Video link: <https://www.youtube.com/watch?v=3NE6mtuDuQs>

**Keshe (K):** Our announcements are made at the beginning of every session. One of the main announcements was made on Tuesday. In respect to the Magrav systems, there is a development and we would like you to follow the development and give us feedback on your results, for over 6 months around the world and for those released by Keshe foundation and those you made yourselves. As we share knowledge, we learn everything together and that has become the success for the technology. In introducing the new technology, we have to play a safe game in order to understand the development of the plasma within the structure of the units and we went through 5 or 6 days of blueprints in teaching.

**K:** If you remember from the beginning, when you connect the systems you made and when you connected it to your main, you made a load of around 1200 watts of power to trigger the plasma. In the process of developing, testing and sharing knowledge we found easier ways to work. We slowly reduced the power to 600W then to 400W and then a 15-watt LED light would do the work. What we are seeing now (through) the process of development from people who made their own system and those using the systems from Keshe foundation that were purchased, what we are seeing now is that when you are using these loads to trigger the plasma in the Magrav systems, you are paying extra costs for the 600 watts or the 400 watts. And for 24 hours that is another 18W of energy and if you run it for 30 days to trigger it, it builds up.

**K:** What we see now that is working and we ask you to convert, is using the refrigerator in your home. When you build or buy your Magrav system, you don't need to load it up any extra. Connect your refrigerator (or freezer) to the Magrav load. (14.43 minutes). So from now on there is no additional costs in the house and it is plugged directly into your refrigerator system. The fridge-freezer system, because of the compression system, the motors in it, and they oscillate with high use and drop for a few watts because of the thermostat control in the back and then they peak up. So they have a cycle which long-term/short-term, long-term/short-term because of the compressor. And if you look at this they follow the impulse of electricity. This process brings both AC and DC out of the system and what we have seen is a very rapid response in reduction of power usages by most of the systems.

**K:** You don't need to add LED lights or extra lights. Even if you are using units at home that connects to lights, use the fridge/freezer hookup in every system in the household. You will see you don't have to worry about additional costs of running the system as it is part of the initial system you are using. But you will see a continuous reduction in your supply from the grid and the plasma in the system will supply the rest. There is a key point in this process: we are trying to assess if you are correct and that is when you use this system over time, the plasma technology of your Magrav system gradually becomes a generator which means that you start generating electricity or the pre-plasma which can be used for any application.

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

K: This is the breakthrough. This is what we are looking at and we would like you to test it in your systems. We have seen this in over five occasions so there is a pattern to it. The system which has been used for over six months shows such a property which means you change your Magrav unit through the continuous charge and discharge through the fridge/freezer system and this releases the plasma in an orderly manner and your system becomes a generator. This is what we are trying to establish and we would like you try this. There is no addition; just plug the unit in. What we see is that we would like you to check the part of the blueprint and that is to switch off the main power supply, then add the meter. Then look at your power supply, your Magrav unit. One of the easiest ways we have seen is to open the door of the fridge to see if the light is on.

K: If the light in the fridge is still on by switching the main, you have a generator system. But you have to place the Magrav system at the point of the electricity into the house because what you have to do with the unit is to change the extension so that it can take most of the demand of the house to between 2 and 4 KW. Now your plug in becomes the supply end to the house. This is what we need from those of you who understand, to test and report back (so) that we establish the criteria. We have seen (this) on one occasion and we'd like you to test this: when you put the Magrav system or two Magrav systems and you connect your fridge here (20.01 minutes) and you have multi-plug power strip and you plug that to a second Magrav unit. We originally called this 'cascading'. It seems that the Magrav units in conjunction with the two what is called free plasma transmission. We need to clarify this and as we work as one team on the planet, it is us to us to evaluate it. We have seen this happening. I was present when it happened in a flash of light, but the system was shorted. We are trying in the innovation center to evaluate this.

K: We do this, you do this, because we all work together. Where the field system between the two creates an environment of free, wireless energy, which means your systems can operate without anything else. We have seen the lighting in the LED light that was switched off and there was no connection, switch on. This is a part of the progress into a generator and wireless power supply. It's very much like the receiver and transmitter. What we think in the long term is that they start feeding and transmitting at the same time. One becomes the feeder of the other and the other becomes the feeder of the other and you create what was the dream of our beloved Tesla.

K: Creation of the fields where you can tap into 110 or 220 DC, because this is the plasma creating what you need according to what you have beside it. There is one proviso to this. The reason you keep the plug into the wiring circuits of the house is because we need a potential difference in the balance of the plasma. And it seems that this connection, if you keep it connected to the wall (22.47 minutes), to the earth, you create the potential difference between the plasmas and the field gravitational magnetic field of the earth which allows it to create the difference and the release of the plasma. You need to have a connection with what the electrical terms are called an earth connection (ground) to your Magrav system. If you disconnect it and then just plug it into the wall or make a connection to the ground (as those who are well versed in these things say you have to do with a grounding with a nail or bar inserted into the ground a few centimeters), you need to do this to have an earth connection with at least one of your Magrav systems.

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

K: We see now that we started safely and saw the Magrav systems being built. Some of you had a problem because you were using LED lights because this was the safest system to use. Some of you saw a better result using heaters or generators. Now with the fridge unit that is in every house, we can implement this. We showed you a video from a teacher in our Italian teaching group in his house last week. We saw this months ago in London and in the Philippines with one of our researchers, but we could not (make the) connection. We have two other occasions where we saw the same progress.

K: This has been going on long enough so we see overall what we see, as you know, in London, the meter was changed last September by the power supply company to put a meter that would 'read correctly'. The meter was read January 8 and the power reading was zero. This was a surprise but now we understand that the Magrav system that was connected to the fridge was the trigger. We expect over time that your power supply as the Magrav unit to become your generator. So, we are not in any way promoting it as this moment, but as we work on an open platform source, we see the results. This is the beauty of sharing knowledge unconditionally. We are not afraid, you are not afraid of testing and letting us know of the changes. We advise you now to change all your systems with the fridge as a load site.

K: You will see the benefit of this. We see this in Africa. The most precious thing in the house is their fridge, so they connect to it. We have seen in Africa 95% reduction in the first month and now we partially understand why. These are all the top scientists in Ghana and Kenya who took the systems. There is a precedent for this move. Connect your system to the refrigerator as the payload and please report back so we can develop this further. Most of you who bought a Magrav unit from the Keshe foundation, you will receive an email advising you to do this. This is the beauty because you have done the transaction online, so you will receive the information from the Keshe foundation to change your Magrav system to the refrigerator as the load. Please let us know. If you have been saving on the utility bill by 50%, let's see if you can push it to 100% when your Magrav system becomes a generator.

K: This is important and let us see if this is correct and then we fulfill the dream of Tesla but we do it through plasma technology and not magnetic fields. This way we are able to complete as we said that the magrav power units become power generators. Then you start seeing other effects of the total use of the power unit and the applications for health, food and health material production. This is important and please let us know.

K: The other announcement is (for) the number of you who have signed in to be members of the Mozhan team. You filled in the applications and we see you are signed in. Until the payment arrives, we don't consider that you (have) completely signed up; you have just filled in the form. Within the next few weeks, I will be closing the teaching which means we won't accept any more. This is because of where the Keshe Foundation has found itself in the space technology. So if you applied, please complete the processing of the payment within the next two to three weeks before I close the application process. I prefer to have a very tight, close number of people to teach such as a couple of hundred rather than setting up lectures. You have to make the units. We have tried to set up a facility where most of the things can be done in a different way.

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

K: This is regarding the Rome meeting and we will close that soon because we have to bring the members of the Universal Council in. We are structuring that and there is the matter of huge security around Rome for us. So, it will close shortly, totally. This is partially because of developments happening in the background of the Keshe Foundation.

K: As a lot of you know in the situation we announce this week, today, we will try to clarify information with regards to Sterling Allan and the Keshe Foundation. And we will advise that our security team sits behind the Keshe Foundation as advisors. The sentencing for Sterling Allan is tomorrow in the United States. We stay offline and we will release our position to the supporters of Keshe Foundation next Thursday. We have found a massive corporation in the background and we keep it at that point and we will expose everything in the national arena and leave it to be judged by the people.

(30:37)

K: The other point is in respect to what we spoke about and what we said months ago in respect to the earthquakes and the position of South America. This part of the teaching and explaining in more detail and it is on request and respect of our Professor colleague with the Chinese space to clarify and out of respect to the scientists I explain this today in detail so that the totality is understood. Because what is to happen has huge applications and implications for governments and they want to see the validity and the terms and conditions that apply to their countries in the coming time. As we said before, the Chinese Keshe Foundation team and the groups in the background are working very actively to complete the oasis system to be ready for the crisis or the eventuality that it might come up. They have targeted the production of two tons of GANS and are busy with it and they want more explanation on what our position is and what we see and expect.

K: Today this is a gift to the professor of the Chinese space group who asked a question yesterday and I explained it in a simple way and today I explain it in more detail. I will spend about 1 to 1.5 hours on this and we will go through this on a step-by-step process and why we see that nations have to take steps. As we said, the earth, as we are all aware, even though we walk on a solid part, is on a bed of rotating, molten material. Inside that molten material, for years the assumption was that the blanketing of so much material on the top creates the heating on the inside and that is why it is warm and why we have molten metal. In fact, with the evolution of what we and other scientists have released now, we have a very clear idea, more or less that the heating of the center of the planet is created by the interaction of plasma of different strength matter, nano-material and the rest. And the interaction of the fields with each other in different directions (33.31 minutes) and positions create both gravitational and magnetic fields of the planet. The release of the plasmatic fields occurs with different plasmatic fields with the different matter states. In the reduction of high matter state to low matter state attraction, (it) leads to the heating of the material. And then in heating it creates, due to the interaction of the matter and the fields, into the rotation of the planet counterclockwise.

K: But, at the same time, the further you come into different materials that are on the gaseous part of the planet in interaction with the matter, leads to the creation of what we call oceans or whatever such as mountains, land masses and the rest. What we see, if you understand the

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

principle of how plasmatic fields inside the center of the planet in reduction in the strength and interaction with the other matter state or field state, is that it doesn't matter if it is a liquid or gas, (it) leads to the motion of the whole structure where stronger field/weaker field interaction creates the motion. And part of the energy dissipates as heat and the rest is motion.

K: If you understand this, you understand how the upper part is a floating boat on the magma where it doesn't matter how deep the oceans go or how high the mountains are. The whole structure is within the structure of floating magma. This is forced and dictated by the fields of the magnetic/gravitational fields of the center of the plasma of the planet. This applies the same to any star or any moon. It applies the same to the plasma of a proton or the plasma of an electron. The boundary of the interaction is a confirmation of the physicality where there is a gravitational/magnetic field balance. In this process, our planet is no different than the others; the magma moves and what has become solid moves on top of it. Somewhere at the bottom in a very grey area, the totality comes together.

(36.38 minutes)

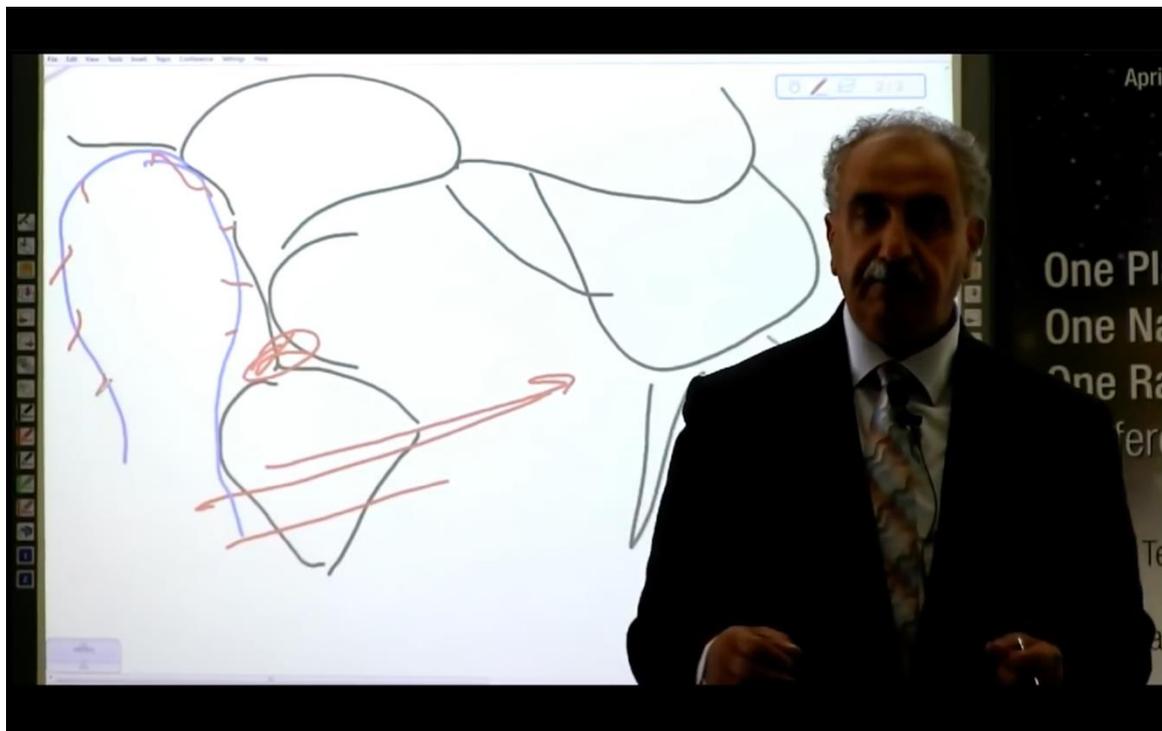

K: But this part has connection with both the magma and the matter. So whatever is on top, is floating and if you have a mass and you can penetrate part of it and weaken it, you can bend it. If you have a piece of metal or paper, if you cut into it and play with it; you break it, you bend it and you do whatever you like with it. And somehow in the past history of this planet, in (an) occasion that we don't know, (it) has been indicated (that due) to the hitting of a meteorite in the Mexican Gulf, we see a split in the structure of the northern and southern part of the American continents. A weakness in this structure has been created and sits at this moment somewhere around Panama. If you understand this, now you (had) the continent in one piece and what was a solid piece, now has a dent in it and we call this dent the Gulf of Mexico. When you go further down, there is another below the Gulf of Mexico and the rest of it where we have a weakness in this position.

(38.26 minutes)

If you understood that the whole structure of this planet is on the revolving magma which is rotating counterclockwise, then you understand that now that you have a weakness and the magma is moving, you now see what is happening.

K: The South American continent is floating away in the direction of the float of the magma. There is another factor in this. This magma is not just floating in one direction; it is floating in the other direction too. It has done this for millions of years. And now it has come to the point that it cannot be. If you get a piece of metal and bend it up and down in two different directions it will break. This break is now at the point near Panama. This has been developing because it is part of what we have seen on the West Coast of the United States on the Pacific Ocean. This tearing apart that has been taking place is called the Ring of Fire because it goes to the other side because it pulling itself apart because it is connected by land mass on the top which includes the rest of the mass: the Asian continent, Africa, and Europe. This pulling over centuries and ripping apart has been creating the opening for this to happen and that is why we see the Ring of Fire and why we see the volcanic eruptions. The whole material is pulling apart and it has to give way.

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

K:

Now we understand the process of why we have the Ring of Fire and when you have this and you have matter state connection, in the tearing apart of what we call the continental plates, this is what we call the earthquakes in the heavy earthquake zones. On the other side of this Ring of Fire, the Asian Continent has to react also.

(41.14 minutes)

So, it is under pressure and under contraction. It is getting pulled by magma on one end under the Indian Ocean and by the other way it is the pull from the top. The pull is both ways and the whole planet has a heartbeat. It is exactly like your heart and is moving. In that process, South America is on the verge of separation. That is why we (have seen) such a huge amount of earthquake activities in the past few years, decades and centuries.

K: It has now come to massive separation and we announced the separation, that this is about to happen. Never before have any scientific organization or papers spoken of the separation of the two continents, North and South America. I explained this for the first time last year and now we see it in progress. When such a position takes place, to show it is correct, we explain the pressures we will see on the southern European and on the Chinese line through Iran to the place called the Americas coming together. Then everything in the past few months comes together to confirm the correctness. When the pressure is coming on the continental plates and moving up and down, we should see huge activity on the line of separation. Earthquakes are geological. The only problem which now appears, and go back to my talks, with this separation we feel the earthquake in Washington DC and New York because the bottom part of this separation is pulling and the top part is locked into position into the other land masses where the North American part connects at the North Pole land mass into the Asian continent and the rest of it.

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

K: The part near the separation is free but the top part is pushing against the others. What it is doing is it is squeezing into the part of the North America where the US is and we are seeing earthquakes and volcanic eruptions in pushing the magma through in the Yellowstone Park area. We start seeing the huge pressure buildup until this pressure is absorbed and the volcanic eruption will take place. And the pressure is released and that pressure release creates a shock. And with that shock, the continents will separate. But now, with the separation from North America, South America becomes afloat. The back end of what is left as the northern continent, now that the push has gone will go back to the normality of past centuries of the separation push. This will create feedback earthquakes into Japan and China as we saw with Fukushima. That was the first sign of this kickback because the release of the lower level plates have started. Now we see the beginning of the separation and the start of massive earthquakes and massive volcanic eruptions until the kick back comes in.

K: Now this separated continent of South America will go afloat on the magma platform. This float is in the direction of Europe because the magma is moving that way and we have seen the earthquakes in Gibraltar and Spain. Along the same line, Austria, Switzerland and Greece are reporting earthquakes because the South American movement coming towards Europe. And now there are two possibilities. What we call Gibraltar, if the pressure builds up, will close. If the land mass can take the pressure of the continental South American release, it will close the Suez Canal because the continent will push to close to take the pressure.

(46.14 minutes).

Or South America will twist backwards and become like Australia. The geology and atmospheric conditions of the planet will change and not only will it change due to the fuel from the eruptions, but now we lose one of the biggest land masses of jungles in South America which supplies huge amounts of energy on this planet. And that oxygen will disappear because now it drops down lower than the Equator.

K: This will happen over centuries and thousands of years if the planet is still here. But what will happen in the coming time as I explained yesterday in the private teaching, this planet is like the wheel of a car. When you buy a tire and put it on your ring, you balance it a few grams here and a few grams there on the balancing machine so the rotation is perfect. So, when this mass starts separating the planet has to balance itself. And in that balancing, a lot of the oceans' current flows which balances the planet will change. We cannot change the land mass but waters of this planet are 'floating land mass'. We will see different direction of the water flows and this different direction of the water flows will create new atmospheric conditions on this planet. These will be felt in the next 3 to 5 years; that is imminent. But on the other hand, the process of the development of the separation in a short term is seeding the large number of the volcanic eruptions. And the Ring of Fire will not exist because now the totality of the pressure for separation has come out of the equation.

K: In this process, we will see massive earthquakes because everything now that is separating is trying to settle. We will see a huge number of eruptions that will disrupt the atmospheric balance on which our lives at this moment are dependent. You (will) have too much dust in the air and aircraft (won't) fly and jetliners (will be) grounded. The economy of the western world will

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

come to a halt in the next 12 months. For sure, the North American continent will become a landmass with transportation of donkeys, horses and if you can still drive a car. A large number of people will depart from the United States in the next few months because if the correction calculations are correct, the amount of ash released in the volcanic eruptions for balancing the earthquakes to support the separation will cover most of the United States.

K: In my writing, knowing this, a few weeks ago to the world leaders which was in a way a message passed on, is: would there be an election in November in the United States? Or as we suggested, it is better for the Senate to make a provision to appoint President Obama for a third term because nobody will be there to run the nation except the man who is already in power. Now you understand why we addressed this on the political level as well as the economic level. You have to understand that the economy of the United States is dependent on its military influences which are created and financed by the British Isles and the Europeans. In losing the manpower of the military forces, the economy of Europe will collapse in a matter of hours. The moment the eruption happens anywhere on this line, and the earthquakes (come), we lose what we call the false powerhouses of the world. Then this brings Russia and China as the world leaders both economically and influentially.

K: Look at the data released by the American scientists in respect to the eruptions, not what we do here. This is important that this is understood by the American and European governments. This is the time of cleaning up but the process is very diverse. For 500 years, people of different continents took to America. Now when there isn't much left and the land is unusable, they will go back home. Most of the nations have to be ready for exodus back into their nations. People will claim every right—my grandfather was this and my great-grandfather was Indian and I'm going back to India because there is no America left. The process has started and we are witnesses to part of the evolution of the life of this planet; and we are passengers of the driver. So, now you understand the extent of what is about to happen and I have asked that we share what we showed on our private teaching on Tuesday. And we bring it on the surface for you to see this data. This is what I explained in theory, what is sitting and how the process started.

K: Now we go through the next step. Don't forget: Australia was separated by the same process millions of years ago. The British Isles used to be part of a desert. If you go to Sheffield in the center of England, there is a cement factory called Blue Circle. If you go there to the factory where they are digging, they will say that what they are digging was part of a desert and an ocean. And that is why they can produce the sand they need from this area for their cement factory. I have been there; I lived in England and did a project on that factory. Because the geology of the land, at that time (it) was important for me to understand. So, now we understand in the process what is going to happen. The North American continent and the South American Continent are (to be) freed from each other. The North American continent will flex back and I brought a stick to show you the example of what happens.

(54.00 minutes)

This is what it used to be. It is like a stick, but you call it a continent. The pressure on the bottom through the magma is pulling on the continent and it is breaking. So, it has broken and what happens (is that) it is going to come apart. You have seen the separation. When the break comes,

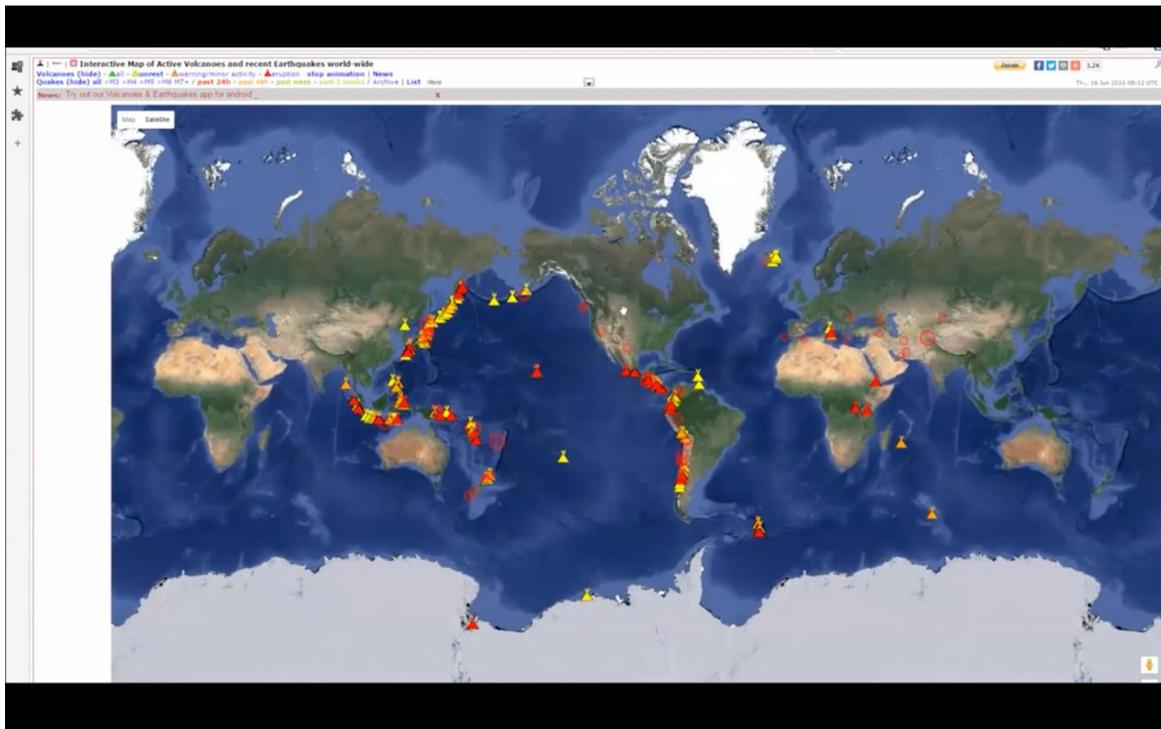

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

this takes the position (South America) of floating on the magma. The upper part of the stick represents North America and in this process as the main body of the land mass (Pangaea) on the top sits, it has to take the pressure off the change, but the Asian land mass is huge and can take the pressure of the South American separation and movement.

K: There will be changes with the closing of Gibraltar or the opening of Gibraltar in a different way. If Gibraltar opens up due to the pressure on Africa, then the Suez Canal will close because the Saudi Arabia land mass is the flexing point. Most probably we will see the end of the Persian Gulf in hundreds of years because it will collapse. We will see massive flooding into Western Europe by the way the process happens. And most of us won't be here to see this. But this is part of the process that we are witnessing as part of it. What are we going to do? We will show you the data that what we say about separation is imminent. This will affect the life of every man on the planet; every one of you listening will be affected and you have no choice. None of us has a choice.

K: Can we have the earthquake activities in the last 24 hours? (Note from transcriber: <https://www.exploratorium.edu/faultline/liveeye.html> is not the same map as he displays). Can we have the earthquakes in the past 24 hours? You can put the volcanoes and earthquakes up, please. Let's go to where we include North America. We want the whole planet to show up.

(58.10 minutes)

K: OK! Now! We are showing Africa into Asia. These are the earthquakes and volcanic eruptions in the past 24 hours. The erupting volcanoes have a triangular shape on the map. This is what you see and we explained. Look at the massive movement between the North and South American continents. Now we will look at the past two weeks with the volcanoes.

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

(59.22 minutes)

Now you see what we speak about; the concentration of the earthquakes at this point and you see them along South America, Central America, west coast of US and the Yellowstone area. You see the earthquakes. Once this goes in the next 6 months, this flexes back and all this is due to this. Now you see what I have explained. The feedback will go through China and the line I explained 8 months ago. We see Switzerland, Gibraltar, Austria and Greece will come into activity. The indications are what I said before; the pressure of South America will move this and close the Persian Gulf. You see most of the activity sit around that area of northeastern Africa. This means the African continent will tilt towards North America. And it will close this Persian Gulf area. Now you see the building of the pressure for separation is along the Pacific side of South America and Central America and North America is being pushed. You will see that the seismological data confirms what I have said. If you go back and go through the history of the quakes and volcanoes for the last year then you will see a very clear pattern and what is about to reach completion.

K: Any of these volcanic eruptions that come simultaneously will darken the Pacific area for the coming times. Zero flight zone is here. I wrote to the governments to have their naval forces ready for picking up as many boats as they can as people will take into the oceans. And this is on the verge of happening and we estimate this autumn/winter will be the last push of the magma and the change of the seasons will bring this activity in. What we have seen in the activities in the central to eastern United States shows the pressure is building up. The building, if we can go to the 51 states seismological data, they turned this off for a short time. They switched it back on and it is so heavy that they don't want people in the United States to go in a panic mode. This shows the compression and that is why on the 22<sup>nd</sup> or 23<sup>rd</sup> of this month the American is testing a 9 scale earthquake. But that will be totally useless. The problem with this situation is that because of the magnitude of the eruption, nowadays when there is an earthquake we fly things in and try to get there quickly.

K: When you have these kinds of eruptions there are no flights. We will have to rely on naval support to be able to reach support. Two months or three months...are we going back to the situation of crossing the English Channel with boats to get as many people back from the shores of France because there are no flights. Now you understand the two options left and why we are pushing with the development of this technology. First of all, as many people who have learned how to use the plasmatic fields, the GANS, the nano materials, such as the Chinese concentrating on the oasis systems, the more people you can protect without the need for other support. The other way with the plasma technology with the Magrav positioning flight system, as you create the shielding, is irrelevant (whether) you are going through dust, through the water or through a volcanic eruption. You can reach, deliver, and be able to support life within minutes. Reaching and supporting American citizens will become the duty of every man on this planet. If we have the knowledge, we can do this.

K: Now, this is a warning. The same goes with the government of Iran. On the feedback, the kickback, as we see, the line of fire sits right across Iran. Southern France, Spain, and Portugal will be shaking like a bucket of jelly. We will not see much on the Chinese west coast, but we will see this through Japan. We will see heavy involvement in the Japanese sector. Pressure will

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

change in a drastic way and then the earthquakes that occur, the Chinese government can handle. The pattern, the picture is very clear. You can see the line crossing China, through Iran and it angles down to Panama and you see the warning we have given. It is to the benefit of governments (including the United States) to act now and not leave it until it is too late because there will be no nation to have elections. When we announced in February and April, we saw immediate response from the White House in setting up organizations for the earthquake support and they are testing. But President Obama, you are too late. You acted too late, delivered too late and your nation will not be there to support in the coming months.

K: This is what we said: there is no need for armies because all the armies of the world will become naval forces trying to save their own citizens and the others. You look at South America and millions are affected. The Silk Road of Asia will be totally devastated, one after another. It is not going to happen overnight. What we hear is that there are not enough resources to support such a change unless we all get trained in how to support ourselves. There will be no Hawaii left because what is not taken by the earthquake and volcanic eruptions will be taken by tsunamis. This will bring earth into a new position on its own in the solar system. A warning goes to the world governments: hardly any of you will survive this. The only possible nation which can come out of this is China and Russia. Western Europe will not be known any longer. It will break up because financially it cannot support some 10 nations to be totally devastated. They will all claim their independence. They did their best to rob each other and now they cannot support each other—the ability to support each other does not exist.

K: This is why in the past few months, in a very silent way, the British view my work as I lived there and they understand. And they are seeking separation from the European Union (EU). They don't want to be in it when everything starts happening. The rest will happen one at a time. All of the Asian nations will be devastated. We saw this in 2005 and we will see the repetition in the coming months and years. All of these have to be adjusted because they are being pulled apart. When they let go they will go back and this creates new earthquakes. Most of the volcanic systems will be shut down by the release of the South American continent. The problem is how a few million supporters of Keshe Foundation around the world can act when this process happens. We leave the Americans to be.

K: There is something I gave the Islamic world in the hidden codes and now I open it: when the American continent goes through such a change, the 52<sup>nd</sup> state of the United States, Israel, will not exist because there is nobody to protect the Jews. It is the job of the Israelis to patch up relationships very quickly because what you relied, the 'father' United States, will not be there to feed you. They (will) have too much to look after inside (their) country. The process is a natural process and is planned by no one. Maybe this is the time of correction. The Arab states, the Palestinians will not let Israel exist for one minute. They have done enough wrong that (it) has to be cleaned up. Now we see the danger sitting on the horizon and why we call for rapid movement in September for the unification of mankind before we get to this position. Bury the hatchets and whatever wrongs you have done to each other, we have done. But when the earthquakes go, Yellowstone and other eruptions go, when there is no transportation across the US to get and launch rockets, there will be no state of Israel.

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

K: This is why we call on the government of China to take the leadership for the human race at this point. It is the only nation financially and politically correct and solid that can carry this through. Now you hear about little earthquakes and little eruptions but when you put it in a map like this you see it and as you are watching it new circles are getting added

(1.12.35 minutes)

If you watch this in the background, you will see continuous circles are being added in the same line (the Ring of Fire) as they are updating. It is not as it was when I started talking. A few have happened and we have just seen additions of yellow on the American continents side and the Asian side. The process of the separation will change the food chain supply. It will change the energy supply as we are used to it. It will change the whole geopolitical structure of this planet. And it has all started and there is no way anyone can stop it; the clock is ticking.

K: I advise the American government to stop the election process and start investing all this money in how you can develop different technologies so that you can save your nationals. And the other point is, once this happens and I said this a couple of days ago, up to now the Africans and the Asians needed visas and passports and they were checked before they could enter the country because we abused you for centuries and we got used to it. The American passport needs clearance at least for at least 12 months. You have to clear and you never touch a gun, you never killed anyone, but you have to wait for clearance and you have to show you never bought any shares. But, your central data is gone and now you can stay where you are. There will be no rooms for animal behavior and we are in the right time to deliver what we are supposed to deliver.

K: You have the European passport and you are grounded; you raped the world for centuries and now you can stay where you are because we don't want you anymore. The position is very clear: this is not a doomsday; this is the evolution of the physiology of the alive and living planet and now a child separating from the mother. You see how if you patch Australia into it, where it came from. The same position will happen to the South American continent. The pressures are too high and will not fit in, they will twist and the South American continent will be in a somewhat horizontal position at about where the lower tip of South America is today.

(1.15.30 minutes)

The force of the magma is much freer in that lower end and will push that tip and the upper part will follow the push of the tip to make South America horizontal with the Chilean side facing the South Pole are of today.

K: The Central African nations stay solid; Russia and China for the most part will stay solid. Part of the Silk Road will be affected. The Himalayas will go and Everest will play a new game. The volcano Mt. Damavand (located near the southern coast of the Caspian Sea and 41 miles northeast of the city of Tehran) in Iran will blow in the next few months. It is part of the pressure and it is getting squeezed. And with the earthquakes you have seen in Europe, the pressure is building up that way toward Mt. Damavand.

(1.16.57 audio lost)

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

K: Now the communications are gone and the whole nation is gone and you hear nothing. Don't forget, the effect of this process is huge because all these volcanoes will start bursting into the atmosphere and some of this dust eventually blocks the satellite communications. This is huge and what is about to happen has only just started and every minute we (will) see a shake and a tumble. And we (will) see more and more high magnitudes of earthquakes and more frequently in different parts of the world.

K: This should have happened last year. The earthquake on the west coast of Chile was the prelude to everything which is about to go. We see massive amounts of earthquakes around Peru because Peru is about to go. We will see the end to most of these volcanoes and earthquakes. And these nations will be safe places to live in 20 years because then all the volcanic eruptions will have finished. The level of the sea will have changed drastically because up till now, the Pangaea (land mass) has kept the little boy, "South America," afloat. Now it has to find its own position. It will rise. The level of the sea in some places will drop 2 to 3 meters because at the moment the sea is taking the pressure. When it is released from the pressure gradually it will float on its own on the magma and it will not sink that much and it will rise most probably. So we see most of the ports going down. Or the level will sink (for) most of the ports.

K: If you are involved after the breakup of the USSR and the opening up of the canals with the open oceans and the Caspian Sea, you will see how the ports will disappear under the water. I have seen a couple of them because the few meters are not adjusted and you find the ports are not there. I have witnessed a lot of changes in time. I told you a few weeks ago I opened the book of humanity for humans to be ashamed of what they have done to themselves and this is the beginning of it. Everything man has done will be open for the man to see. It will be very interesting to see how the human race that raced to go to America will race out of America. They came with a boat and they will go back with a boat because there will be no air travel.

K: The only difference is 500 years of killing and destroying and still carrying on with the same thing. Do we need them back or do we let them sink? My word is to let the nation take its course. They will come and carry on with the same habits. I have seen it with the Jews. You give them a state and they become arrogant of the society in having the 'big boys' supporting them. My call goes to the Jewish Lobby: sit down and talk with the Keshe Foundation and find a solution for the state of Israel and amalgamate the Jews the way they were across the Arab world. We acknowledge you and cherish you and now maybe it is time to go back through the same process.

K: You see another earthquake just flickered in South America. You see these flicks and come up; this is a live condition. The problem is how fast we can come to an agreement with the governments of China and Russia to build a safeguard for the Chinese and Russians to go back to their countries after this mayhem. They are going back. Most of us in Europe cannot absorb millions of their own citizens. They don't have the facilities and financially they are bankrupt.

K: If you go back on the internet, you will see the warning I gave last year and that has been watched by a few million. So, there are millions of people listening. I put this section on the internet of what is to come and let's see what the people decide. We don't get into the military

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

because the military has not effect(?). There shall be no borders. You will see the last dictators move out in the next few months when there are no states to support them. We have two choices: 1. controlling the situation with the new technology that we can support and take what comes or 2. stay in the arrogant state and be the last man standing shooting ourselves. It seems that mankind has chosen the second option.

K: If you understood what I deliberately started teaching today in explaining about cascading the unit, would we create a condition that we can cascade with a number of reactors around the world with the whole of humanity to support? You see, the position is very clear. It is the end of one cycle for mankind and beginning of another. The process will repeat itself most probably and this has happened for billions of years. This happened here (Australia) and I was explaining something very interesting. Maybe there is truth in it; we say that planet earth was hit by a meteorite and all the dinosaurs died and that was in reality not true. The reality where we see the end of the dinosaurs due to change of climate most likely happened with the separation of Australia. In separation it created smaller mayhem than the bigger brother, South America. If mankind could trace this, you would see the separation of Australia from the main Pangaea was what created the main climate change. There was no meteorite. Don't ask me how I know. You will find out I am correct.

K: The process now will be so fast that if the Australia separation managed to get rid of, then this process we are going through with the human were the ones who escaped into the caves. Maybe we have to escape into the nuclear silos to stay alive. If you can find enough copper using enough materials to make food and energy out of it. And then, we emerge out of these holes in thousands of years when the planet is safe. Would there be a race or would another mammal have taken over? These are not jokes; these are part of the history of mankind on the planet.

K: If you look at this map, I explained to you how the human race was created. The human race as a race was not one. Due to the condition, the life was created simultaneously in different parts of this planet. And in time, when they came together, the stronger could take over another race. That is why you have blood types O, A, B and the whole kit and caboodle of it. The condition of life that we understand, the plasma GANS technology, the condition of the fact of the presence of salt and presence of water and elements of this planet such as copper and zinc and you have seen the existence of these across this planet everywhere. So now you understand (that) the interaction with the gaseous part and the matter part has led to life across this planet.

K: How man came to go, as the theory says, from East Africa into what is the east coast across and up and creating a race has a little truth because another race came to the center. The same in South America and the same in East Asia. The climate and condition were correct for different races as beings were developed and that is why you understand in so many ways the theory of existence of man is all the same. We are 99% and we can depend on it because the mouse, the dog, the cat, the fish, the man all came from the interaction of the atmospheric gases with the elements and there was one option. It depended on how you decided to run or you stayed steady and woke up on a different planet.

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

K: The structure you will see is that man will see the development of races in space now that man goes into space. You cannot interact but you can observe the way we have done for thousands of years. The process is the simplicity of it but if you make it complicated, you need peer review papers to confirm it. I have peer reviewed my papers; I have been there and seen it through. So Professor, I hope you got the message and you can pass the message on to the Chinese space technology. We need to take the spaceship program as fast as possible to find our level in the coming weeks so at least we can protect the territorial lands of China. Because the others have created enough mess, they will be too busy cleaning up the mess. The only option at this stage is the development of the new technology which can stand the hail storms of sand and hot lava and the rest.

K: We should be able to have enough knowledge as we have done and you are creating the GANS so you can heal the burns from the storms or the heat of the fire which comes from the sky. You have to be able to stand when there is darkness and no vegetation growing to feed your loved ones. The GANS water, in different shape or form, will give you enough because it is the field of the plasma. You need to rescue and you will be amazed at how fast the governments will start running to you to develop the technology. Go back on the teachings. Every one of you, open as many networks and teach how to make GANS and how to make, how it does, if you burn it, how it does, and spread the knowledge as you are the messengers of peace. Don't get bogged down in who is right and who is wrong or who told me what—you are all right and you do it in your own way. And you are correct because you deal with the field of the plasma. Any questions?

(1.33.26 minutes)

Tommy (T): I want to show my new set up for making GANS.

K: Can we do that when we finish this segment?

Mario (M): Update on the Chinese development would be great.

K: The Chinese development – we are in close contact with Keshe Foundation China and Professor Zhu is in charge and they have large funds for development and spread of technology. I will spend a year or two in China for the space development and every other aspect. Once we get into that position, our main target is the rapid development of the Oasis systems to be available to all Chinese. When we talk about the Oasis Systems, we are talking about water, food, heat and shelter. They are working on a number of designs and aspects of the technology and on our arrival we will sit at the table with our huge number of knowledge seekers in China for them to tell us how they see doing this and how we can support. We will most probably be doing daily teaching in China and we will translate as much as possible. We have requested all the paperwork that has been transcribed from the knowledge seekers so the Chinese can use it for different aspects.

K: The Chinese scientists and officials have understood the beauty of the technology and the way the universe works, independent of the message. And they will use it because it is close to their understanding. We have developed the space ship program very rapidly in China. Most likely,

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

the spaceship institute and those of you who complete the payment, will join us in China. These are the last things we have to confirm. Once we agree the spaceship program teaching will be in China. I am proud to be part of it and we will have the Chinese space scientists working with us to develop it very rapidly. I think most of you had the hint it would be in China. If you applied to become Mozhans, complete the process as we will close it rapidly as we will have plenty of students in China and plenty of funds for the program.

Q: Will the updates be published on the Oasis System so everyone can build it?

K: The updates will be in the hands of the Chinese Keshe Foundation; we will complete it China and then it is in the hands of the Chinese government and the Keshe Foundation and our spokesman, Professor Zhu in China. Their version will not be released unless they agree to, and I think they will. The Chinese are proud to share knowledge. Their emergence of what has been explained here is the Chinese Government's rapid development of the Oasis System. There is not enough food. The Chinese are well trained in disasters and they know how difficult it is to get food, water and shelter in disaster areas. We have seen that when they had major earthquakes in the past years. Our prime target as we have agreed with our colleagues will be the Oasis Systems. We will start in a couple of days with the full process for the Chinese Keshe Foundation groups; laboratories are working to pass the knowledge the Chinese and the Chinese people.

K: We are aware of the threats by the US Government on my movement to America and by the Jewish Lobby. But I tell you one thing: Our moving to China safely is a lifeline for your nations.

Ghee (G): I am not really clear about the timeline on all these events and what is happening in America; we are hearing about the super volcano in Yellowstone. I know that recently there were a lot of activities there. They usually say being prepared is a wise move; is this within 6 months or a year?

K: The timeline already started millions of years ago. Now this is the final act and once it starts, and the pin released in Chile a few months ago with a large earthquake and now we see a small portion. As you see in North and South America, you see how heavily it is concentrated in one place because there is pressure and a huge amount of pressure building up that it is starting. The volcanic eruptions in Yellowstone and in Central America are inevitable because they are taking a lot of pressure from underneath. The solid mass is not flat underneath (either). It is the same on top with hills and everything else. So, the main mass is pushing underneath to the solid part of the continental mass of South America and it will happen; the pressure is going through the center. You have to know the real condition, the line of Central America and Yellowstone. This is important because if you look, you understand why.

(1.43.00)

K: Bring the camera forward and you will understand why it is going this way. This globe is partially correct. Go from a line in eastern Central America up towards the United States and you will see where it is going. It has no choice. The planet is shifting on that same line. We are not going 'up' that way'; we are going with the land mass. Look at the shape and you will see that

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

the mass is twisting and pushing itself away. So now the push, with the Central America stopping, the northern mass is still moving if you look at it and take the line down from Yellowstone to South America. Yellowstone and the Midwestern United States all come into the same part of the twist. The west coast of Canada is heavily vulnerable. There are two or three volcanoes sitting under the North Pole that you have never seen. They will pop up and they will create a huge problem in the Northern Hemisphere. Look at the globe and look at the line north from Yellowstone and Midwest of United States to the North Pole.

(1.45.18 minutes).

K: You see Gibraltar, Southern Spain and Portugal will start the push. We will see the closing in the next hundred years of the Suez Canal. This is so narrow it will close and then the Persian Gulf will become a lake. The land mass will close in time. This does not all happen from beginning to end in two hours. It will be hundreds of thousands of years. If you could look at the land mass of Australia and trace it back to what was called the 'end of life' on this planet, the new cycle they call the end of dinosaurs, it was not caused by a meteorite. The same thing will happen with South America as happened with Australia.

Steven (S): Mr. Keshe, should be going to Rome in September for the council meeting or stay at home to help?

K: If you are a council member or support the council members as in the talks we had yesterday with 40-odd council members online, you don't need to be in Rome because in fact we are not building another UN conference. The whole position is that you are there for your nations and your languages spoken in your country so be amongst your people that more people know that you are there to serve them than being present. We open Zoom channels live during the conference for the council members across the planet. It will be nice to have you and fantastic to see a number of you, but this has to be a global event that all the members of the global community are part of and not just a happening in Rome. We are realizing the hundreds or a thousand in Europe and we especially picked a time we could explain to you. Being part of it is good, but now that the universal council is taking shape, you are the guardians of humanity in the time to come.

K: There will be no United Nations. The first thing has happened in this position and in the next few months, you will find all the UN ambassadors will be running home. They will be claiming the first seats on the planes because they are UN ambassadors. There is no nation to be united now. As the council members, it is for you to be, to learn, and to support. If you are on planet Zeus and a conference is announced, would you come back to the planet? Or do you bring people that you are part of in learning and understanding the structure of your organization? You are becoming a global, universal organization and so start looking outward instead of inward and there is no title to go with doing this. Your duty is to be able to serve.

K: We never ask for donations and there is a place for donations. Interestingly enough, nobody, compared to what we have gotten from outside, has donated anything to the foundation. Because, you are all takers, you are all takers and you made the pen, the Magrav system, you went to doctors who had the technology, you made the pads, and you took it for free, "thank you very

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

much". We don't ask but man has to learn. The Magrav system takes and the more it gives, it is there for us to serve. So, you will see, you don't need to donate funds, but you donate your time and soul to serve humanity. You do not need to be in the council meeting in Rome. You are welcome but remember one thing: what do you do if there is no plane by September? It is a real possibility. This is not something which I just talk about; I can open my phone and read it to you and I've done it before.

K: Will there be a November election in the United States? Or would the people Obama to be president for the 3<sup>rd</sup>, 4<sup>th</sup> and maybe 5<sup>th</sup> time because there will be nobody else to head the nation? That is a very high possibility. We have warned the world leaders of such an event. Every single communication with the Americans is on the phone with calls and communications. Organize events that members of the council can come to give you support and spread the message of peace and the systems that can develop it.

V: I just pulled up a recent map of the earthquakes in Yellowstone. This is for the last two weeks.

(1.52.41 minutes)

K: We see now that today there was a 4.2 magnitude. There were initially these for 3.7 and yesterday was 4.0 magnitudes. If you go to the 16<sup>th</sup> and the 15<sup>th</sup>, we see the report of a 4.9-magnitude earthquake. You see they are very shallow. When you see earthquakes this shallow it means the magma is very close to the surface.

R: There was a 4.0 earthquake 1.5 to 2 days ago in West Yellowstone in Montana.

(1.53.51 minutes)

K: Yes, it is building up. Now go back. This pressure here from Asia is pulling the 'skin' of the earth in the western North America and Central America. And the pressure is building up in the Panamanian area (where the break apart will occur). When the pressure builds up in the Yellowstone area, the surface is weak, the magma will build up and will affect the Midwest and Yellowstone areas. Los Angeles and San Diego will go in no time. Arizona on the verge, will be totally blocked. In Central America, we will see massive losses.

K: You have to find something else which is part of the whole problem and that is where the Atlantic and Pacific Oceans link up again in the area of the break apart in Central America. The Atlantic and Pacific will come together. You see the pressure is there if you look at how heavy the pressure is on the western side of South America and that is pushing on Peru. The magma in South America is pulling to the east, and the break apart is occurring in the area of Panama. And when that goes, the top skin of western United States is pulled and the pressure is coming. This is very much, if you look at as a standing man. If you push on the upper back of the man and pull his legs, all the pressure goes in his lung area. The lung on the land masses is the lung of the Yellowstone volcano. If I put my leg on your back and somebody pulls your leg forward, you are exactly in the position of the North American continent. The lungs and the heart are taking the pressure because the land mass beyond this part (to eastern United States) is holding on. The 'soft part' of the North American land mass, like an organ, is in the greater

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

Yellowstone/Midwest area. (1.55.56 minutes) Or, it's like playing an accordion when it collapses and then pops up.

K: The area of Central and Eastern South America is very, very clear. And this is another problem. This is why you don't see many earthquakes on the west side of Los Angeles and California. It is because it is pulling into the stretch and now it is time for Yellowstone to go, then the break apart of South America from North America and then the stretch in the Yellowstone/Midwest goes back; all the places free themselves. The line in California is the biggest indicator of the earthquakes. You can't pull it in the stretch any more. When the release happens with the break apart of the North America and South America, then within a matter of seconds we will see a sequence of earthquakes around the world. There will be volcanic eruptions (that) will come to an end in a matter of a few years and then we will see the realigning of the continents.

K: What is a danger point in the future is the line across Gibraltar and northern Africa into Asia. Now the Africa mass being pushed by the movement of the now free South America and we see an opening and series of earthquakes around India. So India and Saudi Arabia become an earthquake zone and in so many ways, all this area will open up. Over the long term, the Caspian Sea will open back into the Atlantic Ocean, and that is over a very, very long time. You don't need to imagine anything. This is the data by an American organization. Go on the other channels and you get more and more data and you will see that the break apart of South America and North America is the biggest problem. This activity in the Western United States around Yellowstone is the biggest warning that it's all about to happen.

(1.58.16 minutes).

K: If there had been earthquakes in California and western Canada, we would have had more time. But now because that didn't happen, it means the skin of the earth's surface is pulled fully and the pressure is taken by the center of the United States and we are about to 'go'. It is the matter of the 'last straw' which breaks the back of the camel. This is a warning to the governments and they don't listen or they say it is 'too late'. Don't forget that at the moment the Iranian government is doing the same. When the damage is so horrendous in Tehran, it will be left and a new capital will be created. This is the official decision of the Iranian government because they cannot handle the losses of millions. You have to understand the structure of Tehran. Tehran is built on continuous hills and the houses are built next to each other and are 3 to 4 stories high. Once you have the earthquake and one goes, the whole lot of them goes. There go 5000 people down the hill. Each apartment holds 3 to 5 people and you have 6 floors in each apartment building and then what happens when you have 40 of the going at once? Then it is one connected to the other. The Iranian government policy is very clear. We will do nothing when the earthquake happens; we will just move the capital because we don't have the resources.

K: Unfortunately, the American government is so bankrupted they cannot even find a new capital. They have to stay where they are if Washington is still intact. The biggest bankrupt nation in the world is declaring they are first in the world. How that is possible? We don't understand now and we see the repetition of Louisiana. When it comes, you will find out as the English say, *they wear fur coats and no knickers* which means it looks very good but there is nothing underneath to keep yourself warm. The fur coats will blow away. The only ones who

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

have anything underneath their fur coats are the Russian and Chinese governments. Europe is already stripped. If you are a European citizen, every town hall, every statue, every column you see in your city is already mortgaged up to the hilt and loaned to the bankers in the West. You don't own anything. When you go to see your town hall, ask how much debt the town hall has. Most of the town halls and statutes in Europe are pre-sold for loans to do the things they could not pay for because they could not steal the stuff from the rest of the world the way they used to. The facts will come up, and then you will have to face them.

K: You saw what happened in Arizona; you saw what happened in Louisiana. And we will see the rest of it. In Louisiana, they thought America was a very rich country. We saw worse conditions than Africa (from Katrina). Much worse and it took them years to manage and sort out a small flood let alone such a situation. Don't forget California is the 8<sup>th</sup> largest economy on this planet and it's going to go. So the American nation will go below the 5<sup>th</sup> or 6<sup>th</sup> lowest nations in the world because the main part of their economic support will not be there. The other problem is that I warned the governments: when these things happen on this scale Fukushima was just child's play. Would this make a new race out of the human race that can stand radiation? Most probably it will. Would we mutate to a new form or would we take to space because we cannot stand the environment? I give all my support to the Chinese government to see them into space as rapidly as possible in a correct way. This is what we are committed to and we will carry on with our commitment.

K: In the West they have silenced the technology and they carry on with their abuse and stay with things as they are. As not many people in the West know how to use or to make little things to help themselves, their dogs or their families, so what doesn't exist, you don't miss.

Peter (P): What about using nano-cell technology and frequency accumulation techniques to reverse engineer a toxic environment back to pristine condition?

K: Why not? If you understand how to do it, merge all the sciences of the man. Merge all you know and what can be done and share the knowledge freely. I explained something very interesting. Keshe Foundation became the recipient at various times of large donations. Jewish Lobby threatened the bank that if the bank accepted the money it would be 'this and that'. So they deprived the Keshe Foundation of developing centers around the world by holding back those finances. My deepest consolation to the Jewish Lobby is that now there shall be no state of Israel because we haven't got anything to help you with. Because you shot yourselves in the foot. You will understand how nations and the people who played games, played games by their own acts done by themselves. We protect and developed the technology in Italy rapidly. It is our home base.

K: Are there any other questions? Are we too ashamed to be human because now we know that what we have done is our own demise?

Francois (F): Maybe we should all start to build a device that will clean the air above us from the dust, the chemtrails and the pollution and volcanic clouds and keep the sunshine above us. If MK would give us all the blueprints for that now we will make it.

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

K: You have the blue print, the red print, the green print and every other print. I don't know any other way to teach you. If you understood what we are doing in China, it is when you make a dome, you will have everything you need from your dome—the light, the heat, the light of the sun, because it is the interaction of the fields. You have to understand that the Keshe Foundation and its supporters in China have raised millions in the past 2 to 3 months. They have raised millions and millions of dollars to support the technology once we arrive. And in the West we have seen nothing but boycotts and threats. The open channel teaching of the technology has been silenced by the Jewish lobby sitting in different parts of the world and by the 3<sup>rd</sup> Reich in Germany. Now they will pay for their own deeds. We close our doors when the time comes and we decide the time and position; that is our motto and now the time has come.

Dominique (D): I am from Monaco and I understand my family is going under the water. I never supported any of the elected governments in Europe but I was born in Europe. I never voted because I could not support the political system and now because I was “dropped” where my parents created me in Europe I am going to be punished.

K: It is not a punishment; look at it the other way. Look at it another way; why don't you use your life to serve and help the others when the time comes?

D: Of course.

K: So, it's not a punishment; it's a pleasure to serve. Don't forget the European monarchies have created their own problems—Monaco, Belgium, Holland and in time they created most of the problems for themselves and they will stay that way. It is very interesting when we look at the political situation in France. The government that came into power under the false bombing is now getting bombed every day by their own people. They used the race and religion to create mayhem to get votes. Now that they are in they don't know how to get themselves out of it. They repeated the same in Belgium. They thought they could bring mayhem between the races and it didn't work. People have become wise to it. A lot of people nowadays don't look across t across at nationality, religion and color. They have become one; that is the work of most of the Keshe Foundation supporters. We say to become one nation and one planet because we see through the work of these people. In Monaco in one of the most beautiful parts in the world you will have opportunity to work with the French, the Italians near you and the rest. You have a solid background with the people we have in the French teaching.

D: In other words, I have to go back to Monaco; I live in Oslo. So you would think it would be a better action to go to Monaco?

K: Teach as many as you can where you are to save themselves. The Magrav system is irrelevant because we can do different things with different aspects of the technology. If you understand the technology and teach it and help people, we have seen how people in Oslo are working with the Keshe Foundation. We see people South America and China helping others around the world. It is learning how to work together to bring the accessibility of the technology to a lot of others.

K: I have some bad news. The outcome of this process will create a lot of problems in Germany. If you don't understand the process in the coming time, the outcome will not be understood. The German economy will be devastated and the lifestyle will be devastated. The Germans and the

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

French partnered up to make the EU do what Hitler wanted to do and this was draining the central banks. They created the Euro and emptied all the central banks into one. Now that this disaster is about to happen, the governments will go to get their gold to support their nationals. You have to understand; the situation is so volatile. It is so horrendous that most Europeans need 3 passports instead of one to travel. The way they boxed the entrance of refugees from different parts of the world in the past year, and as we watch very soon, they will be on the same doorstep themselves. We have seen this happening.

K: If you go to Russia and you are of German descent, you know exactly what I am talking about. After WWII, there was enough money in Germany to pay for the mayhem they created in Russia. Russia took a large number of Germans as payment for free labor and they took them to the in the position that they could never come back (to Germany) for what they had done wrong. The city where part of these Germans was taken is today the capital of Kazakhstan, Astana. The same will happen and repeat again if humanity doesn't watch. A lot of you don't know what happened in WWII. But, go back into Germany and ask how many people came from the capital of Kazakhstan, Astana. It was a German city built in the middle of Russia for the payment of death of the life of the people who served the German army. When you go to the capital of Kazakhstan, Astana you will see a German city. You don't see a Russian City. This will repeat itself again. People will pay in different ways again if we do not disturb the balance. Keshe Foundation is giving the knowledge freely and people don't care; they will survive.

K: The history of man is very dirty with what man has done to each other.

D: It is always the people in charge who lie to the people underneath them in every single nation.

K: You cannot lie to yourself; you teach yourself irrespective of where you sit. That is what you have to carry with you. Irrespective of who sits in a government, no government tells you to get a copper plate and a zinc plate and walk up to a man whose children are hungry and make the right things for them and say *drink from this water*. Even if it is dirty water, you have seen from the teaching from Ghana that the water can become purified and become the drinking water and if you energize it right, it becomes the food. So, don't blame governments. You put the governments; you (as a collective) voted and put the government there or voted for themselves. Don't forget that these people are temporarily seated.

K: When I was young in my early 20s, I got to know a man who was living in a room with a cooker in one corner, and had one bed and hardly any human life. He had a bit of covers. He was living on Social Security in England. And one day I was in his room as I was the landlord and I had to check something. There was a booklet on his table; he used to be part of the office of the mayor and ran to become the mayor of one of the major cities in England. Now he was living in a small room with one bed and nowhere to go. These politicians are temporary people. Soon they vanish; it is you who put them there. But if you teach them knowledge there will be no kingship. Change your mindset and be there to serve and you will see what happens. It doesn't matter if you are in Oslo, Cannes, or London.

K: The monarchies will run in the coming times because when people are hungry, the first (thing) they go for is the rich. And the kings have stashed a lot away. But I wonder how much

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

gold the people can eat. It doesn't become a food unless you teach them to make GANS of gold and then they have every energy they need to make. This is the difference; when you come to a man, give him a piece of copper and say, *eat this*. Can he eat it as though it is food? You can show him how he can change it into a GANS, how it gives energy and how it heals. Then he understands. Don't walk with the GANS; give him a piece of metal. Can you eat this? No. but he understands a piece of wire from his home. Show him that it doesn't carry the current for light, but it carries the current for life. Make it simple and understandable and reachable by the public.

K: We have millions and millions of supporters without ever being mentioned on any radio or television. We know who wants to abuse and carry on. But, very soon they will not find a seat on any plane to escape. They will have to stay with the people they abused. It is the same with the state of Israel. I keep warning the Jewish community to be ready because what they have done wrong, they did not learn when it was done to them. I warned my cousins on a continuous basis and it is for them to understand. They think they can sit on the seat and have a big brother supporting them. As we know, Israel is a state of the United States and that is why it is called the State of Israel. When there is no United States, there shall be no State of Israel, because they will be eaten up in no time. They cannot nuclear bomb themselves, so the nuclear bombs stay in the bunkers. This is how bad it is. This is why we put the hand of peace out to the Israelis and the Jews and the Palestinians and the Muslims. Soon they will have no choice; no matter who you are, we all become one.

K: It is for you to teach the way I do; you have seen the troubles—the shooting they tried to do, the poisoning and everything else. I don't stop—I teach. Maybe you can learn. If you are committed to serve humanity, there should be nothing to stop you. We are here to serve; you have to choose.

D: Of course we are here to serve; we are taught through the Keshe Foundation.

K: It is up to you how to serve.

*(Transcriber's note: Look at the current information on October 30, 2016 regarding the earthquakes in Italy. <https://www.youtube.com/shared?ci=D70Oz56kR9M>)*

(2.21.1 Minutes)

Tommy (T): I have spent a lot of money and time on this, so I want to get this down. I think you can answer this quickly. I have three pictures to share. We have three vases, 8 inches tall and 2 inches wide, filled with salt water. The elements of copper and zinc are pure. On the outside and the left side of each vase I put a copper plate. Inside the vase, the zinc plates are hanging. There are no wire connections to the nano-coated copper plates and if we go to the second picture I will show the GANS. As you can see, I am getting a white fluffy GANS. I have a question about the 3<sup>rd</sup> picture which is of two test tubes and someone's idea of what pure CO<sub>2</sub> GANS looks like and pure zinc oxide GANS looks like. (2.22.09 minutes). You see the CO<sub>2</sub> GANS looks somewhat translucent. The zinc oxide GANS looks fluffy and white. If you look at my GANS, it looks fluffy and white. My knowledge says my set up should be creating pure CO<sub>2</sub> GANS.

**Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016**

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

K: You are set up for CO<sub>2</sub> GANS. Don't go by the color; it depends on what kind of zinc you have and what conditions you created. One of the doctors in the Weds team produces the same kind of thing in conjunction with a kind of fruit in South America that she uses for helping her patients without any connect and with the copper and zinc plates outside.

T: Would you say that I have made pure CO<sub>2</sub> GANS?

K: More or less yes. The question is, what are you going to do with it?

T: Many things. I am training 20 people and I had to get this right.

K: Do a reverse test and put the nano-coated copper inside and put the zinc outside and see what you get.

T: I am trying not to nano-coat 15,000 plates every two days. That is why I wanted the nano-coating on the outside.

K: What do you mean by 15,000 plates?

T: There is a big issue on nano-coating plates and a lot of people say their nano-coating comes off after a couple of days. Some people say their plates are indestructible and I don't know what the truth is. If it is on the outside I don't care, because the nano-coating is not going to come off.

K: Why do you want to make 15,000 of them?

T: I need to make a lot for myself and I am training other people and I'm giving some of it away. I am trying to educate a lot of people and I want to get this right, so I am telling them the right things.

K: Yes, but try the other way I suggested and then you will see. What you have, the way you have done them, there is zinc oxide as well.

T: But, it's predominately CO<sub>2</sub>.

K: It depends on the size of the opening on top of your containers.

T: I am going to put bubblers in there too. I'll feed air into them.

K: I was suggesting to Armen that one of the easiest ways to make CO<sub>2</sub> is to buy the gas meters for CO<sub>2</sub> that you use at home for making fizzy drinks and it releases slowly into the system. It is already CO<sub>2</sub>, but you need a carbon gas. The gas of carbon is not easy to buy. When I asked for it in Tehran from the officials they said I was crazy and wanted to know what I was going to do with it. You will understand how to use it.

T: I already have a tank, but I thought the big thing was getting the oxygen into the water.

**Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016**

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

K: If you are trying to speed up the process, there is no point putting oxygen in there when you don't have enough carbon.

T: I thought the carbon was a matter of the plasmonic fields between the copper and zinc plates.

K: But how much can you pull from the small opening on the top of your system?

T: I have a big compressor and I'm going to be pushing a lot of oxygen, a lot of air.

K: Yes, but you need the carbon fields, the carbon in the air around you to create and be able to do this. You need to create the condition of the carbon presence also.

T: I have a CO<sub>2</sub> tank.

K: Try to work on the carbon, not the CO<sub>2</sub>.

T: Not the oxygen?

K: No because then you would have to change the atomic carbon into the GANS of carbon. It can be done; it's very easy. You are trying to make the CO<sub>2</sub> into a GANS. Try it and see what happens. Maybe the condition you create is right for it. You are never wrong until you don't try and don't know. So, educate us.

T: Am I producing sufficient quantities of CO<sub>2</sub> GANS?

K: You need to understand and test it; it's very easy to test if you are creating carbon, CO<sub>2</sub> or zinc oxide. Drink the GANS water of it and see how you feel. You are a test tube. Both are part of the structure of your body. If you produce zinc oxide and you think it is zinc oxide, in drinking it you will find peaceful conditions. You become the meter. If you produce CO<sub>2</sub>, you will find a different interaction with the environment that is not so much peaceful but there is a lot of energy, a lot of concentration.

T: Thanks for answering my questions.

K: You're welcome; thank you for carrying on the technology.

V: Let me add something. I have been making the pure CO<sub>2</sub> and Zinc and what you are making there is a zinc combination with CO<sub>2</sub>. If you want to make the pure CO<sub>2</sub>, the zinc then it should not be touching the water. And you can look at your zinc plates to see if it is coming off.

T: Put the zinc on the outside.

V: Yes, I have mine in really thin plastic bags in large containers about 2 feet long and a foot wide.

T: You are worried about the fields and the plastic?

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

V: No, it just slows down the process; the CO<sub>2</sub> takes a lot longer to produce.

K: This is what we suggested some time ago. If you put your plates totally outside what you get inside is CO<sub>2</sub>.

T: Great, that is the answer.

K: But you have to measure it; it depends on what you have and what your glass is composed of, what the plastic container is composed of.

T: OK.

K: It will be interesting if you are putting... I've never taught this and you could do it a different way.... If you put your nano-coated copper plates outside and you put the zinc plates on the other side, you are trying to transfer the fields of the zinc. If you are using fields of plates outside with the water inside, then you don't even need the water. The water is a medium for you to get a confirmation of it. Let me have my white screen back. I touched on this on an early teaching and nobody picked up on it. Armen wrote something very nice and said that I have the patience of the universe and not the patience of the elephant. You wait until things happen.

(2.30.05 minutes)

K: If this is your container and you put your nano-coated copper oxide and you put the zinc on the other side, the whole purpose is to produce a field of carbon. When you are outside, why don't you nano-coat your zinc plates too? Now the field of nano-coat goes further than the matter state and you still get the same rate of production and even more. If you are in water, put your zinc and copper. If you do this outside, and I mentioned this in one of the teachings a couple of times and no one picked up on it, nobody understood and I left it because now the matter state has a field to here (2.30.58 minutes) and the zinc state of nano-material is here. Why don't you get nano-coated copper and zinc nano-coated or the GANS and put it in the water and you still create carbon and you will still create CO<sub>2</sub>? But you will have a stronger field because this is the beauty of this technology. You haven't changed the material on your plate; it's the same plate. But by making the GANS of it or the nano-material of it the matter state field is this far out from the plate (2.31.39 minutes). Nano is this much; when you have a GANS it is this much (2.31.44 minutes).

K: This is what I tell you; the knowledge has become a spoon fed knowledge and I feed what I want because I am in charge. But this is wrong because you have to be in charge and you have to extend the knowledge. You have seen this and I talked about this even a couple of weeks ago. Go back on the knowledge and what was taught. Understand the knowledge correctly. Let's expand on this: now we are here and I was talking about this with Caroline who was asking me a question. This is the repetition of the question Caroline asked at the dinner table.

K: You have a plate; up to now you put the plates inside and created CO<sub>2</sub>. Some of you did a little further; this is the problem. If you understand it, go all the way! If you don't understand it, you let others make mistakes. You already made mistakes. You joined the Keshe Foundation, so

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

make the mistakes all the way through. You put your zinc plate inside your container. And you nano-coated so you don't want to lose the nano-coat in it. You have not understood the totality of the knowledge; you are working with field plasma. We call it field plasma technology so go back to what the others did if you don't feel safe. They did the orange, zinc oxide, copper oxide, CH<sub>3</sub>, and amino acid. What you did, you filled it with water and drank it and said *yes, it did taste like oranges. It feels like oranges and I feel good.* Why can't you translate the knowledge across? If you could bring the field and the taste of the orange here by putting the GANS outside, how far are we from the technology and understanding? Now do the same with your zinc outside, the GANS of it; put your nano-coated GANS of the copper. You will still make the fields of carbon and you will make pure CO<sub>2</sub>, a massive amount. You don't need to be inside the container.

K: But you still have one dilemma because you can't see it, so it can't be there. You put it in the water to see it at the bottom. We moved on from this; this is last century teaching. Three weeks in Keshe Foundation is like 1000 years of man's understanding. This is from 1000 years ago; we have moved to field technology. You still have GANS and you understood that. You still have created a field. In this space there is a field of the copper without oxidation. (2.35.55 minutes). You put the water in, and now you have your carbon. If you can convert this field, you will receive a pure diamond.

K: I spoke about how to make crystals and you never listened. This is a repetition. If you put water in there and you want CO<sub>2</sub>, you get CO<sub>2</sub>. Extend the knowledge further. I want to know how many of you will do this. You made the orange juice water; put the orange here and now do the reverse. And try to breathe from the environment on top and see if you feel the taste and energy of the orange. The answer is yes even before you try. Try it to be convinced because you don't trust in the knowledge. We entered from the plasma to the fields. We haven't changed; it is the same. When you took the water and drank it, you already entered the field plasma technology. You need the water to confirm it. If you put the orange on top of it without any water and breathe through it, and 'walk into outer space' you will be swimming in the field of the orange. You can be orange in color if you want to stay a long time.

K: You haven't understood one part that I have explained many times; vertical people are the same as horizontal people. Then they are all made of amino acid; that is the smell, the taste, the body of the orange is an amino acid which you created a balance for and it's trying to create a field balance. That is how you brought it here. This is what I was teaching yesterday to the doctors. Maybe we can teach you and you will understand a little bit of it and I'm sure that you understand a lot of it. You have the orange, you have the fields and you had to have the water to confirm that you are right. The man has to see to believe it. That is why we never believe anybody who says *I love you*. There is no bucket to show the size of the love.

K: You have a system; you have a burned hand. You put amino acid, the zinc, the CH<sub>3</sub>, copper oxide and a couple more things and if you understand it, you put the perfect unburned hand and transfer the energy to here. (2.39.21 minutes). Then you put the burned hand up and the energy from the unburned hand will heal you in no time. You have brought the replication of the totality of the structure into the plasma. Field plasma technology is far beyond the understanding of the man. You have a pain, a burn, because it is there, and I have explained in the teaching to use three different layers. I taught this again and again but you have to see the water to be able to do

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

it. Man has been made afraid of his own shadow in accepting new knowledge because they can't control man (when he accepts new knowledge). This is done by the church and the religion. In space there is no religion, church or mosques.

K: Try this. This is what is called field technology. I brought you through to where you are happy that you have the GANS. Now, become magicians and what do we call them? The people who played with chemicals were called alchemists. Now you become plasmacists. Play with the field of plasma. This is what the universe is made of. The fields of the universe become you and me and the dog and the rest. Otherwise it wasn't here—you have to create the condition of it. You have to understand the totality and that is why you aren't sure. Someone shows a slightly different color and you want to know if you are 'right'. Of course you are. The lack of confidence is what they have done to you with peer review by taking your confidence. One of the things that will be done in the new generation is to take PESwiki out of circulation because this is peer review system built by the same people. Another means of controlling—they give you enough of what they control of what you can have. I would not donate a single cent to this organization because it is another structure of mind control.

K: You go to the internet and read everyone's work and then you take from them according to you what is correct and not for people to take it. It's very strange; you put my name on the internet on PESwiki and I'm a criminal. You put my name on Wikipedia and I don't exist. There is no such a creature on this planet called Keshe. I was there a few months ago. Until we open the hand of PESwiki, we will see the brother and the sister (PESwiki and Wikipedia). And then the Blue Circle came into operation. These are means of controlling; go on the internet and read everything and you will acquire your own level of understanding. You are sitting on the computer; put my name Mehran Tavakoli Keshe on Wikipedia and I do not exist. Six or seven times people have tried to add my information to Wikipedia and they wipe it out.

K: Go on Facebook and put my name and you find an international public figure. Which one do we believe in? When we showed PESwiki had done this and that and now PESwiki is spending 25 years as a controller of other things in prison. So, we are correct. Extend the knowledge and don't be afraid of learning more and trying further. Because when you are the last man standing in space there are no references; there is no peer review. Understand that the technology is so beautiful and it's the essence of the creation in every shape and form. Listen to the tape we play at the beginning of each teaching: *It is beyond the understanding of the man*. Now you see the knowledge is there and has been there from the beginning. You don't get CO<sub>2</sub>; you don't get the field of it, make a house, and make a room. And walk into it. What did we teach you about space travel in the past few weeks? It is no different. As I said the teaching is complete and it is you who have to start manipulating.

K: The problem is a lack of confidence; they have taken that away from you and that is how they manage to control you. Have confidence and there is nothing wrong. Instead of making CO<sub>2</sub> you make zinc and CO<sub>2</sub>. This is what it is and what does it give me? How can I use it? What is the best way for me to use it? That is all it is. Have confidence in what you do. They have taken the confidence from you. They say, *has it been peer reviewed?* You tell them *are you thieves or are you one of those who want to control me?* You have gone that far, so teach it. Let them feel it is

## Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

out of magic, out of air and they breathe the air with ‘nothing in it’ and they woke up without the cancer.

K: This morning we were supposed to have a presentation by a man who spent the last few months to create a GANS of water to help his wife out of lung cancer. Now he tells us there are some signs of it on the lung and they don’t think there is any more cancer according to the scan. But the wife has not appreciated the knowledge that has been given and the life of the husband to support it. She says she doesn’t want to be shown or for it to be known. Madam, the knowledge saved your life. It means you have not trusted your husband. The knowledge he brought and his effort to go to the sea to make the GANS of the sea water, you share the life with other mothers who have children. You should be proud to be shown that another mother with children and with lung cancer can be there to serve the mothers of children to come not to be in the grave. Shame on humanity.

K: Use it and then abuse it. This is the problem and this is where we go wrong. As we say in English, “*I am okay Jack, so screw the others*”. You use the technology to save your life; a man gave his time, you should be proud to at least save one child from having its mother die of lung cancer. This is what I discussed with the Chinese yesterday. They are developing so much, but we saw what happened with the mayhem that Red Circle created in China and now we are cleaning it up. The Chinese community will shine as a star the same as the Africans. We have the videos and pictures of the process of the woman who has been saved by the plasma technology from lung cancer and we can’t show it. Because she is upset that her name or picture is used. Shame on humanity. When a child dies in the next few months where it could have been saved. The others gave courage to be there to help the other children to keep their mothers and the mothers to keep their children from lung cancer. It’s a shame to be called human.

K: Any other questions? Do we have any pictures of the lung cancer lady?

R: We don’t have any pictures of the lung cancer that I know of but there are pictures of the Magrav device and questions about the device that he had. Let them release it. It was supposed to be a power point presentation. If you don’t believe in saving this, why do you want to talk about the energy when you have wasted the energy?

Peter (P): What is your opinion about using a frequency to excite the nano-coated metals; would it increase the field strength efficiency to produce more GANS?

K: I don’t know; you test it and tell us. I never use it. Frequencies are the matter state of the GANS and not the GANS. You understand? The matter state is the lowest strength, the smallest state. This question has risen a number of times in the last few days by different scientists who have talked. Try it and you will see what difference it makes. You will excite the liquid water within the GANS, but you won’t excite GANS because it is too powerful for the matter state. Then you say it excited the GANS. But you changed the resonant frequency of the water. It is the same as with Emoto in Japan. You don’t change the GANS, you change the matter state of the water of the GANS. That is a big difference. Do you understand?

P: Yes, I do.

**Transcript from 118<sup>th</sup> Knowledge Seekers Workshop held June 16, 2016**

(v2 2016-11-02) DRAFT (Transcription has not been verified. Double check info with video)

K: Let's call it a day. These are supposed to be 3-hour sessions and not marathons. Next week I might not be here in the center. I will be back the following week. Thank you and please remember what we said about the refrigeration unit with your Magrav system. If you have applied to become a Mozhan, please finish the application and the payment. If you are coming to Rome to be part of the Keshe Foundation (as) new members of the universal council, please sign up as soon as you can. I will close everything before I leave for China. There is no joining the \_\_\_\_\_ when the \_\_\_\_\_ has already started. Thank you for today and I hope we clarified our thoughts with the government. It was requested by our friends to clarify some points and we hope it was understood by the world leaders and they have their eyes on how the Keshe Foundation works on the scientific basis and not the imaginary basis. Thank you for everything.

R: This closes the 118<sup>th</sup> knowledge workshop for June 16, 2016.
