Rick (R): Welcome to the 125th knowledge seekers workshop on Friday July 29, 2016. there is new disclosure for this workshop.

Keshe (K): Good morning, good day. Yesterday I had to go into a meeting with high level officials on the work of the Keshe Foundation (KF) and it could not be there. Today we are going to carry on with what was supposed to be done yesterday. One of our colleagues has achieved what we explained and they are trying to replicate it for a second time and record it because when it happened he didn't see it. He achieved the flash of light and lift. If they can replicate it, they will come back. We are on the way with the complete process and we are developing different technologies that can help.

K: One of the most important parts of this technology which is missed and in a way we have to go back to it in a structured way for you to understand. In the process of the teaching in the past few weeks and months we showed how we came from the sun into what we called the transfer of the fields into the earth condition. (6.07 minutes) From this matters of this planet started. And then with the GANS technology we produced GANS which in a way come full circle. We have created conditions of the sun and the matter state conversion. But in this process (6.32 minutes) a lot of you missed something very important. Today's talk is about this. Can you see my writing clearly?

K: So what we have come to is the reality partly of what we missed in what we were looking for and what we have achieved. So, in this process we have missed something important and this is part of the teaching today. If you look, the

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

magnetic gravitational fields from one strength became gravitational magnetic fields of the other strength. that is the natural process in the universe. By our using nano materials and matter coming to the GANS state and coming back to the field, we have become and we helped the other side which was the natural process of the universe, in the section where we created our own new system. If you look at the whole system and return back with the energy that we see now (8.10 minutes) with your pens that absorb pain and other things, we have completed the circle.

K: The purpose of the teachings was this if you go back and read my papers on the unified field theory, completes this theory. We have confirmed the unification of the fields but it is not as one field but as two: one is magnetical and one is gravitational. That is why there was a problem in the past decades and centuries that we could not understand. When you speak about the unified field theory it means both gravitational and magnetical; we have to call it unified plasma rather than fields. In this process we have understood the totality of the structure of the creation of matter. so, if you go back what has been discussed for many years by scientists in unified field theory, now for the first time as in one group we understand it. if we apply this and understand it we can come through major breakthroughs of the separation of the matter state and the plasma.

K: This has been one of our biggest problems. We always considered matter state and we never considered the other (the field and plasma states--see the drawing at 9.42 minutes). We never considered this estate; we are too materialistic in the matter state of this planet and this is the only concern of ours. We never understood the other two (the GANS state and the field state). When you come to unified field theory now you understand that it is unified. It all starts with one (such as field) then goes through matter and plasma and comes back to the field. (10.10 minutes) it doesn't matter where or at what point you draw the line. If you

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

draw the line and start with matter, it will go to liquid and then field. If you start with field to matter to plasma it still goes through the same process.

K: So, in a very simple way we have unified the fields so you understand it. in the next step to go forward and develop the technologies, be aware of which state we are talking about. Are we talking about the source (field), the conversion to matter to state or the conversion to plasma state? this will change a lot for us in the world of science. It will change everything we planned or understood, not destroy but to be able to classify and put together and understand that each one has its own work and at the end one does not exist without the other (11.15 minutes) because they have 'come to' or 'go from'.

K: One of the biggest problems that you have faced and has been an obstacle in the teachings and I emphasized this many times but because it was not understood we how you convert from one to another and how you go from one to another (11.50 minutes). Many time in the teachings in the books I set the pre-condition and the explanation of this and today I complete this. By the time we finish the teaching today we have completed it. we have completed the full cycle of the understanding of the conversion. If you go back into Book 1 and understand the neutron splitting to the electron and the proton and if you go back to this understanding from the beginning, you start unraveling. Then the first pages of book one and what has been taught in the past weeks come together.

K: In the teaching we spoke about principal, transition and matter state (13.08 minutes—the principal is the inner circle, the transition is the middle circle and the matter state is the outer circle). Go back to putting the tools together. This is your proton (the first set of blue circles). Now you have the same with the electron. (The set of green circles (13.44 minutes). You have the principal, the transition and the matter state. in physics they tell you the size and dimension of

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

each one of these: 1 to 2000. if you understood this then it is very simple. What is the principal in the blue set of circles becomes the matter in the green set of circles? (14.34 minutes). What is principal in the green set of circles becomes the matter in the blue set of circles.

K: In the teachings and support teaching with the innovation teams working in the background, I asked them in the past few days, especially the past 48 hours to build such a thing and to build a reactor with 2 reactor poles where the material of A is outside of A and the material of B is inside of B. (15.35 minutes). When you understand this proposition in trying to reach from you call the transition boundary out to the matter state of the other, now you understand how in the universal condition you move from one state to the other. (16.18 minutes). This is been the secret of creation which man has not understood. That is why you have the electron and the proton and that is why you have twin stars and why you have 2 parts of the brain, where in the center is the transition of the fields.

K: We call it in physical life emotion and where the emotion decides which will move to where and how. If it is smaller or stronger on one side or weaker on the other. If you understood this, you can convert any energy in the universe to any matter at any state in the universal condition. And when you go from one to another if you notice, at the point of interaction, both of these points here and here (17.43 minutes) and in totality of the field you get the rapid conversion. In the human body we call it enlightenment or understanding. In the physical motion of the reactor in motion and lift you call it *the light*. If you look at what you called the UFO over Jerusalem on Christmas a few years ago, you see the craft coming down and you see a flash of light and a vertical upright. This is what the composite captain can do using his emotion to control the physicality with it and show its reaction. This is way we complete the science of man today.

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: This is why if you understand and the world of science understands, you can enter the world of creation and you decide where this orange zone is going to be (18.54 minutes). And this is how you communicate emotionally and with others emotionally and how you can elevate the principal or the soul of the man. We need to understand this and add to this so that we can go ahead. We need to go in the steps that we can understand this transition and we can understand how to go from one to another. We need to understand how a little of the principal can become a major part of the matter of the other and in this process what you create is motion.

K: You saw this motion in the presentation of the rotation of the liquid with Dr. Ghatta and I said this video that we saw was the corner principal in the first step of man understanding of his own condition. When you have the GANS of two different states acting with the GANS of another state and where the transition of the field forces creates the rotation. (20.48 minutes) if you understand this and you can consider how in turbines we convert the rotation in fields in contraction and interaction to electricity. And you understood this principal as I drew with the orange center (21,10 minutes) you can create balls to produce megawatts of energy, not even kilowatts and this is being done by many of you.

K: It is you who has to understand where to tap into and to understand how much energy you need. Then you will out when you make two cores with two different filling of the same you will create perpetual motion on both and by distancing them you dictate the rotation of the speed and the flow of the fields, the strength of emotion and the rest. (22.03 minutes). This is where we have to complete the knowledge and where now you understand that we need no generators, we need no nuclear fuel; we don't need anything at all except the creation of fields. At the moment you put GANS in these different areas. But in the coming time when we further the understanding of the all the states of matter (22.41 minutes) you will be dealing with what it is. There is no physical boundary as there is with a pen.

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

You will be dealing only with fields (22.51 minutes). And that is what it will be and if you understand this and how you can deal with fields and convert one to the other then very soon you will understand an amazing condition.

K: You can have any entity in any direction in the world of creation. this means that we do not need to create but to be in charge of the fields in the right order and it can go from one to another. And at one point in the center (23.30 minutes) is where you can everything you want in that matter field or whatever because even at this point you have the principal, the transition and the matter state. (23.47 minutes) This is the point of the creator that exists in all dimensions. The rest of creation in the universe works in these fields (24.00 minutes).

K: If you can replicate, develop and produce fields in this manner you will see everything which we have said and that has been done—vast amounts of energy, any kind of food, any kind of material, any kind of motion and this is what we come to in the teaching that you understand how this technology and all the teachings have brought us to the final point, to the point that from now on you have to learn how to play. Which one do you want to connect to what and in what manner, in what condition? Would you like it to be affected by the environmental fields or by your decision? You decide to create an environment in a zone that you want to be and manifest itself as you want it. (25.14 minutes)

K: This is part of the control; as I said you wish gold and it will be in your hand because you use the atmosphere of this planet that creates gold in respect to the condition of the sun and your thoughts become the transition line. The end product is gold and the beginning thought is the energy of your soul or the sun. (25.50 minutes—Notetaker idea: sun = soul; thoughts/emotion = transition; matter = gold). This is why I called for the teaching today as it was not complete yesterday and there is always a reason. It always has a reason, explains itself in a

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

very different and complete way. some of you saw the motion yesterday of the pendulum, very light motion. Some of you saw the motion of the liquid. Some of you will see new things in the coming days as you mix and you decide what and how you would like the mixture to be.

K: Arman and the innovation groups put a core, a second core around it and a third core around it. (26.37 minutes). The reason for that was very simple: for the second core to operate it needs to be in a floating condition that operates on its own strength. you can change this to the GANS but when you are flying in space where are you going to find the GANS? The next step for you and the development of this technology: you started with physicality and you go to the source for the accumulation of all the fields (27.15 minutes) and in that point then the amount of energy of the physicality will reverse and will create the entity.... The flash of light.

K: The prophets of the past always said they saw the fire of light—they got enlightened by bringing their physicality into the essence of their soul and by that they receive the light of the physicality of the universe. With that they absorb most of the information that they can understand (27.53 minutes) to transfer it. now all of you have the same capability. If you understand it, you reach the station of the prophets of the past and what we call the messengers of the universe. If you don't understand it, you battle it to stop it because it shows your own short-minded understanding of the knowledge of the universe.

K: It is you who will understand if you go from the center outwards; something very interesting happens. Now the center barrier from here (line drawn from the center coil to the outer coil and then around the coil 28.34 minutes). What was the physicality becomes part of the center itself and this is the state of the soul of the man and this is the state of the operation of the stars. This is how galaxies and

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

universes are created. Fields in the condition of environmental control, be it the womb of the mother or the universal atmosphere itself or the structure of the proton or the electron—once they created the matter state condition barrier they feed themselves back in to create the total energy and to manifest themselves as an entity.

K: As I said in the teaching the sperm and egg come together and multiply to a point that they reach to create that hollow sphere in the reactors. Remember in the reactor you rotated it and what you created was a hollow sphere that was the central plasma. (28.45 minutes) And then that central plasma will radiate the fields out to dictate its condition. At the point of conversion you see that light because so much energy which is gathered has to be released and the interaction of the boundary of this with the environment will create the light (30.05 minutes). And, then you see it as the flashing light as we have seen in the dome in Jerusalem.

K: Then the same thing happens in the womb of the mother and this happens with all of you who made the core reactors and you saw the hollow center. If you could have ad continuously from the material side to the center, the point would have come that the center would have opened up and you would have seen the light that you call the dome or the atmosphere or whatever you need it to be. this is where our teaching comes. One of our team has seen the light this morning and a couple of hours ago after I announced that we would have a teaching I received a message that they have witnessed the light and what happened. I explained that the plasma fields came together and when they merged together they became something else. That is when the light is released.

K: Is Douglas around?

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

D: Yes, I am here.

K: Can you repeat the experiment? Yes, I was following your instructions putting the two cores together and I told Renan that I had some stuff in the garage I was going to try for pH input which is organic with a pure alkalinity of 14. It is a natural substance used in raising the alkalinity of water to 14 even to test and calibrate instruments with. So I had 3 reactor inner cores that were all made of a heavy GANS. When they were put with the CH₃ they all sank. I couldn't get much of a reaction so I told Reenen I was going to try something and I knew I could raise the pH super-fast by raising it up with 14 pH. I took out half of the CH₃ out of the outer core of one of the reactor balls and filled the other half with the pure pH which is an organic citrus solution base. I resealed the core and spun the core on top of the reactor. My wife was sitting here 3 feet behind me. As I witnessed, first off that the balls for the first time floated. All three were sunk and now this one I changed was floating. I've done something right because I have made this heavy substance float.

D: My next idea was to spin it. So I started spinning the ball while I was sitting in my chair and my wife was behind me. As I started spinning the ball the inner ball that was floating was like drawn to the bottom to the outer core like some magnetical force. It was really super-fast. In the middle of this directly to the outer core there was a solid line of light that grew to the size of not quite the width of a pencil, but maybe the size of a small painter's paintbrush or an 8 to 10-inch wire and was a solid stream of light like a prism. I was standing up from my chair at the same time and was really coming apart at the seams. I am really excited about it now and I'm trying to remain calm. My wife was witnessing this. The ball came completely off the platform and it managed to leave the platform so fast and busted into the two halves against my ceiling.

D: My first reaction was *holy cow, where is the reactor! Don't step on it.*

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

After everything calmed down, the outer reactor had busted into two pieces. These were acrylic balls made of two pieces. Unfortunately, I have had to use toys that I cut open with my knife. I didn't have access to 2-part balls and I am fabricating these things myself anyway. When it hit the ceiling it smashed into 2 pieces. The inner core was fine; it was in another room. We don't know how it got there. it was unscathed and I have since rebuilt the outer core and am waiting for it to dry. My wife said that the strange thing about all this was this was instant for me. When I saw this light and vortex it was like a crystal starting from the top of the outside ball and going straight to the inner ball. It happened so fast and I just leapt out of my chair. My wife was 3 feet behind me and it scared her because she said that everything was going in slow motion from her point of view and I was moving like watching a replay on TV and everything was moving really slowly. She said she could actually see the fluid flying out of the ball as it left the platform. For me everything was instantaneous and this appeared to last 4 to 5 seconds for her. She was pretty astounded about where the ball went. It took us 15 minutes to find it and it was in the middle of another room. We cannot explain how the ball got into the other room under a door. If I'd had better control or better adhesion, I don't know. Maybe the ball wouldn't have left the platform, but once it left, it hit the ceiling so fast that it wasn't funny. I didn't have time to see it or blink when it smashed against the ceiling. Liquid went everywhere.

K: Let me ask a question; did you or your wife see a spread of light?

D: Yes, it was a bright light like a prism and that was why I jumped out of my chair.

K: That is what I was trying to explain before. But, when it exploded was there more light coming out with the liquid.

D: Yes, the vortex it created went straight down to the inner core and when it hit the inner core the bottom immediately ...to me this happened so fast and to my wife it was slow. To me it was over in a flash. It was like a flash of light and it had the colors of the rainbow ...I saw the different colors instantly before the ball

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

left—it was gone so fast Mr. K and up against my ceiling. That’s all I can say about it. it was slower for her.

K: Can you show us the apparatus so the people can replicate it?

D: I’ll be more than glad to.

K: I asked Douglas not to go fast and to calm down; thank you for being calm. Let us see what happened so people can replicate it.

D: I’m trying to remain calm but when you see something like that defies the laws of physics it is hard to remain calm. This is the outer core that I used; I have ordered 2 piece cores. You can see this (40.00 minutes)?

K: Yes, that is one core inside another.

D: I used a toy so I have to cut them open with a pocket knife. And they have flammable liquid in this. I’m doing the kids a favor by buying these and cutting them open because they actually have lighter fluid in them. it’s a toy that I cut apart. I have to reassemble these with a different type of glue. The only thing that seems to work well is model airplane glue. The inner core as you can see has one ml of CuO₂ GANS, 1 drop of my blood and the rest is CO₂ plasma water.

K: So you have a drop of copper oxide, a drop of your blood and the rest is CO₂?

D: Yes and then the outer core and I did CH₃ with the amino of CH₃. I used this which is the organic thing you buy at Hydroponic store and it’s called pH-Up and it is a generic brand. The first time I had this in all CH₃ the ball completely sunk to the bottom...all 4 reactor balls. So I remembered that I had to put something in so it didn’t sink. I remembered what Arman said about moving the hydrogen. I thought that I had the pure pH out in the garage and I can bring the CH₃ down and the pH up. I got the pH up and filled it up to the top with CO₂ and used hot glue to seal it up. I tapped in on the table to get all the air bubbles out. I draw them out with a syringe with a little needle and then I force the rest of the air

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

bubbles out while tapping on it at the same time. there might be a tiny air bubble left. I sealed it back up and thought I would spin this one.

D: I took my little platform spinning device and I adhered the ball on there. I haven't had any of these come apart and some of these are solid GANS. I have been doing this for months with these little motors. It's a 2 speed motor and when I turned it on, I noticed immediately there was a little drag to it and I skipped up to the second speed and it dropped like it was drawn by a magnetic force. It went so fast. In the middle I started a pin hole no thicker than a hair on your head through the plastic straight down like an umbilical cord. It kept getting bigger and bigger and bigger. It got to the point where it was about the width of this (46.02 minutes) and then I saw the light in the middle of that ball.

D: My wife was right behind me right here in this chair (46.11 minutes). She had her laptop and was watching. I was standing up saying *look at this*. The ball went straight up. I live in a modular home and the ceilings are barely 7 feet high and it went straight to the ceiling and smashed and covered me with CH3 and pH and it took us 15 minutes to find the other core. It went through this closed door out to the living room (46.40 minutes). That was strange was how the inner core out there. I am letting this dry thoroughly before I do this again. I did have a witness, my wife and she wouldn't lie for love nor money. I will record this so we can all see it.

K: Can we do it now?

D: This glue hasn't set up enough. In the last few days I have tried this so many times and I even used an automotive resin fiberglass. It won't hold up if it doesn't dry properly. I don't know if it's the pH being raised so high in the outer core. I am having to use an adhesive instead of a regular two-piece ball. I have to use an adhesive and I'm not a surgeon so these cuts are not exactly straight and I have to fill in gaps (48.04 minutes) with glue until the other balls I ordered come in. the

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

glue takes an extremely long time to dry and they will fall apart if we don't let them dry. I'd love to and we'd better wait until tomorrow for it to set up. I'll be more than glad to show it.

K: What is interesting is the light and the way you saw the structure of the light.

D: It was beautiful and it looked like a prism.

K: What you explained in your writing is that the center just lit up. Then it flew off.

D: It was like a little sun just like you said. This happened so fast and my wife got scared when she saw me moving in slow motion. She has seen me be able to do things I haven't been able to do for 6 years because of my back. She has accepted a few things.

K: Let me explain scientifically what you have done. If you go back in the teaching with the team in the Philippines who showed a few months ago that by adding GANS of oxidized materials into the water, you then make the water alkaline. What I set out from the beginning to do was to create alkaline internally and acidic externally. This is how the body of the man works. The stomach is acidic and the lymph is alkaline. Arman has a good saying for the energy transfer of alkaline: *pH is the power of hydrogen*. In the CH3 you transferred all the energy directly by adding all the alkaline directly into the alkaline side. Alkaline being in the center absorbed all the energy and it came to a point that it could not absorb any more and it had to release it. what I explained in the teaching and instantaneously creates a dynamic rotation and that is why the ball floats up, rotates, creates its own fields and releases the fields.

K: In a star formation this happens with all 4 of your reactors. If you don't have the top reactor to divert the energy back in you literally fly out of everywhere. But with the top core you control it and dictate how much it can go. What you have seen is the natural process and if the man understands the process to do the

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

same thing for himself he can travel anywhere without need for any flight machine. You can use to increase to the alkaline of the stomach and with it transfer the energy of the stomach into the alkaline of the physicality and you can fly anywhere. Many people for thousands of years they know they can go and control it. you have shown this for the first time.

K: I have seen this many times. When we used to be in Belgium I used to create it and hold the flight. Our neighbors made complaints to the police that there were strange lights coming from my house at night. So Caroline put thick insulation and more black tape so I could operate. I have seen flight many times. Now you have started it and we have seen Dr. Ghatta with the rotation of the liquids inside and outside that has brought the concentration of the energy. That is why it goes to the center. Now you put the alkaline inside. It will be interesting if you make another core but the opposite way.

D: Oh yes. I'm already on it.

K: So the way I asked you to do it yesterday?

D: Yes.

K: We have seen that you did the test last week. The change comes as we go back to the teaching where they put the nano coated material at the end of the string. At a given rotation the bottle twisted 90 degrees; in that way it released the energy in. here you have trapped the energy and now the switch had to come as the lift. You have achieved the lift that can be seen for the first time in the public. (53.44 minutes) You can create if you have 4 of these rotating machines; create 3 with the acidic in the center, the CH_3 and with the alkaline mixture and the alkaline outside and put one as exactly what you did with the acidic on the outside and the alkaline in the center. And by the speed of rotation you change the acidity to alkaline or transfer from giving to taking, magnetical to gravitational. And then you decide the flight. You are literally on the verge of a flight and you have seen it for the first time. now you have to repeat this process

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

not only with the 4 rings but by controlling the speed of the rotation of the plasma you can create the craft. In 24 hours you should be able to show us a structure. As I said last week, the minute that we see development that brings man to the point of the flight I come in.

K: Yesterday I could not teach because of the meeting with our people from overseas. Meanwhile in that time it was a gift with me trying to teach the balance and with you achieving this; now we are going to the next step. Lock in your 3 platforms on the ground on the table—glue them and make the same condition and move the one you had in the center and you should see a center light. This time the flow of the fields from the 3 reactors will break it and instead of shooting up you will start seeing a gradual lift. Maybe one of your coils will jump off but if you do it properly you will have it under control. you can expand the dimension of this craft as you like to 100 to 200 meters.

K: I will ask you a question. Was the door opened or closed when it flew?

D: The door was closed to the living because the kids have church camp tomorrow and they were all in bed. We were getting prepared in here and I was trying to build these reactors.

K: Let me explain to you what happened. The energy transfers of what you had in CH₃ and alkaline created the magnetic shield which can pass through anything. The thickness of the wall, the concrete 20 meters is irrelevant. Until it comes to balance. you don't see anything. It is the fields that carry the matter through. This is the way as I explained many times that you travel through dense fields in the universe. You can control and create it. when you say the center core was found in the other room the only possibility is that you created a shield with what we call the dark matter or the transition strength. the matter strength does not exist so it can go through anything. You most probably would have never found it if the

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

conversion of the control was not so rapid. Maybe you would have found it on the street 100 meters away until it becomes the balance of the matter state.

D: Here is the ball we found in the other room.

K: Because you didn't put any CH₃ in the center core, it was totally alkaline and then the outside had the CH₃ which is acidic and it wants to transfer energy. You brought a balance of alkaline to it and it transferred the energy exactly like the rotation of the material. If you go back in the tests shown by someone's on Renan's team a few months ago, they showed the alkalinity of the water by putting the spoon in the water and how it changed it. Now with a twist of the fields you can change the field from gravitational to magnetical. CH₃ is called magnetical in the plasma technology and in the human body we call it energy. The CU alkaline is gravitational and it pulls especially on the condition of the earth and the condition with the oxygen. All the materials you had were CuO₂, CO₂, and ZnO so that means gravitational and pulling. Oxygen is a pulling condition.

K: If you use lead, iodine and that and make it heavier the field strength will be much, much stronger. So if you can repeat this we will come back tomorrow and we won't stop the teaching until you or somebody like you can go on and show the light the way you say you have seen it, the total lift and then with it we go into the condition of what we call energy production and everything else. If you could create the double magnetical field-gravitational fields of the 2 balls (59.46 minutes) with CH₃ and the other one with the alkaline and then the other way with the CH₃ alkaline outside, you will come to understand something very interesting.

K: You will not need any power in the house; you can disconnect your grid because your appliances will take energy from the center from the environment

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

that you have created. And this is what I said because of the way I have been teaching your innovation group on how to mix GANS for the past 2 or 3 days and how to put the CH in the middle. You have literally achieved wireless energy transfer and you can literally feed the whole of the US government offices and all the US nation with one system. You make them like the sun and transfer energy to them. these balls carry the amount of energy in them to sustain humanity for centuries when they come to the GANS plasma. Because they created gravitational they tap into the universal energy and so the more you the more they take from the universal energy.

K: What we have shown today is the change of the course for humanity and I said it started with a video from Dr. Ghatta and then everything else. This is what we discussed in the past few days in respect to the energy transfer and the new generators. It is exactly in line for what we have been trying to do as a team in the Philippines and other places to achieve this. I congratulate you and that is why you are here to be able to do it and to show it and to show that the common man can go into deeper space with his own knowledge and he does not need to have the PhD and doctorate. That was what I always said to Arman: *we bring the knowledge to the man on the planet not through the offices of the planet.*

K: You and Arman are examples of this and the whole of Renan's team with Bernie and all the others and many people who are testing it. we have brought knowledge to man not to what I call offices, buildings, degrees and certificates. You achieved what man has been trying to achieve for thousands of years. but, it is to keep the concentration that we go to the next step and develop more technology for space, medicine, agriculture, and the rest.

K: I was teaching yesterday to our friends who were here with us. If you understood with what you create and can suspend it you can place this on top of

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

any farm and it will be the fertilizer, the energy of the water and the plants will grow without fertilizer, water, or rain or anything else. They will grow according to themselves and what they want to be and how they show themselves and what they feed to their environment. So now we have to wait to see what you show us next.

K: Other people please try to understand the ratio of the change from acidic to alkaline or from magnetical to gravitational. You don't need pumps and heavy things. But at the moment use the rotating facilities but if you use the right combination of mixture in a 3-ball and not a 2-ball condition you will find the rotation without the need for mortar (?—103.44 minutes). This is what I explained. Can I share my camera please? Thank you very much Douglas. We are waiting for you to show us the light or the flight. Don't do anything this time without your camera on. Make sure your camera is on before you start rotating and invite us in and we will all join you to watch.

D: Yes, sir, Mr. Keshe. I have learned by now; this is the 3rd time and 3rd time is a charm. I promise I will not let this happen again without a camera.

K: (104.14 minutes) as soon as it dries and if you want to test it and if you start it the whole KF team will come in and record it. what you achieved is the alkaline in the center (orange circle inside surrounded by pink circle). But you have to bring a rotation and the condition of the transfer because you have a physical barrier here in this structure (104.49 minutes) and you had to convert the energy of the alkaline or acidic to be able to cross in a rapid way and as you said *wolves with wolves, birds with birds*. When you added the acidity to some alkaline you created the transfer of energy (105.11 minutes). And without the change. This is what we explained in CH3 mixtures and the oxidized condition.

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: If you go back to the condition we explained that you are making the 3 cores and this is the second core and now you are building a third core which Arman at the moment is doing. (105.40 minutes). So, if you get the right mixture in the third core you will create the rotation of the second body (105.55 minutes) and what you will see is the energy transfer will be very rapid. And then you decide. You will see the hollow center in the middle and then you will see flight and the light and the system will create its own shield and its own position. As you put your own blood in the center with your emotion you will see the control.

K: This is all nothing...it was a flash of light. Your emotion controls instantaneously but your wife who has no blood in the center is not aware of it and she sees the time as slower. Now you understand why she said it was like slow motion and for you it was like a flash of light because it is your blood in there and you wanted to see light and your emotion was inside. You wanted and it was your decision to see. You are part of it and in control of it you don't see it because you are in it and the outsiders watch it. sometimes it is you to a second and it is millions of years to the others. The others are the human race that count the time of the age of the universe. But the passengers of the universe travel across the universe in seconds. That is why the time does not exist in the universal condition.

K: Now you understand the mystery of the creation if you have a true soul to see it. that is why for you it was one flash of light. I can put you there and structure the same thing and mankind will watch for hundreds of years and they will see nothing because to them it is a long time; to you it is what you have achieved in time. this is what I said that we see many spaceships outside the earth and to man they look like stars but they have never been stars. A lot of stars we see in the sky are in that position because time does not exist.

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: If you are an observer of the matter state you go by the time of the state of the matter and this is why you keep repeating that to you it was 'fast' but your wife saw it in slow motion. If you could have made the right combination to you it would have been a second. When you come out of it and the system hit the ceiling and had time to convert your children could have been hundreds of years old.

K: Time dimension does not exist in the universal balance. and now you have opened the door and people can try. Just be very, very careful. I showed this initially two or three years ago in Sosano where we could see the traces of the fields created by the GANS in the 4 reactors kilometers in the sky clouds and in the formation of the clouds. Because I see many of you have started this process and if your intention is there for this to show, it will show. The space crafts will be kilometers wide and it is you who has to be the passenger to be a part of it. the change of the technology is very rapid.

K: The whole understanding is the simplicity of it and this is what a lot of governments have been shaking and shivering for. In the coming time none of you have achieved this and you start doing it, we will start seeing the creation and the channels of communication with the universal community. Man is maturing very fast and we have asked for a direct line of contact with an opening in the universal community and it has been granted. Our only request from the governments is *do not shoot; do not take action and do not take position to defend. The missions are peaceful but if need be man will lose life in one state or another as we do not stand for this structure.*

K: Our message for the world leaders is very simple: *you do not capture us; we have come and we have delivered the technologies and the hand of friendship. The message is very, very simple: we said once that one breaks through we go to*

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

the next step because the maturity will pass on to the others. in the coming time in a very short time a large number of UFOs and what you call spaceships will be made by man and by creating these fields the way Douglas' ball went through the wall, you will see there are no walls on this planet and you are among the universal community.

K: It was explained by Douglas that he could see a light like a pencil going in. if you do it the right way, the light will pencil out and open the atmospheric condition of this planet into the universal community and you will see that you have been sitting in a self-enclosed show. As I said, we have granted the opening of the universal community to the human race. And now from today you will see.

K: My advice goes to those who think they have captured; we never get captured. We are here to deliver and to open the council. You have to understand how you add materials inside out and how you add materials inside. You understand that I do a lot of words on zero time to begin with which is 9 to 0. today is 2972016. it is the end of one and the beginning of the other (Note taker: 9 in numerology is the end of one; 0 is the beginning).

K: Try to develop the technology so that wherever you stand on the table in the drawing you decide if you want it to be the food, the light or the matter. (1.13.52 minutes). You decide from now on what you need with this system you have by positioning yourself accordingly. In your crafts that you build this is what happens: when you are hungry or in need of energy you go to the specific point in the craft. This is where the energy (1.14.13 minutes) and your amino acid will be there. If you want light you create the condition; if you want dark, there are some spaces where you want the dark will be created. If you want to have food in the shape of the banana and everything else, it will be done.

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: It is very simple; when I asked Douglas to join the KF innovation center we knew the soul of the man, not the physicality. And we knew this would come and it is the same with the others around the KF and now as I said it is our job we entered the world of politics in July. I gave a couple of hints and you are all in it. Because in a way with building the system we have finished with nationhood and we become one planet. Where is the ball going to land next time: Washington, Tehran, and Beijing? Now the knowledge belongs to you. Hundreds of thousands of you will see this, understand it and replicate it. You will understand the control between the acidic and the alkaline, and gravitational and magnetical energy, sugar and salt. Then you understand we have started the process of man and the communication with the universal community.

K: The universal council will meet in its initial state next week when we set up the first steps for contact. Those who have been accepted as members of the universal council will understand. For the first time we call the members of the core team to join. And now for the first time and probably the last time that they join it. That is why no member of the core team can be a member of the council. The core team is what you call the 'sea hedge(?)' and the universal council is the alkaline (?). You receive until you mature to become the givers.

K: The universal council will meet in the coming days; it has been requested. With it we meet with the members of the core team. And we establish the first lines of contact for humanity to be welcomed into the universal community. Hopefully by that time a number of you will be able to achieve the production of the systems. You will see the light and you understand the conversion. You will understand all the possibilities but there is one thing to remember that is very important.

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: Do not forget any of the teachings from day one because the way you came from the matter to the state of the plasma and the unified field, you need to go from the unified field to the plasma and back to the matter. That is why we taught this way so from your point of view where you come from you can go back to. We are teaching in respect to energy, agriculture, medicine and everything else. It has to be understood because in space if you convert yourself into the matter state of the region or the destination point and on that planet or that space in the universe they eat rocks of gold as food and you are trying to create wheat and bread which don't grow and you will starve to death. That is the time when you will convert back to the universal energy.

K: That is why we taught this way. Try to understand how you convert matter to energy and how you convert energy to matter. What is the taker and stable condition and what is the giver? How do you convert acidic to alkaline and alkaline into GANS and the GANS into the matter state and you make the body of the man? You have done it every second and millions of times in your body. Now you have to understand the process. If you are going from one to the other are you giving more so you become more alkaline or are you giving in a way by taking that gives you instead of alkaline or are you a total giver that you want to end up in the state of matter so that you become acidic or what we call 'magnetical?'

K: I taught this yesterday and the first few units have been made very simply. Renan can you share the two that you made yesterday with the alkaline and the acidic in the center? It was tube like an ampoule.

Renan (R): The cylinder that I made with the bolts?

K: This is not accidental. I set up the teaching this way with this specific group and I enjoy working with the Philippine group and Douglas and I share knowledge with them freely. They always keep the keep the secrecy until we decide. There is a lot of development in the background with them. We talk and share very openly. I

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

enjoy working with Bernie because he has the understanding of the soul of the man.

K: The reason you see these things coming out of the innovation group is not accidental. There is a lot of work that goes on in the background and we meet and talk frequently and we discuss and slowly elevate the condition. In an away the innovation center is the arm of the development of the knowledge which I carry. Have you found it?

R: Not yet.

K: What we have done in this structure is we have created a vertical condition like the human body and Renan will show you. We went out to create a condition (1.22.13 minutes) where we have put alkaline on two sides (one at each end) and we created acidic in the center. Energy transfers if you look at this, is another version of your stomach. The center (colored pink on the drawing) is the stomach where you intestine goes through and the two ends (colored orange) are the rest of your body.

K: If you look in the balls you built it is the same. (1.22.51 minutes) the acidic in the center can create mayhem for the alkaline and alkaline in the center can create mayhem for the acidic. I started working at 3:30 this morning to be able to bring this out. Now you understand as it is nearly 11 o'clock. I work 23 to 24 hours a day at the moment. The knowledge has to be completed.

R: I have the picture. (1.23.43 minutes). This is the GANS that are different and some of us have tried this before. This is the one where the areas on the ends of the tube are more acidic because it is the composite GANS. The center is the CH₃ GANS alone and in between them we just put nano-coated copper spiral and a baking paper divider using baking paper with sand in the middle just to separate the transfer of the fields. What is just amazing is that even when we did this for

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

several hours already it is a stable system with continuous fields going from the ends to the center. The principle here is that there are portions that there are continuous fields from the right end going to the center. So if we change this to the other side maybe there will be another portion that will go out in the opposite direction from the center so that the different GANS will be introduced as well.

R: (1.25.40 minutes) the set up below the tube is similar but we used patches. These are the plastic patches and in between them we use the middle electrolyte system with the sand and the baking paper just to be in between them so they can interact so there is a continuous flow of voltage and it has amperage as well. In this aspect it is amazing that this is stable. Until now when I test it, it still has the millivolts. I just charged it and re-tested it and put 12 volts on these two nodes. It told me that there was electric charge and then it drops to a certain level of voltage. But it can hold up to a one volt for about an hour of charging and then it goes down.

R: That is not the point here; the point is that there is a continuous flow of the fields that keeps it moving without any external factor that is being applied to it. so, the thing we want to see here is when there is a movement in the center area of the tube with the GANS moving when we look at it the GANS are still on the bottom and the water is still and I think the action is in the intersection at the end of the middle part where the coil is going in and we cannot see the movement in this area. That is the one thing we are looking into. Douglas made this into a ball and that is why he rotated the ball and had that experience.

R: We want to see if having the different acid base and the other thing we are looking into is using the dried GANS and mix it back into a liquid state. We are testing different dried GANS and putting the liquid GANS or the wet GANS and see if we can create more basic GANS and add some acidic GANS.

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: Let me explain this because we have not taught this in public, only in the private teachings because Renan is referring to something that is not known in the public so I explain and teach this. I explained this to them and Douglas found the reference in the books.

K: So what I am going to teach you, you will understand is a very big difference in the teaching. We are adding to the knowledge of the teaching. What has happened up to now is that you have seen only the water state which is the liquid (L) GANS. (129.07 minutes). But if you go to the original book in all my work I not only work with the liquid plasma. I started with the GANS and if I mix the GANS with the water liquid I have freedom. If you look at the picture in the book it is on plastic, I work with a gel and it has a lot of properties.

K: Up until now you have been using one type of GANS which is the liquid plasma. With the gel GANS you can add salt to it if you want it to be gravitational or you add sugar to it if you want it to be magnetical. Then it is what I taught you in respect to putting the GANS into the papers. When you add the GANS to the paper then you wrap it on your coils or your capacitors. If you let it go in the gel and then add any sugar or salt to it that allows the ability of the hydrogen to be given to it, if you are using sugar it becomes the giver and is magnetical. And salt, because of the presence of oxygen attracts oxygen to itself and in the presence of other materials in the GANS becomes gravitational and then it receives more as it gives and the capacitor becomes a generator. So you can use a gel condition.

K: You can go further and dry the GANS and if you have the book you see the powder which I show. This dry GANS has different properties and application in the space technology. It has a huge application. Up until now you were playing with the liquid GANS and the solid state of matter. With the GANS you do the

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

same and you can play with the liquid plasma, with the gel of the plasma or you can play with dry plasma and you will see totally new directions.

K: Those of you who get the dry powder and mix it with your water will find different properties than when you play with the liquid GANS. Those of you who play with the gel and then mix the gel with the water will find totally different properties. As I said I can teach you for the rest of your lives and you still have learned only a small percentage of the totality of the universe. But if you understand the way you play with the gas, the GANS, the liquid and solid, if you understand this in the dimension of the GANS now you play the same game (1.32.25 minutes). But in this state there is no interaction of the heat or the pressure.

K: The field is constant and it gives the possibility of having different interactions in different dimensions. (1.32.45 minutes). If you mix them then you have different things. If you mix nano material in the gel or if you mix the nano material in the dry GANS or you add the dry GANS to the liquid GANS it is totally different process. This is a new teaching and a lot of you need to learn. You played with the water, ice and vapor. And now if you understand this rapidly you will understand that field strength plays a huge game. You give or you take and then you can play new games, new toys and new ways of playing with the universal energy. 1.33.53

K: It's when you become in the state of the dry state of the GANS if you understand how to do it properly sometimes you can enter the matter state. This is where the nano to make nitrogen with the upper layers in conjunction with the moisture of the waters leads to the creation of matter state nitrogen. How you absorb energy from the GANS from planet earth is an oxygen interaction and you convert the GANS into matter. This is why we get hydrogen when it rains or when

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

there is moisture. That is why the lowest moisture on this planet is 15% because the moisture itself as part of the flow of the energy needs to add the material to the environment. It is the conversion; it is the oxygen which is the converter connector and with it converts in this atmospheric condition GANS state of the matter in dry into the GANS state into the matter state itself and we feel its tangibility.

K: This is why in our body we eat the food. We convert the energy and then into the GANS and then we can hold the hand of the man as the matter state. You create muscles and tissues. Now you can see how in the universe you convert the energies into the GANS then into the power then into the matter and as I said you can have as much gold as you like and as much meat as you like. You can become Italians in America. They could never have meat in Italy but when they found themselves on a continent with buffalo they added meat to their spaghetti and they still have a connection to spaghetti but now they call it Bolognese. But if you ask in Bologna from anyone they laugh and say they never had a spaghetti Bolognese. It doesn't exist. It is the invention of the Italians who went to America. Because they never had meat here, but there the meat was free and they added it to their food

K: It is the same when you go to space. You add the material from where you came in combination to where you are and then your emotion builds the strength of the environment you arrive in and decides if the spaghetti is going to be with Bolognese meat or not. But you still call it Bolognese. And then what happens? You decide to have 8 arms and 2 legs or 20 legs and no arms because you are a fast runner.

K: Now even today you learn a new state of matter of the condition of the GANS in the state. Go back to the book; this is in the book. It's good to give the page

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

because then you find it straight away as you did the day before. It's page 92 book 2. This is the CO2 dry GANS; this is published as part of the paper about the development of the GANS. The pictures are there and you see the power (powder?) If you look at the pictures you see different layers of the GANS and they don't mix because of the difference in their strength. one of the reasons why when you put the GANS in the water and you shake it up (138.46) and it takes time to go down is (garbled) in space you can use this property and what you have you create a GANS.

K: For example, copper oxide GANS are all gapped in distance but you are in the water in the GANS liquid water and you see the water increases more as the GANS goes to the bottom. What happens and why you have this that you keep getting water coming out is because now every one of these GANS (1.39.29 minutes) have to move one way or another to allow the molecules of water to slowly find their way to the top. As they come down this positioning comes back and then it allows the packing. (1.39.41 minutes). So you can use the GANS material as a filter, or a combination of GANS materials. It is you who adds or takes or can put a gel GANS in here or you can put a dry GANS here. You connect it (1.39.56 minutes), you decide if you want to want to take from the urine of the man iron or you want to take something.....garbled.... people who understood this (when I stop talking it is because of the internet connection so I stop teaching until it comes back) ...

K: I see there is a problem here; people are trying to load up on the line. What you see here (1.40.47 minutes) is the property which you have and that is what you see when you mix the water of the GANS. And then you let it settle. As the water passes through it absorbs the energy of the GANS so that is why this water you can drink and have all the property. Because it has become the atomic matter state of the water by going through the GANS and that has changed and taken the strength of the properties of the matter state. That is why as it filters through it

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

finds the property of the elements which are in the center of this (1.41.25 minutes) with the matter state.

K: Now you understand why the GANS water has the property of the matter you are. But if you understood further and we saw this yesterday you see bubbles in the structure in the middle of the water. These bubbles are pure plasma conditions that are created from the interaction of all the fields and all the principal energy becomes a bubble and that is why you have a center. (1.42.00 minutes) if you put your GANS material in your glass and put it on the rotating table and then let it go you will find the energy in this water is totally different (1.42.12 minutes) than when you normally do it; it is more concentrated and it has more strength. Because now all the energies of the free plasma are added to this as well and so it covers more spectrums of the energies which are needed. So you understand slowly and you come to it.

K: Douglas is one of the first ones who has started doing this. I have seen others. When he makes the capacitors from the liquid, he adds nano copper or nano something else into it because now the nano material and the GANS water of the capacitor becomes the denser energy and the powerful capacitors. That is why the capacitors made by Douglas are totally different than the others. Because he understood it and he does it automatically. We see these kinds of things a lot with the members of the KF Innovation Center. They have understood and they do it automatically and none of you have ever touched that. Now you store the copper nano, if it is copper nano dust, the outside is nano coated and the inside is still in the matter state and even if it is dust it stores a lot of energy and when you need it in the matter state it releases. (1.43.54 minutes).

K: This is one of the beauties of working with the genius of plasma because they do it naturally. The whole understanding is in these conditions every structure has

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

its own application. What do you add? You add the GANS, you add nano coated particles, you add particles which are nano coated, and each will have its own property. We knew this years ago when we did tests in Belgium with the scientists in the University of Ghent in the electrical engineering department. It was very, very obvious; without them knowing I could add materials and I could see how one system would perform. One of the people who understood the operational transfer of energy in this level is now the head of the electrical engineering department of Ghent University. But at the time he was the deputy head. He understood it very quickly and he did it himself; he thinks it is done in the cells. He said it works and I told him not to tell anyone or they would kill him.

K: This is how the process is and how when you, when you use patches, you will receive different kinds of energy. It depends if you add sugar or salt or a grain of copper into your patches as you have seen Renan explaining because now you add storage and you add capacitors in the matter state. Now you understand we are moving even in our new generation of the generators to be released and we should have hardly any matter state and we can produce megawatts of energy by understanding the transfer in the different state of the matter. if you put nano coated copper oxide in the center here and the outside here (1.46.31 minutes) and now you put sugar in here with your CH₃ and in here, God help you with what you are going to get. (1.46.42 minutes) Because as you saw with Renan's system we are tapping into the center. (1.46.53 minutes). You make another one and see how it goes. The papers, the aluminum will give different energy than when you change and put copper.

K: I told this to the innovation team about a week or so ago and we have seen the rapid development and achievement because in the innovation center you work with the people who understand the totality. And when the knowledge is as a child you bring the child from childhood to a genius. These people are becoming part of it because they understand and they are a closed community of 6 or 7 and

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

they analyze in the same direction. The innovation center group will bring new technologies very rapidly and that is what we set out to do. If you understood this and how you change everything from alkaline to acidity (1.47.56 minutes) and if you look maybe by Monday, you will see a new product in the market from the KF. We are marketing what we call the jugs. You can buy a jug from the KF that is designed to change any water from acidic to alkaline without any residue. This has already been done and being completed today.

K: A huge number of products will come. Next week or the week after we will release agricultural products. And before the end of August we release the first agricultural unit where if you are a farmer you can do 1000 to 2000 liters per second into the system. The first order has been completed and it was about 50,000 euro. If you are a farmer you don't need pesticide, nothing at all. At a high rate we can change the farming.

K: We do the same thing now in the condition we are creating for pollution in the environment in the cities where instead of running water we run the plasma fields and the extension of pollution reaction will leave residue inside. These units are built to go in places like Tehran and you don't need to create winds anymore; you create magnetic fields and you collect all the residue and material.

K: Now you understand that we can change any of these and put the GANS liquid, GANS or the gel, or the dry or you can put all three where with the GANS you mix matter state, nano state in the other one and you can put the GANS of the other with it. Now you see that the game changes. We release products in the dimension that you understand and there is no magic to it. So when you drink water which is now getting delivered on Monday you get 8.6 pH no matter what. The rate of the cancer goes very rapidly to zero because the energy in your stomach is not that much conversion from acidic to alkaline. It is a normal transfer

and in this area (1.51.00 minutes) you end up with matter state. If you understood this and the gap in between now you know where to create your matter states when it is going from one to another. Higher order materials are created when CH is giving. Lower order materials are given..... (garbled).....the knowledge of creation.

K: It is you who have to understand and apply the knowledge. If you understand you are transferring the knowledge of the universe and in the coming days and weeks when you see more of what you call space ships of which part are made by man and part are made by men of the universe, we stand equal shoulder to shoulder. We don't "send you into the city on the back of a donkey." We send you to the city on the same it's simple; it cannot be stopped. The progress is rapid and in the coming days we will see flying ball systems and everything else. And in time we answer to those who came to be restorer of the souls. Because you are not aware of it but I know how to bring souls to speak and then we see what they have done. As we speak there is one going on the internet on the lines of international condition. Those who tried with their thoughts to override the work of the KF, we gave an option to come and speak or we will leave it that we have spoken for you. It doesn't matter how you try to turn it.

R: question from Vic: *I have AuO₂, golden oxide. Wouldn't that provide better and quicker magnetical fields?*

K: It depends. Always learn one thing: it depends on what your magnetical fields are going to be. You always give from the weakest to the strong in gravitation. (1.54.43 minutes). You release as magnetical but it becomes gravitational to the strength of the strongest. If you look at the earth you start with the strong field coming out but as the strength reduces it becomes the source of the field of the gravitation. When you have gold and if you have zinc it is gravitational and not magnetical. But if you have the vice versa of plutonium, then the game changes. It

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

depends where you sitting and what you are looking at on the atomic gravitational mass or the Magrav. You are supplying the magnetical but this magnetical becomes gravitational. What is magnetical to one state below can be gravitational to one state above. It is the way you set up your structure. Look, the reason we choose in the center to put very heavy materials (1.56.18 minutes) and on the outside we put CH₃, the CH₃ receives huge amounts of fields because it is weaker than the center, but in receiving it, it has not got the capability to hold on so it gives more to what is next to it. it concentrates the fields and them because it is part of the same structure – don't forget you put the copper, CO₂ inside and now the connection tells it where it's going to go.

K: A lot of the mixtures that you mix write them down. Write CO₂, write CuO, write CH₃, and then see why you are connecting. (1.56.21 minutes). This is the connection; you build connections. At the same time the strong is giving but you have taken a field. Remember in the plasma technology the strong always feed the weak, but it the weak that is the food of the strong. Mix it because it brings it together to rise. What is doesn't need which is very limited, goes back into the stronger field. That is how you build it up. That is why you saw Douglas say that he saw the field, he had a line because he had CH₃ and he had alkaline. You have to look at what is in alkaline. CO₂, ZnO but he said that in the center he had put all the "O's" and he had created the light. He has the line of gravitational magnetic field and you say that carbon is the line of the transfer of the energy. That is where you see the light. If you hold that light long enough and you can freeze it, you will have diamonds because that line is a line of communication which is the carbon line of strength.

R: There seems to be some confusion in the chat about the gravitational magnetic fields.

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: No, what is magnetical of one becomes the gravitational of the strong. This is what we always taught.

R: So it depends on one's perspective or position.

K: Yes, you are correct but from the magnetic gravitational point. (1.59.53 minutes) and not where you stand in the matter state where you are watching.

R: So it's from the field's point of view.

K: Exactly. 2.00.01 the plasmatic fields. A lot of you who listen to the teaching today will come up with a different state of mind. A lot of you who don't understand there is nothing wrong with that. Those who want to go to the next point will go very rapidly now. Mix the GANS, the matter state, the nano state, the dry state, the gel state and the gases and everything else and then you come up with new mixtures, strengths and storage. Some of you in the coming week will see huge signs...megawatts and how much you want to put into matter or if you want to convert it to matter. Start understanding the process and don't do *monkey see monkey do*. This has to stop. Now you all have enough and you are intelligent enough to dictate this from now on. From now on it is you who decides how to play and no one can tell you that you are wrong.

K: I was telling someone recently, I have made many professors of plasma in one go and you are all professors because the man matter professors are lost in the science of plasma. Not that they are wrong; they understand the matter state and not the plasma state which is non-dimensional. It will be very hard for matter state professors to accept your knowledge as professors of the plasma. If you call a housewife and a man in Africa a professor that is who is sitting as advisor to the president of China and the rest. All of you have been trained to the level to the true knowledge of the universe. Those who want to be in the matter state, there is nothing wrong them, because when you arrive to the position of the matter state you become one of them. So there is no use to be arrogant to start to where you are going to end up yourself.

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: The process is very easy; if you don't all become professors in the space then you need someone to process for you and then they can abuse you. If you understand the totality you cannot be abused in space and that is my job. That is why I teach this way so that you all understand and there is no gap for abusers. One of the conditions made with the universal council is that none of the sciences of space will be given to man to abuse man, himself and the others, but the man will be told not to become the abuser of himself.

K: Douglas, is the glue dried?

D: I just put another coat of glue on it about 5 minutes ago while you were drawing pictures. This is the 3rd coat and I've had to cut these with a pocketknife.

K: Yes, but you have 3 daughters and they have a hairdryer so dry it that way. It shouldn't be that hard to dry.

D: You wouldn't think so. I think there is alkalinity in the glue.

K: Have Rick give you the answer—he used to work with these things so he has the answer.

R: I was kidding about finger nail polish and drying it with a hair dryer.

K: You can do this and it works very well.

R: There are glues that work well, but the best glues take a couple of days to set up properly and really pull together and be very solid. It's okay if you are doing low speed experiments around 1000RPM and you can use glues that aren't that strong. Once you get up to 3-4000 RPMs and especially 7-9000 RPMs then vibration in the ping pong ball might make it peel off or break.

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: So, Douglas, you are inviting us for lunch on Sunday or are you inviting us to lunch on Sunday. That will give it a couple of days to dry like Rick says.

D: I am going to let them dry properly and I have some proper 2 piece balls like Arman had that I have ordered. They should be here in a day or two; I'll make these work in the meantime. Rick is right; at lower RPMs they hold together but when you get to the higher RPMs the bond of the glue breaks.

K: We waited millions of years, so a couple of days will do no harm.

A: The RPC glue they are selling in Home Depot.

K: Are you still in Arizona, Arman?

A: Yes.

K: How is the factory coming?

A: Good.

K: Thank you for your work there Arman. Any other questions?

R: A question from Rene that asks *what if I put my blood in all sorts of GANS that I use in my experiments? Or must it be only in the center. Thanks from Austria.*

K: Would you like to be in every state or bring everything together into one state? Don't forget the soul of the man and the physicality of the man works with the strength of the environment he has manifested himself in. That is why we keep everything in one position.

K: We come on every day with the development and when it is positive and correct to share then we will deliver it.

R: Can you give a quick answer for Nick who asks *how do I connect with my space reactor, by just allowing and intention or is there more to it?*

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: You have to have the key to it which is your own soul or your own energy. The rest is just the history. You decide. You don't need the GANS and the balls. You can go into the structure of the soul of yourself and create every matter. It is your soul that decides more or less what is going to be the cell in the organ of the lung or cell of the blood or the cell of the heart. None of you have understood this. If your soul is the creation of your physicality the soul decides what is the bone, what is the liquid, what is the rest and it is done according to the wish of the soul. Because that is the only way you can exist. The soul decides.

R: I just got a video from someone that replicated the same experiment that was shown yesterday. That was breaking the vortex in the mixture of the GANS.

K: You don't stop...you want to show this. Show it. This is from Sandor in Romania and he says he is a priest and with this work we have brought the world's religions and the world leaders together because they all want to find a passage for the salvage of their soul and their physicality. So Mr. Zoltan has done this test with the Magrav set up and it shows a very interesting pattern. It will be interesting if this can be shown to others and they can replicate it. If Mr. Zoltan is online let him speak. You can repeat it and make a decision on it.

K: Sandor (has been bashing every door to show this for the past few days. I told him to send it to Rick and we would show it. Every time we give a platform to people to show something they claim they did and others can't create it and say there is something wrong with KF. So we don't give much platform to others so they don't put their souls in the wrong position. We are doing you a favor. But we allow you to teach in different places and on different sites and dimensions. We have mishaps with 3 or 4 people; we gave them the platform and now they have gone off to destroy the KF when plastics (?) they created that caused fires in the houses. They call themselves all sorts of things so we are very careful who we allow to show things because we have a huge platform on the internet. We

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

support what you do and we want you to do it, but the people who come here and do this call themselves the teachers and the professors of the KF because they have been here at the foundation 2 or 3 times. We are becoming aware of man's weakness and we don't want you to damage your soul because of us giving you freedom to run with. Let him come on and show and explain to us. He is a priest so let's see what God says.

S: I will share the screen.

K: Can he join us to explain what he has done? Is he a fluent English speaker?

S: He writes and reads but is not so good at the speaking.

K: So you become the voice of the man? Let's look at the video first and then he can explain so we understand. (2.14.06 minutes)

S: He made the same set up with the GANS in the liquid as he did previously according to your advice. He didn't move the 2nd Magrav near it but he put a nano coated coil in it. The other Magrav that is functional is at a 3-meter distance. He has a Magrav until that is under construction next to it with some coils in it. It took 2 hours to start this formation.

K: This leads to two of them that we will see later as I have seen the pictures.

Why does this change? The pattern of the fields changes and the interaction. You have to watch this and there are a lot of question marks about this presentation and that is why we would like him to repeat it. Go back to the capacitor coils that you are showing. This is a very interesting development. You see here and some people do this using this capacitor addition to the system on the top without touching. (2.16.09 minutes). A number of people are using this and it has a lot of advantages in the concentration of the energy especially if you put it upright and not at an angle. The position of the field changes. Carry on please.

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

S: Here we see the second one forming and it has not been fully developed. (2.17.02 minutes).

K: Let's keep looking; the end picture is amazing. It is for you to transfer and then you see two souls in one thing. When I looked at the end product in way it is what I call the state of the physicality of what you call beautiful people—one entity and two souls. Watch this, it's very interesting. But you have to replicate it. The preview to this is the video we showed earlier this week with the green box where the GANS moves from one side to another in respect to the GANS of the body of the man. But here you have a static condition of 2 fields. What has to be done here is to find out what is on the base of the liquid and how he made this GANS. Why are you playing with so much? You took the color out. Where is the picture with 2 circles? There is a picture with 2 circles.

S: That was yesterday.

K: This one is showing it developing.

S: This was the video with the 2 spirals from a couple of days ago. (2.20.15 minutes). He found that when he uses a simple lie detector it shows the red light when he touches the video cover or the desk which is otherwise all wood. This was the first video where he noticed the two spirals.

K: Bring him on so he can explain for him? What is in the base of the mixture?

Z: There are 2 drops of led GANS, metal of his GANS soup, the box that he used to wash down his brush that he used to cover the Magrav coils with the soup. The only thing he made different from last time this was shown was he took out the coil and he took the figure 8 out of the box and put it below the box.

K: You said something...let me ask. Underneath this box you had an infinity "8" loop?

Z: Yes, it is under the box.

K: Is it infinity nano coated material?

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

Z: He is trying to show with his camera.

K: Is this field created by the Magravs or the infinity loop underneath?

Z: He will do another and move the infinity look away.

K: The shape has formed because of that. The loop which now we see created on this platform is partially or mainly due to the nano coated infinity loop underneath the box.

Z: The size of the loop is smaller than the vortexes.

K: What happens if you put this loop away? (Zoltan shows the loop 2.25.29 minutes). Shake the box to normality and stir it and let it settle and then take pictures again and we will watch the pictures in the future.

Z: This will be stirred up and let it settle again.

K: What brings a man of the robe to the physics of the plasma (a priest)?

S: He is not a catholic priest he is a Calvinist.

K: It doesn't matter what name you put on it.

Z: It is research.

K: Does he always do research or is he trying to find the path to God through the plasma?

Z: Science all leads to the creator. Otherwise his interest is the 'free energy.'

K: Thank you and send the next pictures you have and we see the difference with the loop not near the bucket.

K: There is something the priest said to us. There are a number of organizations that are floating around in northern Europe tied to 'free energy.' They are trying to get access to KF generators to start companies to do all sorts of things in their

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

stock exchanges. We have exposed two in the past 48 hours. Be aware that if you cannot make the generators to only rely on the KF which can produce them and deliver them and you have to wait until September for it. Then we teach you as we are developing a more efficient system. Do not invest in any energy or 'new energy' systems. The only things available in the market are small packages for delivering an energy system. We have seen people coming in with all sorts of conditions and selling all sorts of things on the KF and logo. We are ready for action for using the KF logo if you are not certified by us. If you are KF it has to be on the mandate who you are and who you are working for. And, anyone caught with these things; we have our own way of doing things. But please understand that we are here to help and to develop together and we are not here for some to benefit by damaging the others. This is important. You join and use the technology and stand by the technology and the way we work with our leaders.

K: I hope we see flying objects soon. You understand the principal, create the difference. If some of you made coils and cores and put sugar on the outer core and salt on the inner core when you are GANS coating, you will see a more powerful system and now you understand why.

Caroline (C): I want to read a question in the chat. One of my Turkish group people used a homemade Magrav that they used for several months. He says when his hands come near the electric dictator it starts weeping like showing electric and it was not like this before. What does it mean?

K: We don't know what it means. You have to understand if it has a short in it. We will get more of the Turkish group to join us and show their work. We need to see what it is. If they show us, then we will explain it.

C: He says he will show it very soon.

Transcript from 125th Knowledge Seekers Workshop held July 29, 2016

(v1 2016-08-06) DRAFT (Transcription has not been verified. Double check info with video)

K: Thank you for your hard work in the background. If you make anything we can see post it on the new knowledge on the golden age of GANS channel and other channels that support the work. And we support the work. Load up new things on the KF forum. A lot of you do everything at the same time. If you use other different universal community groups and we share the knowledge. If the condition of the creation of the light and lift can be shown by anyone we will start teaching immediately. You taught if you can understand the completion of the unified fields. There are new ways of creating energy transfer. You are closer to being able to enjoy more of the beauties of the plasma technology.

K: Maybe before the 31st of July we will see the flying saucers. On the other hand, today we have opened the doors of the universal council and the universal community for the first interactions. My warning goes to the governments: *do not fire ...do not take what I call action of.....these are space travelers from the universe who are here to establish the first steps with the whole of the human race.... The human race is ready and is getting more and more ready to become part of (the universal community) on an equal basis. As I have said I have fulfilled my mission. The last teaching is to show the soul of the man in interaction with the soul of the universe. We have to complete a lot of teaching so that you understand. Don't forget we stand at a point on point on both sides. We are not negotiators; we are the messengers. So, please understand—my warning goes to the Chinese government and to the American government and any other nation that has the capability, any representation in the coming time is the representation of peace. Refrain from any hostile activities. Thank you very much.*

R: Thank you and that brings to a close the 125th Knowledge Seekers' Workshop title *Disclosure* on Friday, July 29, 2016.
