This workshop is a landmark workshop, with multiple breakthroughs presented. First of all we had the good news of the first signs of Naomi waking up from her coma one month after the terrible accident that killed Fabio. Later in the workshop MK reveals how this happened in a similar way to how we can all make shooting stars happen with the correct focus. Then there is some deepening into the understanding of what is gravitational and what is magnetical, and then with the understanding of how they can be differentiated by using different weight substances and different pH values using sugar or salt to create acid or alkaline conditions, there are multiple examples of how this is breaking through the barrier and allowing lift. Douglas and the Philippine innovation team again appear to be ahead of the bunch, with Douglas's small spinning ball not only creating enough energy to run everything in his house, but also lifting its platform off the bench by a few cms, then the Innovation team getting a similar result with their small system of ping pong balls – seen in the picture! Then we have a presentation from China in which a small spinning ball filled with GANS causes rotation of the plasma without any touching and half way through this presentation MK reveals the identity of the 12 individuals in the Kf core team and how they relate to the Universal Council. Then we have Peter in Austria who reported dramatic effects in the last workshops with ping pong balls disappearing completely, now telling how he makes an extreme acid or alkaline condition in the GANS water, showing a pH at one end of the scale up to 12 or 13 or at the other end down to the 2 range, and how strangely he can actually drink this water and it tastes and feels like pure water! MK spends some time explaining the importance of this and then the workshop ends with another presentation from Thorbjorn of Norway who is getting effects from his spinning balls that will not only allow treatment of cancer and other diseases, but also allow travel to the ends of the universe without actually going anywhere in the physical body! This workshop with its focus on the

## Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

effects of GANS filled spinning ping pong balls holds fascinating developments in the subjects of lift, positioning, and space travel ...

Keshe (K): Good Day as usual. I have good news for you. Last night I was in the hospital with Naomi and she has gained substantial control and understanding which we saw yesterday for the first time. She was responding to questions of moving her hands and legs and it's the first time she has shown signs of life and direct contact since the accident 4 weeks ago. With the technology that we have we should be able to balance the damages that are there. But the good news is that she is back with us. She is responding and knows her birth name and for the first time is responding to moving hands or legs when she is asked to. It is a matter of repairing what is left. This is a celebration of life and we thank those of you who prayed for her wellness.

K: now we are going to a new phase of development of the space reactors and the space technology in the sense of the development of the reactors. There is more information that some have not understood and some have understood but they cannot see it. Now that we have developed the plasma gans reactors, we see that there is a need for better understanding of the field flow and the interaction of the fields because this has created some mayhem for some of you and some questions for some of you such as *why are these things responding in this manner?* It is important that we understand the totality of the process and this is important for us to be able to maintain a certain amount of clear understanding of the field flow within the structure of your reactors. Some of you who have done some tests see things which are not the same as what you are used to in a physical condition motion. And now that you have these cores and you are testing them, and you have these cores and you are seeing fundamental changes and motions that you cannot understand, it is good to bring the position forward.

## Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: yesterday in a test we managed to achieve flight. I will let the gentleman speak when he comes on and in that process we have managed to see more and as we understand more we bring the knowledge forward. The process as part of your work is to bring in the full understanding and process to where we can go and how we can extend the knowledge to the level that we can follow the field processes, the level and the condition. A lot of work has been done in respect to plasma; you know the plasma exits and how the plasma has to enter. (13.28 minutes) But you have to understand what happens from any point in the life cycle of this field and if you understand this from now on you can explain all the conditions and all the motions within the structure of the plasma.

K: **There was a mystery for a long time: *where is the changing point that field changes from the gravitational to the magnetical?* (14.03 minutes) Where is the point of change? In the process of the teaching for the past few years, now we understand that it is the same field. (14.12 minutes). So there is no change of point. Here we see it entering and here we see it exit. So there is no change of polarity from south to north or north to south.** Here we see full separation of the fields in the plasma; you will start seeing this in your reactors. This creates a lot of problems for those of you who have transparent balls because you see phenomenon and some sort of reactions that you cannot explain. One of the reasons that you cannot explain these reactions is that some of you have not made the connection. We always said the plasma was this way (a clockwise spiral 15.19 minutes) and increasing the strength as you go to the center of the plasma of the plasma and reduction in the strength in gravitational in the other direction. If you understood this you understand what is opposite of everything you have understood or assumed up to now.

## Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: I referred to this in a couple of teachings but at that time you were not ready or it did not make sense. You understand it now because you have systems which we showed you. If you understand it, it makes it very clear for you. Here (16.01 minutes) the plasma exists (at the 'top') and here the plasma enters (at the 'bottom'). As this plasma is moving on from one point to another this plasma works opposite to what you have been used to but it has been in the work structure in the interaction of the fields in the plasmatic magnetical field. What happens, as this plasma (drawing on the right 16.49 minutes) comes here for example, the plasma actually to you, it gets weaker as it moves clockwise and as it enters. It is actually the opposite; it is absolutely and crucially opposite to what you assumed and as it gets weaker it enters the bottom. In interaction with the environmental fields, the magnetical gets weaker (17.26 minutes) but as you go the center, the gravitational strengthens. So when the field actually enters the gravitational magnetic field point of entry it is much strong at this end (bottom 17.50 minutes) than this end (top). What happens in this environment (the interior environment between entry and exit) is very much a fast, loading up condition.

K: here is the slow loading up (18.11 minutes) and as it gives, it also takes. But the majority loading up of the weaker magnetic field increases if this is the gravitational magnetic field of the exit. It has entered here (18.27 minutes) and at the point (upper exit spiral 18.34 minutes) and at this point (lower entrance spiral) and it adds more of the lower strength and higher strength. This is the total conservation of magnetic field rotation. So, what does this mean?

K: If I redraw this for you, you have your system and you have fields which go out and come in, and come out (19.03 minutes) and in the process you enter the new dimension of understanding and now a lot of you see it makes sense. (19.14 minutes). Here you entered at this strength and when you leave, you leave at this strength. (19.28 minutes) This strength (lower spiral) is gravitational and this

## Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

strength is magnetical (upper spiral). But in the process as you are moving to join back in, you lose all the weak fields (19.45 minutes) As we said, hydrogen is here (top of outside spiral (19.52 minutes), gold is here (left side of outside spiral) and plutonium is here (on the lower part of the spiral) and here at the bottom is the gravitational magnetical field of the earth in respect to the central core.

K: If you understood this, one of the anomalies in the world of science that we know becomes much clearer. It is as simple as why, for example, lightening starts from earth and not from the cloud. Because of the gravitational magnetical field pull in respect to the cloud it initiates the pull and the charge responds. In this process if you understand that the fields that enter the southern core are much stronger in gravitational on the strength than the magnetical of the plasma fields and now you understand why you have the rotation. As the field goes further to what is being attracted by the gravitational it loses more of its magnetical and the motion is continuous. (21.21 minutes). So receive in the southern pole more of gravitation and less of magnetical and that is why the southern pole is colder, because of what is pulled in and there is not much interaction.

K: here at the exit pole you have more of the magnetical and that is why you get the opposite at the north pole and vice versa. The temperature difference is the interaction of the gravitational magnetical fields on either end. It is, if you understand, when you start building your reactor cores, by looking at how the field vortex is created (22.22 minutes) it shows if you are in the magnetical or in gravitational. At the moment a lot of you use motors that have magnetical fields and this affects the pulses and absorbs most of the lower field strength that are coming and are available and in that process most of the time your field flow is counter clockwise (22.59 minutes). You will see vortexes being created from the north to the south. As you have different cores (smaller balls inside of bigger balls) the interaction of these fields with some of the matter state or lower state fields start creating light.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: for you to create plasma balls that can create light that you can see in them, the light inside the ball becomes the light in the room. For example where you are you have to understand this process and you can add very, very small dust fragments of the matter state in your balls. Any dust that you put, depending on the flow and depending on how you speed the flow up, facilitates that the ball will create light inside and not outside and you will see the total light. Most of the times you need to see this flow and then you understand that you in respect to the magnetical gravitational field of the earth, pushing down gravitation and pulling up magnetical (24.21 minutes) and then in some cases if you understand this you will lift off.

K: this knowledge is part of what you need to complete your work. But as usual, as I say, please understand the field flows and how you create the conditions. At the moment your motors on the bottom absorb most of the weaker fields that are available so you dictate to your system field forces which are pushing the stronger or the weaker. One of the ways to overcome and cover, you can put materials that interact with the fields of your motor. (25.24 minutes) which are aluminum and copper and it has to be mainly what the balls are not made of. So whatever you don't have you possess and in possessing and conditioning it, it allows you to create lift and motion and to create currents.

K: for those of you who understand the plasma in this level, you become masters in it. You can see the creation of the vortex internally, exactly, if you remember in the double cores, or in the single cores initially what we saw was the plasma with the gans in it, we saw the empty space, the liquid state, and the gans state. (26.28 minutes) now that you have created two or three layers of gravitational magnetical fields and different gans, the game changes. This chap here (the first core drawn) has another chap waiting for him here (new drawing of cores at

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

26.49 minutes). And it's another chap created and you will see the vortex flow and that they link up. If you look from the top in respect to the rotation that you have in this direction (to the right at 27.07 minutes) or in the opposite direction is very much the creation of a hollow field center in the overview if you look from the top of this you have something like this (drawing a5 27.30 minutes) and these fields in the center are the polar points.

K: for you to see and understand this is that all 3 fields in the multiple cores, each is trying to feed itself (27.50 minutes) and that creates the column. This is the property of multi matter state entities like earth. In the center of the entity if you load all your gans precisely the same you will find the process as drawn with the single core. But because you have mixture of the gans you see the different thing with the 3 cores. (28.24 minutes). We will show a process on a video by Douglas.

Renan (R): I can show this. (29.47 minutes) you can see the clear column created in the center at 30.11 minutes. What is interesting is that the center mass, the center ball, is full of dark black mass and it becomes at a certain point because of the higher speed interaction of the fields it becomes totally transparent. Can Douglas explain? We had the video that recorded the cylindrical column in the center.

K: one of the things that you will see and you saw last Tuesday and we can show you many of these, and if you start testing it you will notice something very interesting. You have seen it and we can show you again in different videos where you have the coil that is filled with liquid plasma, with water, at a certain point this totally empties itself and all the water and everything else is outside (32.20 minutes). There are no holes, cavities or possibilities for the liquid to come out of any place. But, what happens is that where this central column starts creating, then the fields take a totally different field force and they start pushing

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

out (32.45 minutes). It is that small cavity we saw at the beginning of last year in the balls, now we start seeing it expanding. As the field gets stronger through expanding it creates a field balance (32.58 minutes) and the liquid goes to the other side. The matter state is irrelevant. So, when you see the splashes of the water this usually empties. Even the half empty top is not air at all. This is total plasma. As the liquid takes over going out what you have is the plasma field here that interacts and the hole that was in the center now sits outside. (33.45 minutes). What we done and you will see this in tests to come is that this (outside) field we are now making a trap, a containment for it. In that containment, more or less according to what we see, creates lift and motion.

K: Armen is doing some tests and we have put the limitation of the lift at a copper level. In the tests Douglas is doing we have put the limitation on armenium which is chosen for a specific reason. Because of its lower strength compared to the stronger strengths outside it will create a push and the system will find its position and fly much easier. This is very, very important because in fact if you can tap into this armenium you can pick up as much energy as you need. And if you make the mixtures of the 3 reactors equally balanced as you want, this (inner ball) will float and it will rotate independent of any motion and at the moment Douglas has achieved rotation of the ball without any material due to the gravitational magnetic field it interacts and releases field forces among the 3 balls and not only do they not let each other sink, but in not sinking they float at one moves clockwise, the other one moves counter clockwise and for the first time we see the motion of the plasma as it is in the universal condition where field forces create motion and the interaction of both gravitational and magnetical fields.

K: Douglas, show the video and then following that one the video of where the ball floats and the motion.

Douglas (D): that is the one I have pulled up first. (36.50 video with ball spinning).

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: what you see is the interaction of the fields. In reality because the center ball is much heavier, it should be sinking to the bottom. The same system later on shows with different structure that it actually sinks and sits. So, what you see now is fields' interaction creating rotation just like the rotation of this planet where the outside, for example the solar system. ....

K: (38.43 minutes) now you see that the speed changes.

D: the only advantage of having the megatron magnets is to create a hole for the ball to sit in.

K: this is the exact rotation of universal motions. The two black pieces are magnets that create ... indication of the field flows of central universal field forces. The copper plate is for blocking any magnetic field of certain strength as it acts like a filter. You see the rotation is permanent and the replication of the planetary system, the solar system and the galaxy. It comes from the interaction of the fields and being able to allow the fields to interact naturally. Now you see that he has changed the direction of one to the other.

D: I had to edit that out.

K: show us the other video with the vortex on it? We never had this opportunity to study the real structures and according to how you mix your plasma liquids you create different conditions. If you can create different mixtures that can lead to faster rotation you can achieve conditions like neutron stars. Now for the first time you can leave many of these balls in the tank and you see how they interact. The center is continuously rotating on its own and the others have the same kind of sense of rotating on their own and they create fields that you can now see the molecular structure of elements. You can create the condition of Zinc with 2 oxygens, and see how they position themselves. **While internally they are creating their own gravitational magnetical fields, externally they interact with the others and while they are independent, the totality of the 2 or 3 elements**

Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

creates its own atmospheric condition of what we call the Coulomb barrier of the molecule.

K: this is a very good replication of what is to be understood and how furthermore, we can start seeing the reality in the operation of the atomic molecular geological movement of the earth, or cosmology. There is no more guessing; we can create it and absolutely see without any factors that we can create it, replicate it and see the effects.

D: please excuse my excitement; I'm forewarning everyone. (42.45 minutes). The ball is not cracked but the water comes from the outside in. The ball is dry and not covered with any water. The water is coming out of it and it's astonishing when you see the ball is dry.

K: when the ball gets to the empty condition the ball will interact with the plasma. It is a natural vacuum condition and this is important. You can create universal vacuum without any vacuum itself and you allow the matter and the field forces are there to interact as the matter is there. We are doing some other tests that we hope to show you alive.

D: this is trying to take off right now. Earlier when Mr. Keshe and I were doing this neither one of us was recording and the platform raised at least 4 inches off my plywood table. It was amazing! I can't describe how excited I am about this and I've only scratched the surface of this. But it was astronomical; I was so excited he was trying to get me to calm down. Both of us were trying to record. I couldn't figure out to get the camera on soon enough. We missed the opportunity but I promise we will have this in a day or so of this thing lifting off the table 4 to 6 inches if not further.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: you have something you set up this morning with the empty ball and the chicken wire. Have you tested it yet?

D: yes, we started with the ball and drained the outer core and made it empty and put it on the motor and I had a problem with the adhesive that is not drying fast enough. I got my daughter's hair dryer to speed up the drying.

K: can you go on the camera and show it to us?

D: it's torn apart because it came unglued and was ripped and I have to rebuild it.

K: can you share the screen to show us the system is still working. This system has no power supply; it is now running in the totally plasmatic condition and plasma is releasing its energy. Can you share the screen?

D: this is my composite water that I am using for my reactors and is not a necessity (pointing to bucket of water at 48.18 minutes). All 3 lights come on and I can turn it off and on. The dremel tool is hooked up to it—listen to this. This is how this kind of electricity works - the RPM gains and keeps getting higher. You can hear it to continue building. The dorm refrigerators are still on and I have the glue gun plugged in. When I want free power with the tools I use this. This is a 1500 watt hair dryer. I have a surge protector on this. Mr. Obama won't like this free energy, but oh well.

K: as I said on Tuesday we are developing the generator to become more compact. We are more or less on a solid state position and there is more development and testing and the team in the Philippines is testing for adding different options on it. They are developing different aspects of it and in the next couple of weeks when we are satisfied, the production will start immediately. This is matter state energy and what we spoke and showed with the rotational cores will create wireless energy. Here we are still connected to the matter state

Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

and you still have to plug in. thank you, Douglas. Thank you very much – go to sleep you’ve been up too long!

K: in the process to come, what you have seen is the solid state. In the coming time I will guide you in the development of the fields that radiate out (52.21 minutes) and what you need to do is to create miniature. The miniature units that you see on computers and that can convert to supply the lap top, fridge, or whatever. This is the future in the next few weeks. We are going that direction in the innovation center. Now that we see the field pushing the water out and we know now that the fields are transmitted. For us now we will build a small miniature opposite to this and what is inside has to be outside and what is outside has to be inside. Depending on the mixture of what is inside and outside you create a wireless energy supply. Tesla showed part of the magnetical of this. Now you put the unit in Moscow and pick up your energy in New York. This is what we are targeting and the next step is the creation of the light through the plasma and you should achieve it. We saw it yesterday and the day before in some tests and now when we add the matter state to it, it creates continuous light. As the ball rotates and as the fields rotate they will create the fields and give you the impression and the light you want to see.

K: if you go a step further in this development and choose the mixture inside the central core, at this level as the creation of the emotion (54.28 minutes), high in zinc with calcium you can interact with the man who already has and shows emotion. So we can satisfy with one system every need of the nation or the change of the course of the emotion of the human race on this planet. This is the ultimate goal; we know this and at the moment we have satellites, and now we will have emotional satellites. We can create it, dominate and control it heavily. Those of you working in the background on the medical side, if you will create these kinds of cores and you understand that in that structure you have to have the condition of one to be stronger so the weaker brain of the man of the

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

emotion, you bring it and you will understand that people with cancer, Alzheimer's or Parkinson's will walk to the system and walk out free of the condition. It is the field flow and we expect that Dr. Klaus team in Austria will manufacture a medical system and soon be able to demonstrate this. We can physically control it, dictate it, and we have no dimension in the control of the fields if we decide we can create the magnetic gravitational field of some of the most distant planets and galaxies in this universe. We can find out what their position is, what their strength is and what materials they are made of and replicate the weaker of the strongest and you will start traveling.

K: we know some of you have lost and cannot find some balls in the center. This is how it has to be and we will understand. Is Peter from Austria online? Could you explain what happened with yours?

Peter (P): I have only the outer ball that is crushed. The second ball was also crushed and I couldn't find the inner ball; it has disappeared for sure. I looked in all the rooms and I can easily find anything. Recently my wife lost a 2 mm diamond that we could find. But I couldn't find the 2 cm ball.

K: so you are one diamond richer and 2 balls shorter. Can you explain the composition? From now on we share the knowledge so others can replicate and as we replicate post everything on the internet, on the testimonials on KF and this is how the process will change rapidly.

K: Don't be afraid to post. We brought in the nano technology and we brought the wires, the winding, the coils, the gans and now this is the next step: motion, conditioning, creating materials, and now we have entered the phase where we have to carry on and develop it. In a few weeks time a lot of you will be in that stage of plasma technology. All of you are using liquids in the core and you will see with Douglas that the outer core is now completely empty. We asked them to extract the liquid but because the gans material was inside they have created a

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

zone, a condition that the plasma fields exist. Now the interaction of the central ball will be in the plasma. We are going away from the liquid plasma to the field plasma and this is the first demonstration of it. Can you give us the details please Peter? We are not here to teach *monkey do monkey does* we are here to inspire. If they understand they get inspired and they test it, not necessarily with the exact mixture you did, but they will find another way and understanding of it.

P: (1.00.09 minutes) I have only the holder for the balls. I have this motor that has a bit of the gans on the outside of the ball. On the inside it is empty because one day I put this in the water and suddenly the bit of gans in the water went into the ball when it was turning and I cannot wash it out any more. It is on the walls. Then I had my 3 balls, and there are only 2 because one is missing. People have been saying the ball would crush because of the speed of the centrifugal force. That is not true because with these balls were in the water at high speed and nothing happened for 15 minutes. When I approached these two, the ball to the motor, then the ball exploded. It was not here, it was not further out and this was on low and not high speed. So it seems impossible that this ball could crash with low speed. The inside was filled with the mixture of the 3 gans—CO<sub>2</sub>, CuO and CH<sub>3</sub>. And in the outer was only CH<sub>3</sub>. The small glass ball is the one I cannot find anymore.

K: can you test it and see if you can turn the motor on?

P: something happened to me and I was running all after noon with a 2 amp power plant. It should last for 2 motors and yesterday it overheated and the motor stopped. I have never experienced the power unit overheating. Maybe there was interaction. I haven't experienced overheating on my power source. This time with the 2 balls with the gold, it overheated after one or two hours. I have no power source to show it. I searched for a day for the glass balls and they are not there.

## Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: one of the options we have is possibly we start the distribution of the Magrav generators in the Rome conference. If you remember we gave the Magrav systems to ambassadors from different nations last October. If we get to the position we like on September meeting of the universal council and the council of the heads of the 6 nations of the planet we will give one to our own ambassadors to take back to their nations for development and technology. Then the universal council members as they are ambassadors for their language which is the totality in the way we have mixed as one race and they will carry this with them back to their homes. We gave them to the governmental and everything was 'wrong with it' because it would have affected their work. This time if you manage to bring it online by that day we will give generator unit Magrav systems for the universal council members to take with them. At that point we spread the knowledge worldwide simultaneously and we achieve one of the biggest goals of the foundation because it is to create balance between the members of all nations, languages, and colors.

K: so in that process there is a possibility and no guarantee that we might even, as we are developing things in different directions, we might give the magnetical gravitational field positioning system to every delegate. The process is for the rapid change and the new leaders dictate the condition of peace and it will be fantastic when a large number of these for positioning and will go out of Rome and be distributed world wide. At that time we will release the blueprint as we did last October in Rome; we follow the same thing in Rome in September this year and we will show more in the conference in Ghana. So, in Rome you will see the working generators on the commercial size. If you were in Rome last year you saw minutes before the presentation the Magrav units that were brought in from the factory. We try to be able to have the generators available to distribute among the universal council members and the council members that they can take them back to their countries to wherever they go to share it in their own language across the planet. We change the course of energy and with it whatever is developed from now to that point will be shared in Ghana. We are trying to

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

make sure that the meetings of the universal council do not become the representation of showing something as it happened in Dubai.

K: we are trying to keep the meeting of the universal council to as minimum as possible. There are there for interaction for the change of the course and for the universal council and interaction with the members of the council which is the 6 members of the 6 continents and how they are going to interact. From that point on we open all the finances of the KF to the universal council that they can use for spreading development and sharing. In the meeting with the manufacturers this week I explained to them that I expect the factories, those who can, go into production when the documents are finished so that in September we can launch and release the generators in Rome and they are ready to meet the demand. We have brought a new management team in running the manufacturing; they are a nice team and are working very closely.

K: I have received a number of emails that some of you would like to be on the council for such and such country. Submit your forms; we have not opened the council yet and it will not be opened for the next few days. There is a reason for it and I will explain in the coming time. those of you who think you can lead mankind to peaceful conditions and change the course of humanity using what is there on the table in the peaceful application and the peaceful change and you think you can be the leaders of your continent and be just and correct in respect to the others you can apply. As I said before on Tuesday I do not stand for any of the positions. It is for you of the human race, the way now we have a number of the councilors for the universal council and had a meeting yesterday, they will be in Rome and they do not need to be interactive and they are there to interact among themselves to increase the soul of the man and the understanding of the position of the man in respect for the council that is responsible for the running of the work of the physical side of humanity in respect to the other side and the interaction of the two as the universal council. (1.12.32 minutes).

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: We start providing and facilitating systems, technology and finances to start the process. The KF is not looking for any organization that thinks it can intervene or change the course. We go into more detail and development. From now on it is up to you how you development this technology. We have gone from the matter state to the plasma state and you have to develop and test it. We brought in people form outside to show the development and technologies and they have caused mayhem. That is why we more or less decide to work with the innovation center team and others we find that are reliable information carriers. We saw an unreliable presentation last week that gave distorted information. All these we are siphoning out.

K: If you develop something you record it. You send it to the KF center webmaster. Rick will look at and it is correct with nothing in the background that jeopardize our channels then we will show it and you can explain it. At this moment in time we have and can deliver technologies that can interfere with everything possible known to man—crafts, ships, cars, house energy fields. My job is not to bring and try to push. My job is to guide until it comes to the point that it is done by a number of people and it cannot be blocked. We saw a blocking technique that was carried out by the Chinese representative to the KF on the instruction of the government of China. We have bypassed it. We will not allow such a thing to happen again. A very tactical point was used by deception and we bypassed it in a very easy way.

K: we will not wait for others to take position. We create a condition that they have to react to the position and condition that we create. In so many ways by freeing the energy and the knowledge we forced the condition for what we are looking for a peace organization with the technology to create and develop it. I ask you all if you have \$20 start playing the game. Get a cooling system fan for a

## Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

computer and a few ping pong balls of different sizes to put inside each other you will join the head of technology knowing more than any professors or organizations in the world. Sharing of the knowledge is important and we have to understand the team that is teaching how to make the nano-coating is as important as the ones who are working and teaching the work of the interaction of the plasma. We are in the development of the technology and the understanding of the technology by numerous people who keep coming every day.

K: We have to have a spectrum of teachers right across who understand the technology. Ingrid in Germany has done translation of the books with her physicist into the explanation of the technology. We have people in the background who teach the nano process from the matter state. We have experts in the production in gans. We have a group of people who feel good in working with the plasma, the liquid plasma and now we are creating the condition for the people who can work with field plasma because they don't need to see the physicality to understand it and then we have a group of people who are applying this like Dr. Ghatta in Kenya and Benjamin in Ghana to make the energy commission and Alekz in Nigeria and people in Australia (S Africa?) who are testing on the water in agriculture.

K: We are spreading the knowledge on the application. Those of you who are on the gans level this is perfect for what you are doing and there is still a lot to be done. Those of you who go into the plasma at the core level as we see with Alekz and Peter, then you come to the next level and now instead of matter state like using like using the water to grow the plants, you use the fields from these cores to do the same. Then you become detached from the system. People like Dr. Klaus in Austria at KF manufacturing will start working on the next step of development as we still need the coils but the new core system will allow us to expand the knowledge. So my job is not to build; I built enough. I built the

## Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

foundation and now it is in your hands. It is you who have to spread, expand and understand it. I am here to guide and when there is a need for explanation I explain to enlighten to go further.

K: from now on we will see the full spectrum of people. The ones who go to the latest stage which is field interaction will find out very quickly that you don't even need these plastic balls because you find out there is nothing you can do with them. They become useless. The wall is there, the ball is there, the water is there, but the field is so strong that even the water gets pulled out. Why did we create with the balls to start with? We needed them to create the fields and now the fields have taken over and there is no need for water because the field forces push the boundaries of the fields to the point where the water can exist. If you can make a sphere that can absorb the water coming from one ball to another and you can make 3 or 4 spheres next to each other, you will see the water will go through every layer and you have moisture in different gaps.

K: this is important because then you understand how to transfer matter states and energy states from one to another. Those of you who have the 4 fields and you saw the water get empty now get yourself another container and put around this and then you see another container and you will see how the material will flow from one container to another. In one container you will find all the salt and in another you will find the gans of one thing and in another container you will find the gans of another thing. I have already spoken about this months ago and 2 years ago. For those of you who understood and I said if you nano coat each layer and create the gans condition and the field of the material on the cores you will start collecting it. As I said we are going very, very fast with the advancement of the technology so it is for you to develop it and spread the knowledge. 121.02

You have this core and you saw the water coming out but if you make other condition plasmatic fields in each section here you will capture sodium; here you

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

will capture copper because you put copper field strength ( 1.21.16 minutes) and then you start filtering. If you create a condition of Armerium here (1.21.34) then you have stronger fields the closer you go. Or you create the condition of it.

K: I explained this to the innovation center a couple of days ago in a very simple system. If you have been to a feather manufacturing companies, when they feather the duck, and all the feathers go into one container with separations like walls. What they do is they have walls and a huge fan that blows and as the heavier feathers drop they go into the first compartment in the container. The duck down which is the lightest and the most expensive lands in the farthest position of the container. This is the same thing you do but now you create the magnetic gravitational forces. So the system sits on this end and you go the opposite, field to field. (1.22.41 minutes). You can always find replication in the process of the matter and if you reverse it, the majority of the time you will find the performance of the plasma. Now you see the outer core has no material in it but there is still a speck of matter state of the liquid state of the plasma you put in and now it behaves like a vacuum. You have created for the first time in these empty balls, the vacuum condition field but still some plasma in it. It means that in reality the middle core has become the vacuum condition. (1.23.35 minutes). The amount of the field you spread the higher the vacuum condition comes and there is no way you can avoid the opposite fields and then when it comes to the running this core interacts with this and this inner core interacts with both and the inner rotates one way and the next rotates the other way. Then you will find out the outer rotates in a totally different direction to the other 3.

K: if you go and look at the motion of the planetary system in this solar system you soon will see the operation of these things yourself. You can put a ball inside another ball. You will see the behavior of the proton and the electron. These are important and part of the structure which now the world of science has the capability to see the real operation, not what has been assumed. In a simple

## Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

system in the coming time we will explain how the technology will spread very rapidly and we can produce and replicate every condition in the universe from macro to micro. From now on you have to remember simple practices that bring you in a fast way to how some of you will develop the technology much faster than those who started before you because once you start the process you get locked into it. Not many people are flexible to go from one to another.

K: Remember 2 things: the world of the universe has only 2 propositions: gravitational and magnetical and magnetical and gravitational. (1.25.55 minutes). And, this is in every entity where one increases the other decreases. And at all times these fields continuously interact with each other (spiral through the 2 fields, 1.26.22 minutes). At any point it is the representation of the balance of the two fields forces. If you look in the structure of the coils, in the Magrav system you have this representation with the coil, the wire and which goes between the two coils. You pick up the representation of it. If you cut that wire which goes in the center and it is just used with the coils, you will see a totally different condition that is more in a plasma condition than a matter state magnetic gravitational field representation. Remember we created the double loop coil inside each other and each had a double coil itself. (1.27.46 minutes). This has a gravitational magnetic field which we see on these coils and this is exactly if you look, you repeat in your cores.

K: Here you have a ball that has both gravitational and magnetical (1.28.12 minutes) and you put another ball which has its own gravitational magnetical and if you put another ball it is the same still. The condition changes as the middle gravitational magnetical has to connect with the outer ball gravitational magnetical and at the same time you have you have this end (directional arrows) connecting with this (other set of directional arrows at 1.28.43 minutes). At the same time you have the inner core has to connect with the outer core and the middle core has to connect with the outer core. Now you see whatever the

## Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

balance is between all three balls determines the motion of the inner core and whatever the gravitational magnetical is of the center, the middle and the outer will dictate the direction of the outer ball. But, there is a big difference if you understood this level you start building the plasma where in the center of the balls, you have the totality of the higher strength fields of all three (1.29.37 minutes). You have the two reduction points and you have the 3 reduction levels. Now you see that as this rotates the fields here (1.29.56 minutes) reduce in the strength (**gravitational this way**) counter clockwise. But they increase magnetically this way (**clockwise**)

K: if you understand this you will see that what I had you make as the balls is the replication of the work of the plasma in the Universe. (1.30.17 minutes). If you understand this you are on the verge of replicating any condition in the universe. We had to do it step by step and you understand the interaction of the nano material. Go back to it and what we did. We used the matter state and then we put nano material of it and then we created gans of it and if you look the same proposition exists in all **dimensions**. But here the strongest is outside and the weakest matter state is inside and that is why you can extract energy. Because you bring the field into the matter state and here is the opposite. You go back in the opposite direction. Now you see as I said before all the teachings of the past 2 years where a lot of you got lost and asked why I kept moving form one to another is because when we get to this point of teaching you understand because you have seen the different side of it, from the matter state, from the gans state and from the interaction of the gans and the matter state, and now you are totally moving into the fields which is the next step and we have seen in the process last week or on Tuesday with Renan and we have seen it with it Douglas' tests and now you don't need to worry about it. Just test it yourself—it costs you \$10.

## Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: if you have an old computer at home, just open it up and get the fan out of it and keep the connection of the circuit so you can run the fan off the main and make sure you don't make one mistake and this is it—those of you who started playing with the fans like Douglas or anyone else, there is a small problem you have watch. You have the fan (1.32.34 minutes) and you place the ball to go on the fan. Never place the ball directly on the fan because now the field locks in. Make sure that you create an aluminum coil or something made of copper or whatever or plastic that you create a gap that the field flow will be mainly of the state of the plasma. If you leave the ball directly on the system you will not get the true effect of the system because now you are going through the motor as well. So the interaction is out of control and you don't know the exact properties of the motor inside the computer and the computer fan. The little things, the further you can lift the ball up away from the fan the more you can create the field interaction.

K: those of you who use plastics and all sorts of clear balls, you have to understand why your system leaks. It is very simple. Most of you, all of you, have used as a liquid inside your system, CH<sub>3</sub>, CO<sub>2</sub> and other carbonates. When you put the system in rotation, what you have done if this is your core and this is your motor and this is your plastic or whatever you hang it on, the liquid inside, it doesn't matter which (the CH<sub>3</sub>, the CO<sub>2</sub> and other things) you are using plastic. You have possibly some sort of the combination of hydrogen and carbon depending on flexibility and some oxygen. (1.35.02 minutes). So now you see why the water leaks because the combination of the these fields have replicated at one point the property of the plastic and so then the plastic does not 'exist' and in the 'eye' of the field and the water goes out to find its combination. Now you understand why you see this leakage.

K: If you want to understand more of what this means I can explain this in a very simple system. If you have a 3-D printer you can replicate it and you understand

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

very fully. I have it here and I can show it to you and you understand it in a simple, fast way. Most of the systems which we built some time ago, we used a 3-D printer and we could not understand why we were losing so much of our material until a knowledgeable man with the plasma technology. If you understand how your system works with the plasma, this is a 3-D printer copy of the vacuum of what I built years ago, nearly 5 years ago. These 3D printers look solid, but in fact they are very porous like kidneys.

K: If you find the right mixture you will find that you fill the container with liquid and the next day all the liquid is out because dimension and the holes cannot be done. These are in a special field and they have some sort of ball that it leaks out and there is no liquid in it. This is the old version and they have adopted it now and they system is porous. When the strength is the same between the core and the plastic it does not exist. That is why suddenly you lost so much water. The loss of the liquid is because you bring balance to the barriers and the barrier does not exist. Most of this leakage if you do a close observation in the future should be somewhere on line with this line with the field strength or with this line (1.38.27 minutes) is strong but equal to both the carbon which is composition of oxygen and hydrogen and it doesn't exist and you get the leakage. The minute you stop everything comes back in again. And you will find that there is nothing here to fill up.

K: if you look at the same condition in your reactors with solid gans inside and you create the same kind of condition in a given point the center becomes transparent because the field strength is more or less rebounded by the CH because now the whole energy is in balance and you all see the light transparency. (1.39.24 minutes). You have a solid core and then one of the reactors rotating and it becomes transparent because the field strength is about the same in this condition or in the other condition with the core that has the interaction with the matter state you get the leakage. Here there is no matter

## Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

state (1.39.51 minutes) because you get the other fields of the same strength so the balance field is transparency. This is what I said: in space technology you create a condition that you can be seen and in the next second you disappear. All you need to know is the gravitational magnetic field strength of the environment you are in and in creating it, you still are there, so you don't create the friction and you have no lights, no emission even though you see it. You put your finger on the back of the ball and you see your finger but you won't see the solid gans state of the matter that was in the center ball.

K: as I said as we come I explain more because now a number of you have reached this point and you testing and experimenting. You have to understand what you see and try to explain your knowledge according to magnetic gravitational field strength and why one ball as we saw with Douglas moves clockwise and the other one counter clockwise which is exactly what happens in the center of the planet and in the center of the universe and in the center of the solar system. The interaction of these rotation of one clockwise and one counter clockwise creates the motion and the positioning and the rotation of the ball. It is not that it is just happening because now everything is plasmatic and you have enforced the condition of the control and now they have no chance but to interact because you put a material here and you confined it. (1.41.42 minutes). The only thing left is the balanced **field forces** between gravitational and magnetical and if this one is going counter clockwise the other one has to go clockwise in order for it to catch the magnetical field strength and the other catching gravitational field. (1.42.13 minutes) gravitation always rotates in the field of counter clockwise and that is what we understand because it winds itself into it. The magnetical winds the other way **as it spreads**. So, slowly you become masters of the plasma and field technology and in that process we move on to the next step. **Any questions?**

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: if you have a question in respect to the plasma we will answer it; otherwise please keep for another time.

R: Mr Keshe you were talking about this idea of the reverse rotation and there is a person that communicated to me in the last few minutes with a video that was illustrating reverse rotation. I don't know this person; they are from the Taiwanese Keshe group.

K: are you happy to show it?

R: it seems good and like a perfect demonstration of what you were just talking about. He sent an email saying he would need a translator. Let me see if he is still here.

K: if he is from HK do we have Lisa from China who can translate for us or anyone in the background who can translate.

J: there are about a dozen Chinese in the viewers maybe someone can act as a translator.

1.45.02

K: it looks like it has no attachment to the base and it is rotating on its own accord.

R: it appears to be rotating in the opposite direction as the sphere is rotating. There are 2 fluids inside the white container. There is no movement to start with and as the sphere is brought down from the top the sphere appears to be rotating counter clockwise. The one on the bottom as we can see, you can see the fluid rotating clockwise very rapidly and the bottle picks up speed as the fluid starts rotating.

K: what is in there; is there another magnet to create motion or is it pure gas.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

R: we need to find out. I don't see a magnetic stirrer. Can you explain the set up; are there magnets or stirring apparatus underneath the ball? What is underneath the ball? What is in the container?

Emilio (translator): (1.51.00 minutes)

Lisa: the ball above is a gans ball and a motor is running it. At the bottom there are 3-layer gans and in the cup there was CO<sub>2</sub> gans water with a little bit of acid. The small bottle has CO<sub>2</sub> gans and live gans—the water. In the center there is CO<sub>2</sub> gans. The water in the small bottle is live gans.

K: is the ball connected to the motor at the bottom?

L: no, it is above it and it's free on its own.

K: there are no magnets inside the ball, just the ganses?

L: the ball is a 2-layer ball; it is a double layer. The outside layer is lead gans; the inside had CH<sub>3</sub> and also alkaline.

K: the inside ball is CO<sub>2</sub>?

L: yes the CO<sub>2</sub> water and the CH<sub>3</sub>. The outside is lead.

K: so inside you have CO<sub>2</sub> plus CH<sub>3</sub> and outside you have CO<sub>2</sub> only?

L: outside is the lead gans.

K: outside is only lead gans and the inside is CO<sub>2</sub> plus CH<sub>3</sub> and alkaline water. Ask what alkaline was used?

L: he used caustic. NAOH.

K: we want other people to be able to replicate. The middle is CH<sub>3</sub> plus CO<sub>2</sub> plus alkaline water that is caustic water and outside is just the lead gans and the base is a motor. What is under the white cover in the picture?

L: no magnet is used at all; just the plastic cap.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: is there a motor rotating?

L: there is nothing underneath. The bottle is a small plastic bottle inside.

K: what is on top of the motor that is there?

L: the motor is rotating the ball. And the motor runs on its own. There is no connection to the cap or the ball. The ball is rotated by the motor.

K: where is the connection?

R: the fluid in the container around the bottle, so the fluid is being spun by the ball and motor combination.

K: the orange ball is just hovering over it. Okay, we understand.

L: he says the condition with the lead gans in the outer layer of the ball and the CH<sub>3</sub> and Co<sub>2</sub> inside of the ball are the same direction. If you switch the gans inside the ball to the lead inside and the CH<sub>3</sub> and CO<sub>2</sub> outside then it rotates the opposite direction.

K: if we start and stop the motor would the rotation carry on without the bottle and the ball? The bottle is hanging in the CO<sub>2</sub> gans water. You have the ball on top with the CH<sub>4</sub> and CO<sub>2</sub> inside and the lead outside. We start the motor to rotate; what happens if you switch the motor off? Is there an interaction between the ball and the water?

L: Mr. Keshe, the motor is connected to the bottom ball.

K: we don't see the connection between the ball and the bottle. How is the ball connected to the motor?

L: he said he can share the screen.

K: yes, let us look at this and I will explain the reason for this afterwards. Can he show us the picture on camera?

L: he will show the picture.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: it looks like there is no connection but he says there is a connection. Picture shown at 2.08.25. Is the ball connected to the white piece or not. Is the ball separate on its own?

L: yes.

K: is that ball glued to the white disk or is it free.

L: he can show it now.

K: is Vernie in the background?

L: he shows the set up at 2.12.05 minutes on camera. He attaches it to the motor.

K: he holds the motor on the top and uses the rotating ball on the top to swing the motion of the water. (2.13. 55 minutes).

R: the water is moving faster than the white cap and the contents. It is rotating backwards to the rotation of the ball.

K: is the wind rotating it or is it the field of the ball? Now I understand, because the picture didn't show the attachment of the motor to the top of the orange ball.

L: he said when the rotation starts very fast and then it slowed down. It is not building up.

K: I understand.

L: I asked if he had to be careful with the ball.

K: we have seen these tests sometimes and it doesn't show if the fields link up. Is the water rotating? I don't think so.

L: it is not rotating now. It was rotating earlier.

K: it takes time, no problem.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

L: he says when the water started rotating there are the two balls and they will move can hear the noise from the balls.

R: ask if the water in the jar rotates in the same direction as the ball or the opposite direction.

L: the same direction he says.

R: the video looked like it was opposite.

K: we see this happening with the other tests. Sometimes it works and sometimes it doesn't depending on the field forces. But, tell him to reduce the amount of water in the container to very little. We will wait; leave very little at the bottom and put some gans on the bottom. Reduce the water; there is too much mass.

L: the water has the HCl in it. He will dump some out.

K: tell him to dump out half of what he has left.

L: he says too little the bottle will attach to the bottom of the cup.

K: just enough water so the bottle floats. We have seen this working with the test done by Dr. Ghatta in Kenya with very little water.

L: he has another camera and he wants to leave and come back to restart.

K: is the water rotating?

L: it is rotating and now it's quick.

K: let me explain something that is important and nothing to do with this part. Lisa please stay until he comes back. This has to do with KF foundation and how it works internationally and we need to make this clear to some government. The KF has set up the Universal Council for the interaction of the universal community and the human race. (2.23.14 minutes). We have set up the council which is the

Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

one person as the head of the new One Nation and 6 people from each continent. The KF originally had the core team made of 12 members and their job is independent of the council of 6 and is there to support the totality. They do not interfere with any government, running of the nation or the Universal Council. But in total when they are together as a group they have the capability to enlighten both or either or interact with the totality. The 12 members of the core council—their position is sacrosanct and no government and no nation can threaten or use any of the core members for their own advantage. These are selected by soul and accepted by us and they have been operating for over two years. Lisa is one of the members of the core of the KF and her position is sacrosanct. Any threat made against any members of the core will be handled severely by us. This is the warning to the governments who make threats to any of the core members. And for those who make these kinds of threats we will respond heavily. It is to be understood fully by those who think they are above as before. You are all equal and we handle equally. There are 11 more members in the council and their position is sacrosanct and we don't deal through the physicality. It is the soul of these who are actually the supportive backbone of the whole change. Other members of the core team as they want can introduce themselves. Gradually people understand that we are not a secret society. Those who have been with KF for the past years they know these members. Any of you who would like to represent yourself as a core member please come forward.

R: I can attest to that. (from Canada)

G: I am a member of the core team. (from Canada)

L: I am Lisa and Chin Chao (?) is another core member. I don't think he would agree that I can speak for him.

K; we have two core members from China.

S: I am Sandor from Hungary.

A: I am Armen from US.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

M: I am Marko from Slovenia.

K: we have a member from Portugal, we have a member from United States , Brett Baggett. We meet when it is needed to support changes and they stand as the total of the soul of the Creator. That is why you know they are sacrosanct. Any government that makes threats to any members of the Council and the Core Team, we will handle it severely and we will show (how we handle it). Because you do not play with what you do not know. As for those you who have come recently to the KF you understand that there is a total structure for the elevation of the soul of the man and we support it in every direction. Thank you very much, can we go back to the Chinese to see how he teaches us please? 2.31.45

K: we know this works; if you can show it that would be nice. Pick the cap out and then let it float; that might be easier.

L: that is a small bottle.

K: take the small bottle out and let the liquid rotate and then put the small bottle back. What is in the bottle and what is the water outside of the bottle?

There is more mystery to this test.

L: the bottle is CO<sub>2</sub> and lye. The cup is CO<sub>2</sub> and NOAH. The cup, water, bottle and inside the bottle is another bottle so there are 3 layers.

K: this is good to see and it takes time to get these working. If the motor creates the interaction and motion that would be perfect. It is clear what you have done, thank you.

R: have him make a more clear video and send it to me.

L: he has questions. The first question is that he has gans ball reactor and inside he has CH<sub>3</sub> gans and he put hydrogen and when it rotates it becomes green. He can show the color changes very fast. (2.32.22 minutes)

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: you changed the field color. This is nice to see that somebody is injecting gans into the gans state so it's good to see it.

L: the ball is red. Now he spins it and the color changes to green.

K: how long does the color change last?

L: he said it may last for one minute.

K: how much hydrogen gas can he introduce into the ball?

L: just a little bit. After a minute the color will become lighter away from the center of the ball.

K: thank you, I see the green there.

K: **Before I forget**, we said there are 12 people—Manuel, a black African from the US and Volf from Norway. That completes the 12 members of the council.

Renan (R): **I would like to show a video because we have replicated to show the water coming out. (2.41.52 minutes) we tested and there are no holes in the reactor.**

K: yes, it is good to see. This is the backing of the KF and disclosure does not wait for years for journals to come out to decide; this was done this morning and you see it now. Let me explain: Renan is the head of the KF Innovation Center worldwide. If you see talented people who are there to serve unconditionally on new inventions you can join the innovation center headed by Renan. That is why you see Renan presenting as part of the KF innovation center. Douglas is another member; also Vernie and Randy. We have a good team in the Philippines working and each has his own are of expertise. If you are thinking or work to bring new innovations that we can share world wide, ask the webmaster and let him know you want to be part of the innovation team. 02.43.28

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

R: the set up here is that we made two reactors and one is a single core in the white ping pong ball and the other is a double core with a ping pong ball inside. The contents of the inner reactor of the double core are highly acidic composite gans and the outer core is only CH<sub>3</sub> water and in the white ping pong single core it has composite gans with acidic water. We stand them together.

K: **Renan, can you** explain again clearly on both?

R: the orange one with the double core is composite gans with acidic in the middle, **the inner core is acidic**. And the outer core is alkaline with CH<sub>3</sub>. The white ball is single core and acidic with composite gans. There is no inner core. The ball outside is equal to the one inside.

K: why is one orange?

R: the color of that ping pong ball was orange.

K: we want to explain so people can replicate. We have plenty of time. The white ball is highly acidic. Explain what acidic is and what is in it.

R: **we** get all the gans, all the heavy gans together including lead gans and we put nano-coated particles or nano coated brass particles and very low pH electrolyte water (about 3) to make it more acidic. The inner cores of both are the same. The only difference is the water in the outer core of the double set with the orange pin pong ball which is pure CH<sub>3</sub> water. This is measured as alkaline water.

K: CH is acidic – **how come you are you using it as alkaline?**

R: we put NAOH water and mix it to make it alkaline.

K: so in the outside core you have CH<sub>3</sub> and alkaline mixed?

R: yes.

K: that is acidic as the main base and you introduced alkaline to it. I will explain why we do this later. Carry on, please.

Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

R: this has been spinning for about two minutes and I show on the video that the water already splashed. (2.47.34 minutes) So what happened is the motor was vibrating and suddenly it became silent and we could not hear the noise. There was vibration but no more sound. It's like a sudden shut down of noise; after a few seconds it will jump and then it stops.

K: that is not a camera moving; this is the plate moving?

R: yes, it had a leap. In that moment when it reached a certain interaction the yellow ball is doing the movement to bring the system up. This is what I saw during the jump. The ball gets disoriented. (2.48.25 minutes)

K: let me ask a question; this is important for us to understand. You achieved no noise and after that you achieved lift.

R: yes, there were a few seconds of silence and suddenly the short burst and the jump.

K: the field interaction gets disturbed. What will be interesting and you don't see it in this motion, if you go to a high speed camera, prior to noise level and lift you will see a flash of light. Every time there is jump with a high speed camera you see a flash of light. So for the first time you are showing lift position. We saw this with Douglas yesterday with a jump of a few centimeters. You can start seeing lift motion, sound barrier, shielding and everything else which comes into operation.

That ball....can we see the whole video from the beginning? Go back to the beginning. Now the plates start moving (2.51.50 minutes) and it takes time for the fields to balance each other. I have done this if you remember by the Iranian test 8 years ago by fixing one and leaving the others to fly. We have shown this a few times. Somewhere between the two balls there is a field plasmatic condition created which tries to find its position in respect to the earth gravitational. Because it is open it just releases itself. If you make a triple star formation that you sustain, you get a lift. Now for the first time you see this and I have shown this before. We achieved this 8 years ago in Tehran. Now you see how we did it and how it happened. It is the field force between the two that is created but the

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

two are fixed and cannot move anymore. So they move in respect to the earth's magnetic gravitational field.

R: right now we are going to test it by immersing the ball in water to see if we can see air bubbles coming out. (2.53.34 minutes). There are no bubbles that are coming out.

K: yes, because the only field inside is plasma.

R: there is no leak in the ball, so it is plasmatic when the water came out of the container.

K: thank you very much; that was a nice way to prove that. You are a genius with these things. It is a pleasure to work with you.

R: that is it for now.

K: now you see the step by step development. Is there anything else we can see?

K: do you have something from Farhad Amini in Germany from the workshop teachings? We are trying to complete the workshop teachings from Farhad. The Italians, Spanish, French and Americans are doing workshops and we will bring everyone together to bring it to the next level of teaching it. Do not forget that in the Rome conference as I said the last time we gave the Magrav units to the world ambassadors and now hopefully we will be able to give the generators for the first time to the KF Universal council members to take back to their languages and nations so we spread the knowledge very rapidly. We know that we have to wait for those who achieved lift to allow us to disclose and we might deliver to the Universal Council members the lift and motion units to take back.

## Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: thank you for today; we are students of life and students of the universe. One way or another we will achieve bringing peace through technology and hopefully in the coming days now that **we** have started coming into the operation of the work of the universe, we will see more 'magic.' 2.57.18 min. Hopefully in the coming days now that we start coming into the operation of the work of the universe we will see more 'magic' that will become transparent. We should see light and I will show you how to make meteorites and shooting stars that because you learned it, you understand it and you will create it. If you **spread** a very fine dust of the matter state around your gans, which is rotating in the core, you shall see shooting stars. You can create the same if you release energies inside your inner brain in respect to the field plasma of the technology, and you will see the same. You can create shooting stars visible to everyone, but this time you release the energy according to your thought and emotion and it needs a lot of strength and a lot of understanding to be able to do such a thing.

K: what does this mean? (2.58.23 minutes) You have a core which is rotating releasing fields and if your emotion is true to the sense of your creation you can release fields that in interaction at the point of your decision can lead to you or people around you to look at a shooting star. You don't create matter state; you create field strength of your emotion and understanding the operation of the soul, releasing it at the point of the interaction of what you want to call an entity to appear as a shooting star. There are a number of you who have seen this; I do this at my will and this is in my power and knowledge to do it and if somebody is in the background they can say that they saw one last Saturday. And a number of people have seen it before; I can produce it because of the knowledge and the position that I carry. If you become the soul truly to inspire the man, the man shall see. 2.59.44

Ella (E): I can say I witnessed the shooting star and it was wonderful!

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: would you like to say where and how?

E: we were coming back from dinner and were in a parking lot and we were looking at the sky for star formations and the stars themselves and I asked you if we could see a shooting star. We were waiting and then I went to get a jacket from the car and as soon as I turned I saw it from the corner of my eye. It was really different from **any** others I have **ever** seen; it had a fluffy tail and it was **like** a blue **beam** light in the sky.

K: and that was about 1 or 2 o'clock in the morning.

E: it was 2 o'clock in the morning.

K: we were thanking Ella and Stanley for coming to Italy so quickly to support us after the tragedy of Fabio and they were returning back home. We were returning from dinner and this was a thank you for what they had done for us. That is how we give our gifts—as books and the elevation of the soul to understand more. The others in the audience can come forward if they want to talk about seeing it. These are the pure souls we work with and I did it for them. This is how you show the power of your knowledge, the purity of your soul and the wishes of your deliberation. And then it depends on those who are with you if they reach your level and they shall see. I have done this on a number of occasions and I do it for those who are close to us and who we trust and it is gift from us to them.

Armen (A): Mr. Keshe you have done that when we were in Italy (?). You show me two times, not just one.

K: I asked you if you wanted to see a second one and you said yes. You can create it; the energy within the essence of your soul is so powerful that you can decide the point of interaction and where you want to see it. This is what I tell you: if you wish in the atmospheric condition of the earth to see gold in your hand, if the wish of the deliberation is pure to change, it shall be there. The only man who ever did this and could not explain it was Christ, bless his name.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: to handle physicality is very difficult. But to change the soul to change the physicality is so easy—absolutely easy. And it is you who have to understand the power within you and if you are pure enough you can see the light and you can create it. Because you will understand in the future, this is the way you create motion (3.04.12 minutes) in space through your emotion and through your soul. In time I will explain but now if you have this, you have your cores and you can throw in some dust because you have created the field from the dust of the matter you will see shooting stars around your reactor. That is a gift; try to see it. In so many ways when the water splashes out of these containers and in interaction with the fields around the system, if you do it in very slow motion you start to see light. We saw this with Douglas this week. He was trying to show us and it is in the center of the core where the fields react. Thank you for today.

R: Monique (M) and Thorbjorn ( T) have a new reactor combination to show.

K: I hope he is not using it for medical application. This is an excited plasma scientist who does a lot of things as husband and wife. Let's share the knowledge; he does beautiful things. Taming this man to work in the realm of science is too hard; he is very enthusiastic to do things. Let us see. 3.06.10: technical difficulties

Peter (P): (3.10.27) the pH setting of my salt gans and sugar gans is quite interesting. I have made a gans of salt and gans of sugar and diluted them over and over. Now they taste like water but it has a pH reading of 12.1 to 12.2.

K: I shall explain in the future.

P: you can see the reading of 12.1 with the pH meter and even with the paper I can do the paper and this is around 12. Now I can show you that I can put a bit of this water here and I can drink it and it tastes like ordinary water. Here I have the

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

sugar gans and it is now already on 1.9 and it drops down. It's really acid. I can try a bit of this and it is not acid and tastes like pure water.

K: what has the alkaline one done? How is the gans of alkaline?

P: you can see a little bit on the bottom of the jar.

K: you are a very good teacher and you are teaching all over northern Europe. Can you explain how you make a gans of sugar and how do you make the gans of salt please?

P: I put one teaspoon of salt and maybe  $\frac{3}{4}$  of a teaspoon of NAOH and I pour boiling water over it. In a minute all the salt and everything was diluted and I let it settle down and the next morning I had a little bit of something that looked like gans. Then I started to wash it with CO<sub>2</sub> water and I emptied the bottle to just above the gans in the bottle and then I filled it up with CO<sub>2</sub> water. Again I let it settle and there was a bit more of the gans. Again I emptied the bottle and I added more CO<sub>2</sub> water. I did this 5 times until I could not taste salt in the water; it tasted like pure water. Then I checked with the pH meter and it was 12 to 14 and I am wondering how long this will be at the pH, so this is the water of the gans. So I don't need to add matter. I can use this to change the pH. By drinking the water I will just show you that normally if I would drink pH 12, I would burn my tongue. But this does not bother my tongue.

K: and it is the reverse for sugar?

P: with the sugar, I made it with hydrochloric acid. The sugar turned very black.

K: why did you choose hydrochloric acid?

P: we make the food gans with hydrochloric acid. (3.16.02 minutes) it is the same thing that happens in our stomachs and we don't have the NAOH in the stomach; we have hydrochloric acid so I made it with that. The sugar is already acid; why should I make something with NAOH. It seems to work and it's the same; it's a very deep, low pH reading and it is pure water.

Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: and you take the water from the top of the washed gans?

P: yes. I have washed this 10 times and there are no more things in it and it takes a long time to settle down because this black substance is very, very nano. It takes a long time to settle down.

R: did you use your CO2 gans water to wash that as well?

P: yes, but somebody said it would have been much stronger if I had used CH3. So next time I will wash it with CH3 water; maybe that is a good idea.

K: if you go back and repeat what you said, when you have anything that is CH3 it is giving energy and acidic means giving energy and alkaline means gravitational and receiving energy. If you create a condition we see in different presentations they add alkaline into the acid CH3, and then with the rotation you see the change of the fields, this is exactly why I explained at the beginning of the teaching today how the matter changes from the gravitational to the magnetical. So, when you put in the rotation the field of the gravitational that is mixed with the magnetical tries to link up with the gravitational in the center and this builds up the energy that comes out of that center. It allows the magnetical field to push itself out to expand and you see the liquid coming out. Let me explain this on the white board. This is why you see rotation and materials coming out and you create these things.

K: (3.19.22 minutes) It is very much like this; when you have the core which is alkaline then you add the material here (surrounding the alkaline) which is acidic. Then you if you put some very high alkaline with this it adds a huge gravitational. I explained this to the innovation center people. This alkaline which is gravitational tries to go into gravitational and in becoming part of the gravitational and it becomes too strong. Now gravitation has too much in the center and it cannot contain it. It pushes out and it produces acidic or magnetical. When you increase the gravitational you get higher radiation on the magnetical. As a soul the more you give, the more you receive. The more you give, the more

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

you empty from what you don't need and the higher levels that you get. You see this in the practical physicality of these demonstrations. What you add when you add CH<sub>3</sub> and it is giving, it is radiating out. When you add alkaline to the acidic because the alkaline is gravitational this becomes the mass of the center. Now it releases the energy in the higher order and more radiation and more fields pushing the liquid out and now you have a huge, strong gravitational magnetical field here. (3.21.21 minutes)

K: This is very important to understand why you mix alkaline into acidic. The center is alkaline and the outer is already acidic (CH<sub>3</sub>) and you add a high alkaline. (3.21.42 minutes) It doesn't do anything chemically. As more mass by the strength in the center pulls the gravitational field which is alkaline and what it receives it has to give of a higher order that gets released and now the magnetical field is of a higher order. The field is so strong that it pushes the physical matter which is weaker out of the ball having the same magnetical gravitational of the field and the matter doesn't exist. You can do this if you understand it and I will demonstrate this very soon because it has a huge application. The way I explained to you the way you can make a star is that you can wish and you can create the fields within your hand or within the tool where as the material of the water crossed the wall you can put the hand in the body of another man and take things out and put things in. You can release it. This is the knowledge which belongs to the creator and we show it when there is a need.

K: those who can and have been enlightened and use it in the correct way, as I said you can hold this power within the soul of your body. You don't need to do the physical; you can transmute the field within the emotion of the length of the field. I demonstrated this yesterday with 20 people. (3.23.30 minutes) I leave it for Giovanni to explain to you what happened in the hospital yesterday. We started showing the strength of the soul in interaction and when Giovanni comes back we will give him a chance to explain how the body which was motionless for

## Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

30 days and when I started speaking to it, it started moving, shaking legs, **responding** and so on. And there were 20 witnesses in the hospital. We have the power in the soul to understand and if you understand that is what we do. We keep so much in the soul in the physicality that it will radiate out and affect the physicality.

K: someone yesterday in the hospital after we finished said *the minute you spoke she responded and moved*. This is the way you have to learn; there is no need for physicality. You see these in the matter state and then you can do the same. I showed it yesterday. It is the same thing Christ did by the resurrection of the dead, because we don't interact with the physical. I wasn't in the room; I was standing outside. Giovanni was inside with Naomi. These are the things which we start showing and to confirm there were 20 some people present. These people have been going to the hospital every day seeing Naomi with no motion for the past month.

K: You have to understand that the way we can create light in the sky we can give life in the man and take it too. We don't take to kill, but to **replace** it and position it where it can be no danger (?). We can do the same with the presidents and the kings. We have done it before. When the king of Belgium came to me in a little restaurant in the mountains of East Flanders he threatened me that I could either give him the knowledge or leave his country and I said to him *when I leave **within a short time** you will abdicate and you will not be king*. He asked his security body guard to take a picture as a joke. I left Belgium and within a few months he abdicated.

K: Now you understand our power and what we can deliver and that is why we introduced the Universal council and with it the new 6 member One Nation Council. We are not governments because **they** are not there to govern. They are

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

there to guide as counselors and that is why you have no government. We replace the government as I wish and we will deliver. And, we leave it to Giovanni to tell you how we resurrected a body into full motion. As we wanted, she moved the hand and moved the leg. In the coming time I will bring Naomi here for you to see. This is the first time we have seen Naomi since the night of the accident.

T: this is my new unit. I prepared it and I was lucky because now I can test it. (3.28.46 minutes).

K: what is inside the ball? Explain to us please.

T: yes, it is copper based liquid plasma.

K: copper?

T: CO<sub>2</sub> plus CO<sub>3</sub>. There are between 40 and 50 food gans in the core.

K: food?

T: yes, fruits and vegetables and the result is this glass. I cleared it with the pH level with zinc and copper liquid plasma and it turned from brownish to very clear.

K: repeat this again. The outside is CO<sub>2</sub> and CH<sub>3</sub>?

T: yes, it is a mixture with CH<sub>3</sub> and my gans are here.

K: this is the bedroom that became a lab?

M: no, it's the gallery that has become the lab; the art gallery has become a lab.

K: (Chuckle) OK – it's a garage science the plasma technology - you don't need to be in the middle of Cerne. Show us on the outside, do you have acidic and alkaline mixed?

T: yes.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: take your camera back to the medical unit. That is your upright medical unit; I hope you are using it wisely with a doctor.

M: yes we do.

K: congratulations, you got the message.

T: we have a **lot of** patients and I found out something fantastic. M prepared this for me and it's a mixture of soursop liquid and **zinc** based liquid plasma and I sprayed this on the coils.

K: wait. We have a lot of new people that don't come to the other side. Explain what you have in the bottle.

T: this is soursop liquid.

K: soursop was brought in by Paul from Togo. It is a vegetable with a lot of elements that are beneficial to the body of the man. What is the other one?

T: the other one is zinc based liquid plasma for the emotion. The spray is like a mist and makes it possible to spray the coils so that they don't start to drip.

K: so you use this as a gans coating for your system depending on different patients and whatever. You have to remember that this knowledge is brought by another doctor from South America. She uses what is available from South America for cancer and everything else. I have to explain to you that we have received information as you do on the same basis with the zinc, CO<sub>2</sub> effect on a specific condition that comes to us from Togo. We have tested on a person while the doctors are supervising to see the change, and the effect of AIDS has been reduced in 30 days by drinking this water. In time you will see the full confirmation of the doctors. Using vegetation gans is a very fast approach to reducing things that affect the body of the man without the physical condition and massive, rapid changes in a positive direction. The body cannot take it if it doesn't need it. So, you made the gans of CO<sub>2</sub> plus CH<sub>3</sub> outside and explain the rest.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

T: on the double core it is mainly 40 different **fruit and vegetable** gans that M collected and she kind of had a **'hint'** on what to take. They are with the soursop as well and when she brought it to me it was brown and quite slimy and I put it with **zinc** based **liquid** plasma and a bit of copper based **liquid** plasma as well. Then it became much easier to deal with as I used the syringe to fill the two balls.

K: let me repeat to understand you correctly: the inner core is a mixture of food gans and vegetable gans plus CH<sub>3</sub> and CO<sub>2</sub> and copper oxide and zinc and copper.

T: yes and there is a drop of lead based liquid plasma as well.

K: and the outside is copper and zinc **only**?

T: yes.

K: so you have the connection inside and outside by putting copper and zinc in both.

T: exactly.

K: let's see what we have. **Be careful you don't get washed if it goes like the others!** Have you done this test before?

T: yes. (Starts the test at 3.36.41 minutes). It is beginning very slowly.

K: the ball is free inside?

T: yes.

K: what are you expecting from this test?

T: we have had a lot of different experiences already.

K: let is go faster; what do you predict to see with this? What is happening, can you explain.

T: it is very strong energy (laughing).

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: energy?

T: it is like sitting in a vortex (laughing).

K: yes, of course, because you added the lead in there. Let it take what it needs. I explained this to Vernie. If you have cancer this is how you take it out of the body of the man; it is amazing.

T and M: both laughing.

K: if you put this on two different sides of the body, you will extract anything that is connected to the emotion and the physicality. That is how you can, if developed currently, within seconds cancer tumors will not be tumors. Thank you; that is the gift that you brought to us. This is what I explained and this is how you opened it. This is for Dr. Klaus in the background to understand as well. This is how you can literally create that feeling of the vortex, taking because you have amino acid in it.

K: you worked on this and I pushed you to get it done. You have shown the next step. As I said before this plasma unit can be used instead of the coils and you have demonstrated the first phase of it. All you need to do is to add amino acid to the center core and if you get a cancer patient please in the presence of a doctor. If you create the same condition with 4 to 6 of these sets of ball cores on either side, you can walk in with a cancer tumor, give him time, and he walks out with no tumor. Doctors will tell you that we are crazy but we told them this was what was going to happen.

T: yes, we have a cancer patient and she is 70 years old. She is getting just better and better and had 4 treatments and she said the first time she came she was actually dying. The doctors had turned their backs on her and told her there was no use for more treatments. And so she came here and what happened was that not only did she get better but as a secondary reaction of the cancer in her body she scratched herself and I treated her with the mixture and she stopped

Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

scratching. She got more and more energetic and now she comes once a week and it is not the same woman. She walks and she changed her opinion about death and now she wants to live.

M: I have just given her your third book. She got interested in the technology and she requested we order your books and she has now ordered the 3<sup>rd</sup> book.

K: if you make another 2 or 3 copies of this machine you just showed us, you need 4 and you have to position them in the right way. I will talk to you and Dr. Klaus to do this in the right way. 6 will be perfect and you can walk people into the system and you can change the mixture inside of the ball and then you can get people to walk into the system in the presence of a doctor. You get all the data and all the blood certification of the disease and put them through the machine for ½ hour 2 or 3 times and then tell them to test the blood again. If you get the mixture right, the plasma field the right way, because you added the CuO and the zinc oxide, you connected both the physicality and emotion and you elevate the soul and the emotion and you will find out the cancer tumor will not be there within minutes.

K: You can remove the cancer but if an emotion is not elevated to support the new higher level when it changes the physicality you will not achieve it. But because you added zinc oxide into it you will find out if you get it right that within minutes the transfer of energy through the plasma of the body and after a few session when you take another MRI to compare to the MRI they came with and full blood tests there will be no cancer. I have done this and it works, but you have to elevate the emotion through a high level of zinc. Most cancers have been created through evolution and even the evolution has received the right fields it will accept the change and it doesn't accept the cancer. That is how we build organs that we have or if refused organs that we had, because now we have a different emotion, like your appendix. You needed it at a different level and now

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

you don't need it but it is still a part of us. But it is not a cancer tumor and it became an organ.

K: when you developed the pancreas it was a process of evolution. So in this process then one thing is missing in your mixture; you have to add at least a small amount of amino acid; you have to. Because it is for the body of the man. You and the others have to understand. When you deal with a system for the health you always have to add amino acid from all the elements that you have put inside. When you made the mixture of different gans, and you made the water for it, please remember to take the amino acid from the top and you might not even see it. When you create the condition that you have then you connect all the minerals in the gans state and the minerals and the proteins and the amino acid of the body of the man and the process will be very fast.

K: don't just take from the vegetable gans for the amino acids. Take it from every gans you make and just take one lollypop stick and just take it over the surface one by one and use the same stick for everything and add it at the end. So you connect every material because it came from itself from the strength of itself with the amino acid and it works magic. If you have breast cancer remember that you have to work with calcium and when you make a sphere for the breast cancer, remember that 99% of breast cancers are calcium based.

K: If you understand the process from the medical side, you have to have calcium gans in the center. Otherwise you don't see the seed moving and they say it doesn't work. Because you need, or choose vegetables in the foods that have high calcium base. That is even better than using calcium. When you use calcium for medical application always use the bone and if you are going for a brain tumor, for people with massive brain tumors, the best alternative is to get the structure of the brain and you get it from the shop—sheep and cow brain is the

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

nearest to it. The calcium that is in the structure of the brain for all the creatures on this planet is exactly the same. If you make a gans the way you do from the blood, then if you make a gans from the bone or the brain, then when you put it on the brain tumor, within seconds there is no brain tumor because you are dealing with the same.

K: Don't forget you have to create with the reactors on the back and the front of the body to be slightly different even in the mass. If you put bigger cores on one side and smaller on the other side you create the gradient flow of the fields. This is very important. You cannot put matching units next to each other. In the link connection with the coil, you put the coil from the back to front with the link to the wire nano coated. You cannot do that with the spherical cores. The only think you can do is that it goes by the size of the mass. If you use a 2cm diameter core on the left hand side, you use 1.5 or 1.0 for the right hand side. This is how you create the gradients for the emotion by the mass field strength.

T: it is a very intense energy and when you sit around, approximately 30 to 40 centimeters around the box...

K: oh, it goes beyond meters if you do it the right way. Let me explain; please do not touch lead gans in any of your health units. The lead gans is very heavy gravitational and that is why lead causes problems in the body of the man. Make sure that you don't use aluminum and make sure there is no mercury in the vegetables that you choose. Read the full content. Paul from Togo and the doctor from South America have shown this. Study the materials that you are making the gans from. We are past the position of showing things merely to show them. We have shown enough magic and now there must be structure. Read the content of the vegetable and then you can change it according to the disease.

T: Jacky has been very thorough in his explanation of these.

Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: that is why he is a teacher and head of the teaching for the KF.

T: I have a question: this was the first unit I built.

K: I have seen this unit with the Chinese doctors; they have sent me something **very similar** in the past 48 hours.

T: I made this a week ago.

K: this is strange; if I had my mobile phone I would show you. Maybe the doctors **in China** copied yours. **OK – can you** explain what it is and why you made it.

T: **Yes** this is the double core Magrav unit set up. (3.51.20 minutes). In here you cannot set it now, but you have between the coils the same heart as this device. The big difference was that when I started this it's hard to talk about the time and I think it was a couple of seconds, but it felt like 10 minutes and I was out in space. In a very rapid, extremely fast, I left the body and I could see the earth and the planet got very small. Then there was a new chapter with a dark blue carpet with the stars and the funny thing that I couldn't understand when I got 'back to earth' was that the distance between the stars were getting closer and closer and I couldn't realize if it was my eyes observing this phenomenon or if it was the speed. And I got a bit confused as I realized the distance between the stars was getting closer and closer to each other. It felt like a worm hole but it was smooth. It wasn't scary but it was very surprising because I made the device to capture free energy. So I was concentrating on the free energy and I didn't expect to see outer space.

K: can you explain to us what it is and how you made it so the others can copy it?

T: yes, I kind of followed the instructions from the blue print on the Magrav. And in the inner core you only have one motor.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: do you have a Magrav in the center? You have a plasma unit in the center—a double core?

T: a double core.

K: what is on the inside of the double core? There is a reason for this. Is Armen in the background? Armen this is what you are testing.

T: what I put in the outer core was the CH<sub>3</sub> and on the outer core I put CO<sub>2</sub>, CH<sub>3</sub> and CuO. The inner core was made very much like this one with a composite and especially soursop.

K: the soursop is the vegetable that you make the gans of is very much for the needs of the body of the man on the magnetical or gravitational. We have shown this in a teaching.

T: since the liquid plasma from the soursop was **like** transparent glue, I actually put copper and zinc based liquid plasma in it to 'thin it' so I could see the pH level getting better and better. That is what I put in the inner core.

K: **OK – so** what is on the coils? You put these two in the middle of the coils.

T: yes, **the two outer cores** (the coils) are sitting here loose with no connection. But the three inner coils **only** have a nano layer joined. (3.57.06 minutes).

K: no coating?

T: no.

K: what are the 2 bottles next to it and what are they for?

T: the one on the right is liquid plasma lead base that is connected to the gravitational field inside the coil.

K: have you connected with nano-coated wires?

T: yes. There are actually if you can see inside here, there is a hole in the wood wall coming out from the core connected to the two bottles in the magnetic gravitational field.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: what is the other bottle on the left side?

T: this one is from 3 different liquid plasmas and has CO<sub>2</sub>, CH<sub>3</sub> and CuO. This is a mixture of the 3 liquid plasma. The one on the left is only lead based liquid plasma.

K: at what speed of rotation do you go?

T: I only got this device yesterday and before it I had only 7 volts put together (batteries). What happened was that I got the leakage and they were dripping off the bottom of the outer core and I was stopping and thinking I would finish the last device and take out the double core and change it to a bit stronger construction so when I put it back there could be more testing.

K: what is the speed of rotation with the batteries?

T: up to 700 to 900 speed a minute.

K: if you push the limit of the rotation above 7000 to the motor if your motor can stand it and your power supply can supply, you should see very interesting phenomenon. At the same time be careful with your system if it creates heavy light and heavy emotion and please change the lead before you do this to something else. Change that bottle of lead and put another gans that is more base or more alkaline and I am sure you will see very interesting things. Secure your system so that it does not fall off the chair. I know something and I cannot tell you; you must get it exactly right as it should be. You will understand what I am talking about.

T: we must warn people that this is not the usual energy; it is extremely intense.

K: I want to explain something to you. You have zinc oxide in one of the cores?

T: yes.

K: and you had lead on the other side.

T: yes.

## Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: because you went through the process that you explained, because of the lead connection into the matter state, your physical state separates from your emotion and your soul. This is separation and that is why lead is lethal to the human body. It creates a field strength that absorbs energy at the matter level, the physical level. **What you have experienced** I can explain to you scientifically why. You hold the body in the structure that it is, but with the rotation of the zinc, and other minerals you elevate the soul which becomes detached from the body and then you leave on the level of the emotion and the soul. That is why you had such an experience.

T: **It makes sense because** in the beginning I had the feeling of something grabbing my heart and I had the touching of the nose and the back side of the brain.

K: I have taught this to Renan when they work with the lead; if you give in to it you will find that the physical body cannot move. You will be the floating physicality. **But** the fear of the loss holds you attached to the physicality on this planet. So, I do this quite frequently and you can travel at a speed like Father Christmas going to all the houses at the same time on the same night to all the chimneys. You become the Father Christmas in the level of the soul of the man. It allows you to have unconditional **detachment** and what you see is through the eye of the emotion and the soul and not the physicality. The reason you saw the lights coming closer is that you elevated your emotion to the level of the soul. You move in the higher strength to the higher direction that is more central to the universal direction.

K: If you go further out you see less. If you go further in you see more powerful, but closer. 4.04.03 So what you explained in your emotion and your physicality is very correct. More and more people will start feeling. You don't need a space ship to travel; you can create the condition that you can travel through the soul and the emotion. In a way you are telling us what I have been teaching for some time. But you made a system that can hold on to the physicality where due to

Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

spread of the fields from the center core and with what you put in it you elevate the level of the soul. The way the water came out of the bottle as we have seen in other experiments is like your emotion which goes beyond the containment of the physicality of your body.

K: yesterday or the day before we left I had the MRI of Naomi with us and Giovanni brought it here. When we were looking at it I showed it to Giovanni and I said this is the seat of the soul of Naomi and if you can reach it you can do what you like to bring her out of it. You see the seat of the soul in the physical dimension in the brain of the man. When you create systems like you have and then you put a heavy attachment to the matter state then you hold on to the physicality into the prison of the physicality of this planet. And now through the zinc you have elevated the emotion which reaches the soul. When you have an 'out of body experience' your body is here but your soul is elevated. It will be very interesting what you explain later on with other experiences.

T: what I thought of later was that it was hard to take the consciousness with you; we have a tendency to ask questions and what is happening, but it such a huge energy that it is very hard to bring –it's happening so fast and it is so amazing to see the deep space—that you easily become an observer.

K: in so many ways that is what I said. We open the universe and people like you who are pioneers in the technology will do the same. You know the people who were pioneers in new islands and places, with the new plasma technology you and many others who endeavor to open new horizons will open as the pioneers in space. You don't need a space ship. Even in space you can if you take it further and I taught this a few months ago in my teachings, you can stay safe physically because of the condition you have created. But in time with confidence you can present yourself or manifest yourself in another position in the universe at the level of the strength of your soul or your emotion. So, you can have one soul

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

presentation in two dimensions in the universe. It is you who experienced it and a lot of you will not need a space ship if you understand that.

K: We have seen the same explanation from Vernie last Saturday or the Saturday before in the Philippines when he was telling us about the dog. There is no way you can take man for ransom or brainwash a man. The only thing is to elevate the soul of the man to work on the balance of his physicality and emotion and the soul. And then it you who decides that you want to leave the physicality behind or you can hold on to the soul and move the physicality. So one second you are here, the next second you are there and you use the soul as the transportation. If you make the right combination in what you are making you can fly the physicality within the structure of the physical body of the man. This is what we are testing with Armen now. He is supposed to test tonight and he is building something and we are moving in the direction of lift and motion.

K: you saw the two interacting systems with the innovation center in the Philippines. We saw the jumping yesterday with Douglas in the United States. In a way humanity is moving in the direction we wanted and it is beautiful to see. This knowledge cannot be shelved and this knowledge will not stay with those who might abuse it because it touches them and it matures them too. It is very nice. I know I put a lot of pressure on you to share the knowledge with the doctors that you don't start anything in misconduct, and your soul stays free, and I think we were right in doing that. Thank you very much, it is fantastic. I hear about you every day from Caroline.

M: we are so glad to be able to go to Rome and see her again. I miss her!

K: Thank you very much - I watch what you two are up to because I get dinner table information.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

T: since it was your birthday I was thinking to honor your example when you talked about this amazing device and so I was actually going to put the dome solution on the top to keep the understanding of the building of dome as a remembrance of the first presentation of this device.

K: thank you very much. I am sure you are going to explain more and those who want to understand the position of their souls this is a very good device to bring to Rome. Then we can see which of the counselors are true counselors. And which ones we need to elevate. You will understand exactly **what I mean** when you get there. Bring it with you; it will be interesting.

T: there is something that is worthwhile knowing. On the device on the upper side of the outer core and there is a little room here and with the inner core there is a locker. And that helps for the vacuum so that you don't have to have very tall **throat here**. I have no leakage and the water molecules are not driving up because of the little space that is just here, so it is practical to know. Then you can work faster.

K: I think if you go to the higher speed of 8000 to 10000 you might start losing your fields, losing the water. So be very careful and make sure there is no voltage shortage in the electrical shortage. Because I am sure 100% that the field transfer because this is plastic ball you are using, so you will have the leakage of the plasma balance as we have seen before.

T: but it is very effective for the pressure; I tested and if you have this space and you use the inner core as the locker it is going to create a vacuum of its own that is not infiltrating the oxygen.

K: it will be very interesting when it empties; let it run. Do you understand? The position of the leakage created when the fields empty out, do not panic when this happens. Let it run so we can see. It's running at the moment. Can you speed the motor to 10000 RPM?

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

T: yes, I can get to 11500 spin with the motors.

K: can you go and see what happens or is your mixture going to hold on to the water because it is not strong enough to push it out?

T: when it gets to 2500 approximately ....

K: can we watch it while you are doing it now? 4.14.06 minutes

T: yes, just a moment.

K: you cannot rotate the outer core; just rotate the inner core, yes?

R: I think both rotate Mr. Keshe. They said earlier in the chat that they have a motor on the top and a motor on the bottom isn't that right?

K: yes, I can see it.

Armen (A): may I ask a question. I made a calcium gans but not from the brain or the bone, it's a pure calcium.

K: the matter calcium is different than the protein calcium.

A: so I cannot use it in health.

K: preferably not because it is synthetic and it is not the same. Calcium bone from the bone has the amino acid link strength to it. Calcium as the matter state is pure.

M: how about calcium egg shells?

K: the same; these are human body strength.

K: what are you showing us please?

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

T: there is an attachment to the inner core propeller and this is getting wider and wider when it gets to stronger speeds.

K: let me explain something interesting that is overlooked by some of you. You know these inner cores you make, just try to put nano coat material to it like your wing. Armen has it in his system. The inner ball you have is just spherical rotation. If you just put a loop of copper gans wire like an '8' with the double loops, around the inner core you will find a much better field reaction and a much better performance. I have seen a lot of people making these cores and you forget about this. Just glue to the ball the spring of nano coated wire, even a thin one, so you create a beating effect. It is like 2 or 4 ears of different sizes and you will create a huge, a much more powerful system and you will feel the energies the same.

M: he has one.

T: I have one here and it is around the core. (4.17.12 minutes)

K: the inside core. That will strengthen the beating and centralize the field forces. Let's see what we see. Are both of them rotating?

M: both are rotating in two directions.

K: in two directions?

M: yes.

K: ok, go higher in the speed. Let it run for awhile and let's see if the field forces come and interact.

M: the field is coming up; I can feel it.

K: **can you** get a radio and let it run?

T: I have to attach the propeller to the upper motor and the connection is getting wider. It's just a technical problem.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: you are more advanced than my time as my technical problems get monstrous. Get a radio next to you. Leave the radios on to see when they go silent. I used to have 2 or 3 radios with the systems at different distances. By the radios going silent like the way you felt the pressure, it shows you the boundary of your fields and it is very easy. You might hear a different tune than outside but you can hear both tunes. And if you move back to front you can feel the barrier. I have done a lot of these experiments and you learn a lot.

M: we put a compass next to it to see whether it will start rotating erratically or not. We didn't pay attention.

K: you will see that doesn't make much difference because they are made in a specific way. If you can inject the CO<sub>2</sub> or CuO where this needle is, you might get a different result. 4.21.06 minutes. What happened?

M: this is because the neck that gets wider with the rotation so I am tightening to make it smaller and immobilize in the rotating. This is what painting teaches you...when we have to reattach the hair on the brush. I love what is doing because one is a French tool and one is an Italian tool—southern Europe and northern Europe and harmony!

K: you have something that is under the desk that you don't need in space...toilet rolls!

M: it's kitchen paper.

K: you don't have food in space so you don't need the kitchen paper!

M: If we are feeding with the plasmatic fields we won't have need for them.

Next time we will try to clear the visual distractions. Okay, switch on. (4.24.30 minutes)

K: at what speed are you going now?

T: 7 volts, do you want it up to 10 volts? That should be around 2000 RPMs.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

K: you have to go higher. We only see changes from 7000 to 10000 when the fields cannot catch up and they interact.

M: we can see the vortex outside the outer ball.

T: now I am at 3000 RPMs.

K: you need to go higher; is it shaking?

M: we can't hear you very well.

T: yes ..

K: let it go, can you go higher?

T: the inner core lost the grip.

K: yes! Let it go. Let it go and increase the speed. Just carry on and you have to go to 7000 plus if your motor doesn't burn. Explain to us what you see.

M: the ball is rotating of its own accord; only the outer ball is connected to the engine. The inner ball is rotating on its own.

K: increase the currents on the outside core to the maximum and let's see what happens. (4.29.50 minutes). You need 7000 to 10000 RPM before you see the field **grow**.

M: we can see the inner vortex and the outer vortex.

K: **yes** carry on and go higher if you can. It's just a hollow tube.

T: now it is close to maximum.

K: hold it there and see what we get; there should be a strip of light at the conversion point.

T: it is getting so intense I have to have a break—it is effecting the stomach and the heart.

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

M: and it's affecting the sinuses and the head. Everything is vibrating **inside of us.**

T: the whole body and both hands are trembling.

M: I have the organs trembling inside my body.

K: thank you very much for a live performance! You have used the minerals which are part of the structure of the body of the man. If you keep using it you know what it feels like inside. You can remove as I said organs from the body. One warning: you always ask anybody who comes to these machines if they have any matter state like heart valves, pace makers, pieces of metal attached to their body. You cannot touch these kinds of conditions because you can cause havoc inside the body of the man. These matter state conditions even though they are in the gans body of the man will **absorb a lot of** fields and heat up. They create different conditions so always ask people. I said you two are rebels but we learn a little bit more with everything that you do.

T: the whole body is like a battery and there is a big difference between north and south of the body and the brain spins clockwise and the body is counter clockwise. And it is **unnatural to not sit** with the open hands.

K: I will leave you in that state. Please try the other system to change the lead; - Pb - change that to the gans of iodine and you will have a very strange effect and let me know where you travel to. Thank you.

K: Rick that was a very good choice. We better call it a day. Thank you for today and hopefully we will see you somewhere in the world. We will not stay in the center for the rest of the holiday so this is the last presentation from the center. We come back sometime in September and hopefully we **will elevate the knowledge of man by that time to another level.**

R: Thank you Mr. Keshe once again – so this is the end of the 127<sup>th</sup> Knowledge Seekers workshop of the KfSSI for Thursday, August 4, 2016. **Thank you very much those who presented and if there is anyone else you can get hold of me or**

**Transcript from 127<sup>th</sup> Knowledge Seekers Workshop held August 4, 2016**

(v2 2016-08-27) DRAFT (Transcription has not been verified. Double check info with video)

the webmaster at spaceship institute website and we will get it through security to be presented.
