and why the GANS works on bacteria.

K: What you have shown us today, I wish you go to directly to the professors in the biology lab where they did the same test 2 years ago and came up with the same result. But the WHO blocked them to come out with the technology that was given to them by Keshe Foundation to stop the E.coli and Ebola (?). The WHO threatened that the professors would lose their seats in the University. For the first time we see with the scientists like you in Ghana that you are confirming what your colleagues in the University(did) two years ago. All the equipment was taken from them by the President and the WHO and they were told they could not show those results. Now it is in the public. But we understand how it works. The reason your scientists in the Atomic Research Lab see the reduction in all the viruses and bacterias is because any virus or bacteria has a base amino acid. So with your soap you have already created a base amino acid, but adding another energy to it with your GANS of CO₂, CH₃ or copper oxide, or any GANS that

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

you add to it, the power of it becomes more than the bacteria or the virus which could be salmonella in the stomach or whatever, and the energy transfer one to one shows you the reduction total because you transfer energy from the bacteria or the virus which already have a common denominator of the amino acid of the protein.

K: This is how it works. Understand the science behind and just don't come up with figures. When you understand it, you can come up with it easily and now you see why I asked to come to this. This is what you need to do in space. You have a common denominator; you are in the space lab of the Ghana Atomic Energy Authority that you work with and that is your base home. Then Ghana produces the space ship into space and the knowledge that goes from Ghana gives you a step forward to know how to protect man in space. You need to have amino acid condition, power of strength in magnetic gravitational which you can add slightly more to it and you guarantee life. You did not destroy the amino acid of the bacteria or the virus in your culture. All you have done is you depleted the energy of it and that is why it is black. That is why you still see it. If you take the residue of the culture plates that you have that you just explained to us and analyze it, you will find out that it is a pure amino acid. You haven't destroyed it; you depleted the energy. This is what we call the space technology which is understanding the transfer of energy of the plasma. In a simple way with the soap you have brought fantastic new knowledge in the world of space technology.

K: This is what the scientists in the lab have to understand and start working on. This is what you need. Do you understand? Now you have to ask, can as a man who understands plasma, GANS and nanotechnology transfer this to the scientists in the Ghana Space Institute and the biology lab. Explain to them and thank you for the knowledge you brought and the purity of the knowledge you shared. It should be very easy even if you add ½ percent of soap, if the energy of that ½ percent is more than the bacteria they have in the sample test, they will share energy; you will still have amino acid. Please test the residue that you left there which were black. Those will show in tests to be pure amino acids in nano-structure themselves. Is it possible to do that?

B: We lost you for a couple of minutes. So would you repeat please?

K: it is your job and you understand man has been producing the GANS in soap making and now you have added the GANS of another material to increase its strength and you created a safe virus in the nano-structure that could deplete the energy of the E.coli, salmonella and staphylococcus. It will be interesting if you can take the black spots and see if the amino acid is still there with the energy of the virus or bacteria. This confirms the technology that you are depleting the energy. So, we can use soap, literally caustic or ash with human protein or any kind of protein and add a small amount of energy that is safe for us to overcome any virus or disease on this planet. You can digest it; you can use the GANS of the water used in the soap and the water of the GANS of what you made as soap and take a spoon of it with any kind of salmonella that man takes and within seconds or minutes you will see he is finished with the (symptoms of) salmonella.

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

K: The soap, the way you made it and added CO₂ and test the water of the GANS on the human body, you will find out that salmonella will walk away in no time and in just a few seconds. If you have salmonella poisoning, eboli or E.coli or any kind of virus infection of any microbes or virus, just take the water of it. If it enters your digestive system, you can make these soaps you made as a water to put on patches and put it on the stomach. Put it on the digestive system. You don't need to digest it. With the energy transfer you will find out that salmonella disappears in no time.

B: I fully understand and that is why I told him that it will eliminate the pathogens in no time. He was skeptical at first. He was happy with the results.

K: You have to understand the process and not the results. You can repeat the process with the GANS and the CO₂ in the patches the way you make them. Anybody who suffers from eboli, E.coli, salmonella or any other infection, you can put that patch on their body and the energy transfer will do the same thing without digesting it or using the soap. It will be interesting if you put this culture material and don't mix any of the soap with it. Put it in environment of the soap and see if anything happens to the bacteria. So you don't mix your culture with the soap; you put the culture with the culture and bacteria in it in the GANS of the soap which is CO₂ or copper oxide or whatever with the soap and see if the bacteria changes and becomes ineffective. We not need to eat it or drink it; we use its energy to do the conversion. Is that possible?

B: Yes, it's possible.

K: Or, just rub the soap on the culture box and see if the bacteria start to disappear where you only left the amino acid. Make the soap and drop the culture box in it and let it float without soap penetrating into the culture plate. Let us know. What is important is to transfer the energy of the GANS, not the GANS itself. You understand? So please come back to us if the result is correct or how much you have to increase the intensity. Some plates that are glass or plastic will not absorb some of the energy. This is very important and we see this when we create plasmatic fields. When you use plasma it depends on whether you use glass or plastic and different strength fields interact. You don't need to have the soap; you can make the water of the soap. The water of the GANS on the top when you mix it, let the water settle. If anyone has salmonella or E.coli, you should see the reduction instantaneously and the transfer of the microbe or virus into only protein where the energy is transferred into the plasma of the rest of the GANS. You don't kill and destroy the bacteria. This is one of the things we always had a problem with in nuclear centers. When they do their inspection they don't see the energy; they see the effect of the energy but they didn't see anything different because GANS transfers energy because it is a plasma. Do the tests...this will take 5 minutes to do this test.

B: it is not me; it's Daniel. He can do it quickly if he is not loaded with a lot of jobs.

K: Pull him into the Keshe Foundation research and then you have him all the time. Now you are embedded with Ghana Energy with Keshe Foundation and they are getting done; move them to the Keshe Foundation on the institute side.

B: Dr. Nash is here.

K: Can we see his hand where it was burned?

(2:36:28)

Dr. Nash shows his burn (2.36.28)

B: That is Dr. Nash's hand (and arm) that was burned and treated with the GANS water.

Dr. N: As you can see my hand is almost taking the natural skin color. Ben and I showed him the burn and he said it could be treated in a matter of days and he would come every day. By the second day I saw changes and the tone is coming back. So this works so marvelous. The accident I had was when I was driving and veered off the road and hit two other cars and my hand was on the steering wheel. The air bags popped up and my hand was the nearest object to the air bag which crushed my hand. I sustained severe burns on my hand and I had the accident Jan. 25 this year and they treated it for 5 days.

K: Since January there was no change.

Dr. N.: I used the GANS treatment for just 5 days. It started creating natural skin from then on.

K: Let us know when you do the tests.

B: I don't know if anyone has questions to ask. There are students from various universities doing internships here. My team is also here and they were all part of the soap-making team.

K: Would you like to make the announcement?

B: I would prefer you do that.

K: Thank you very much. As I said the African nations are leading the space technology and you bring knowledge so freely and you show your scientific papers and the raw state of matter. I assure you that thousands of scientists and world leaders watch this program today. They are understanding how easily we share knowledge in this foundation and I thank you for doing this. We have a surprise for you. In August 2016 Keshe Foundation will hold a conference in Ghana for the all the African Keshe Foundations. If they have problems getting visas to come to Europe, so we do this with the help of the Benjamin, Alexz and others in Ghana to see this through. This is the first time we organize in Africa and we do it in the center of Africa.

B: Do we know what we will discuss in the summit?

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

K: We will release it; it is scientific and it is for Ghana to enter into space technology just the way you are doing it. I will try to be there and by then we should be able to see different applications on the space technology and on the health. We came to Ghana through Dr. Nanna as part of the spaceship program. Now you can join China and the others in the space technology. The beauty of this is that you don't realize what you have done in passing this knowledge. You opened the biggest mystery of man of how this has worked so simply. It is not what you bring as pieces of paper or cultures. It is the knowledge that you share unconditionally. This paper that you shared with us was a simple presentation by your beautiful scientists. This broke all the rules of the present economic cycle. You showed how easily that the bacteria can be defeated. This advance has been the dream of the world of medicine. Thousands of people die because of these bacteria every day around the world –salmonella and the others. With this simple presentation you have brought everything to a stop. The knowledge you shared in the past hour has been the dream of humanity to solve for thousands of years. And you have done this so humbly.

K: Today microbiologist and the leading pharmaceutical organizations around the world are kicking themselves. Their terms of saying, 'things are finished'...and Ghana comes on and gives a presentation and you have been watched by world leaders such as President Obama. The Chinese leadership is online most of the time. You have been watched by NASA, by the health authority organizations and by the most leading scientific organizations around the world. We speak to them and we know they are online. We monitor them. In a very simple way you have shown there is no need for peer review to control. You have destroyed half of the soap industry in the world and half of the pharmaceutical business in the world. Where the man can make a caustic, and we saw animal fat left from the steak on the table last night, add the caustic to the fat, a little of the oxide from the copper from the wire in your house and you can cure salmonella and you can cure eboli and E.coli.

K: we taught your colleagues in S_____ University how to make the same as what you showed us two years ago. They took this to the presidential palace of the president of Salerno to show to the WHO to show how easily E.coli and eboli can be destroyed. They confiscated everything and threatened them they could lose their positions (in the university). Now you have shown that they cannot silence 20 beautiful scientists like you in Ghana. Now the whole world knows how correct the technology is because you presented it. What you have done in the past 6 weeks have taken scientists hundreds of years to solve. And there it is. If the pharmaceuticals understand that you do the tests as the energy and use the liquid soap as the liquid water of the soap and use it and they will find out that no child in Africa should die of anymore bacteria and diseases. And Africa will head walking the man out of these diseases.

K: This is what the beautiful thing is about this. But the most important part is understanding the principle behind it and how you produced the GANS of the amino acid which is the structure of the man. You produced and added a little bit stronger strength with the copper oxide or CO2 and that plasmatic condition is enough to deplete another amino acid with a little bit of strength

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

that we call salmonella or the other killing bacterias. You can walk your children in Africa out of all disasters. No child, don't forget if Alexz on the line and we do, that doctors in Nigeria are doing the same thing you are doing with GANS water. People are walking away from malaria. Try with the soap you made and give it to the people who are having a malaria attack and watch how they change their positions within two to four hours. Try it; test it on malaria and see how it works. Spray their rooms with the water of the GANS of these soaps and see if you can overcome malaria in no time. I lost my heart to Africa 25 years ago and I worked in Africa a long time. I have seen how my workers suffered from malaria and now you have the solution. I worked in Gambia and I have seen my people suffer and they could not afford the treatment injections for malaria. Now you can give them the water and they can walk away with no suffering. I have seen the same thing in other parts of Africa for years.

K: it is time for Ghana Space Institute and Ghana Atomic Energy to deliver the first material against malaria and all the diseases that have caused suffering in Africa. I thank you for what you delivered.

B: I want to try. There is a veterinary unit with the Ghana Atomic Energy Commission. I am trying to work with the animals. I didn't want to break the ice until you brought it in. The animals respond to treatment faster than human beings because they have no attachments. I will do this with the veterinary unit for the animal health and I will give you feedback.

K: You can use the same material in agriculture for pest control without chemicals. You don't destroy the life of whatever; you change the environment so they cannot exist there. You have to understand how it works. When you use this water of the soap in the fields in agriculture, they change the field strength, the same you did with the bacteria, salmonella and the rest. In that environment, the pests cannot exist so you do not use the chemicals and you just use the same water. You can extend the knowledge; we have done this in Brazil and in China. Very soon the Chinese scientists will bring this knowledge in. So now you understand how it works with the transfer of energy in which you create a new environment. You can use it with anything.

K: Today we announce the establishment of agriculture.KesheFoundation.org. And it is headed by Dr. Bhuta in Kenya. From next Wednesday, we teach on Wednesday mornings to the agriculture scientists. If you are in agriculture in Africa or anywhere else in the world, the way we are teaching doctors on Wednesday afternoons, then we start teaching the agriculturalists on Wednesday mornings. We ask you to come in and bring your technology that we can share. It will be headed by Dr. Bhuta. We are bringing leading scientists around the world to head Keshe Foundation. And now it will be done from Kenya. Dr. Bhuta is coming soon to Ghana to share knowledge and he is a well-respected researcher and developer in agriculture. Understand that the technology you have shared so beautifully with us will apply to agriculture. You don't need to bring any fertilizer or pesticides from anywhere around the world. Ghana will export water out of Ghana to its own culture.

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

K: Understand the principles and technology and the physiology of the interaction of creating new environments and now you can become 'astronauts' in no time. You develop it, you play with the same energy in creating lift and motion. I met Dr. Gahanna in Italy last year in the peace conference and I explained to her that Ghana and Africa would be the crown jewel in the space technology. Today is an example of it. It was done so unconditionally and you sit there so humbly when you have changed the course of humanity in a very simple presentation. If you had somebody from Harvard or Oxford, they would have been sitting there with a tie on and expecting respect because they know 'too much'. Africa is humble and we respect you for it. I hope we share more with you next week. Test it without the material. On the other hand, on the Keshe Foundation Universal Council on Facebook, Caroline has established a veterinarian section for those scientists who want to participate on that with their knowledge using the plasma technology to share with the others. When you go to the universal council, on the veterinarian section you can see how you can help your animals using what you just shared. Thank you Benjamin.

B: Dr. Nash has a question.

Dr. Nash: from today's presentation on the soap and someone is diagnosed with the typhoid fever, can that person be treating using this technology?

K: yes, immediately. This works on influenza and has been tested by Tepco Japanese Nuclear Center for helping people in Fukushima with the winter colds. All you need to do, and actually our Japan Keshe Foundation, Mr. Kansha, showed the research that was done by Tepco where they put influenza on the foot of the mouse. And, afterwards there was no toxicity in the liver of the mouse and there was no influenza. You can use it but use the water of it. Use the water of the soap and not the GANS itself; GANS is too powerful. If you put 0.5 ml, you will get same result and then you will see that you bombarded those 'poor bacteria' in those plates with the equivalent of the Hiroshima bomb. That is why they are not there. You have to understand to dilute it with the water in the ratio of 10 to 1 with the soap with the CO₂.

(2:56:54)

Try to use CO₂ GANS water and see if you get the results. You can use copper oxide GANS water with the soap and it will be very powerful; it will be a big punch. Use this 3 times with 2 tablespoons 2 or 3 times a day. Let the body take it slowly. Don't use the copper oxide water GANS; it's too powerful and too big a punch. And they will walk away from the typhoid. Research from Japan confirms that your idea is correct because we have data and we know it works. It was done by Tepco the biggest research center in Japan.

K: Maybe we can announce something that will come to you in talking about the water. A lot of you know the organization called Emoto in Japan, the well-known tester of the water. Emoto showed the love on the water; Keshe Foundation is in the process of negotiating to develop with the Emoto group. Mr. Harry Emoto, the son and thanks to the work of Sylvester, we have

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

delivered and done the final tests this week and we hopefully will announce the cooperation and collaboration of the Keshe Foundation with the Emoto group in the development of these kinds of waters across the world. We will bring and we are going into participation with the major players in the world of science. We give thanks to Sylvester. We delivered material to the techs in the lab this morning so they can understand the technology. In coming weeks a joint venture in a company called Keshe Foundation Emoto Group will be established in Japan for delivery of these kinds of materials to use with diseases without radiation.

K: You can use these waters for all kinds of influenza, digestion of the heavy metals. If you have people with issues with heavy metals, you can give them the water of the soap. And then you will see that they reject the metal from the body. Mercury can be rejected, but with mercury do not use CH₃; only use CO₂ and no copper oxide. People who have MS or mental diseases caused through mercury fillings, now you give them CO₂ and you will find a lot of neuro repairs. But, do not use copper oxide because copper links up with mercury and potassium in the body of the man and create a different condition. It is not hazardous but something you don't need. You can clean metal toxicity from the body using the water of the GANS. If it is not enough, just add a little bit more. Try to use, once you make the culture the base, don't use the culture base but use the water because it transfers the homogenous energy to the water. Now you have made the soap mixture with different GANS, so just use it as base; you can use it for hundreds of years. Just put water on it and you correct with the water; it has the same effect.

B: You mentioned a teaspoon or two. Does the patient drink it?

K: Yes, drink the water. Mix the water with the GANS and let the GANS settle to the bottom and use the water. It works most effectively. I will tell you how effectively. You shared so much beautiful knowledge so let me share a bit of knowledge. We have shared and we are running a trial on using the GANS and the GANS water for a supplement for eyes and skin. You are using coconut and cocoa butter. We are using olive oil for the same purpose. For the eye drops we are using CO₂ water, not the GANS of CO₂. I explained yesterday with the doctors' teaching. It is well known by people around me that I suffer degeneration of the eyes which means I am losing my eyesight slowly in different dimensions. I even switched from a normal telephone to something different to be able to read the screens easier.

K: Now that we have launched the GANS water as eye drops I started using the eye drop water GANS in my eyes last Sunday. And I explained this in the medical teaching yesterday. I do not see in reading from the mobile phone and I had to concentrate to read the pictures. I changed to a bigger screen in the last couple of weeks to be able to see more. The first time I used the eye drops in my eyes, I had a strange headache, a tingling feeling in the back of my brain. When I used it the next time I had a tingling on my tongue. It was very strange and lasted for several hours. Literally since Monday which was the first day I can see what I could not see before. This morning just before coming on the presentation I was with Caroline in my office and the table is there and the papers are about 2 meters away from me on the table. I said, "Caroline, look, I

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

can read the read the number...it's 160420416." She said, "You can read from this distance now?" I said, "I don't know, it's a new world."

K: I feel the pressure in my eye has changed. You know your eyes narrow down and your facial pressure changes. Now I feel relaxation in my face because I don't need to concentrate. I could not see at night. Yesterday I saw a totally different, new world. So I am testing the GANS water directly into my own eyes because I suffer badly. When I go to sleep at night I have a lot of pressure in my eyes all the time. This morning I woke up with no pressure—it was a pleasure to be 'young' again. I can see. I was sitting in here in the auditorium on the 2nd row. Many times in the past year I sit on these chairs when I teach and I tried to look and I cannot read. I know what the book says on my table but now I can read what the words are. I am about 5 meters or 10 meters away and I can read the books! That is in four days of just spraying some GANS water of the CO2 into my eyes. If I deliver technology, I have to stand in the technology myself. So, I see the difference. You can try it safely. There are thousands of people with eye degeneration. It has worked on me. But, as I said yesterday to the doctors, I am not interested in my seeing better, but I am interested in why in changing the eyes my tongue reacted. This is strange. What has the eye to do with the affairs of the tongue? Why was the pain the back of my head where there is a section for writing--why did that have a problem? I am left-handed. I stopped writing because I cannot see properly. It means when you adjust the eye everything else in the brain adjusts or is your disability just covering all that up? Now it is correcting itself too.

K: Look at what the implementation of this technology brings. It is not just bringing soap for cleaning. It is not orange juice, or the skin of the orange but the transfer of energy. Use these soaps and see how they affect the stains, and not only the soap. Do we transfer the energy? Do we need water to wash anymore? Or can we put the soap near it and transfer the energy from it? Do you understand? This is how we have to extend the knowledge; we are opening a new door and thanks very much. I was telling last Friday in Italy where I was a guest that thanks to offices of CIA who brought us to Ghana and we thank the American for bringing us to Ghana to do research and development. We work with everyone and we have no boundaries and borders in sharing knowledge. Thanks to the people in the foundation who know what we can do and now we can see the beauty of

Africa and the knowledge of their scientists. It will be nice to invite or to allow the other scientists who come to Ghana space institute as Benjamin said a few minutes ago—you have scientists from all over the world and we are there, the Keshe Foundation, for a summit in August. I have left the time and the place in the hands of Benjamin. We will be glad to have scientists all over Africa who work with the Keshe Foundation to be there. It is time, and I have said this many times and I spent years in Africa, it is time that the scientists in Africa do not have to clean lavatories in America to pay to become doctors.

K: I have many friends, doctors and professors, who did everything in the US in New York to become doctors and scientists and then they kept out of their nations the assets that they clean the toilets with. Now it is time for Europeans to come to Africa and learn the knowledge from the

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

birth place. You have beautiful scientists and I have a lot of respect for doctors and scientists in Africa because you spend time deliberately and a lot of resources that families don't have to be the scientists we see sitting here. It is very different for someone who is given a grant and everything is on the table. They read the book and get the degree. A lot of scientists like you, a lot of scientists in the Iran nuclear industry and in East Asia; you want to come where you are. It was not done with a silver spoon. For that you learn the true science and there is a lot of respect for you. I have very good friends in different African nations for over 30 to 40 years. This is time to change the position and let the world come to Africa to learn from Africa how easy it is to share knowledge unconditionally. Thank you for sharing knowledge today. Let us see what you bring us next week.

B: I have a car unit. Who shall I give it to?

K: Start your manufacturing company. We have given car and home units to many of you. Half of the Ghana Atomic center scientists are living on free electricity so we have to make it free for the whole nation. We are setting the factory up very soon in Ghana to produce all these units. Benjamin works during the day in the center and at night he makes units for everybody else. Thank you Benjamin and thanks for sharing your knowledge with us.

B: Thank you. We want to still go and do our work. A lot of them left the offices for this program. So I'd like to thank you for listening to us. We will do what Mr. Keshe asks us to do and come back and present it.

K: Thank you for sharing knowledge.

K: Now you know that we have the agricultural at KesheFoundation.org and we start teaching on Wednesday mornings. If you have knowledge that you use, please come and share it with us. If you are a doctor in Africa and you are listening to us, join us at doctors@kfssi.org to share knowledge with doctors around the world. It is important to share knowledge as we do, because we have made it unconditional. It is important to share the knowledge that we do because if this program gives the knowledge of one man to save the life of one child by simply what was shown in the past hour by the Ghanaian scientists we have served the purpose of living. If you have managed to stop one person to stop suffering from salmonella or the other bacterias or viruses with a simple spoon of water produced the way you do, and you have shown us so freely, it was worth establishing and going through all the process of setting up the Ghana Keshe Foundation and I thank you for it.

K: The knowledge is shared unconditionally and I would like to see if we challenge the scientists from MIT and from Cornell University and if the Cornell University scientists would like to share their papers openly without peer review. Let the humanity peer review the papers and not what I call the crooks of the peer review structure. We will make the soap and a lot of us around the world; we will give you our peer review in the next few weeks and thank you for saving a lot of pain for us. Your paper has been peer reviewed and your presentation and it passed first class.

Transcript from 116th Knowledge Seekers Workshop held June 2, 2016

(v1 2016-06-06) DRAFT (Transcription has not been verified. Double check info with video)

It is published by what you have shown by millions of people seeing it. A peer review publishing might be read by a handful of people who might benefit from the information. Thank you Ghana.

K: This was one of the best teachings of the past 2.5 years.

Rick: It was nice and it was a very clear teaching.

K: in the coming weeks, Professor Zhu will bring Chinese scientists to share knowledge with us the same way. Now that we have developed the structure within Chinese teaching, the Chinese Keshe Foundation will come back in part of the main teaching as we have seen today to show us what they have learned and what they can share with us.

Let me explain something important: we announced that our Italian friends as of today the 300 Euro donations for the units on the website becomes voluntary. If you want when you get a unit you donate 300 Euros to the foundation for what we have seen in Africa and other places around the world, all this has to be paid for. It is not free. You can donate the 300 Euros. But from today the power generating unit will reduce from 499 Euro a unit, plus taxes plus shipping. On the other hand, if you are an Italian citizen with an Italian address, you can buy the Magrav unit using the following link: italykeshefoundation.org.

K: You can download the 2 page bank papers from Deutsche Bank. We announced the sale of the units for 10 years for 10 Euro a month. The arrangement is too much for the banks to carry so we have a new arrangement cheaper for the bank and for you and it will be around 21.59 Euros a month for 3 years.

(3:18:17).

So fill in the 2-page application and supply your home address and the copy of the last payment for wages that you have and the unit will be delivered to you. When you receive the units, you start paying 21.56 Euros and you start receiving the units. All the units will be delivered in 60 to 90 days. At the moment the delivery is 7 to 14 days. This is for Italy. You need to download the documents.

(3:18:58)

There is a second very simple form besides the one we have shown you. It just a few lines and it says 21.56 Euro for 36 months. This covers your family in the even of the death of the one who purchased and the family will be able to keep the unit without anymore payments. In the next few months we will extend this to Germany, France, Portugal, Spain and the Netherlands. It will be through Deutsche Bank for these countries. Now the German or Dutch foundation and French foundation pages are going up. You can use these sites to fill in the application and you will receive the units in the time allocated and you will see the development. We are monitoring everything with security services in the background for any Mickey Mouse abuse that comes out of Italy or Belgium.

K: There is a second part. If you are Italian, you can get your unit literally free and get it delivered. As soon as you are approved in Italy you will receive your units. You are saving 64% and Giovanni says more because he is using it. These units are delivered to universities in Italy for them to evaluate for different applications so you are working in different directions. Can we have the banking San Paolo Bank information? We have added to the website and from Thursday next week you can go to Banca Intesa San Paolo and they are setting up the programs at their banks. This is the number one bank in Italy with 6000 branches and all will be informed that this contract can be used. Use the Acqua & Sole Keshe Foundation. Fill in their form and once the bank approves the application you receive your units. You are then obliged if you are a bank customer, to one of the 600 banks in the country that will have a stand in the bank. In cities like Milan and northern Italy you will see advertising on the billboards. We expect to sell 2 million units in the next 12 months. We have the target of 9 million in the first 2 years. The units will be delivered by the postman to your front door with either bank you use.

K: in the next couple of months we might add that you could pay a small amount to the foundation and we give you a unit and since you save 50 to 60% the contract stays for 30 to 40 years and this allows the foundation to support for research. What you save you will put back in the foundation for research in the coming years. Our own company and factoring system support this. We have received backing from governments, banking and the scientific world and we share what comes to us. Italy is the flagship for the Keshe Foundation. You stood by the foundation and accepted the first Magrav units. You kept supporting the foundation to help humanity. We are delivering units across the world. We had delays due to the 'teething' of new science and new technology and thanks to a lot of you who stood by us, we have come to maturity.

K: Those of you who approached us for making companies and manufacturing in a short time we will release container manufacturing. If you want to produce the soap production from Ghana, they will receive benefits from the sale of the units because they brought the knowledge. We will deliver a full factory in the container and you just need to assemble what comes on the computer. You have your soap factory and you can sell and produce material and support your nation or your culture. This way you have seen the foundation is growing very rapidly with the freedom we were given and we thank Italy for allowing the Keshe Foundation to grow in Italy and we are giving back to the nation and the rest of the world.

K: Now the Italians can place their orders on the application forms or on the banking system. If you make a combination of new materials coming from Keshe Foundation and it has to be above 600 (650?) Euro like the new energizers, heating systems and use of the health programs, you can do the same procedure to the bank. The minimum order is 600 Euro. You can order from the website.

Rick: There was a suggestion in the chat that the Keshe Foundation prepare a short presentation on plasma technology for health so we can inform doctors who may be interested.

K: This goes to Dr. Klaus.

Dr. K: Please contact us at doctors@keshefoundation.org.

K: They want a video that could be made by you or the doctors on the team and explain what it is and there would be a link.

Dr. K: We are working on a summary of the different cases we are going through and the different therapies you suggest to the doctors. This handbook would be published with the different cures and therapies.

K: If we can produce a short video I think this is a very good idea so that doctors can see some of the tools you are using. One picture speaks a thousand words.

Dr. K: We could implement this after the doctors use them in their surgeries and publish them in a booklet.

K: Is Dr. Bhuta here? Tell us the terms you want to put on your teaching

Dr.B: The teaching from Ghana was excellent and I am ready to start teaching agriculture next week on Wednesday. Right now I am in Kenya where I am testing seed germination using CO2 GANS water and the growth of the seeds. I am going to test more and new crops are going in and we will learn from it. What I have will be in next week's teaching.

K: If you are involved in agriculture and you are in China, South America, Australia, please join us in this process. We can learn what you have tested and we don't have criteria who can join, but we will try to have the parameters be with the farming and agriculture. We will bring in as part of agriculture the veterinarians as well. It is not just growing the food; it is looking after the animals in the field as well. We try to bring a new platform if you are a veterinarian to become part of the teaching. You will learn that what you use for the animals, you can use for the plants with the same benefits. It is a mutual replication of the science.

DrK: Some veterinarians applied for the medical teaching. Should we let them go to both teachings?

K: The human and the animal bodies are the same; they can go to both. We know that Dr. Rodrigo treats dogs, men and women.

DrK: We just got a picture with a dog that had an eye injury from chemicals and after one week by using the liquid CO2 in his eye, it is nearly healed.

K: Doctors are human too and they get sick and injured. It is good to see if they can't find a solution in their world they come to the plasma world for a solution. It is beautiful for me and this is hard to explain. I can read the words now from the book I wrote from 10 meters away and last week I could not see them. So to me it works irrespective of what they say; the pressure is gone

and life looks different and it's beautiful. Thanks again to the scientists from Ghana. I hope you learned the old and new the soap science and that you can use the technology to create as much crystals and material as you like now that you have learned to crawl. It is time for man to walk into space with his head high.

Vince: 2pm central European time.

K: You can join the teachings of plasma technology on kfssi.org and you can enroll. It is 100 Euro a year; if you are from South America or Africa and cannot pay, you may join anyway.
