MT Keshe (K): As you know we are going into the holiday time and we are not in the center. Good day, morning or afternoon. As we enter into the summer season holiday time for the foundation the teaching stops tomorrow and for the next 6 to 8 weeks we will be traveling. One of the things that we started on Tuesday was to show the application of the space technology and its very basic forms in the creation of the motion and the lift and everything else that will come with it. In so many ways we have started the forces now where we will decide where and how we will interact with the environment that we are in. The position with the present technology we have brought in is the fact that it does look to work and will not interact with the present technology we know and with the present world of physics and science that we know. We will show effects and results that we are not used to and in time to come we start learning more and more about it and we start interacting with it. And with it we will develop new understanding of the science.

K: The problem which we have and is with us at the moment is that we have learned a lot about the matter state but we have not learned about the plasma state and this will be the biggest problem for this process. Learning how to work with the plasma state and how to find an interface between the two is what we already know and what we have to learn what the reality is in space. And we have to bring the two sides together and learning how to use one and have the advantage and the use of the technology from one state to another. This is in fact the state of matter and nothing else and nothing more. We have known everything about space in the matter state but we know nothing about the space in the plasma matter and this will create a lot of confusion, denial from one side to the other. We as the Keshe Foundation (KF) supporters and we as the people

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

who have brought this new technology and there are millions of us, have to learn how to use and teach to other people how to use and interact with both sides. This will be the biggest item—I already see this. I see this in the innovation center and people who are on the edge of science with us like Renan's team in the Philippines, the team in the Innovation Center in Italy, the teams in America, Africa and South America, are all sometimes fall from one thing to another.

K: Our job now is to bring both sides to understand how to interact and more or less what we know about the matter is perfect; there is nothing wrong with it. But the addition of the new knowledge is going to create a lot of confusion. This is where we are going to have a problem and where we will sit a lot with one side or the other denying each other or trying to say something is wrong with the other one. This will create a lot of problems for both sides, massive problems. How we interact, interface and negotiate between both sides will be between the new scientists of the plasma and the 'other' scientists of the plasma. This will create mayhem. We see a lot of people called everything. In this respect we have to stop this at this moment so we don't run into this problem.

K: What I have seen the past few weeks and years is the problem we have to face now and sort it out. Otherwise the ones who are not part of our work or they see their positions in danger will start causing huge amounts of problems. We see this know with the Chinese Scientists with this interaction. We see this now with some of the scientists in the United States and we see this in a number of cases in Europe where scientists who have developed the plasma technology of the matter state now see the plasma technology of space and they cannot link the two together; they cannot connect together so they have to deny one or the other. We are here to consolidate the position of the space technology and bring balance between the new science and the old science. It is on us as a whole, as members of KF worldwide which is millions of you, is in fact to make sure that this does not happen. We have to not only accommodate the new knowledge we

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

have to accommodate the ones who are used to the old knowledge to adjust to the new knowledge so they don't see it as a threat. The ones who come to abuse it and use scams have to realize they have no room to play.

K: There are those who are paid to block the technology and work in the background to waste time for both sides but they see that this way they confirm their existence. This is what we have to stop. I can teach as much as you like. I can teach technology every hour, every day as we go along. But I will not be able to break this gap if we do not put the hand of peace and the hand of knowledge of the new plasma to the people too. This is the problem; we have seen this heavily in the past few days since we actually started showing the generator two days ago. We have a huge shift of governments in one way or another because now the situation is real. It is not that there is 'going to be a power unit.' We will show it again today that it can be displayed. This is a change that none of us, nobody can stop. There are thousands of you who will list the blueprint of the energy when we complete it in the new form. The present form can be used immediately.

K: What we see in the next week or two, we change it to become more efficient. Instead of launching a new product or launching another product again we have decided we don't want new product. We are trying to make it with 3 or 4 groups who are working to make the generator a portable hand held unit. We can still supply the generator as it has been developed but we are adding new innovation into it and we see a way that one Magrav unit instead of 2 can be used. Secondly a wireless unit can be applied. It doesn't take much; we have all the knowledge and it is just linking the systems together, the understanding together. In that process we bring new technology. As I said the other day it took us a year since we announced the Magrav units until now. Now we have the generators and we have shown and today we go back again to see it. Next week we will show you two blue boxes. That is exactly what you want. And then we go to the next steps

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

of wireless and then we are working on compacting the system so it becomes totally plasmatic which is possible.

K: So I thank the innovation center in three or four countries who are working on 3 or 4 sides for developing and completing it. The system is operational and we can look at it again. Because of the yellow box, some people have called it the yellow Subway. The Philippine group has chosen the blue color for the box. In Italy we will show what I called the green box as part of the technology release. And in one way we will go back to the blue box of the KF that was chosen by the Italian group and it stays that way. It is important for all of us to understand one point directly and that is that we cannot operate if we do not explain and teach to the other side. This is what the people who are there to create mayhem are using: the lack of knowledge of the others to create mayhem because they know the matter state but they do not know the physical attraction and interaction of the plasma state. So, we have come so far and now we can develop the technology to the point of the next step and interface between the two sides, the matter state and the plasma state and to be able to bring everything back in order. We need to bring back everything in order so that we can bring in the position of the change but do it in a way that we can dictate the change and we can bring the totality of the change. Can we go to Douglas and let him show the system he showed on Tuesday to see the new power generator and its compactness.

Douglas (D): We had some storms here today, our internet is messed up. Give me a few more minutes.

K: can we go to your camera and show it live. Make sure the generator unit is covered up. Show the rest and next week we will come with 2 or 3 other locations and we release everything worldwide.

D: can everybody see? (24.32 minutes) I am using my remote camera and this should give everyone a look at everything. We will go down so you can see there

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

are no wires anywhere or up under the table that is connected and there are no loops or wires. You were seeing some wires that go to the heater and the strip and they are just hanging here. That is the back of the system and there is nothing hidden. Let me turn on the generator and I am producing power immediately. There is no voltage on the switch. I'm turning on the lights and it is producing current. Now I turned on the strip and it's receiving 120 volts. The Panini sandwich maker already came on and so did the refrigerator, the microwave and as you can see the heater is set at 1500 watts and it is blowing out hot air. The compressor is going and it fills the vacuum. We have lemonade in the refrigerator and now we will turn on the microwave for 30 seconds.

D: We have a full load and if you look at my board you can see (26.39 minutes) we are having the following:

Heater 1500 watts; microwave – 800 watts, the Panini maker – 800 watts, refrigerator is 500 watts..... It just tripped my breaker. I've got to reset the system. I'm pulling a lot of amperage.

R: Your audio just got better after the breaker tripped.

D: It's the plasma fields is what it is.

R: You sounded like you were talking in a submarine.

K: Do you want us to come back in?

D: You can for a little bit. Give me a couple of seconds and I'll have this back together.

K: We are about 3.3 Kw and it was 4.3 Kw when the motors came on and when it goes steady it goes to 3.3 Kw. These units can be pushed to 20 Kw.

But this is part of the re-design. We sell the 3 Kw units but depending on the circuit positioning we can go to 4, 5, or 6 Kw. More than that we have to redesign the circuitry.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

D: I have a surge protector and it has a breaker on it. This surge protector isn't meant to carry this much amperage.

K: We just wanted to see that it works; are the toaster and heater still on?

D: Yes, we have the thermal indicator and you can see 240 degrees on the Panini maker, 280 on the heater, 80 on the light bulbs, 90 on the capacitors, 96 on the top coil, the middle coil is 99 and the bottom coil is 93. So for the amount of wattage and amperage that is going through this system for 3.3 continuous watts that are running and a start up with 4.4 Kw, in theory this 16 and 18-gauge wire here should have disintegrated and melt beyond recognition. But through the plasma technology it allows for a different kind of electricity that doesn't have the heat and resistance. I have my hands on the coils and they do not shock if they are properly coated. You can hold them all day long. People say they get shocked and that means they are not properly coated. I am pulling 3.3 Kw and everything is on. Nothing is touching. If I didn't have the surge protector, it isn't nano-coated and it will take a couple of weeks to nano coated, and then the strip won't kick the breaker with the surge protection. This is a continuous 3.3 Kw. I'm sorry the video wasn't loaded up; I have a nice video for everyone to see. I ran this several times and it has warmed up and it's causing issues with my surge protector.

K: Would you like to show us your pendulum?

D: Rick has that video and he can put that on.

K: can you hear me? (33.28 minutes). Let me explain what is happening; what you are going to see is the continuation of what you saw last week with Dr. Ghatta in Kenya with the rotation of the GANS water and creation of motion by applying plasma technology and a mixture of plasmas. Now, what you see is that the system is hung near the water and it is going through the phase system as we see in the Plan 3 system when the North Pole and South Pole turn comes in. In this

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

system, because of its compactness and the smallness and closeness of the GANS water, you get very rapid changes. So, whenever the field balance comes in and the current flow of the plasma reaches maximum saturation which I have explained in one of the books, then the polarity change comes in.

K: every time you see the pendulum shaking or the ball moving is the time when the shift comes in and it's the time when the maximum fields with the magnetic gravitation flow.

D: I was working on the balls earlier and I do have a short video where it actually shows some rotation is occurring. I have just finished rebuilding these things so they have not been activated very long. The video will show some rotation. (50.19 minutes) I'll start the video and you can see the GANS moving counter clockwise. Notice the things floating across the screen. The little black speck got drawn to the CH₃ ball.

K: We have to start understanding and looking into more details in these applications. We like to see how we can utilize these effects and make applications of these effects. One application is that in the background with the innovation groups, are motors being re-designed with a plasma condition. We are looking into re-designing power supplies. We are looking into the conversion in the use of magnetic gravitational fields more than anything else in different dimensions.

K: I must explain that I have to attend a meeting and when it starts I have to leave so Arman and Caroline with Rick and Vince in the background will take over. They will do the portion of the teaching and presentation today. We will join you next Thursday until the 21st of September when we come back in with the teachings starting on the 19th of September. So I carry on till the beginning of the meeting and then I hand everything over to Arman and Caroline.

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

Alexz (Az): I want to show a quick video with the rotations of some liquid plasmas. I am using the same bottle to rotate all the liquids in the containers.

K: This is Az from Nigeria and he part of the KF. We are seeing a lot of people now that they can affect the rotation of the plasma showing different things. 54.40 minutes. Share whatever you like. We are seeing that this is for you to check. Yesterday we got pictures from a priest in Romania on how the magnetic field stackers affect the GANS and create patterns in the GANS; you need to check this.

Az: (56.07 minutes) This bottle has a rotation in it because of the effect of the ball on the top. You can see the vibration.

K: Is that your clay stacker unit?

Az: This is a composite. I made just one stacker and then I put the ping pong ball on top. This ball on top just has GANS in it and the clay is very heavy. But the ball can cause the vibration of the glasses on the sides of the stackers.

K: I can see the rotation of the water in the bottle. Where are you now in Nigeria?

Az: I am in the bush. The glass on the right with the ball in it is vibrating already.

K: Is that from the table?

Az: This unit is all one unit and this ball will make the table vibrate. The liquid plasma can rotate clockwise or counter clockwise. It depends. Sometimes all of them rotate at the same time. if I set the unit on the floor the liquid in the bottles rotate.

K: The liquid in the bottles are rotating. This is the purpose of the teaching—to enlighten so that others can use it. you can use these rotations of the liquid for very much as we used steam is power stations for rotating blades. You can use this transfer of energies from one core to another for removal and movement of

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

items, entities, fields or matters. You see the interaction and I was teaching this yesterday in the medical teaching with the doctors. there is so much that it will create such a new scale of innovation and development of new technologies that as I am told from what where we sit and we see what is coming, when you add up the energy, the space, the agriculture, the medicine and material and every other aspect that this new understanding brings in, most probably in the next 2 to 5 years will touch everything. We have seen how you can use these fields more or less for change of structures. You will be able to see more and more of these things. What they are asking is not just to watch any more. Make a GANS, make the change, and bring the condition of the change in. it is now depending on you and now it depends on the totality of the KF supporters.

K: We are not here to dominate; we are not here to be the owner of everything. we are here to own everything amongst all of us. I have seen people saying that they want to start companies. We are not starting companies; you are starting companies and we want to support you. You are the people who are there to start structure and we are there to support you. The KF is not looking for people to bring money to us. None of the KF people who start factories or whatever have paid a single cent to the foundation. We support them and we send technicians to them. we send everybody to them and the people who put negativity are the people who came here to destroy and their position is in danger. We are not asking you to become part of KF manufacturing or give us money. nobody has paid a single cent to the foundation. We are even paying to open factories for people who have the right intention. So we open your eyes to people who came to destroy the foundation. People around them have paymasters who provide their income. They came to destroy. In the past week we have opened 4 organizations in and around the KF who came to us. We gave them the feeling that they were doing what they were being paid for. And then they got caught red-handed. We see them and what they do. they tell people the factories cannot be set up and then they set up factories with their own families, their own organizations, Masons and the rest of them.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: You have to be clever. If anyone tells you we are here to take money and no one around the KF has paid a single cent to the foundation. We are here to support you and to set up. We are here to bring in the change and we give you the knowledge freely. If you want to do something, we support you. you have factories and you see you can develop something and you are open with the foundation, then the foundation can support your nationals. It can support humanity and this is what we are about. all the people who are there to bring the change about, we are there to support you. Those groups and organizations that come to destroy—their hands open up very quickly. But now we have come and you see more pressure groups trying to destroy the KF because now we are touching the oil industry, the solar industry, turbines, whatever kind of energy that is produced and millions of dollars are charged to people every day. Now you can produce with very little, less than a couple of days' work, such as the way we showed you the Magrav systems. Now we show you how to make the generators. We are not asking for a penny. A lot of you have received huge reductions in your energy bills. Have you paid any part of that to the foundation? Have we ever come to say that whoever has made these things has to pay? You are free to serve but open your eyes to those who use deception for accusations trying to preserve their existence. Be free; teach freely. We have seen huge changes in Peru where people are changing, teaching and developing. We see lots of applications of the technology with the GANS and the nano materials in different parts of the world.

K: This is where we come from –to bring unification of mankind and put those who try to create division because their hands of mischief have been opened up. This is what it is. Try everything; I keep encouraging all of you. Try things and show them. We have people who come here and show things which they think and then they say there's been fraud and they just wanted to create how wrong we are. we still give them a chance. We give our enemies a chance, because by

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

giving our enemies a chance they destroy themselves. We have scientologists within the KF and I encouraged them and gave them room to test. We had Masons and we gave them opportunities to change their course but they went back to their same old habits and we see them now. We have seen people from different scientific organization, researchers and universities. This is how we should be open and let people discredit themselves. Those who are like Renan, Douglas, Alexz and the rest show how humanity should be served. We are not fighting and we don't go for fighting, but we get busy with changing and they disappear into the dust of the earth. This is all we have to do. Please do not fight anyone who opposes the foundation and the work we do. If you are we see who stays. We are showing more and more and it took two years as totality to do the structure. This took everything. We lost our teaching on Live stream 3 times. It didn't make any difference because other channels are open. Now we see more translations of the books, we see more transitional documents. We have seen people in the highest level of the military going out deliberately to block the foundation because with peace they have no jobs.

K: There is no need for armies when you have peace and now we start seeing resistance and we can give you the names of high-ranking generals who have gone deliberately to set up the KF to be blocked in their country. When there is peace there is no army and they understood that very quickly. Because they understood it now they want to block it. we see presidents taking action against the foundation. No problem. The point is that they know that now especially with what we have trained about the soul of the man and the systems, their hands are opened. This is what they are afraid of; there is nothing wrong with the technology. As I say, pray for their souls; give from your soul for them to take. By taking and by your elevating their souls they find out that they are positioned on a lower level. You understood very soon what this means. In part of the teaching last week, and right now I am not in front of the camera so I cannot show you— let's try to share a screen.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: Let me explain something important so you will understand more. we go back into the sign language and what we explained with the fingers which we explained before. Now look from the top view of the head of the man. 1.08.58 minutes. This is the top of your skull; you have your physical part of the body here (he draws a circle inside the skull circle). Then you have your emotional part here (he draws a circle inside the circle he just drew so now there are 3 circles, each inside the other starting with the outer skull circle. Then you have what we call the station of the soul of the man (shown as a 'dot' inside the innermost circle.) The body at any day or moment has enough energy, calculated to be around 17 or 18 Hiroshima bombs, within the containment of this body of the man. if you look at the structure of the physicality of the man, now we look at the arms of the man. and then you have the 3 fingers—the physicality, the emotion and the soul. (1.09.48 minutes) and then if you look the whole thing is structured the same way and you have the physical side—the arm, the emotion and the soul. So when you look at your fingers and arms you carry the same structure and the back closes in. your back and your front with your arms, you are back in the game of the 3 dimensions in the structures of the layers. So even the structure of the man is based on the plasma. The soul which is much stronger sits with your thumb. This is the structure of your index finger that sits with your emotion. Your last finger sits within the structure of your physicality. Now you see this is very much like your inner core. 1.10.47 minutes.

K: Remember the stacker unit? The first three circles are the inner core and the circle joining the back to the front is the outer core. So everything in our lives is based on this. We have to understand it and then we can use it and you understand that it cannot be abused and nobody can tell you or somebody else that there is something wrong with it. Now you understand it and now you put your thumb towards yourself and feed yourself in the cycle of physicality. I have to hand over the teaching and attend a meeting here in Rome today. Let me finish

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

explaining what I was showing. The structure of humanity sits on the voice of the plasma. You look at same structure at your 3 star formations. The center is the brain of the man. if you see the fields of it, then you see more or less in the same direction as the star formation. (1.12.37 minutes). We made circles of gravitational magnetical and in that process, in the soul of the man, we deal with the more powerful fields. N the physical part of the man we deal with the emotional part. And when it goes to total physicality we deal with the body of the man and it is the same. If you do your systems the same way that you interact with different ways, then you will see that you have the center core and the 3 cores (1.13.11 minutes) and the interaction of the 3 will give you your space ship.

K: Today we heard the news and we don't know if it is correct; go on the internet and check. The Chinese claim that they forced a spaceship to land. Is this true and is there reality to this? If they have done so, then what technology was used to bring it down or to be able to interact with it? Look, now that we make these fields, can we interact with the rest of society of the human race in the same way? Can we share this knowledge? This is what we are going to do from now on. When any of you takes the next step to do something new, it is your knowledge and we share it. No organization works the way we do—the openness of the sharing of the knowledge we do freely. You have to understand that it is your job to teach as many as you can. Strangely enough the lower level of income, the more teaching is done. The more affluent people are the more creation of problems because they see their situation is in danger. We have even seen the picture in the past 48 hours of people who came to murder me in Sosano are now getting involved to kill more of the KF supporters in Belgium, in the French section. John has been seen in the teachings of the KF in Belgium. Now they are targeting the supporters. Be very careful. He has mixed among you to kill more of you because you are bringing change that shows their souls. We released the picture and be very aware the enemies of the foundation are those who want to stop the change are doing and acting very well.

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: On the 27th of February he was in one of the KF Belgium workshops and was speaking. Share the knowledge and elevate their souls; these are people who are active and they know their time is over. Now that you can make reactors that interact with the soul of the man, you will see the people who are taking from mankind. Those are the ones who paid to take mankind. Don't allow color, race, nationality, creed or religion to become a division. In space there is no such thing. We are all one soul, one light and we are all equal. This is what we have to get across. Those who come and make allegations to put things and a very few people, mostly KF supporters go to see what they are saying that they can protect themselves. Otherwise the rest of the world is deaf to them. there is a link set up and we have set up that we will give to you that all the criminal activities of those around the foundation are in a file and it is there to be seen. everyone who is involved in criminality around the KF and we have found their connections to each other, we have put nearly one terabyte of information gathered by researchers of the KF.

K: This is all placed on the internet in 2 or 3 secure places and you can go and see who they are, what they do, how they are connected to royal family, how they are killing the scientists, who is paying them, all the hidden bank accounts in Singapore, Australia and Panama. You will see some of the people who have committed huge murders against the scientists and their bank accounts and companies are in Panama. With the Panama file opening up a number of them have been found. The accounts which were opened up have traces through Luxemburg and the rest. So, you see that they have a pattern. We shouldn't have a pattern; we should be there to serve openly, unreservedly and equal to all the human race. There are no banks in space. I have to attend this meeting and if I finish on time I will come back. Otherwise if Arman is online he will take over as head of the foundation and Caroline is here, so I leave the teaching to you and your team. Thank you.

Arman: good day everyone and I will answer questions with points you don't understand and I will explain clearly what Mr. Keshe said.

R: We have 169 viewers so if someone wants to ask a question. They can raise their hands as a viewer and I'll promote them to panelist.

M from Calif. with a question: In the last week and the last teaching you were showing us those plastic balls that you filled up with GANS. I was wondering where you purchased the plastic balls, the ones you called 'Russian dolls' that you could put inside one another.

A: Internet; I did a search on them. Some come from China and they have all sizes.

M: What about the one that a metal ball that was with the copper coil.

A: I got that in China when I visited over there. Some have made them in LA in a machine shop. Just use the plastic balls, they are more convenient.

M: Is there a specific site that you refer to?

A: EBay, Amazon.

R: Alibaba with a number of companies that make clear plastic balls. Look on the images and you will see different clear plastic balls in two pieces that can be glued together.

Doug (D): You can also find them in hobby shops if there are some in your area. You can find them in different sizes and I ordered 2 dozen from Amazon that were cheap and there was free shipping. There are many places or your local hobby shop in the crafts section. They are in two pieces and you can fill them with whatever you want.

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

Francois (F): The last time you showed the Magrav one of the coils was not nano coated. What will happen after a while because eventually it will become nano coated in your stacker?

A: The last one, I changed it to the bottom.

F: That was intentionally done that way right?

A: No, its connection to the earth.

F: eventually it will be nano coated?

A: No, if you want a connection to the earth, then you create an earth condition.

F: I heard you say that with the new Magrav the capacitor batteries will not be used anymore?

A: Yes, you can do without capacitors if you create rotation in your coils. The coils are the same and if you add GANS on them. you transfer the GANS energy into your nano material.

F: So you don't need the capacitors but you can use them they don't disturb?

A: If you want to change the energy you are applying to the coil you can put it in the capacitor—the energy that you want to transfer. You can leave the coils no GANS coated and leave it plain. Then you can add the capacitor to make that transfer.

F: I missed a few words.

A: In the capacitor you can have the combination of the GANS of which you want to transfer energy. If you nano coat your coils and you don't GANS coat them you can change the capacitors if you want CO₂, copper and zinc for example (1.25.21 minutes). You are going to transfer the field to your coils to the nano material.

F: In other words, you don't need capacitors and you can do the same job by using different GANS on your coils by themselves, right?

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

A: Yes. but it is permanent and you cannot change it.

F: Are we using the liquid plasma or are we using the GANS on the coil?

A: The GANS.

F: Now that we are applying this to the core that we try to achieve to make it more of a plasma field and that is where we get the stronger magnetic field and power, right? Is this what we are doing with the new power Magrav?

A: We have the matter; we have the GANS in the bottom of the container. You have your liquid (1.26.51 minutes) and the space and you have your gasses. You position the coil and the core has an inner core. There is a gap so you have all three fields coming together and that is your liquid gas. There are 3 different states and now the coil is plasma and you have your interaction.

F: That is where you get the plasma in the double balls.

A: In the balls you have center core and the outer core. (1.28.00 minutes) and you have your liquid and your GANS and you have your 'gas'...it is not gas, but the fields around it all. You have the same thing in the core above the liquid and the gas. It acts as the sun and you create the interaction and you have the gap between the liquid and the core and there is the interaction. (1.28.35 minutes) We use electrical devices and we have to somehow connect to them so that is why you use your coils. We use the plasma energy to bring it to the electron vibration.

F: And the coils then pick up this energy, right?

A: Yes, correct.

F: So, K was saying we use the regular Magrav and this type of Magrav so we need both of them, right?

A: Yes, correct.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

F: So if I use one Magrav with six stackers, with 3 or 4 small one would be like the regular Magrav with the capacitor. Then at the bottom I can use something like you have shown with the ball above the gas state above the liquid?

A: Yes, you can use a combination. If you understand what I explain your composition could be many Magravs. There could be 6 to 10 combinations (1.29.48 minutes) and it depends how you are going to use the interactions. You have 3 layers. (1.30.04 minutes). You have the 1st layer, 2nd layer and 3rd layer. You have the principal matter, the transition of the matter and the matter. now create the opposite in a ball. You have 2 balls the same size and you have inner core and outer core and how do you create interaction?

F: With the infinity '8' between the two of them.

A: Let's say you put your heavier GANS inside and in the outer you put your lighter GANS. And the third one. I will make the 2nd ball the same but opposite. If I make my mixture inside the 1st ball and I will put the same material on the outside of the 2nd ball. So I reverse what I did on the first onto the 2nd so you can make the link. So you create the motion in between because we know that with interacting together you have 'north pole' and 'south pole'. In the middle you can put the man or whatever. You can use zinc for the emotional (1.32.24 minutes). Don't forget to put amino acid; if you want to use your amino acid put that inside the core. The generator is right there. try to understand how you can help people with their sickness. These combinations can cure you. Order the balls. Shake whatever is in the water—you just need a little bit to transfer to your ball.

F: But I need to separate the fields.

Q: Two weeks ago you were making a patch for someone who had a lung cancer. Was there any progress you can share?

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

A: We were using patches and the effects are there and she could breathe and sleep properly. She had a tumor in her brain also. Now I will create the condition to put her in between to rapidly reduce the cancer.

Q: Do you suggest any kind of patch for someone with a brain problem like MS?

A: Sure, the doctors can help you with that. there are a group of doctors sitting behind the KF and doing teachings. If you have problems, you can ask the doctors to help you to do properly what you want to do. Order the balls; we want everybody to try them. you will see the interaction right away if you create the flow between two balls and the patient is in between then you make the change.

Q: The balls you were doing, did you put 3 balls inside each other?

A: Yes, 3. you can put 2 and see what kind of interaction that you get. The mixture of GANS must be understood...which mixture do you put in the center and which mixture do you put on the outside.

R: Another question from J: He says that he was thinking about the field strength and making a reactor or a craft that I can control with my mind. I am stuck on the question of making the GANS and put the parts together myself, what would happen if all the parts were made by one person other than me? When I achieved lift and was in the sky, would the other person have any power over my craft more than I would since the field was also part of that creation for me and maybe more than mine since I only made the GANS.

A: Nothing is more than your creation. you put your blood and your amino acid in the middle of the core with the GANS mixture. One drop is more than enough.

R: A comment from Nick says that as long as your amino acid is in the center then you are in control.

A: That is why we are encouraging everyone to make their own reactors.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

R: That is what J was worried about.

A: There is no waste; if you make a mistake you correct it. it is nothing else, nothing more.

R: It's all about the field transfer. Your principal matter is in the center, the transition on the middle coil and the matter on the outer circle.

A: We need to cover that everybody needs to test so you can see it. otherwise I will explain everyday 10 hours a day. If you don't do this, you won't understand it. If you don't understand it, you are not going to carry the knowledge with you.

Unintelligible question from F.

A: For now, we show the way we showed and the motor sits right here (no drawing) and we rotate it. you need to start the motion for your plasma. (drawing at 1.44.26 minutes). When you rotate with the motor the outside cores interact with each other and then connect with the 3rd.

F: The tube is only to spin the wheel and has no other use, right?

A: In the old times the wizards had a stick and when they stirred they put their emotions and perhaps a cup appeared on the table. If you have a stick you can transfer your emotion to physicality. That is what you are doing with the motor and the ball at the top.

F: So the tube is only there to hold the ball.

A: You can rotate the plasma with your emotion. We should go step by step. F: We always want to be the first.

R: What will happen if you went directly to pure fields? What would you end up with?

F: I believe we would end up with the power of the universe.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

A: You already have the power of the universe in you if you can open up. It has no meaning who does something first.

Caroline (C): I think there a lot of people who have been building their systems and they are too shy to show them.

A: Why?

C: How can we encourage them to come forward with them?

A: Very simple; they have to have the courage to come forward.

Oslo (O): We have something to show Arman. We don't want to interrupt conversations.

C: We are encouraging people to come forward and explain their work, please.

O: So everyone was complaining about the lack of light and we tried to improve on it. here is T.

T: Here is my first box and I have tested it. it's very important to do as Arman said – to build and then discover. If everything is to be theory you will never find anything out. I started to build a box (1.49.47 minutes). First you have to build the stacker and then do your drawings, step by step. So I built the box paying most attention to the stacker side of the box as that is where most of the action will happen. In the center of the coils you have what I call the heart. It looks like a heart. As I made the 'heart' with the double core it's hard to see that the inner core is really in the center. If it is in the center you get a better flow. I think I have a leakage and it's hard to see. I didn't realize how important the 'heart' was and yet if you take out the heart of the person, that person will die very quickly. There are two bottles on the right with the liquid plasma and this is the gravity field. It is the one on the right is liquid plasma lead base and the one on the inside is liquid plasma of the CO₂ and CH₃ and CuO liquid plasma. The bottles look much alike in

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

the liquid plasma state so you should label them. When you are doing your connections you have to preview everything from the heart. There is a hole in the wooden wall by the force field 'heart.' You want to connect to the gravitational magnetic field to the super conductor on the coils. There is a second connection to the gravitational and magnetic field coils to the load side on the battery on the motor. The three of these are connected to the battery and I have been trying several voltages just to see the reaction of the skin of the motor.

T: It's all working like it should and what you get is first when it started you heard the sound of the motor. After a couple of minutes, it sounds like the waterfall in a creek—a beautiful sound. When you feel that you will get a strong connection to the heart. That is just the beginning. Then when you have this in the heart you start to feel a broader action to the whole body to the extent that it feels like somebody is touching you. I had a huge pressure on the nose and then on the brain and suddenly I was 'out in space.' When I was out in space that was a big surprise and I didn't expect this to happen. There was dark blue sky with all the stars and the distance between the stars was getting closer and closer and that is where I realized what kind of energy this is. One of the words to describe it with is 'infinite power.' There is no measure to that kind of power on the human scale. I was holding the motor during the first test to see where from the motor side if I would have less friction to the 'heart.' At the same time, I had the lamp on which was the load side so it was all very practical. I thought that was all I could do from the testing.

T: When you start you realize that this is not a game. This is really serious, and huge energies and you get to be part of the universe in a very literal sense. I remember I could see myself getting smaller and smaller very, very fast and the body disappeared because of this speed in which I was leaving the planet. Then the planet disappeared as well. First I got smaller and then the whole planet got smaller and then I was just part of the universe. But I did see the distance

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

between the stars getting tighter as they were approaching each other. And then I became more conscious of what I was actually doing and I guess that was because Monique was passing back and forth behind me. That is when I looked at the box and the double core and I could actually see all 'charge' in the liquid plasma water. I could see the amino acids, the CH_3 , CO_2 —I could see them all working in a very funny way and visiting the station. It was like the stations and it came through the heart to the bottles, and then the connections there to the heart and to the bottles and then the connections there from the heart to connections on the liquid plasma bottle side of the unit and then up and over to the motor and then it started again. So I could see the energies in a kind of physical way and I could recognize the amino acid as consciousness and all the rest of them. It's like molecules and atoms and you can 'see' them working in the fields. I realized it's a communication box and they are all communicating. It's not simple to understand. The way they are communicating is the energy and you have to be very precise about what you want.

T: If you want energy you have to be precise about what kind of energy. The charge is energy and it is working through communication. Of course, I don't think I got the correct spin. Since I made the heart finish I couldn't see how perfect it should be. perfect only means that when you are doing the construction try to do the most precise step by step approach so that you will have an idea of where you are going from here. Now I found out that if you have a triple core, a triple connection on each field you make it simple for yourself. (2.02.16 minutes) This is how you can get the energy out of the turquoise spins in the water molecules.

A: What is in the middle of the core, what kind of GANS in the stacker?

T: In this unit I made together 40 different food GANS in the liquid plasma state with some CO_2 since the liquid was a bit 'fat' and it had a reaction at once and suddenly became very liquid. Even if it hard to understand the amino acids from every food GANS are your 'soldiers' and they are going to work on your side. They ask you questions: *what do you want*. The human race has to prepare themselves

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

to get the correct answers. I don't think anybody will get this far if they have bad intentions. One should be very humble especially when they see the powers of this unit because they are literally the powers from the universe. There is no measure, no idea of DC or AC energy. This is serious, beautiful stuff and it's very, very intelligent.

A: Thank you this is quite beautiful. Remember, you don't need bigger balls; you need bigger mass. If you understand it can be smaller, but what you load in them is the most important.

T: Yes, of course, I got kind of lucky because this ball is not for plasma energy builders. It is the only ball I found that I could link into this technology.

A: You can glue those together?

T: Yes, it's very simple.

A: Where did you get the balls?

T: This is a disco ball.

A: It's an LED light.

T: This one is a candle making shape for creating your own candles.

A: Thank you; that is what we want is people building their own reactors and creating their own fields—whatever makes them happy.

T: This is a pen and it fits and every time you make your connections make sure it is water proof.

A: What do you mean waterproof?

T: I did some liquid plasma water up here you get the press between the halves of the ball so you don't have leakage at the beginning.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

A: Thank you very much; you can call me sometime and I can direct you with some things you can make.

Douglas (D): Brother T you said at the beginning and I didn't want to interrupt that you had a leakage. Was it a liquid leakage or was it a field leakage?

T: What happened was that the sound of the creek was getting less and less so I demounted the tools and I realized I could fill it up more. I kind of hesitated because when I was filling it up I spoiled some liquid plasma and GANS combinations that look like this (2.08.47 minutes). This is a mixture of 30 to 40 different food GANS. It got quit messy here. This was the level which is underneath the core and I didn't know if the 'heart' was leaking but it dried out. So if there is a leakage it is a few drops and that is enough to replace the liquid plasma GANS with oxygen. When that happens you don't get the fields that you want. In order not to play with oxygen in the bottles you have to fill them up to the top and that is going to push the air molecules out. What is also interesting is that during the 2nd or 3rd test you have tiny bubbles in the bottles like a normal reaction from the heart and the liquid plasmas.

D: I have seen these bubbles too in some of the things I have done and I know exactly what you are talking about.

T: It's alive and at some stages it gets organic and when it comes to see the energies and how it is working in the flow. You get to see all the different combinations that you are working with.

C: Do you have the feeling that the bubbles are energy bubbles or packages?

T: Oh, the bubbles are ... you know when you connect the gravitational and the magnetic fields....are in bottles. You have to kind of put the lock on the right side so you can close it afterwards. The oxygen from the top of the bottle lid to the

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

liquid plasma and that is where you can see the reaction from the small bottles. The more you charge it with DC it disappears.

C: Are you only using food GANS?

T: No, the outer core is CH_3 and the inner core has all the food GANS, and I repeated the small drops of zinc, copper, iron liquid plasma. Especially the zinc liquid plasma; I was afraid it would turn out like glue. But it worked very well and if people will gather all the field GANS and put some zinc based liquid plasma in it and it will have a very fast reaction to clear up the liquid. It works very fast and you don't need much zinc base.

C: What do you mean by clearing up?

T: The liquid suddenly gets like water without out the grit (?). one of the liquid plasmas from the food is soursop and it gets like glue. It is transparent glue and doesn't smell that good. But when you put some zinc liquid plasma with it there is an immediate reaction and it gets like metal liquid plasma. It is better for the flow because the food GANS have the tendency to get thick like liquid glue.

C: Is it possible to see close up how your liquids are changing? How they are rotating.

T: Of course. I built this very fast in 8 days to finish this. I was thinking that every time since I was working very fast it was important to make films so that people can see all the steps. The next step now, with the pen and ball is extremely important so you get to the fields without disturbing (2.16.28 minutes) the mechanical parts and you get the spins and everything. then this combination to see the gravitational and magnetic fields and how you get in there without having any leakage is extremely important. When it is transferred you get to see how you can create literally your own universe. This is going to be completely in the center and one of the reasons this is important is because of the flow on the outside (2.17.29 minutes). But, at the same time you use nano coated copper wire that are working for you and they take up very little space. It's the same with the inner core, to get to the inner core first.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

C: Are you using any sugar in your combinations?

T: I use 'liquid gum' (he holds up the bottle at 2.18.19 minutes). That is the only sugar I use. It's cocktail sugar.

A: Don't put too much; you'll get drunk!

T: There's no alcohol in it.

C: It's not the alcohol. You can still get drunk!

A: The sugar can do it.

T: I didn't expect any space traveling and was a bit shocked and I sat down for 20 minutes. It was like a 10 times successful meditation. You have no control. I had a question last night if there was a time gap; that was hard to answer because it happened so quickly. I think the view was a couple of seconds but I did have 2 consciousnesses...there was one up in space and one here. They are not mixed. So I don't know how to put the experience in time.

C: Do you mean that you were 'present' in both of them?

T: Yes. when I was up there I was only up there. when I came back, I realized I came back and that was the big surprise.

A: You said your wife disturbed you and you came back.

T: No, she didn't disturb me, it's just that

A: She didn't disturb you; her appearance disturbed you. how about that?

C: When they too close the fields are aware of it and it's a natural barrier. It is like when you are sleeping and someone walks into your room and you wake up; it's your awareness.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

T: Thank you Caroline; that is exactly what I realized. Since I didn't expect any of it that was the shock. Then I realized that I have to prepare and I wasn't prepared for that kind of information. not at all. I was sitting here working with my connections and suddenly, for example when I sat for the 20 minutes trying to ground myself, I realized that I had a new energy that I cannot explain. It was the whole body and I could feel underneath my feet and above my head a completely new energy. I never felt it before and I don't know if it is positive or negative and I don't really care. It felt like I entered the world with a new battery and the whole word is going to ask *what is it for*. I don't have the answer; I don't know what it is for, but it is completely new. I have this repeating word over and over again—*new*. It's not positive and it's not negative.

C: What did you learn from this experience as a message?

T: First I would say the feeling of being humble because I realized how our stories on this planet, the way we feel them and believe them are completely worthless compared to the universe where everything is harmony and everything communicates and during the communication it is a dance and a harmony that has nothing to do with your stories; they just are not there anymore. not one of those stories—who you are, where you come from. You are part of something that is so big and powerful and its communication; it's all communicating. As soon as it starts to grab your heart you have to breathe and take care of yourself. It's blowing your mind. The superconductors are showing the energy. Then you get as the secondary effect you can see whatever you want. The reason I am saying that when all this is communicating and you are part of it, then I understand that people have to prepare themselves because it is really far from what we think.

C: It doesn't come close to our imagination does it?

T: We are a species that doesn't understand this communication so we say this is power, this is AC, and this is DC which is all crap. It doesn't mean anything.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

C: So how do you prepare yourself better to go in this state? How would you advise people because you have been there?

T: I hope that as many people as possible are going to build and have their own experience. If the bad people in this world have frustration or anger and they get close to this energy they are completely changed. It is like WOW! It is mind-blowing.

C: How would you say they will change? how will it affect them?

T: Since it is so clear that there is no conflict when you can see how the small particles are communicating and the way they are communicating it is like a symphony and there is no misunderstanding.

C: Yes, but people say if they go in unprepared, as you did then you say you will be better prepared next time. and then you compare it as the balance; there is not right or wrong. But if they are out of balance it deflects them so fast. This is what Mr. Keshe was teaching in his last teachings. When you start making your systems so you change people. You make the connection through the system.

T: When I say that I don't know what this energy is, when I was referring to the body, it is quite typical. Even if you don't know what it is and you can feel it and it is new I wouldn't be surprised that it is leading up to something because it is not typical to experience that it is not positive or negative, we have the tendency to say that if it is positive it is a great experience and if it is negative it is a horrible experience. It none of them.

C: Let me interrupt you. What if it is everyone who is building their systems according to what they can achieve and how they can manage in their own way, it is the fields and the intention of how they are getting built. We will reach and the intention will make the connection between all of us and we will make that transition.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

T: I had to slap my face to realize that every time I was thinking I was getting closer and closer to test the device when really I was getting closer and closer to testing myself. That is the truth. because during the process of the building, I analyzed and recognized that this is like a jump from however you can prepare yourself it is limited compared to the universe. So, you would be surprised for sure because you cannot expect something like this unless you have the experience.

Ali: I added a motor today to the system and this was from today's class. What I experienced is that I rotated the liquid and I was tapping into something called 'free plasma' which is the building block of creation. I did put a bit of iodine in my mixture as well and that changed the whole thing. I rested on my floor and I experience that turbine going to a bigger space, a bigger kind of container that we are is what I experienced. It opens a new door and a bigger world that this is the planet and reality that we live in and it opens a bigger universe for us to enter into. It is kind of like a birthing because you experienced that. that is how I can describe it.

C: How long does this new energy that you experience staying present?

Ali: As soon as I rotated it I felt the energy change and I experienced it fully through my soul and my being after I slept on the ground and closed my eyes and let my consciousness know what was happening. It was immediate as soon as I rotated it. because I used a very simple .. the hardest piece of this system is the motor part to rotate the liquid plasma to create the field plasma to a free plasma. There is a very easy way, an easy solution that I think one of our students brought in the private teaching. What was his name? he was talking about the blenders. It was Brett and I went to a shop and I got a mixer and it's a very simple system anyone can do.

T: Did you feel like it was grabbing your heart?

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

Ali: Because I put iodine in, it was more soul/consciousness connection and I could communicate with the food plasma that has a consciousness. You can sense it and feel it and some people say they can see the free plasmas that are produced. it is the free plasma that is produced.

Monique (M): Is it drops of iodine or GANS water of iodine?

Ali: I used the normal table salts that are iodized. I put it in the mixture of caustic soda and then added it to the mix of all the other GANS. 2.35.00

T: Our combinations of the molecule and the cell structure, you have 2 of the preparations for the emotional part and the genetic part that should be in balance. And, if this energy from this device is providing balance and equilibrium through the emotional and genetic body then if you don't go to a specialist like a psychiatrist and you get the energy like a download, then it feels very new and at the same time as you start to live with that kind of energy then you realize more and more what it is good for and how to use it. that is really interesting and that is how I feel that it is. When you are preparing yourself it is on the atom level and it is going faster and faster and you are getting more light towards emotions and genetics. I could feel that it was very personal between the device and me. I didn't think how my DNA could be communicating with my field in such an intense way. that was a surprise. When this is happening it is so big and so much information that it is complicated.

C: You have no time to stand still.

T: Yes, it is happening so fast. This energy is a new field on the body.

C: How important is your body in this whole process if I may ask?

T: It confirms that if you want to be part of the new energy it will be sustainable. Then the big #1 is not you but is Mother Earth. You have a new culture and behavior that is going to grow bigger and bigger because the response from the field is about understanding and communication and the energy is about

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

communication. The field is about communication and the whole body system from the cellular and molecular structure is about communication. When you understand communication there are no mistakes like dilemmas or compromises.

C: This is just depending on the right communication with the fields that you can understand them? they actually guide you or do you go into it?

T: They guide you.

C: They come to balance you but you have to create the fields to get access for them to come back to you.

T: exactly, because the intelligence of this energy is so huge that you are not going to be the leader; you are just part of something.

Ali: exactly; it's like you are already part of it but you don't know you are part of it and it's like when you see a child just born. In the beginning the child is in the mother and his world is very small and he is contained in that environment. The consciousness of humanity right now is similar to that birthing. We are in this container called planet earth and the surroundings that we call space. And, we as a consciousness are birthing into such a vast world that is so vast that we cannot imagine.

T: When I was holding the motor there were all kinds of insects coming into the room because the door was open. We could see enormous bumblebees and huge moths and flies sitting on the box. It was a gathering, a melting pot.

C: I would like to read something that came up in the Zoom webinar chats and it says I wish there were enough Magrav cores on the planet to create truthfulness in living. As the anger within most of humanity does not create enough plasma energy within a region and that is why there is lots of suffering.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

C: Yes, because we have a nano coated infinity stick under my computer so I can only ready parts of it. let me restart as this is important.

I wish there were enough margrave cores on the planet to create truthfulness in living. As anger within most of humanity creates not enough energy plasma, created within the solar region, that is why lots of people are suffering from all sorts of diseases because of not enough solar energy plasma. If we can remove all fear from all attention that is acknowledging ... the technology is the smaller part of the bigger picture that gives relief but it is not enough so far to remove the attention I think we have to build our systems even if they are in water buckets. You have built all your systems and you have all the tools in the house. It doesn't matter if it is transparent or not, start building. Start showing and give them to Rick and he will be happy to present them. Ali is working in his way and T has been working for a long time in the background. I keep an eye on your work, T. it needs time for what has happened in the last 4 weeks. Things have speeded up so fast but we are calling people up. Arman is there for sure; Renan is there –the whole team is there. if you are getting stuck, go to the chat rooms; all our teams are following the chat rooms. When the question is there they will give you a hand. Even T will be there to help you; I am sure of that. they will be there and they will be working with you; nobody will be left behind. It is just we created the universal chat rooms. Come in there and post your questions and re-post them if you don't find somebody to give you a hand, pick you up and take you further. It is going to go faster. I am sure Alexz is there. there are so many teams teaching out there. Arman said, don't worry I will come and talk to you and see what you can adjust and add.

T: Something that is important and ironic is that if you get children toys and destroy them, use toothbrush motors where the toothbrush doesn't work anymore and you can get the motor out of the toothbrush and that will make enough spin to create the environment. So, what I am telling people and this is

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

simplified, when you are on the moon and you push a ball, the ball is not going to stop. Depending on the pressure on the ball that will decide the spin....

C: I will interrupt you because we on our sides can work from the engines and the motors and take them from everywhere; we can find them in 2nd hand shops and dumps and find useful materials. I am trying to push the people who don't have those facilities. They can't go out and buy the equipment; that is where the teaching should go deeper to use the balls and use the fields to go around. Everybody can achieve when they know how to make their GANS. Everybody understood. I think it is very clear that we have to be taught *how much GANS, how much to put in the balls, how much liquid and which kind of GANS should be used, where are the balls placed and give them that kind of help instead of going through electronic systems. Teach them with a bucket of water. If they achieved making GANS, they have the ping pong balls and they know how to fill them up and in what ratio. I am sure all of your teams can help to guide them. they will rotate without engines and motors. You are in a different state and there are a lot of people who don't have access to these things. they have to put food on the table. I would be really glad if you would put these guides and helping in two different platforms—the ones who can work in the electronic world and the ones who are absolutely not at home with these electronic systems, but they can use what they can find in the toys.*

Ali: If you have a mixer in the kitchen get my video and this is very simple. If they have a mixer for cooking they can use it. I got this for \$10 today and it's a mixer with 5 speeds. I put some nano coated part on the beater and made it small so it would fit in the coils. This is a 3 Magrav stacker and this is a mixture of all my GANS from the beginning of the time where I collected from anything I made. Some may even have caustic in them. then I added iodized salt into the mix and there is a plastic separator that goes in the middle (beater goes through a lid as the plastic separator—2.49.48 minutes). Then I fix it and it goes in the middle of

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

the coils; then just turn it on and it will rotate the liquid. That is all I did; it's not connected to anything and it is just working on free plasma. You just turn it on.

C: You have made universal soup, Ali.

Ali: Yes.

C: The trick with the iodine is marvelous and you can find it in the Himalayan salt too.

Ali: Yes.

C: I love the salt for iodine.

R: I was just reading about Himalayan salt and it's 1 or 2 per cent iodine. It's a large percentage.

Ali: You can buy iodine tablets and crush them.

C: You can buy the liquid.

M: There is a company that sells one of the purest iodine liquids on the market.

C: It doesn't have to be pure; you are going to put it in your soup anyway. What I want to point out, you can use the mixer. But I want people to teach how to do this same setup as here without the mixer. Try to teach people how to fill up their ping pong and Christmas balls and position the right GANS with them and get things moving with their fields.

R: Caroline I have some pictures from Zalton and it may be appropriate to show them.

C: I would love to see the position of the buckets of the GANS and his Magrav system. Thank you Ali for sharing. And thank you T and M for sharing. I watched

this yesterday morning and I knew what was coming. Keep teaching and don't stop.

M from Calif.: I have something to show you. this is a demonstration and I want to share with you.

R: We don't let people show things as this is our security. I normally look at the presentation first.

C: Show this offline to Rick and show it.

M: This is an ancient picture in the British museum.

R: We have copyright issues.

M: There is no copyright issue.

R: We have to announce the source of the picture and we have trouble with copyright issues. Send what you want to present and we will do this in the next workshop.

C: We cannot take any risks. Put this in the Zoom and show it to Rick.

M: I'll put it on Facebook.

C: I cannot bring it to live stream.

R: You have to go through our security process and be vetted; I have to make sure people go through the security process.

C: They post in chat rooms and the Facebook; I'm willing to share information fast, easy and accessible. But please send everything to Rick. I picked these pictures from Facebook and sent them to Rick.

R: This is a series of pictures from Zoltan. I don't know the environment and is he part of this group? He might need a translator. Sandor help me with this.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

S: Zoltan is in the viewers.

R: Zoltan you are now in the panelists and you should be able to hear and speak. Sandor do you want to speak?

S: I just messaged through skype.

Z: greetings for everybody. He would like to write on the chat but can't right now because of copper GANS on his keyboard.

R: What do we see in this first picture? What is sticking into the GANS mixture?

Z: That is a brush; he has made a mixture of GANS and caustic soda. This is a soup for covering the nano coating the Magrav. He used the brush to mix it up. You can just see the edge of the Magrav.

R: Let me clear, but where the tip of the brush is, is that a drop or is that a vortex created?

Z: It's a drop that dropped from the brush.

R: Next picture. Notice the time. the first one was 9.46 and the next one is 9.54. this is the mixture starting to form. This is next one and there is some formation in the GANS that looks streaked or layered.

Z: It starts to position and align inside.

R: This photo is 11.23. about 40 minutes later. Now the next one is like a homogenous mixture and there are some black spots. We don't see a definite pattern in this. Now look at the next picture and we see a definite pattern on the left side. (3.05.04 minutes). We see the spiral formation on the left side and it looks like a double spiral and on the right side there isn't an exact spiral shape and there is some sort of interface between the two areas.

Z: The Magrav has been taken apart and he removed it. we have set it up already and we made a new Magrav and then several Magrav units. He had a Magrav that didn't work properly and he took it apart and found a not good coating on the

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

upper coil and that is why he made this mixture. Meanwhile nearby on top of the refrigerator he has another Magrav unit that is working.

Z: First there was a double spiral. The picture at 11.46 definitely shows the double spiral and it looks like something you'd see in ancient rock inscriptions or modern geometric artists.

Ali: Both spirals have different rotations: one is left to right and the other is left to right.

Z: This is part of the field.

A: He created an acidic condition.

Z: Now he says it is not what he put inside; he used the brush to stir it up. He realized what happened was in the bottom of the plastic box there was a figure 8 from nano coating a coil. So the water in the bottom had a figure 8 nano coated wire.

A: Now you have the direction of the fields. ask him where the Magrav unit is located.

Z: It was this way. (see drawing 3.11.40 minutes). There is the figure 8 between the two spirals. He had one figure eight and a smaller figure 8 across the middle of the larger figure eight. It is nano coated copper.

A: So he put this inside the container?

Z: Yes, it is at the bottom of the container. Z took it out and the figure 8 shapes did not stop after he took out the coil. The fields stayed in the same place.

R: What is the combination of GANS?

Z: A few drops of lead, a lot of CH₃ and CO₂, molybdenum (from the harvest of his hard drive), No, CuO, aluminum, silver, gold. These are just traces and not big quantities. The traces came off the brush for the gold and the silver GANS. Z will try to do the same with the separate GANS not in a mixture.

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

C: These boxes in the picture are 3 meters away from his Magrav system; can we see that?

Z: There is a Magrav on top of the refrigerator which is 3 meters away from the table where this box of GANS is.

C: Mr. Keshe is interested in the distance from the boxes and the Magrav system. Can we have a view of the distance on the camera?

Z: I try to draw according to the description. Here is the room and here is the refrigerator. (see green drawing boxes at 3.18.13 minutes).

C: When I saw the pictures with that explanation, Mr. K and I thought this was formed because he implemented the distance from the Magrav unit and the boxes.

Z: He has various GANS against the window on the opposite end of the table from the box of the GANS mixture. (3.19.52 minutes)

J: Is part of the question where he was standing?

C: No, I received 2 pictures with this pattern and the picture title is 3 meters from the Magrav system. The indication of that pattern of the GANS in the box is influenced by the Magrav which is 3 meters away. We wanted to find out if that was correct and we would like a visual from it.

Z: There is no separate camera, only his laptop.

C: The movement in the boxes was created by the Magrav.

Z: See the table size measurements (3.22.35 minutes).

C: restart from before and try to take a video when everything starts building up with the fields. Rick was pointing out the pictures and the time frame. Maybe this can be shown in a short video.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

Z: He has a 2nd Magrav which was on the table and has been taken it apart to put the coils into the soup. So it is harder to reproduce. But there is another Magrav that is being re-assembled.

A: Try this with one Magrav. Bring the unit where the GANS are and the box that contains the mixture. Try with one Magrav that is on the refrigerator and move it between the GANS and the container with the mixture of the GANS.

Z: So this switches the 3 meters distance from the first set of pictures. The second Magrav is moved to another room and is behind the wall of the work room. He will move that Magrav and put it on the work table.

C: every experiment and test is welcome to see how things are moving and will be very nice. Thank you.

Z: everybody is welcome; this is my pleasure.

C: Thank you for the translation Sandor.

Marco in Australia: (Ma) may I start my video on my reactor?

R: Have I met you. we need to go through the vetting process. If there is background music it can interfere with the broadcast.

A: Today everybody is presenting their Magravs, connections and GANS. It is video and he has done it and is showing from his house and we don't have a problem.

M: picture of unit with very large ball. (3.31.02 minutes). George set this system up. The ball-shaped bowl is the set up with the GANS mixture. There is a plastic blue ball connected to the tube and inside the ball-shaped bowl; there is one ping pong ball inside the blue plastic ball forming the inner core, and a black ping pong ball connected to the shaft/tube so that one will rotate clockwise and one will

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

rotate anti-clockwise. I had a long discussion with George about the problem of filling the blue plastic ball halves with the liquid. If I fill this with CH₃ GANS, and then I remove it so the blue plastic ball carries the field strength of the CH₃, correct?

A: Yes. Nano-coat your cores. Whatever field you apply with the Nano-coat will be carried. You can rotate 'dry' GANS. If you are doing the test put a bit of dry GANS in the core with the liquid GANS to see the interaction. Put dry CH₃.

George (G): put the dry CH₃ in the outer core. If I just use the field strength of CH₃ and the dry field strength of the GANS in the inner core, then can I rotate these? Will that concept work without having liquid in there to rotate the cores without the liquid? I have them set up with the field strength of whatever GANS I want in there.

A: Yes. whatever you apply for the Nano coated materials, you start rotating them and they will open up the fields; it is the same as if the liquid is there or you have the vapor plasma. It will be absorbed with your Nano-material and it will stay there. that is why I explained if you have the cores Nano-coated only and then you have your capacitors so you know exactly what kinds of fields you are directing to the cores. Do you understand?

G: So I was trying to eliminate having liquid in the cores so the liquid doesn't come out when we rotate them.

A: Try with liquid first because it is in the matter state that you can see right now. Then you will understand that you don't need all this equipment to start a rotation of this plasma in the air and you do it by your thoughts. We are not there right now, so try to put the liquid. See what fields and interactions the liquid brings. Then you can apply that to nano-coating material and the fields are still there. you can try that too. Try to understand the liquid first. A lot of people don't understand it and that is my point. You don't need to rotate the inside core. When it is loose inside and you have a certain speed it will rotate in the middle of the core.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

G: So seat the ping pong ball inside of the blue ball core without connecting it.

A: Yes. you are rotating the blue core inside the ball bowl and it will start its own rotation.

C: To understand Armen for everyone who is working this way, this gentleman do they have to nano coat their material before they use the GANS waters?

A: No.

C: can you differentiate when they need to nano coat and when they don't have to nano coat?

A: If you want to hold it and you create the nano material you apply it as a GANS material and it will stay on what you put it on such as the blue ball. When you have matter you keep the plasma inside.

C: I see people being confused when they have to nano coat and when they don't have to nano coat.

A: Try both.

R: In the old days the number one rule of the reactors that Mr. Keshe was describing they mostly used various combinations of gases and it was don't let the gases touch the walls of the container. You had the physicality element of the walls that would destroy the plasma so you had to find a way to keep the plasma in the center so it didn't touch the walls or create walls that repel the plasma or keep it centered in the center. Now with plasma water we are in a different situation where maybe it doesn't lose its fields to the surface of the inside of a sphere as easily as the plasmas that were in the initial reactors. So it's something to investigate and others may have input.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

C: Thank you and Armen is also right. Mr. Keshe is pushing them to do this in different ways non-protected nano coat, non-nano coat, to see how people have different results. Make sure that when you start building that you know what you are building and what you are building it for. Make sure your intentions are there and driving the way that you want to achieve. Please 'gift' to your system and don't always take from your systems. Make sure they can flourish and give.

R: One of the most surprising things I heard from Mr. K a few years ago that really stuck with me is that before we started talking about the reactors and the feeling and so on, he said that when he works with his reactors he starts them dozens or hundreds of times a day, these gaseous reactors he worked with in Iran, he prayed to his reactors every time he started one. He would say *I hope you are going to have as much fun with this as I am today*. I thought *wow, what a way to open up to this environment and we are going to do this with joy and with intention. Let's do it!* I thought that was very important and only in the last year or so we have started to investigate the relationship between the operators of these reactors and the actual operation of the reactor—the relationship between the plasmas of the entities involved.

A: Try everything. look around you at how the universe is made—it's all spherical. We don't need the GANS; you just need a little bit of the liquid to see the interaction. Now you bring the plasma to the liquid and that brings the totality; it's sphere.

C: I think Armen, Rick and others, when Rick was explaining he goes in quietly before he touches his reactor because people have to stand still and realize that you are creating; you are creators. Be aware of what you create and be prepared to give and not just receive. Your reactors as T was explaining are giving. Make sure your reactors will achieve the connection that you want and create more balance all over the planet. We can do this. Be aware that when you are creating from scratch, starting from zero, make sure your intuition knows to apply that

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

extra 'pepper and salt' as we say which is your feeling and your good intent. Then we are all going to be fine.

R: Well put, Caroline.

A: Thank you

C: Thank you all the teams all over and wherever they are... the list is too long and it's getting very busy everywhere. It doesn't stop we just carry on.

J: Thank you for your work with the council on Facebook—there are so many messages. Thank you for all the work you do on the background.

C: You are right Rick, I have a relationship with all of you and I am trying to make sure people are getting to the right places with the knowledge they are looking for. I have great news—a lot of times it doesn't get mention as we overlook the normal running of the KF all over this planet—and I am welcoming this Danish team which has a good start in their workshops. There are more workshops from other countries and there is a door opening in Mexico through Don who was trying to see about the life of the dog in Mexico. we have seen nice pictures from Holland and they are showing pictures of their workshops. I am trying to coordinate with Stanley on how to give each one of you your platforms where you can share and present your teaching. I have noticed that every single person has gone home with a working Magrav. Every single Magrav has been tested before they leave the workshops. Thank you so much for all your hard work. These are the little things that are not mentioned. There are so many teachers everywhere. I think Norway will step up now as we have been talking to see where we have English teachings and then subtitle in the languages. I have to thank so many to the translators. We have 18 languages and it is growing and more people are coming to help and participate with more contributions.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

R: Let me mentions about the transcriptions for the knowledge seekers workshops. They need to be on the subscript form and we can put the languages on the videos. There is room for people to participate and they can contact Stanley or me and then clear the security.

C: You are quite welcome; they are struggling for people who know what they are doing. I put a circular to get more translators. We need for them get in touch with you and Stanley for different jobs. We are all sharing and it would be very nice if people will send in more footage and more short videos; get your light clear so we can see what you are doing. Make sure they go to Rick first and don't open your cameras to share unless you get Rick's permission to go into public. I know you are there with your good hearts and there to share, but don't jeopardize that we have create so much extra work for Rick who does all this for nothing. Just one slight mistake can create so much work for our technical people and that is not needed. So please send mail or text or post before you open your cameras and Rick or your host or okay with it before you share because we are on a public platform. We have to shut everything down and it takes hours of delay before everyone can enjoy the teaching. If nothing goes wrong everything can go into the public right away. Thank you for all your contributions.

R: Thank you Caroline that was really clear. People with other presentations, let's organize them this week and have another great show next week.

C: remember we are in the holiday period and we are on standby and if you have any results please send them and Mr. will look at them and we will go live with it. so please bring your contribution and thank you.

R: It's the holidays and it's time to get to work and get on the fast track and proceed faster.

C: That made me laugh, Rick; that is what Mr.K said: *the holidays are coming and the work is going to start*. Have a nice time and don't just stay in your kitchens and basements but enjoy what you are doing.

Transcript from 124th Knowledge Seekers Workshop held July 28, 2016
