Video link: <https://www.youtube.com/watch?v=CazzOb2b9ek>

Keshe (K): Good evening, good morning. Last week I explained that this is going to be very interactive from now on and the minute we see a breakthrough in the spaceship technology by anyone in the program that we see is significant, we would bring (up) the technology and development. We organize and call in for these workshops. These workshops are short, up to 1.5 hours. As you develop, we see the need to be shared and we will bring them to you as they are developed. There are two major developments today that need to be shared. You understand where the change has come. Most of these go back to the last couple of weeks where some people have started testing and trying.

K: If you remember last week or the week before, we made some teaching and I reviewed it and we connected to the work of the spaceship technology. Before we go there, I have a major disclosure that has to do with the Magrav generators. As you are aware we have opened the development of the Magrav generators and today we show it to you today in the raw state. We are making these in 4 different parts of the world so that no government can block the production of them. This is the way we chose and today we chose to show it to you so there is no misunderstanding. You can see the benchmark system and how it is produced. You can use 2 to 5 units together and we can go up to 20 to 30 Kilowatt use. We released the Magrav units last July as the power reduction units. Some of you used them and some didn't see huge differences. The development is now that you disconnect your supply from the grid. You literally take your fuse box off and disconnect from the government or the grid. What you do is you plug your system into the main of the house so it becomes your supply. You don't need to feed it or add any energy to it.

## Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: You can use the rest of the house with the domestic use as you do. These units are fixed to about 3 to 4 kilowatts and they will be supplied after September production start. You remember you made or bought a Magrav unit. You plugged it in and it gave you the reduction. The new system has the 2<sup>nd</sup> Magrav unit that is added to it and it becomes the supplier and they trigger each other together. Plug your power supply into the entry of your Magrav and the one with the 2 cables; you connect to the wall of the house or the main supply fuse box. You have the 2 systems together that make the new generators. These are the first 2 units and this system is now getting commercialized.

K: Those of you who built your Magrav units at home; you can buy the additional unit to become generators. In the coming time we will release the blue print of the generator also. We are in the process of maximizing the power and minimizing the older, matter use of materials in any of the 2 section. In the next 2 months you will receive 2 units. You can buy the 2<sup>nd</sup> unit when we start manufacturing them in September. If you are manufacturers and you are waiting for Magrav units to be tested; now it is a straight forward process.

K: Now the manufacturing is waiting for other companies and production of the materials for the units. You go directly into production of systems that you deliver at the power supply; these are 3 to 5 kilowatt systems and we will add the price for what has to be done internally and we can push the supply to 5 to 10 kilowatts. There are about 25 people mainly from Belgium who ordered the original generators 4 or 5 years ago and never claimed their deposit. They paid the 500 euro deposit for the 5000 euro unit for a generator. You will get the same power supply for 1800 euro. We found those who didn't want the refunds because in Belgium they claimed that those who receive money from Keshe Foundation (KF) were getting money from a 'terrorist organization.' This was done

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

by Red Circle. Now we deposit your unit with a notary in a 3<sup>rd</sup> country which means those 25 people can go, order the unit from that notary and we have completed our contract with you. Thank you for being patient and your power generators will be delivered in the next few weeks.

K: Those of you are applied to be manufacturers, the manufacturing team has changed and the whole management team for manufacturing at this time is in Arizona. Arman will arrive in the next few days and they will reorganize the whole structure of the KF. There are 5 or 6 of them and I spoke with them. If you want to manufacture the generators you can still apply. If you applied before now the new management will take over and sort through everything very rapidly. If you are developing the units or the teaching units, the Magrav units for people who come as knowledge seekers,

In the coming weeks become generators. We release the blue print of the units to the factories first and then to the public.

K: At the same time we are releasing the whole technology and in the process we have made humanity independent of gas, nuclear and the other energy. You can produce these in your country. One of our priorities with the energy units is Ghana and we are manufacturing these because of the energy crisis in that country. This will allow us to develop rapidly. We have a video and you can see the Magrav generator in operation. This started with a small load. Now the system is running about 2.5 kilowatts.

K: This is the first time we show this and it was produced several hours ago. We will show the blueprint in a couple of weeks so you can see. We need to add to a production facility. Video starts at 16.14 minutes on LiveStream. *This is connect to the load: there is grilled cheese toaster with 800 watts, a 1500 watt fan with*

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

*heater, 3 18 watt florescent lights with 54 watts, a dorm refrigerator 500 watts on the start 70 watts on the run cycle. There is also another standard refrigerator compressor at 700 watts on the start and 85 watts on the run cycle. The total start wattage is S/ 3554 and the total run wattage is R/2509. I just added a 30 watt glue gun on here because I had something that had to be secured. We have 104 volts shooting out. I will get the thermal indicator. I have a heater going and the capacitors are reading 89-91 degrees; the Magrav center coil is 91 degrees; the top coil is 110; bottom coil is 89 and the wires and alligator clips are 82 degrees. The main load wire going back out is 91-92 degrees. The toaster is working at 339 degrees and the heater is working and it is 250 degrees coming off the coils. There are no wires melting and everything is normal. We have 87 degrees with the light bulbs. The voltage consumption is down to 98 volts with this particular load on this little system. There are no hidden wires; this is self-sufficient and it is not plugged in.*

K: Thank you; this is how it will look if you build a generator at home. This is from a development lab in the US. We have achieved total energy supply and indefinite as long as you for 3 KW. You can purchase a generator or develop one yourself. There were accusations targeted against the Magrav units. Now you can buy them and plug them in at home. Those who tried to destroy the work of the foundation now have their hands opened. We are delivering these now and this morning I received a confirmation from a major corporation in the world for 1,000,000 per month. That is 2 billion orders per month which will spread across Keshe Manufacturing around the world because we cannot meet that order for this major retail group. If you have applied to become a manufacturer we pass the order to you and you will immediately have a solid base of orders to start manufacturing.

K: This is from one of the major corporations and we have negotiated with them for some time; they said when the generators were ready they were prepared to

## Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

come and they have another order for another 1,000,000 which is pending confirmation from another major corporation with world wide recognition. We receive these from headquarters and we will share these orders across the planet. One factory in Italy cannot meet all these orders so we share the orders with manufacturers across the planet.

K: Arizona is going through the same process. There are others set up by KF and we get these orders immediately. This completes our work with the generators. We have delivered and power generation is complete and the world of energy, man and the supply of fuel are finished. We can release the blue print immediately but as I said, we are refining a few points to make the system more efficient and use less material. In the background our next job is to create wireless generators for the next step. This means that your two units do not need to be plugged anywhere. They can be put in the house and used anywhere you like in the house. This is the next part of the development and we are partially there.

K: This brings us to the structure of the working of the spaceship and now that we have developed this independent power supply we can play the space program very rapidly. What this means is that we can produce plasmatic condition and plasmatic energy and in that process we use it for space lift and motion. You should have realized something very interesting on this demonstration. With these Magrav units all the 120, 110, 220, 240 are out the window. You produce the same structure in the US. We copy the same thing and in Europe when we build them and send them to the US they all work—AC, DC, 110, 220 and this shows it is plasmatic condition and you don't need transformers and you don't need to change. And this process is very important when we go into the spaceship development.

## Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: The reason that we called this special meeting was that the power generator was a bonus. The reality is that if you go back to my teaching a few weeks ago I brought on the table this container and I tried to explain how you can process in a way that start of testing the Magrav systems for spaceship for lift and motion. (27.04 minutes). The way we worked, as we did when we showed the pens, you built them, saw the energy of them and now we teach you how to start building your own space ship. The true space technology we started teaching everything. You started understanding and developing the technologies and you saw the fields and that the fields exist. You don't need any vacuum or complicated systems. Now that you have the Magrav generators with the magnetic gravitational field energy, you can go in the process of the space ship program.

K: If you remember in the teaching a couple of weeks ago I explained how to make an arch; you build the scaffolding, you reduce the arch, you take the scaffolding away and then you have the structure. Remember that I explained to you about the bucket and how you created the magnetic fields with the balls in the star formation and then you put the liquid GANS in. You let your system run and then empty the container and you have the star formation without any system. 28.54

K: I brought out a bucket and I showed you how put the GANS material in, and then put a ball inside. You put your system in like the Magrav system with the balls and then you do the flight system. I explained that if you go further you can put a Magrav system inside the bucket you can achieve the same condition. The process started and those people who listened and understood started testing. They showed if you put GANS materials without doing anything, at the bottom of the bucket and you can create the flow of the field. It was important to show this; if you understood this now you can create dynamism and motion without motors or batteries.

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: I was teaching this over the weekend to the innovation center and a few hours before our meeting, Dr. Ghatta from Kenya sent a message that he wanted to send me an interesting video. This is the first step in the space ship program creating motion without any motors and the creation of motion using plasmatic GANS materials without doing anything. As I have said, Africa will shine in the spaceship technology. And now we see Kenya shining. If you understand this video, it changes everything man has worked to achieve in the past thousands of years. I explained in a teaching and within less than a week, Dr. Ghatta repeated what he said and here is his video. If you are a man of science this is one of the most important videos that we have ever shown. 31.44 minutes.

K: There are two video: creating motion without any material. On the top is a ball with a string filled with GANS. You will see that the liquid at the bottom of the picture in the container when you introduce the ball of GANS on top creates the motion. This is how motion in space is created. At the moment to create motion we drive pumps, generators, all sorts of things. Now for the first time we see this. You see the liquid is under full motion and you can control the motion with the ball that is a double coil. The minute you introduce this, the liquid starts rotating. This can go for thousands of RPMs. This is one of the most important videos that will stay in the archives of the KF. It is the first step in understanding not only that liquid is moving at the bottom of the bottle, but all the fields in the bottle. This is how the universe works. You can create field motion just by a mixture of GANS.

K: Dr. Ghatta will explain how he did this with very few materials and very few dollars. You see the materials moving at the bottom. There is a 2<sup>nd</sup> video of this that is longer. Then we ask Dr. Ghatta to join us and explain. You can all do this. If you feel these balls in the right sequence you can start building space ship reactors without materials and motors. You dictate the motion. We will show you

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

today how we are working. The reason for the teaching today is to enlighten you so that you can join us; humanity has to go to space, not just a few of you. See the rotation is at the bottom and the ball is at the top of the ball. Dr. Ghatta will explain that the mixture of the materials is all the GANS you have made up until now. There is no secret. If you do this properly you can see how you can use this.

K: If you understand the motion of this and use it in health units, you can target and reduce cancer cells within minutes. This is the beauty of this. If you understand this process, you can create balls in the center and on the top that you can control with your mind. We have one of our innovation center guys testing how you control with your emotions and your thoughts. And there is no need for 'system control.' All these panels you see in aircraft systems are now 'out the window.' This is the beauty of it. We have our Chinese colleagues in the background who said you can come to China. I said that when I come I will not need a visa. When you are one nation you don't need a visa to go from one place to another. With this technology within the next few weeks we will come to that point.

K: I urge you to start developing this if you understand this and I explain more today how to develop this technology of the space ship program and sharing the knowledge. We all achieve the same thing at the same time and we change the course of humanity. This video is so important and you have seen with the small ping pong ball you have created a mass that moves in the air. So, what this means is that we don't need turbines, wheels, to burn fuel to create rotation. If you understand and make this liquid to rotate with two different speed layers, with all the layers you create lift and motion. If you can do the same thing with the balls you do the same. In fact, this video is one of the most important breakthroughs we have shown that we thought possible 3 weeks ago with what was explained physically.

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: Those who listened to my teachings very rapidly will arrive to this point and we can go to the next step. The whole purpose for my calling this teaching that changes the course of humanity is this little ball. You will understand very soon what it means. We added to this today and because of the session. If you manage to achieve lifting we will see movement of items and displacement of the liquid, record this and send it to the webmaster and we will play it on Thursday. If there is any major breakthrough from now on, we come on a daily basis for an hour or two so we can collectively start moving in one direction and hopefully in the matter of a short time one of you will break through and create lift with a few dollars.

K: We had to come this long way and now we are there to enjoy the beauty of the space technology. You can create the same kind of fields in the bottle that it reaches the water to rotate on top of a city to extract materials, on top of a farm to feed the vegetation what you like and in places of war a very simple system on a bottle attached to a balloon will push the soldiers not to remember even why they are carrying guns. We have changed the history of man as I said two weeks ago when you start the space ship technology and this is the beginning of it.

K: The generator has no meaning by placing the ball and you will teach and your lights will turn on the point of wish and demand. We are entering in the true world of the space technology. Is Dr. Ghatta here?

Dr. Ghatta: (Dr.G): Yes

K: Would you explain what you have done and how you achieved this.

Dr.G: It is very easy; I just pulled up your teaching from 2 weeks ago on how to create motion and 'remove the scaffolding.' It was the 121<sup>st</sup> workshop. I just tried it and put a ping pong ball inside another ball with nano-coated copper holding it

Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

because I expected the motion to be in the ping pong ball and I wanted to be able to hold it when it was rotating. So that is the top. In the bottom part I put a mixture of all my GANS; I put the GANS and the liquid plasma of the GANS. The moment I put the ball on the top I felt motion in my hands because I was holding the bottle.

Dr.G: Then I looked at the liquid and it was rotating very quickly. That is simply all that I did.

K: Thank you. Could you explain what your next step is now and we have asked you to work in a certain direction? Would you show us this in the camera?

Dr.G: Yes, I will show. 41.45 minutes. Inside this bucket are all my GANS. Then I have 4 coils within coil. There are ping pong balls inside the bigger balls. I have not achieved a very high speed. But it is building up.

K: I have a small tip for you. if, the way you saw the liquid rotating with the coil on top now increase the liquid on the bottom and put your coils in the liquid and put your ball on top. Use the same ball. In that rotation the fields will start rotating the balls too. You will start seeing the rotation with the 3 base cores with the top and the system will start moving or the water will start moving. Tell us which GANS are in the balls. I see you are getting black hair and are you using the CO<sub>2</sub>?

Dr.G: My hair was all white and it's turning darker. I'm getting younger by the day. It is amazing and I have just use the CO<sub>2</sub> plasma water.

K: You are becoming younger; I hope the maturity stays. What did you use in the coils?

Dr. G: The inside ping pong balls have the liquid plasma of all my GANS and amino acids. I scratched the skin on my head and added some of that. When I start flying I will control this with my brain. So that is what is inside the inner cores.

Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: Let me interrupt. The reason Dr. Ghatta scratched his head and put some of the oil in the GANS is that if you start running these kinds of systems, you need to be able to control these systems. There are 2 elements in these coils you produce. In all the coils because you are of the human race, you have to add the amino acid into it. So, in all the coils where you put the liquid plasma, you put in the amino acid in the mixture. In the center of the core if you add your own amino acid which comes from part of your skin or from your blood, if you make a GANS of it, then the reactor is controlled by you and you have a connection to the center. You put your own amino acid in the outer core because you do most of the control in the center for the time being and you dictate the speed of the rotation and the amount of the flow. Then this way you will understand that you start controlling the distance of the ship, the gap, the rotation and in the coming days I will teach you a lot. You will learn a lot from this teaching today. Carry on, Dr. G. and as knowledge is needed I will add to it.

Dr. G: The outer cores because they are the bigger balls, have CO<sub>2</sub> GANS (in these outer cores). The 4<sup>th</sup> ball has CH<sub>3</sub> GANS. Then the bucket is filled with a mixture of all my GANS and the liquid plasma is on top. That is the liquid plasma of all the GANS. Then, when I put in the balls they start arranging themselves in the star formation. I am waiting. Sometimes I see the water shaking and moving a little bit and it is building forces and I expect it to speed up.

K: Let me add to this knowledge. In this process when you put the ping pong ball sets next to each other, remember when we put the ring magnets next to one another and how they adjusted and fixed their position. We don't expect motion, but we expect positioning. In this bucket where you have put the cores we don't expect to see rotation; we expect to see positioning. We don't expect to see huge movement. They have positioned themselves and locked their position. Sometimes when one liquid loses a bit of its field to the environment or it receives from the other, then it moves slightly. We don't expect huge movement in these buckets; we are just looking for fixed positioning.

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: In the future the scientists of future chemistry or what we call plasma physics will replicate the condition of neutrons and the condition of different elements like mixing hydrogen with oxygen and see it physically within these containers because now we can replicate every physical magnetic gravitational field and we can see exactly how CO<sub>2</sub> acts and how copper in copper oxide and oxygen position themselves. We take a lot of mystery out of the present physics. What Dr. Ghatta has shown us is very important because for the first time we take guesses and assumptions out of the equation.

K: If you create gravitational magnetic positioning of one proton and you create the gravitational magnetic positioning of one electron in another one, you see how electrons position themselves and how it comes to be if you add two electrons and two protons. And then we see the whole present world of physics and chemistry thrown into the wall because everything in the present physics is considered as 'dots.' As we see with what Dr. Ghatta just showed us, it has a position. Then when we go in to the medical section when we say we absorb oxygen in our lungs, you see when you put something like 8 neutrons and 8 protons and the electrons you have a volume like this where you have hydrogen of one size.

K: As I was explaining to some doctors, how do you tell me such a huge mass goes through the lungs but the small one like neutrons and protons cannot go through? Now this destroys all the assumptions we made in the world of medicine into virtually starting on a ground floor that we can actually build on. This picture Dr. Ghatta just showed us is hugely important – even the bucket. The simplicity of this technology is that you see it and you understand it. It is like the 4 elements of the amino acids. You have 4 balls. One carries CH<sub>3</sub> and the others are

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

CO<sub>2</sub> and then the others. In a few minutes we will show you a different structure in another way from the Philippines Innovation Center.

Dr.G: Thank you for sharing the knowledge globally. It is very important and it the very first time I have genuine giving. Thank you for sharing the knowledge.

K: Thank you for your teaching and the beauty of sharing the knowledge with the rest of us.

Dr.G: You are welcome.

K: I wait to see what more you develop. Now if you create a very small amount of water as Dr.G has done to get confidence, just drop empty ping pong ball on the water and see them rotate and you see how the balls will be positioning. Add a little bit of GANS, slowly to each ball and then you see the interaction. What actually happens while you have the rotation is very simple. I always said to understand what is going on. 51.11 minutes. In this bottle you have the mixture of the GANS in the ball of the center. You have the ball with the GANS inside and you have created another ball with another GANS ball here filled with a different GANS. Here at the bottom you have a mixture of GANS which are sitting in the ball. Don't forget you have a barrier separation adding and subtracting what is inside and what is in here. The GANS of hydrogen in the ball at the top is trying to interact with the GANS of the hydrogen at the bottom. 52.41 minutes. In doing so and being in the presence of the GANS of CO<sub>2</sub> in the ball and CO<sub>2</sub> in the bottom you have the interaction and the rotation. In this region what you have is a field of plasmas trying to catch up. 53.15 minutes. Look for example in the medical systems.

K: Now you have a dynamic system here (the ball at the top) and you put the patient in the fields and you have the dynamic GANS balls at the bottom (53.31 minutes) and then you have the standard fixed with what it should be in the ball

## Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

at the top. In the transformation of the energy, one to another, they take the energy from the cancer cells with them and then you find out there is no cancer. In this system you replace the coils that you made with bubbles filled with GANS material. It's very dynamic. If you have a lung cancer you change the ball to tissue of the lung strength. You have liver cancer you change it. We have seen the doctors doing this and we have seen how doctors in South America and people in South Africa using stations with the different GANS and they use this method and they see the results.

K: Now instead of having fixed coils change the coils to ping pong balls, and filling them to match with the amino acid with your patient. And the weaker transfer of fields of the plasma will give you the energy from the cancer in minutes. Literally patients are walking in with tumors and walking out with no tumors. This is where you need to understand the basics of this. Further on you understand that by putting the ball on the top and if you can rotate this at the speed you like, you will see mayhem in this water. Is Douglas in the background? Would you explain what happened when you tested this yesterday?

Douglas (D): Yes, I was using a combination similar to what Dr.G just described and I was using a Dremel tool to speed the inner core that was fixed to a nano-coated rod where it would spin inside the outer core with a composite GANS. I used blood instead of skin because I had hurt my finger, so I put my DNA in there. When I got close to the plasma water in the container with the Dremel tool at a lower speed, I noticed the water move just a little bit and I didn't think much of it. But when I flipped it up to where it was at full speed, 15,000 RPM a vortex was created and immediately it went straight to the bottom of the container and in doing so, the 3 balls I had in there slammed against the container and the plasma liquid exploded out of the container everywhere.

## Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

D: The second time I did this and you would have thought I'd have learned the first time, I thought I would have more control if I held the outer core with my left hand. And I had it to where it was fixed above the water about 2 inches instead of in the water this time. And, the outer core this time pushed up out of the water and as it did the outer core exploded and covered 3 different walls 15 feet away. So, it's definitely a reaction and lot of force and a lot of power of lift and pulls if you have the right speed and the right position as Mr. Keshe explained. I have moved it different heights above the water and I have seen a couple of different reactions. Now I am rebuilding my cores as we are speaking.

K: Do you want to go on camera and show us the one you managed to float inside the ball?

D: Yes.

K: Explain what happened.

D: (58.48 minutes) What happened is that I have this little core and some of you have seen this before. It is a composite GANS on a little motor that runs off of a 3-volt rechargeable battery. It can get really high RPMs when it is charged—about 10,000 RPMs and I had realized that the balls didn't float and went to the bottom and I thought that was strange. I thought they should float and didn't because maybe they were too heavy. I was just playing around with the little more on the high level. It has 2 settings and the 2<sup>nd</sup> setting gets close to 10,000 RPMs in this particular composite. I was getting it near the ball and I felt for the first time what I have heard many talk about. I felt the fields; I sense the fields but I had never felt the fields. I had not felt a field like a magnetic attraction and something that was a significant draw. This is the first time I felt something and I thought *wow there is some kind of interaction going on here and it's actually repelling*. A few seconds later the inner core built up all kinds of bubbles around it. Right now you can see the inner core is solid and clear because it has been settled for a long time. The mixture in the inner core started to mix and when it did the ball floated immediately to the top and I wondered what was going on. I raised my motor

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

with the 3 volt rechargeable battery above this and when I did the ball started spinning.

D: I got excited and called my wife in here to see it and I was trying to hold it and I dropped it and it broke. I'm sorry because I'd like to be able to show you. I do have a video of 3 balls that are of different GANS in the plasma water where I hold the 3 volt rechargeable battery over the plasma water in the container and you can see that the water starts to rotate. The balls also start to rotate and they will actually get in alignment and form a star out of their own abilities.

K: Do you have a video that I can see?

D: Yes.

K: I want to explain that Douglas is doing a lot of testing in the background. I try to enlighten and then they do the development in the background and it's fantastic to see how different people around the foundation are working to get this lift and the confirmation of the flow of the fields. These small explanations in understanding show how plasma in the transition state from the source that is in the ball has such power to move the matter state like liquids. Then you understand the game of the energy and everything that we assumed has changed. This is how stars are created in the universe.

K: Douglas just explained about the bubbles. When you fill up these balls you see bubbles getting created. These bubbles are plasmatic bubbles and because you don't see the motion of the GANS in the balls, they are always in motion. They create their own vortex and their own field zones. When you rotate the plasma at a high speed you have seen in the ball you get a cavity in the middle. These are created in the GANS level and not in the physical dimension that you forced them to be created as we have seen before. When you are working and see these bubbles, understand that these bubbles are free magnetic gravitational fields and

## Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

are plasmatic. If you can gather them together by high speed rotation, then the system changes. Let me explain what you are looking for. 1.03.51 minutes

K: What the target is: when you created the rotation in this material because you have two balls here (at the bottom) and they create their own empty space field plasma, somewhere in the water above the balls you will start seeing bubbles. They may be invisible and then you see a 'hollow point.' It was the same as when you created the rotation in the balls. This hollow ball now locks the 4 reactors together and you start to get the star formation. 1.04.36 minutes. At this point you drain the water and you have a lock that you cannot do anything with. It is just the matter of moving this system up and down and sliding it sideways until you see this vortex ( 1.04.53 minutes) in the middle. And then your system is created and your lock is the star formation controlled by the field plasma. Then this field plasma will interact with the gravitational field of the earth and create lift and motion. In this process there is a slight note you have to take; it is very, very important. You hear Dr. Ghatta and Douglas and others a very simple thing they keep explaining to you: *I put a drop of my blood; I put my own amino acid in the center of each one.*

K: If you remember in the teaching of the position of the soul of the man which has no dimension and is in the center of the core of the brain which we told you about last week and the past few weeks, when you achieve this point because this field is created by you because your amino acid had a say in this condition then in fact what you have is full control through your emotion. No need for system control. You think your position yourself. You think and you achieve lift. The innovation center in the Philippines is testing system control through emotion and the soul. Bernie can you join us? Or is Renan there? Could you explain to us what you are doing in the Philippines?

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

Renan (R): We are testing at this time. Bernie is building a system right now with two magnetical and gravitational systems and putting them in a certain position to affect the combustion engine. He has discovered that the two systems, one a greater magnetical and one a greater gravitational, when positioned a certain distance of the combustion engine, it reacts to the enhancement of the engine. But in other location it does not react to the engine. So there is a certain position when combining two reactors. The reactor 1 is highly gravitational and reactor 2 is highly magnetical. Putting them in certain positions away from the vehicle gives certain effects to the combustion engine. Bernie and Clint have tested them in the way that you can dictate to make the fields go nearer or further away. The testing is when you can influence the field instead of having a 13.6 meter impact you can go nearer and still have the impact.

K: Bernie has joined us. Would you like to explain to us how using these plasma liquid like these bottles in the different way because let me explain what is happening. I worked with Bernie to develop they system control through the emotion and the soul because Bernie has this capability to interact. It is in that strength that with Bernie we are trying to develop the system control through the emotion and the GANS and he will explain that to you. Renan and Douglas are working on the structure and we will hear from Arman and we are working on aspects of the control in the way of the totality of the structure in space and not in the system. Then in the coming weeks we will bring the (1.10.37) three together and we will see how the development goes and how we all learn collectively to become 'man of space.' When he speaks it is through system control point of view through emotion and through the liquid plasma.

Bernie: In our configuration we put this bottle that had GANS in the middle and the surrounding 3 bottles are CH<sub>3</sub>, CuO and CO<sub>2</sub>.

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: Let me draw it and you explain it. These are not spherical cores; these are bottles and we have taken rotation out of the equation. This is simply control. The way Bernie is working has nothing to do with motion. With the others we use the sphere. We create positioning. With Bernie's situation these are round bottles very much like this that he is using. By choosing the cylindrical bottle (1.12.27 minutes) we don't allow rotation; we handle only fields and control of the fields which is very important. You have to train certain parts of the technology. When Bernie explains to you it is the field control and we are not talking about the motion of the plasma at all. He has in this core a heavy GANS which is the lead GANS. He has CO<sub>2</sub> in another and CuO and the CH<sub>3</sub>.

CuO<sub>2</sub> (bottle) copper oxide

Lead (bottle)

CO<sub>2</sub> (bottle)

CH<sub>3</sub> (bottle)

Bernie: We have double coils around the lead GANS. In this configuration we have with our understanding, the interaction among the CO<sub>2</sub>, the CH<sub>3</sub> and the CuO, there is a flow among them in the counterclockwise manner that they go from to the next and to the next back (1.15.00 minutes). There is no physical motion that can be seen by our eyes, but we manage to control the flow by the placement of these. The center one serves as the gravitational while the other 3 serves as the magnetical so this is a Magrav configuration. We didn't spin anything and there is no physical motion, but we visualize the flow of the fields this way. Because of this we have the Magrav and once they are in place motion is there already. One way to make the flow also is to connect a nano-coated copper wire to each bottle and you enforce the flow from the liquid plasma. The connection should be wires

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

outside the lead GANS in a circular configuration. These connect in a way that it makes the same flow as the relationship as the liquid plasma. The flow is homogeneous in that way.

K: Let me add to what Bernie is saying. When you look at this (1.16.58 minutes) your 3 bottles your center bottle sits above this...you have to raise it up. The field flow enters and adds and this is the principal that we work on. When you add more flow and fields you get more feedback and it's in a star formation in the cylindrical bottles and we see the effect of the fields. Can you tell us how far you feel this field force? How far can you feel it and measure it?

Bernie: We get 3 meters of fields with these 3 bottles in that configuration. You can only get 3 meters. This is magnetical.

K: You made other combinations and what is the present field on the radius?

Bernie: It went up to 34 meters.

K: You could go and feel it?

Bernie: That is the maximum because we hit the wall of the shop. I believe we can go farther.

K: You did a test yesterday or today and you achieved a field of 13 or 14 meters.

Bernie: In that we reversed the flow and instead of magnetical this time the flow is gravitational and is clockwise. The effect is the gravitational field and we reached 13.6 meters in radius.

K: Let me explain something you will add to it. In this process you listen to Bernie who explains about magnetical and gravitational. In this process how do you measure and how would people have to understand how you consider it to be magnetical or to be gravitational. This has to do with the flow of the fields, but explain this to the people why you consider it this way. You set this up and pre-determine it and then you understand what is going on.

## Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

Bernie: Before this configuration with the 3 bottles and the lead GANS 'outside' we have been using the liquid plasma connected in the coil and connected on the battery. We know the effect on the improvement of engine performance. After that we tried to imagine the star formation configuration that we can build the plasma itself with that formation. Before this setup we are already understood that we can tap the energy from the liquid plasma. But because of that effect we know the engine will respond according to the GANS that we put. So when we configure it in the way that we increase the number of bottles, one moment when we disconnected and shorted the two connections instead of dropping in the battery, we noted a change in the engine performance. Then we understood that this would be a wireless setup and we will change and use any configuration to check distance. From then on first we followed the magnetical flow, and then we made sure what distance the effect will be gone. We know it is magnetical because we know the flow can be that of the magnetical flow so we got only 1.5. Then we got the better containers and we got the 3 meters.

Bernie: How about reversing the flow? What will happen? The effect is opposite in general performance because this is magnetical will pull down the engine from the opposite that it almost stopped running. The stronger the field the more problem the engine has running. As of the last testing it had difficulty in accelerating because of doing the opposite of the magnetical which is the gravitational. So we have several more applications and we make sure of the radius by moving toward the vehicle and away from it when the response of the engine stops or changes. That is where we mark the point to make sure of the distance. If we go closer then you have a magnetical field and when you reach the point where it connects to the engine, the performance went up drastically. If you move out of that distance it goes back to its original. Or, the gravitational when you reach that point that it connects to the engine, the engine will not perform very well. We move away and then it performs just fine, just as it was performing

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

before. So this is how we measure it—we move away from the engine and keep on. You have to rev the engine to increase the vacuum and one person will do that consistently and will signal and you listen to the engine sound and you move away. When the sound stops with the best performance because of the magnetical it will go back to its original response. For example, when you are near the engine and you have this magnetical device the sound will be very good and when you move beyond its range it will drop. You know—there is a huge difference when it changes and you mark that distance which is the range of the field. That is how we measure it.

K: somewhere between the two you have the feeling of a barrier as we discussed earlier. Can you explain that?

Bernie: Yes, it is just like, in my experience there is a warm feeling in my hand when I felt this magnetical and gravitational and it is that feeling on my left hand when I test it. It is similar to the first time when I tested these 3 bottles. I put my hand on top and it is like the health pen, when you put it on your palm and you know this is a strong device and we have to face it in a wider space. You will it is weaker or stronger just by feeling the field.

K: Let me add something that I explained to the innovation team so you can understand the next step and that is when as Bernie told us you are creating the magnetic and the gravitational. When you feel and measure the magnetical there is still some gravitational existing. It is not that there is no gravitational. Now comes your biggest problem. Your system creates the magnetical gravitational field that at the point of the balance of the two magnetical/gravitational fields of the system, you will feel a field force. 1.27.22 minutes. This is the physical boundary which you have to strengthen and you will find the wall of your spaceship. At the point when the gravitational and magnetical balances with the environment at this point you have your shielding and it is what we call the

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

atmosphere. The earth's surface is determined when there is a balance between magnetical and gravitational fields of itself. When there is a balance between the magnetical and gravitational fields of the system and the environment this gives you the gases for the shielding. In the system control this is important because you decide to shorten the shield and land because you want to walk out. You want to increase the shield so you have protection from cosmic dust and you can go at any speed that you like. Now, Bernie, I explained to them this morning in the teaching and they ask us *have you ever gone through this barrier when you walk towards the system?*

Bernie: The feeling I have is a warm feeling in the hand.

K: Is that when you cross the 'line?'

Bernie: Yes, it is just like there is ...I know there is no difference in the temperature but you can feel it in your hand.

K: Now if you balance all these, for example, to CO<sub>2</sub> from one part of the structure of the bottles to another, then you have the spherical shape which is needed in constructing a physical boundary. You create a surface of the craft and this is the first time we come to it. You can feel it and now what you have to do is to move the cores slightly until you start seeing interaction or tangibility or interaction light. And then if you see tangibility this is the boundary of your craft. If you see light this is the atmospheric condition which is your shielding. We are heading to that target very rapidly in this development. In the next few days and weeks I ask all of you please go ahead and buy a few ping pong balls, fill them with the GANS and join the man of space.

K: But there is another position and development with the work with Renan and Bernie in the way that with the balls as we saw them, there is a ball with three balls (1.30.34 minutes) and the 3 bottles, and now he has added a second bottle

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

exactly as we saw with Dr. Ghatta and what we saw with Douglas. Would you like to tell us what happens when you add a 2<sup>nd</sup> bottle please?

Bernie: The first time I tested this, even only the center container only, it feels much stronger and the moment we connect the center bottles and adding this and having this the relationship also with other similar configuration we tested 3 in the position as Mr. Keshe has drawn on the white board, and there is a moment that everything for us as we noticed it stopped working. So did more gravitational add performance to the engine and so with the others. So we started them arranging them in a triangular formation with respect to each other and rotate them in the manner that they communicate in the way that they give improvement and the engine responds very well. And we did, we did find a relationship among the three and you understand that they start connecting with each other. Also, we noticed that when you have a more gravitational field and a magnetical device, these two will connect. When these two are together and they connect you get the better of the two and not just one but you get the best performance ever. They work hand in hand but you have to place them in a way that they are facing each other for the best connection. You have to feel it. The only instrument to show they are connecting is the combustion engine. It will respond accordingly but with the energy it performs well. When it doesn't it goes back to its original performance. That is how we test it.

Bernie: The lead GANS is in the middle container and the outer container it is filled with CH<sub>3</sub>; that is how we set it up. Then we put a wire in the middle and a wire on the outside and we connect them to get the gravitational and this is where you get a much better performance in any Magrav that you have. In this case we have liquid plasma configured as the Magrav. The magnetic is feeding to the gravitational and it works very well that way. If you have the lead laying on the side the wire will get nano-coated anyway. If used a lead GANS container that I placed on the side for several days and the wire is fully nano-coated. All my set ups with the triangular formation are fully nano-coated and this shows us that the

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

plasma flowed through the wires from the liquid plasma and through the matter state wire. At first I was only using stranded wires that were not nano-coated because I just wanted to connect them. But I know they got nano-coated because the plasma would flow. We have the best coating ever—it is shiny and strong and when I bend the wire it does not crack, so plasma does flow through the wires.

K: Bernie, the next step for you is that you added your amino acid to the center cores.

Bernie: Yes.

K: This was done by dictating the strength of the magnetical and gravitational as you wish? And in a way you reduced the 36 to 25.

Bernie: Yes.

K: You increased 13 to 25 and you have the interface and solid state. How long does it take to get to that point?

Bernie: The amino acids as you proposed, was you suggested to rub the skin, or I used the corner of the fingernail where there is skin and we can use that. It is what I used and to make GANS of it I put it in caustic solution and I am about to add it to the center of the container.

K: Then you will be able to develop the process for controlling with your thoughts.

Bernie: Yes, we did experience also by having a strong gravitational for the device the first time. If there are devices around me. The first experience was a choking feeling and you lost air. You didn't know what to do and you didn't allow it connect with you when it was trying to connect with you. You have that feeling. The same thing happened to our friend but instead of having this choking feeling, he feels very busy like you are about to pull up. Mr. Keshe told us that we had to allow the connection and when you allowed the connection the field flowed into our bodies very strongly and it ran through the neck and the head. And my friend

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

literally felt the formation on the brain and the flow was counterclockwise and there were 3 points.

K: Would you like to explain the setup? You put this on the table and each one of you sat on one side of the table as I do.

Bernie: I was on the bottom end of the table and my friend was on the right side. On his right side of his head in the front, on the lower left corner of the head, he was facing to the bottom side of the board. He had the flow pulsing counterclockwise. (1.38.56 minutes) He felt all the 3 points connecting. He tried to control it and he managed to control the flow. Because it was the first time for us, we just enjoyed the moment. There was a dizziness and loss of air feeling that leaves the moment you feel the connection. So, this is what Mr. Keshe told me the first time I reported the choking feeling. You have to release and connect and when we do that this feeling of being incompatible with it instantly went away and we had this special energy through our neck and our arms. We imagined the flow through our hands and arms, and transferring to the neck and going up to the head. For my friend it was 3 clockwise flows on the head; for me I literally visualized my entire operational part of my brain pulsing. It was as though I was watching a movie of the brain with the texture and every half spherical shape on top of the brain are pulsing. It's a very visual way of my thoughts. 1.40.39 minutes. It is a comfortable feeling.

K: so you see now that you can feel the forces. Do you have the dog in the room Bernie? Tell us about the dog.

Bernie: The moment we felt the connection through our hands, arms and neck, the dog went to the side of my friend. The moment you connect through the magnetical gravitational this connects with the dog. It gives you energy/excitement. The dog is very happy. I asked the dog to come and not disturb my friend. I touched the dog. Then you know the feeling of happiness the

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

dog shows when they greet you? This dog usually only comes to your side for a quiet greeting. But at this moment the dog felt the energy that we were feeling at that moment.

K: Thank you. I explain something very interesting on how we say we change the environment. Douglas would you explain what is happening in your garden and you have been in this house between 6 and 7 years?

Douglas: Yes, the whole yard we have noticed within the last month, there is a sudden increase in wildlife activity. We have more squirrels than I can count and every bird that is indigenous to this area visit the yard where the chickens are. We have 3 baby groundhogs that play in the yard and we have armadillos. We actually caught two baby coons that were trapped in the trash this morning and I've given them shelter until they get bigger and then I'll release them back into the wild. And my wife ran out yesterday because she thought there was a stray dog in the yard and it turned out to be a red fox. We have had all kinds of animals that have come to visit us; it's beautiful to see all these creatures up close. My wife got some videos of the armadillos and they stood up and she was within 5 feet of them. The baby coons let me pack them up and put them in a safe environment. I'd say they are about 8 weeks old because they do have teeth. They are not little babies, but too little to be off on their own. We have seen deer approaching the house and this is the first time we have seen anything like this in the 6 years we have been here.

K: Now the environment of the plasma changes the environment of the living and this is what we will see in the development. Something that is important is that we spoke about the container with the GANS inside one ball and another GANS outside. But for us to carry a container of water like this in a practical way for testing how the inner core is running, is a little but difficult. We should be able to produce a system that in fact what we do is we have the first core and we create

Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

the 2<sup>nd</sup> core and if we create the environment of the 3<sup>rd</sup> core, then we put the material that is in the inner core outside the 2<sup>nd</sup> core (1.46.10 minutes). With the interaction of the middle core in the system then in this way we have the 3 layers—the source, the transition section, and the matter energy. If you can create this condition once the 2<sup>nd</sup> core (ball) starts rotating and the inner core (ball) is rotating and the outer ball is rotating, you will see a new dimension in the world of plasma technology. Now you work like the 3 layers of the skin and you start creating materials and condition of the fields, whatever you like. Is Arman on the line?

Arman (A): Yes

K: A is in this position and he is developing this 3 core system. He is supposed to be in Arizona today with the manufacturers. Would you like to share your screen with us and show us what you are doing and where we are?

A: I just finished it and it is not dry.

K: This is very important and this puts A in the position that if he moves one of the reactors at a specific speed to create lift and motion and you will see for the first time the shape of the dome for the spaceship. This is the way that earth creates its own shielding. Would you explain what these are? 1.48.49 minutes

A: These are 3 balls one inside the other. These are like Russian dolls, one inside the other for 3 balls. All the GANS I have, maybe 27 different ones, and my blood are in the center. Outside of that inner core in the second ball I put CH<sub>3</sub> and CO<sub>2</sub> and in the outside core I put the mixture of all the GANS. I have 3 reactors made the same way. I made the 4 reactor (group of 3 balls, one inside the other) I made heavier. I can show you as it rotates a little bit. I just finished it. (A motor turns on) The ball is stable and I can see the 3 balls rotating, the 2 inside the outer ball....all are rotating. ( 1.50.25 minutes).

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: You have a dark center; do you see any kinds of bubbles in the center?

A: Yes.

K: Do you see the bubbles being created in the middle?

A: Yes, when you rotate this at high speed.

K: They are all completely filled with liquid GANS and there are no air gaps in them.

A: No air gaps; I tried to get the air out and it's impossible.

K: Those are the vortex plasma bubbles. So, when you rotate it on the fast speed can you see the inside balls? (1.51.35 minutes with higher speed).

K: Do you see the empty hollow in the middle? Yes we see that. Now bring any of the balls near to this and see if we can create rotation.

A: I just finished gluing them and they are still wet so I don't want to do this yet.

K: It would be interesting if you can put these balls in the liquid GANS and change the position. That is why you have the long stick on the ball you are holding. See if you can create rotation the way Douglas was explaining. Do you see any movement in the ball in the liquid?

A: All the balls have  $\text{CH}_3$  and  $\text{CO}_2$  in the middle layer. The one I am holding has  $\text{CH}_3$  and  $\text{CO}_2$  as the middle layer.

K: You should have made one of them  $\text{CH}_3$  on its own. It's a balanced field. Will you tell us what happens after these 3 balls dry and you put them in the liquid GANS?

A: Yes.

K: You have another set that is sitting in the water?

A: I took it out.

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: You dismantled it?

A: I didn't dismantle it.

K: Would you tell us what it is? This is a very nice one that Arman made and it needs a little adjustment. Arman is one of the first to create a flight system. 1.54.29 minutes. Explain what we have.

A: (showing stacker unit) we have 3 nano coated coils, but the middle coil is magnetical and gravitational. Actually the coils are coiled differently.

K: You coiled it for creating rotation?

A: Yes. I have one coil that is copper and not nano coated and I connected it to the small load LED. (1.55.23 minutes)

K: There is more...there is a piece missing in the middle.

A: In the middle there is a core.

K: so Arman has a double coil/core. This is what I call a butterfly.

A: I will show the other one. This is copper and nano coated (1.56.04 minutes). This is filled with all the GANS and the amino acid/blood and in the outside only  $\text{CH}_3$ , so I can turn it at a few thousand RPMs...13,000 RPMs.

K: Let us know what will come out.

A: Yes, but I am getting ready to leave today.

K: Thank you. Arman has been working for 2 or 3 days to complete this. So you see in the background the Keshe Foundation team works on development and we teach you their first lines of creation. The rest is up to you to develop and bring to the public. When you look at the development, the flow of the GANS, we taught different applications of the GANS. The initiative of the Austrian manufacturing team is very interesting. Dr. Klaus (Dr.K) are you there to show us your control? You have developed something new?

## Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

Dr.K: We wanted to find out the impact of the iodine GANS. Until now we used mainly CO<sub>2</sub> and ZnO GANS for our body and emotion. Now you have come up with iodine GANS which means for me and the medical part, the third layer which is the layer of the soul. This is what I wanted to experience on my body and environment. I built a kind of glass which is made of tubes, the same plastic tubes we use to build the elements. I filled the tubes up with CO<sub>2</sub>, ZnO and Iodine GANS. I just wanted to know what happens and for the last few days I went aware with these glasses and wore them when driving or walking in the woods. For the first hours nothing happened. Then I realized there was a more intuitive way as a physician and people seemed to be closer to me.

K: Is it because you are wearing these funny glasses?

Dr.K: Yes. They haven't been closer to me because of the glasses—it is just a feeling. (2.00.28 minutes). What I experienced was a friend called me and I said let's try something. *I will put you in my thoughts into the health unit. I additionally wore the glasses.* I had the feeling and there was an immediate change although there was a huge distance between us. This is my data till now concerning the iodine GANS that I wanted to experience.

K: Thank you, we bring this session to a close. You have seen the application of the 3 KW energy units. You have seen the control of energy and you can develop this as we have done with the Magrav units and we will deliver to the KF manufacturing arms. Importantly, now we have seen the development and the transfer of energy to dynamic GANS plasma and the fields and the way that one plasma moving can rotate the liquid in the matter state the way it happens in the universe. For the first time in man's life in humanity we see the will true work of the universe and this is part of the spaceship technology development and part of the understanding where we are about to go. We don't depend on the material (matter).

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: We go more steps further in the coming days. I know a lot of you will do testing and developing in the coming days. Post this on any of the KF support groups and anywhere else so that you share the knowledge. The control of governments and multi nationals is more or less coming to an end. All the efforts to enslave man are on the slave who now has all the knowledge and technology to do this. The reason that we do share knowledge this way is that no one can control. People across this planet share the knowledge. You see how the pads and the pens and the Magrav systems work. Now you see the generators and you can produce them yourselves. Let us finish it to the point that we can share the blueprint for it. As usual we share with you and the manufacturing teams to develop it.

K: I explained before and I always give a pre-warning a few times. The KF in the coming time will put the spaceship reactors for sale around 20,000 Euro which means that you can order a unit that you can fit to your car and use it for lift and everything else. This is a warning to the governments. People will start traveling over borders without you ever knowing it. This is important as I know a number of governments are in the background listening that the situation with the borders and everything else has to be resolved very rapidly because the people of the KF supporters which runs into the millions around the world, will start developing it. In a very simple way, if I can go to one of the banners of the KF then in a few weeks' time you will see a number of these lying around. You will create these, not us. We have seen people in the Philippines explaining the energy of the fields. This is the reality of the human ways in the coming times. Fields beyond and you understand how to control it. Your CO<sub>2</sub> systems with the star formation at the bottom and the top reactor you create your own domain. (2.05.38 minutes). This is the change we will see in a matter of weeks and we are not talking about months or years. We saw the presentation with very much what was shown with Dr. Ghatta in Kenya. What he showed you he put a reactor on this point (2.06.06 minutes). If you can manage to fix these three (ball sets of 3) the same, your

structure is inevitable. The Philippines center has said they can measure and they can feel the field strength. I explained how you feel the boundary, the physical balance between the gravitational magnetical of the 3 systems we put together.

K: What to you was a dream to make a spaceship costs for you less than a few dollars to put it together, develop it, test it and have the confidence in the knowledge that you have. Somebody doesn't have to do this for you. You developed thousands of Magrav units. Millions of you are developing and teaching. We heard in one workshop in that 20 people are making Magrav units every work in Germany. They are coming with the workshop teachings. We have appointed Mr. Fahad Amini to do the workshop development. You will be doing the developing of these things. This reinforces *peace through technology* of the KF. There will be no borders because you can land anywhere you like, create as much energy as you like and at the same time, deliver your message of peace through the delivery of the technology.

K: We said we will deliver and we are now finished with the energy production. You have your generators that you have waited for 5 to 7 years for because we were blocked by gangsters in one nation. Now man is free. We got there ourselves, free of the gangsters and we work together. We see they tried to discredit and that helped us.

K: I made a promise to Fabio's family. When they are brought to Italy (the gangsters) they are going to prison for a long time and we will put them there. I think they deserve it in killing a man by intention and murder. Now the criminal investigation has started. We will bring them here and show how they pushed by murdering one child (Fabio) to stop this development but in fact by doing this we speeded it up and they failed. The only thing that is left for us is to unite and deliver the technology as fast as possible. In a way, put these people in the places

they deserve and they never see another man to harm. We have seen this and they were proud of what they did. In recent days they have even insulted the man who has a daughter in the hospital. This is how low they are getting. And it shows how criminal they are. In the coming time websites showing all their criminality they have done because we finish with the energy and we finish with the criminals too.

K: We have to learn one thing: *to have peace on this planet we have to have abundance of everything so that no man fights for anything.* In the coming time now that we reached this point, I will teach you myself in a very short time to physically produce tons of kilos of gold on the table. That is the only way we will break the circle of the viciousness of those who see finance as we know it to control. You will produce gold and you will make payments with it, make bricks of it, build houses with it, and no one will come again to kill million with their central bank. With it we bring the balance in the emotion through the GANS of Zinc that no man will ever fight. This is what our ethos is and what we came here for and as I have said, we delivered.

K: We delivered the medical systems and we have DrK understanding. The coils are now out of date and we can create with different GANS for diseases. We see the transfer of the energy in the ball that creates physical motion. You did these yourselves and you understand how correct you are and how correct the technology is. And, we come to one point—we meet Thursday again. If you develop anything further we teach it and we share it. In that process you will understand more to change the course of humanity. The man of peace now has the tools of peace and the rest is totally dependent on you. I hope that we will see the first spaceship in Ghana in the opening of the conference. It depends on you and how you will arrive. If any of you develop I put all my energy in this for the coming weeks and we have one target: to create the first space ship. I will come

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

in and we will explain. Watch for the teachings, come and learn every aspects of the technology.

K: We have moved away from the matter state. We are in the plasma condition. You have seen the team of KF working relentlessly for hours with little sleep to bring the technology and to bring the beginning of the change. Go to the shop and buy a few ping pong balls and start playing the game of the gods. We bring peace and the knowledge is yours and we share it freely. Thank you for today.

R: I have the video from Douglas with the rotating balls. Shall I show that?

K: Yes. (2.12.53 minutes).

Douglas (D): This is a container of the composite of all the GANS water. This is the core here that I am using and it is a temporary core I am using that has a little core with a motor that I am using. (2.13.27 minutes) I will hold this above the alls and you will see the reaction and a definite spin start to occur. The motor is running and held over the open container with the 3 balls in the GANS water. (His motor is run by a battery). Now the balls are moving and the water is starting to create a vortex. When the battery is fully charged this doesn't take as long.

K: What you see is the rotation is clockwise on the machine and the balls are starting to rotate counter-clockwise. This is important because it is the plasma inside the ball that is rotating clockwise. For the balls and the GANS to match it has to rotate counter clockwise.

D: Now you see the balls spinning. You can definitely see the rotation and the balls have separated into the star formation. It will slow down without the field working. This is just a quick example to show you the spin of the balls inside the liquid.

K: You can do these at very low cost to yourself and you can make them like Arman did and you create two layers floating inside each other. And you fix them to a point a few centimeters from the base and the field flow is equal and dynamic. Then if you fix your top core, the speed of rotation, you will see the whole bucket moving and the first time of lift. The first time Douglas did this everything popped out and all the water created a field and a lift without touching it. The field forces moved the mass. So try to do this and send us your video or put it on the internet. You have free transportation at zero cost. And if you learn gradually some of you will dictate where and when you want to fly and when you want to go. And in a way, this way, as I said, we made man free. There are no borders and nobody will tell you where to sit, where to land, who to help and who not to help.

K: The Chinese military have made me an offer. You are welcome without a visa if you come in your spaceship. We will be there very soon. My response to President Xi is very simple: *I will be there sooner than you can think. Thank you very much, your Excellency.* Professor Zhu do you want to add anything to this invitation or does it still stand?

K: Let me explain; this afternoon we had a special teaching for the Chinese community on the special lines set up for them. If you are of the Chinese community, get in touch with the KF China and join us. This teaching is only for the Chinese community in respect to the development of the centers in China.

R: Professor Zhu is here.

R: It's not un-muting.

Zhu (Z): I don't have a microphone right now.

K: We cannot hear you clearly.

K: Are there any questions we have to answer?

Ali: Do you want me to show the bucket and the Magravs now?

K: please share, Ali.

Ali: I have been experimenting and this is the bucket with the combination of all my GANS. This is a unit that I was planning to use with a motor to rotate the infinity loop. 2.21.35 minutes. Instead there are 3 balls in here and then in this smaller bucket there are a few of them on top. I do see some bubbles coming from the bottom and there is small counter-clockwise rotation that I see. For some reason this ball which is here, gravitates to the Magrav coil no matter where I put it. It stays right close to the core. I'll keep working on this. This is a unit like the standard Magrav unit and the wires are the same and are not connected at the moment to anything.

K: Are you flowing any energy in the Magrav systems?

Ali: No there is no energy right now.

K: Tell us more; this is a beautiful system. What happens if you create a flow (of energy) in the coils?

Ali: You mean plasma current?

K: Yes, plasma, or isolated voltage with a battery.

Ali: I will have to test that.

K: can I see your tray? Are the balls on their own or are they in liquid?

Ali: Each one has a different GANS; there are CH<sub>3</sub>, CO<sub>2</sub>, CuO, Iron, bismuth, and there are bubbles coming underneath from the bottom.

K: can you put some water in this container with all the balls in it so they can float? Thank you Ali, this is very nice. Don't forget Ali is head of the space program of the KF. 2.24.26 he is hoping to be the first man into space.

Monique (M): could we mix two people like 'teas' so we can be together in ability in maneuvering the ship?

K: can someone explain?

R: I believe she wants to mix the amino acids of two people so they can be together to direct and maneuver the ship.

K: Yes, that is possible; I explained that in one of the private teachings.

R: One time you mentioned that 4 people could move through space. They have all their amino acids mixed?

K: There is no problem. But very easily you come to a quick understanding. When you do this, because you created through the soul of the man, you will find that the one who is best for the craft will always dominate. The ones who plan to do whatever will never take control because they lose more energy than they receive. So, you will find yes that you can put 10 people and they will all try to control, but through the operation of the soul and physicality, you will find the one who is a true server and wants the best for the passengers will dominate and dictate the position. It's very interesting—you will see. It will be very hard to steal cars with a Magrav system in this plasmatic because the thief has a different intention than is what in that engine.

Paul from Togo: (P)

K: Are you going to show us something?

P: Yes, I have made a GANS of silver. So I want to show this.

K: What is the presentation? Is it hard to make a GANS of? Does it have to do with the space technology?

P: Yes, a GANS of silver.

**Transcript from 123<sup>rd</sup> Knowledge Seekers Workshop held July 26, 2016**

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: please send a pdf file to Rick and then Thursday will you share this?

P: Yes.

K: We call it a day and on Thursday we will carry on. If we receive new knowledge we come on live and we teach and then we go to the deeper development teaching of what we can use. I have been sent questions of what the hand and the finger sign language means and on Thursday I will show the position of the body in respect to its physicality. Then you will understand more, how and what it means. Some people want to know how you do the communication whether it is in the physical condition or the soul condition. We teach more and more as we go along. Thank you.

R: This closes the 123<sup>rd</sup> Knowledge Seekers workshop, July 26, 2016. Thank you for attending.
