Rick: Ok welcome everybody to the 25th KS workshop and as usual we're ready to be in contact with MK of the Kf and the SSI in Italy and there will be a couple of other KSs that will be joining him and he has some interesting info to tell us about, some new concepts and inventions we already have to show regarding the Keshe torch or flashlight – this will be explained in detail and we're looking forward to today's session so – Mr. Keshe would you like to take it away there...

MK: good morning everybody and good evening to the Canadians who are going to sleep there! As usual we don't have too much to report but there are some changes, which are fundamental to announce. What has happened is that when we set the Kf and the Knowledge Seekers 10 months ago and receiving KSs into the foundation and working so closely in understanding the problems primarily created by human life, and being involved so closely with everything I see and I've discussed this with some people around and we come to some fundamental changes.

[CHANGES IN THE KESHE FOUNDATION](#)

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

Today we announce these changes but again it takes time to implement them – one of the problems that has been here in in the centre is bringing people from all over the world, separating them from their family lifestyle to learn and to add to the knowledge and at the same time we start running these KS sessions. One of the problems we have seen is exactly opposite to what the Kf is working for – uniting and bringing everything close together that we can work together without pain and suffering. We announced initially a few months ago to set up the remote teaching and we had a lot of people interested in to be - wadayacallit – **remote students and knowledge seekers**. And we try to establish the institute here as a large scale university – threes all are taking too much time to disperse the knowledge – so what we think is the most appropriate way to carry on to teach, but in a specific way but in a larger scale – what this means is that up till now we tried to concentrate on the production of materials and the reactors and the rest, we have ignored 2 parts of the technology.

One is a lot of people who listen to the KS programs and other interviews have not had the chance to read the book and understand the book, or what it means step-by-step. The theoretical part has been totally ignored on the assumption that most of the people who came here already read the books or had a good idea on the background to the science. What we are going to do is expand on the theoretical side.

Then the other side, which has been ignored while everybody is on holiday – and we tried to cover it more and more in general – is the health side. So we cannot ignore this because this is main part of the whole knowledge seekers that can affect daily life of people. On the other hand we cannot stop the development of the reactors and the space technology and new developments and new time engineers or fan mail scientists who are interested to do their work on building systems and reactors.

So what we have decided is that we increase the teaching time to 3 or 4 times a week, so instead of every Thursday morning, we keep the Thursday for general teaching but we discuss with the KS how we do it. We start doing 3-4 hr sessions on the theoretical side – we do not discuss health side and we do not discuss materials – we go into the nitty gritty of the theory and the principal behind every step – about the plasma, about the wadayacallit – **the way we see the creation of the universe**, everything which is in the book.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

We start with book 1 and we don't stick to book 1 we try to go across the three books to keep everybody's interests to be fed, and we feed them, so we start seeing a lot of papers and we start teaching so in so many ways to do this we need to support people to work full time in the Kf – people like Rick need to be employed full time by the Kf – he has the facility and the capability to do it.

We have to change the time zones – we can't do it when its good time for us and its too late for the others to join in to be with the time they work – so we have to create a time scale and announce it in advance saying this day this hour will be theoretical – so we expand into the whole 24 hours so we can have interaction between the communities around the world. On the other hand we have to be able to answer directly – which means people can send questions in and we try to answer the questions in detail – scientifically, and then if there are theoretical mathematicians and physicists who can put it not theoretical physics data then we should be able to support it through their work.

We change the condition of just the Kf SSI to be like a spokesman and explain things once a week to a full time session. We transfer direct knowledge to anyone around the world so hopefully when the KSs arrive back next week we will step by step put this in order. We will not run and I've asked our people here to support us fully, is that, we will run live sessions, which means you will see, you will be with us here – all the cameras, open security set up – so its not just the voice – you can see the screen and we now follow on directly in a different capacity in a very large scale.

TEACHING NOW 3-4 TIMES A WEEK

So from 3 hours once on a Thursday morning we become 4 or 5 days a week teaching but the teaching in so many ways will pass on from here to other KSs around the world who want to add to test to explain their theory. The whole concept the whole principal is that we make the Knowledge accessible to everyone around the world at the same time. If there is a need or people see a need to be here at the centre – they want to come here for a while to help, to develop with us – you can come in. On the other hand one of the main problems which the Kf has been facing for a long time is to support all the expenses for what goes on – for this reason we had to rethink a lot of things with our people – for example I stopped any Google adding on the Kf websites totally – we are opening the website to that channel that it generates funds that we can support teaching things and development.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

We left the open donation closed, now we directly seek donations for the Kf that we can support scientists in Universities with all our work. We change the direction the way we were teaching – you were prepared – we received thousands of emails from people who wanted to do like the medical course and they were prepared to pay 1000 or 2000 euro per year to be part of this remote teaching.

We have put 25 sessions, this is the 25th session of the KS workshops which has been literally a teaching program in parts we discuss other parts but none of the KSs who has been on the live stream or skype or downloaded have ever gone and donated anything to the foundation – so you have attended classes and not paid for it. As I call it - from now on we request you to do so.

[DONATIONS FOR Kf SUPPORT](#)

If you go to cinema you pay 7-8 Euro for movies – we now teach 3-4 times a week. So from now on before you come on skype pay your payment and then if you think it is good then go back and pay some more. From now on our teaching is directed at the core of interested people and we have to support it – I've supported the Kf for years and years through different means – even the way the people came to us and asked or requested and received help through our health section – we got accused of scamming and - wadayacalit – they donate money for use by the foundation (fraud) These things are all gonna stop so from now on you come on the KS workshops – when you go to cinema you pay 5- 7 euros for an hour of entertainment – we give you knowledge and the knowledge is worth a lot of money to you.

You who value your life, and if you come to take it free then as we said before it goes back to the judgment of your soul. Those who think they can take and they've taken 25 sessions – say 30 sessions with other knowledge sessions, and they say they want to come and become a student – you've received enough knowledge. Value your life and accordingly the people who give you the knowledge – contribute towards us so that we can help the others. There have been a lot of people around saying we can give you millions we can give you this we can give you that if you give us this if you give us that. We have given you everything and in so many ways from now on we still carry on doing it but on a much stronger and a more solid base. Because here I teach 3 4 5 KSs and everything we do takes time, because its practical we make things so everything takes time to make. Now to receive the Knowledge on the other hand

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

theoretical discussion groups around the world this takes time not to be in the Lab – we discussed with some people we need our own Wikipedia so we can add to the knowledge

14:30: As you know I have written some 4 or 5 hundred papers – some finished, some in the process of release, some never released. From now on the time I don't spend with the KSs because they are mature enough to start developing the systems – they'll see less and less of me in the Lab – they have to take charge they become the teachers, as I told them, they had their 6 months of learning. From now on I'll be a support to the KSs and at the same time I spend more time knowledge seekers outside the lab they can come and sit round the table and be in the teaching room while we're teaching internationally – or they can spend their time to support you.

We become the teaching centre group, four or five of us, world wide, and we try to recruit as many people at the highest calibre to be able to support the whole Kf by their teachings – the people who understood the work of the foundation will connect the old knowledge with the new knowledge for the people too. People who want to start doing work for children, we put children's classes live on line – Devana is trying very hard to do this – to write books and then get it translated is very difficult – writing and paper has been the work of the pastime now most of the schools around the world have at least one computer somewhere, even the ones that don't we should be able to support them somehow.

[KIDS WORKSHOPS TO BEGIN](#)

So people like Devani who want to start teaching children, we give them time and support them here in 2- 3 channels to start teaching live – we put physics programs directly online with people like Devani and Eliya – directly online at the time they have, not the time we want it. If for example Dr Eliya wants to put time, so many hours a week, to run a discussion group on health, we run a program directly to her time that suits others – we announce that in advance.

So we're going international, we're going into teaching en masse and we start this next week. When the Knowledge seekers are here on Monday and Tuesday we'll set a program – we'll talk to Rick and some others and we set up the basic teaching of the Kf Internationally. How you support us is how long we can be here. I have supported the foundation over 10 years and as we see today a lot of organizations around the world are trying to stop us. There is a lot happening in the background we never tell. Because they say this is wadayacallit – moaning

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

and groaning – but the threat to the Kf is very deep – is beyond even your imagination so the whole situation goes back to teaching direct – so from next week and the week after we try to lead up to 4 or 5 sessions a week and people who work around the foundation and put their time will be paid by the foundation as we paid the people who worked for us as a donation. People who worked for the foundation and you saw them fulltime and people thought they were working for charity – they were paid and quite well by the Kf according to what they wanted.

Since I came to Italy this was stopped, now we start back again because people put their time at the moment – their bills their electricity their food has to be paid for and from now on before I start a KS or any of the teachings – have you paid for your donation? Not to be assertive but to show there are expenses to cover, there are people who are in the background working and at the same time there is a lot to be done in the foundation.

18:40 So this is absolutely important that for today we change the course that you don't need to come all the way to Italy to be here to learn – we come to you. Today for the first time I opened the video through the secure channels and we made a video about the torch and the nano layers around the globe – this should not be beyond the scale we got today but because of the way they pushed us we try to become more and more secure. Now we turn the table – we go so open that it cannot be stopped. We install cameras in the teaching centre live – you can see it 24/7 – if we do something you watch – all the teachings to not be blind teachings. The camera shot in the centre.

All these need finances. Stop for 2 seconds you can pay on paypal – pay directly to the foundation in Holland even 5 euro 10 dollars 5 dollars – every time you pay through paypal we use 5% 10% in some cases, because when you pay in dollars they exchange their own rate – so for your ten dollars we see 8 dollars, 8.50 at most – so we loose 10 or 15 percent – pay to Kf in Holland details are on the bank list – if you come every session how much do you pay to our conference? We give you a conference every day on whatever subject you are specialized in.

Be judge of your own – you receive you pay. You don't need to spend 20000 to come here and another 20 thousand you spend the 1 year rent and other expenses to live in Italy – and then your family to suffer with you not being there, your income being damaged. We teach you correctly from here from next week and you split your forty thousand over the weeks or whatever and pay to the foundation – you support us we support you. At the same time we are here for humanity we are not here for a few people who come on the side – I hope that the live stream bring 4 millions and something minutes – I heard that the European Space Agency with

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

the large number of people who know them they had about 18 million – so a large number of people who come and go in different languages.

We need to change and we change the table from today – we teach directly internationally – you are a doctor you are a specialist – if you want to come here and discuss it come here and teach us from here for a week, two weeks, be the guest – you pay for your time and services and what you donate to the foundation to support your work we do it. We come to the point of – wadayacallit – qualifying the technologies. So we start qualifying – we start putting things out – it's the responsibility of the companies to produce – we have a huge problem at the moment sitting with the Japanese people who want to develop the technology The problems is that they say we have to donate for what sits in public. I said we gave it to you free! But we have no control I told them – you have control to the market you can sell. This is not fitting into the Japanese structure of thinking apparently – you have to pay for patents, you have to pay for exclusivity rights – there is no exclusive, the exclusivity right is the human race!

So on the other hand to pressurize the foundation the Belgium Police have put the document that we released Internationally to show that they wanted me for questioning into Interpol – that no governments will issue me a visa for teaching. Because on it they put a scam – the ministry says 'he's a scammer – how can we give him a visa?' So we don't fight, the time of fighting for us to defend the Kf is finished – now we teach!

THE HEALTH PROGRAM

It is your problem to defend what you know and what you can do. We go into details of every aspects of the medical side theoretically and then we show you how to make the reactors for health. You want the Kf in Italy at the centre to build the reactors it depends on our specialty you pay our rate. You donate to our foundation according to our rate – you want to go to the doctor who is in Japan or in China or in USA who uses our technology you pay to them their rate and then they donate part of their work to the Foundation. And then we support the others – so from next week the Health program will be open Internationally, but at the same time we have to secure no-one off the street comes and sees something and does a mess and says "this is what I did with the Keshe foundation – they told me and this is what has happened!"

So we try to streamline only to medical people, this is the only part we want to control we try to control as much as possible. There are people who work for pharmaceutical (companies) and

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

they come in and as doctors or health workers. They seem correct but they are working in the background to destroy the Kf and our work to see what they can do. These people will pay through their souls I am not going to go searching and doing this and that – you come – you damage – you get damaged yourself!

So we are not going to look into who it does, how it does, where it does get damaged – we are going to open the books. People like Armen are spending their time here, they are leaving their family – to develop the physical part. John comes here leaving his family I know how much pressure he's under to develop part of the technology – you give our technology to security forces, to air forces to space tech forces to pharmaceuticals – at the end thinking you're working behind our back for others, you promote our work! Because if they didn't need it they wouldn't send you here or send you other people around or go on the skype to see what we do that they can expand their knowledge. So if they want to eavesdrop we open the doors they can hear our shouting!

[A PROCESS FOR RELEASE OF PAPERS](#)

I'm going to change the process of the papers I release. In past 6 months we tried to release papers that fit into the work we were doing or adding to. From now on I release papers on the Kf website unfinished, which means I put a figure like figure one – the paper for nano papers – I put a figure 1, empty space, you read the paper you donate to the paper – you read it and you think this is the image that should be there – you provide us with a picture that you think it can be, like a nano layer connection. When you read the papers your own knowledge, your own understanding – you send it back to us and we put that picture in the empty space.

So the picture comes in the language of the people not in the language of where it fits us only, so all the papers from now on will be put on and whatever is correct knowledge can be added to it – this is how we change our wikipedia but paper by paper then anybody can use it from the center so we can in this way release a lot of papers but in the same way add to knowledge maybe we put the seed and you expand on the knowledge the way we understand it. So the papers are going to increase rapidly we keep it on pdf file but you read it and you say 'this picture needs to be open'

[I AM NOT AN ENGLISHMAN](#)

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

As all of you know I am not an Englishman. They say I write in English, but my own version of English is not even English and its not Farsi – it's the way I write with the understanding of my soul and the knowledge of what I have to pass the message on. This does not make much sense in the English reading it but if you read it in the sense I've written it then it makes sense. We tried to get the books edited but it became what people wanted to write not what I was writing – we had to reject two books, three books like this but then if its your way you push people the way you want them to think – it has to be the way I've written it – if it's a little word changing – is to are – we don't mind, so if you find papers released and its not to the English language you are used to, this is the English language of us the way we understand it, the way I write it. The grammar is irrelevant the spelling to me is irrelevant but in a way has to be correct – so you correct it.

HACKING OF THE FORUM

The Kf for nearly 6 months because of the hacking and all the problems we had on the website I had not participated in the forum. From next week the forum will be used to its full value. I don't spend time answering everything in detail but we start explaining things even if it means leaving things behind – it's the job of the people to convert these to scripts and to write it.

Doctors who want to work with us – send your emails in. Doctors who want to be part of the technology send your information in – doesn't matter what language you speak or you write – there are Google translators and word translators – somehow we communicate – we need your knowledge to help the humanity.

NUCLEAR DECONTAMINATION

There is a situation at the moment that we have developed a technology to literally cascade the reactors in Fukushima which means they are putting millions – billions to putting cooling systems ice walls around the reactor. I have developed the system, the system that's in the lab, its taken me three months to look at it theoretically, to design it and it took me 2 days to build it to show its work. WHat this means? It means we can contain the reactor in molten condition inside Fukushima without moving a single material without any radiation leak without any hazards to the environment.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

I cannot go to Fukushima I cannot go to Japan because of what the Belgian government has put a false paper in the hand of Interpol – so all of us are suffering because of the criminality of a few. So Fukushima has to be corrected – we have the material, all the tests have been done now I can open the emails even from the Japanese that the tests we done is correct for the decontamination of the land.

The nuclear center of Italy has done a test and spent tens of thousands, hundreds of thousands of euros in past few months, testing what we did in Fukushima. The report confirms – official reports of Italian nuclear center, which is done for Kf in collaboration with Italian government which is in my position, conforms the reduction of the radiation in the material.

So what we developed is 100% correct – now they're asking for more materials which nobody knew up till now is contaminating. We knew as nuclear physicists but Tepco never announced it, now I have a list of the material contamination in Japan because they saw – they done a test in the past 4 weeks – they checked the data we produced with Yukoko and now they say 'OK you can do this, can you do others with the same material?' But I cannot go to Japan because of the Belgian government putting a paper with Interpol.

[ONLINE TEACHING FOR UNIVERSITIES](#)

We have taken actions they will not be able to touch us, there are governments and officials who know what we are doing, and this criminality – all of us around the world are paying again for criminal activities of a few – but now we teach live on line to Tepco scientists what to do – so there is no barrier. I teach from next week directly to the scientists in the Universities in Africa how to make material – they stopped us getting the material to Sierra Leone, from next week I teach them directly in the universities – live! How can they protect themselves? So we teach directly on line – we started with Rick about 8 months ago teaching it slowly, now it became the Knowledge Seekers 25th session – that's nearly 6 months – now we go after 6 months into International teaching.

Send your proposal! What you think and how you think and what subject you want to talk about – we expand on it. We leave it in the hand of the experts who go. If it's medical it goes to Eliya and other doctors who work with us. If it's to do with the nano materials, if it is to do with

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

theoretical, we try to teach. There is a gap in teaching of the theory because a lot of people don't understand the theory, so I see that problem and we try to teach live on the board type thing here that you can understand it.

So these are the changes I'm going to put in form next week and we have enough good support, solid support, with the KSs and other supporters of the Kf around the world to do it. But it goes back to one principal – we need to be supported directly by the people who receive the knowledge. From now on before you come for any sessions, make your donation to the foundation for the knowledge you received. I've seen someone making a comment about the Fukushima paper – 'he shows Becquerel per kg but he shows only Becquerel' – you never understood why we did it! And the scientists in Fukushima understood exactly why we did it – they checked the data and its correct and its what has to be done - it shows the lack of knowledge. There are people who make a lot of comments on the Kf – you don't even understand what is involved!

When we released the first nano papers two years ago they said 'oh this is rust you don't understand!' 'You're a fake! Blablabla!' Now it's shown to be one of the most advanced materials man has ever known. So we don't listen to rubbish. We have to work in one hand, and united, and I start the teaching, and this teaching will be mass teaching because we had enough time to teach the teachers. You have 4 or 5 gorgeous knowledgeable humble teachers sitting with the KSs here in the center. Now they start teaching! They start teaching in depth but at the same time they need your support to learn how to start teaching and what to teach – and they got to teach in what they are interested, not what we want them to do.

[I AM COMING INTO YOUR LIVING ROOMS](#)

35:50: I spend time from next week coming to your houses, coming to your labs, coming onto your garages, coming into your living rooms – to go through the reactors – to the papers live with other people to learn, so we're bringing back the International community in a way that it soothes the humanity.

I've done this with Geert in the past two weeks – I went live to the house, he took me to the lab he showed me his things and we went though his reactors step by step. I do this with the other people in different aspects – now ewe start teaching you how to make things but I have to understand what you understand about how to make things. So be prepared to open your labs,

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

be prepared to share the way we shared knowledge with you. But from today we don't say if you don't contribute you don't get the knowledge – we go back to the same point.

You go to the swimming pool for 3 hours you pay. You go to a fun park, how much do you pay? You go to cinema how much do you pay? You go to ice-cream parlor to be entertained by ice cream for 10 minutes.

You use the facility of the health side of the foundation; we make a system for you, which is one-liter capacity. Go to a shop and buy one aspirin, or one paracetamol or one tablet and fill the cup – and multiply the cost of one tablet to the number of tablets you put in the cup – if you pay one dollar for a headache tablet, when we sort the technology with your fibromyalgia and other diseases, and you have five hundred or a thousand tablets in a cup to fill it up then every time you use the cup that's the worth of the cup!

You pay to the foundation what is within your limit as a donation. People say it's just a tablet and its 40 Euros for the time to develop and half of that tablet is most probably chalk or whatever they use – just put a few drops of the material which does the work inside it. Our knowledge worth the same and our technology worth the same but from now on you value it and you pay for it through donations that we can support our work and at the same time we can help the others to expand the knowledge.

So this is important that from today, every time you start a session – how much your time worth donate to the foundation for the time you spend. We have people who said they are happy to pay a 1000euro for being remote students – a thousand euros a year would have been an hour and a half or two hours per week – now you have four hours for 25 weeks – have you paid your thousand euros to the Foundation? – You had your teachings.

[HAVE YOU HAD A FREE RIDE?](#)

Or again it has been the foundation, which has been free ride. It's a free ride for your physicality but your soul has to pay somehow to find its balance. You have to be happy the foundation as a collective has to be happy too that it can contribute and develop. I receive a lot of emails – what about they are doing this – ahh... whadayacallit – the Ice bucket thing for ALS.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

Yes, I called Mr. Bassett our ALS volunteer because we speak on a regular basis because we meet on a regular basis that we know the problems and the advantages he had. I had a gorgeous talk with him, I know he listens to this program he came here to the centre for the first time to see us a few weeks ago. I called him yesterday or the day before, I Said 'Mr. Bassett! You've seen this ice bucket business, because I received a lot of things on my emails and from Kf, that you know this ice bucket thing is creating a lot of money for ALS research.' He said ' Mr. Keshe! I'm ashamed; this is humiliating what they are doing. They are not doing this to help us; they are doing this to gain fame for a few seconds. I don't want to be involved with this!' And in a way I said 'Thank you for enlightening me!'

To a man who suffers, this ice bucket business goes to the head of Microsoft or (another company). Even though they do so in a good will of giving some money they think it's going to be used for their own public screen. They raise millions, but checking into it, no institution, no organization, no ALS center, has up to this minute come to be able to reverse part of the ALS and as we saw their executives earning 400,000 a year – its on the internet.

As a small foundation we have well established research, we have a number of (people with) ALS and MS, like Mr. Bassett and others, who are still entangling with the disease – they're still living with the disease but we slowed or stopped the process and maybe we reversed the process. We have ALS people using different processes and different systems for the past 3 4 5 years we developed. They expect to change but they don't see that even keeping ALS or MS in its present condition – that is a great achievement. Nobody has frozen, let alone reversed it!

So we are correct, our research is correct so these researches don't need to go and get publicity that we do this and that and get an ice bucket – you can raise money with an ice bucket – most likely next year they come up with boiling water! Whoever can withstand the boiling water donate more! And then next time you can jump off a cliff – higher cliff you pay more! And like the guy who started this ice bucket business he jumped and apparently he died a couple of weeks ago by breaking his neck! What's the next gimmick? We don't rely on gimmicks!

[TEACHING IN LANGUAGES](#)

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

Research time needed! So it is up to you lot who claim to be or want to get involved enough to be more than just the ones who make questions and just ridicule – it means nothing you have understood. And from now on before you go onto the KS workshop, go to the tab – whenever you go into the cinema you don't pay after the cinema, you pay before you go in. Judge your time and donate to the foundation for the cinema you going to watch. It doesn't matter if I'm here or not the most important thing is that you are there and you're sharing knowledge with each other freely and you value each other's time. I start teaching in languages.

I organize time like it comes with James in Hong Kong for the Chinese community – its exclusively for them. They can ask questions and they can be answered in their way that the translation can be done. We do the same thing with the French; John has started a radio channel. We do the same with the Spanish. One person should not become the spokesman of the Spanish; the whole Spanish group has to be the spokesman of the Spanish language. You don't understand – put the questions to the moderator, you choose and then we answer it in the Spanish time. But at the same time if the knowledge and the question is good enough that it's not repeated we share it with the rest of the Keshe foundations around the world.

45:39: From next week we become very active in the forum again. For 6 months a year I kept away because of all the hacking and damages – we have sorted most of it out and we go back on line. Six months we were busy with the KSs here, now we have 4 beautiful teachers they start teaching – they have to learn how to teach – they will teach in the institute but now they teach on your works – we teach here together collectively or wherever we are around the world. The most important thing is to be able to spread the knowledge correctly and collectively, and adding to.

[BRICKS IN THE WALL OF HUMANITY](#)

No one is the guru. No-one is the chief teacher. We are all small bricks in the big wall of humanity and the wall cannot be made by one brick. Whoever thinks they can do that is too arrogant. So the teaching of the foundation from next week when the KSs are here, we consult with them, we consult with the rest of the foundations around the world; will be done according to timetable.

We announce the timetable on the website. The website will be changed slightly in the coming days that you can accommodate and put times in, that you can see which time which channel you can listen to. We don't make a condition if you don't pay you cannot come in, but it's your

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

decision on what you want to learn and what you want to put. So we teach, we learn, this is something that a lot of people never understood what happened in the last workshop in Number 24.

WINCE'S BREAKTHROUGH

What Wince showed us as a few wires, and what he could achieve, and when he was given the knowledge freely by Bratt, and the two of them expanded on it – this shows that these guys have understood the ethos of the foundation because they didn't go in the background doing this and that, saying we do something with it, they put the knowledge the way we do, clearly in the table. If you understood the implication and application of what they put on the workshop last week! Microsoft will be change in the pocket with the knowledge that was put on the table last week by these two people – freely! Because of the way they showed things, today I brought the camera - we opened our security for a short time before with Rick and Vince to show you the torch, to show you the other material, and they will show it because I cannot release it in the next few minutes they will release this video to you. There are a lot of people who wanted to see the torch. I've shown the torch!

Its not to be able to give credibility – we could have done this years ago. It is just because as I said – you take a step we respond back to your step. When Wince and Bratt put their thing and I thought 'we add to it to show how correct they are!' But what they showed was still the first step on a ladder of a thousand steps!

The knowledge which was shown last week by Wince and Bratt – Bert I should say – is so fundamental – it is so fundamental – it is so important if you understood what they showed. Even they themselves don't understand what they showed. Let me expand on this.

They showed us a number of coated wires next to each other, then they put aluminium foil, then they put a nano layer copper sheet behind it, and then they put a plastic to cover it. This is one cell, my friend, this is gorgeous! But why don't you look a step closer? Why don't you look in what you have in your hand what you built is a battery, capacitor, according to your schizophrenic (condition) between the matter and the plasma.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

I do the same thing in much simpler way – maybe you can test it! Look at the structure. You have a nano layer of the wires – you have a conductor in between – and then you have another nano layer. Throw the conductor away. Throw the nano sheet away and look at one of the 6 or 7 or 10 copper wires, which are coated. A scratch on both sides of the same wire – your nano layer is off. Just that there is no connection. Put your nano wire on the table and just scratch one straight line from one end of the wire to the other that there is no nano layer. Turn it 180 degree and scratch it off again. So you have a nano layer, your copper wire and a nano layer – isn't this simpler? Isn't it a cheaper way to do it?

You put a number of nano materials next to each other as wires, you put aluminium foil, that aluminium foil now is your copper wire internally, and the other nano layer is another nano copper layer. The nano sheet you made to be on the back of the aluminium foil is your nano layer on the other side of the wire. Now clean either end of the wire and connect them together in series or parallel – how many voltages do you want? – How much current do you want? Make a Weston bridge then you have your full circuit – AC/DC – you still get what you want.

YOU TAKE A STEP – I TAKE YOU ACROSS THE BRIDGE.

You take a step – I take you across the bridge! If you haven't taken a step it means you haven't understood it, what's the use of me showing you the other side of the bridge? So by tonight you should have capacitors or cell panels which can create 5 or 10 kilowatt! Understand what you are doing!

You two took the understanding to a new level of maturity, now I show you an easier way. You made a nano layer, you connected so many of them next to each other as nano wires, you put the aluminium foil, you put the copper coated film nano layer – nano – metal – nano. Take your wire, separate two sides from the sides, two nano layers so they become two nano layers facing each other, the conductor is your copper wire in the middle – cost zero! Connect it the correct way – you have your battery, you have your capacitor. Empty the copper wires but fill them with Gans – you'll have your plasma reactors, the plasma batteries.

You take a step I take you across the bridge. If you haven't understood what can I show of the beauty on the other side? Put as many wires as you like next to each other because they are called insulated gravitational magnetic filed wires, so you connect them together.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

Look at the structure of the torch I've shown today. It's the same. So the Knowledge is not that difficult – you have to be able to stand that I can get you walking and running! And a lot of you are reaching that point. Now people like Wince and others who looked at this nano foil and the separation – you don't need that plastic separation, because if you can fix your copper wire in the right position, you can put your nano layers back to back because they don't interfere. They are already insulated.

A SOLUTION FOR CANCER

This goes back to Eliya - if you understood what these people have done, put this on a cancer cell! You will understand what we say that we have found – solution for most of the cancers, but in different way – don't look at the physicality of it. We teach so direct and so simple that we'll force the changes, not my suggesting the changes. **They say – you love me once, I'll love you a thousand – you take the first step in correct way, I teach you the rest in one go!** But you have to understand that then we take the next step. I cannot throw you over the walls - what happens if the torch breaks? How are you going to fix it if you never understood it?

A GRAM OF CAESIUM IS A GRAM OF GOLD

Next week when the KSs are here we show live to Tepco how to cascade the reactors directly in the core, you don't need to spend millions in doing what they are doing. They took part of the teaching, part of the process and now they say they have a solution for radioactive materials but they cannot find a solution for cesium. Every gram of cesium in the reactors, in the tanks, in Fukushima, every gram of it, every gram of tritium in hundred thousand litre tank can be changed to a gram of gold!

1:00:03 Tepco and the Japanese govt have not understood what assets they are sitting on! And they are running like crazy trying to find a solution. If you have 400,000 liters of water and then one kg of cesium, you can do something – if you have 1 kg of tritium you can do something else. But you do something else and you have 1 kg of gold! This is the lack of knowledge of the scientists who don't understand. The tank of gold and they don't understand they see it as a problem – and they're trying to negotiate a way to decontaminate – they are trying to put gold in the water in the oceans and then cause more problems.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

Every single atom of tritium in these tanks can be changed to one atom of gold – they are in such a hurry they didn't see what we showed them in Fukushima. John knows about this because I said to him afterwards, because John's goal is to be Archimedes he wants to be able to make gold out of whatever. I explained to him scientifically how we made gold in Fukushima with Yukako without anybody seeing it! Because they never tested the material for gold and you saw change in the reduction of the radioactivity – where does it go? And where did the cesium go? The radiation in cesium and the material which Yukoko told me unknowing on the line when we were testing confirmed the production of gold in her hand!

Go back on the video of Fukushima if you have it – if you don't have it I ask Rick and the others to put it back on the line. I asked Yukako a very simple question – 'do you see anything like fatty or greasy on the top of the water?' and she said yes. And in a simple way, not to emphasis that this is coming from the lab – it could be in the lab. Go back to your Knowledge – your production of this Gans. In every tank you see a layer of fat. A lot of people write to me – Is Tepco using your tech? Tepco is not using our tech, a lot of companies around the Kf and others in Japan are using the Knowledge we gave about the absorption of cesium, now they are using other materials – this can show other materials in the land and the water can be reduced too, because now Tepco has confirmed that our tech has caused reduction in cesium and if they repeat twice it brings total loss.

But where does this material go? This is not a magic show it is a full scientific base knowledge. Most of this material has changed into atomic gold in that soil – so – if Tepco has over 1000 tanks and they're spending billions to make freezers to contain it – boys! I would let that reactor create as much tritium as it likes because every tritium created gives me 1 atom of gold! (if gold is the interest of humanity)

We have opened the science of the Knowledge of God to you lot and you don't understand it! And because of your lack of understanding you blame! Like your father we have to forgive because you don't see. So if you are Japanese a lot of people write to me and say – can we talk to Tepco? Tell Tepco 'for ever tritium you have I give you 1 atom of gold!' if you have by weight lets say 10kg of gold of tritium – even cesium – we give you 10kg of gold. So these people are sitting on gold and they want to dump it into the sea. And they want to spend billions and billions of dollars to keep it and not destroy it – not to produce it.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

This is an inherent capability and abilities in nuclear materials in nuclear reactor processing – in the reprocessing plants – what do you think? You think they take only the uranium out? The material has gone through the process of decay – the material in the process of decay when they take the fuel rod out has produced gold.

The world of science has not understood how profitable reprocessing is – it is the richest way of attaining rare earth materials and they don't let nobody know! This is one of the reasons the Iranian nuclear program is getting halted. Because Iran with its enrichment program can produce rare earth materials and therefore certain companies lose their control of production and pricing.

When materials decay what do they decay to? And then because of the environment of the reactor – I'm a nuclear physicist, my specialty is reactor technology, I've been trained to understand every aspect of the reactor. My friends! – When we take a fuel rod to clean, recycling or reprocessing – we put in 1 dollar and we take a million dollars out – because you don't have the knowledge to understand what they do! Reprocessing which is exclusively given to the British government will create so much wealth that even the Bank of England doesn't have!

[THE SHEEP ANECDOTE](#)

Let me explain for you if it's too hard for you to understand another way of processing – this I've explained to the KSs – maybe some of you have heard it!

You Lot! When you see a sheep walking on the land, to you it's just a sheep! To a farmer who's got the sheep, it's the meat he has to sell, and he shaves the wool on the back of the sheep. He sells the meat for peanuts and literally sells the wool for scrap because it gives him something extra – now depends on where you live around the world – where this little sheep has walked around the world! Kazakhstan – Siberia – New Zealand – England – Europe?

Now – where does this sheep go during its lifetime? It doesn't have a bed; it doesn't have an air-conditioned mattress. It grazes it eats it sleeps on the ground and where it walks on. Sheep by its nature produces oil to keep itself waterproof – this oil is like hair when it gets greasy – if you

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

don't wash it it gets greasy and dirty. Now you have a wool walking around with a fat which comes out to keep himself waterproof and absorbing all the dust on the ground where he sits where he sleeps, where he goes. What is the ground made of which he's walking on? Gold, rare earth materials, dust – now the farmer sells this wool for peanuts to the wool merchant – the wool merchant makes ten thousand kilo of it – they ship it into Portugal or India and not China. What do they do?

1:10:54 You go to Harrods, you go to whatever brand name you buy 100% wool and you pay so many thousand dollars for your suit. Oh boy – you haven't understood a single thing yet! This suit that you pay 1000 dollar 2000 dollar is worth nothing compared to the fat and the real earth material that was in it. You got the waste – in the special factories in the special condition when they boil the wool the fat comes off, the rare earth material comes out and now it gets processed, the oil is sold the same thing as keeps the lamb waterproof is sold at a very high price to makeup manufacturers and pharmaceuticals – we are talking about thousands and thousands of dollars per ton .

Chinese buy wool at 5 -7000 dollars per ton – now – what happened to all the rare earth material that was stuck to the fat – now it's worth millions. When you see the fat it's brownish greenish stinking material, but when you separate it from the back of the wool that the farmer sold for peanuts – you have gold, you have silver, you have titanium – you have every rare earth material inside it. So a ton which is bought at 1500 dollars lets say in Kazakhstan, and the farmer only receives two or three hundred dollars a ton, at the end of the process, worth millions and no-one has ever been told of this!

How do I know? Because I was the man who bought the wool in Kazakhstan and sold the gold at the end! That's why I can explain to you the full process. (*pardon?*)

The same thing goes with the processing of metals. When you go to refinery, refining copper, when you boil these material to refine it, in different processes they use different systems, when you go to steel manufacturers – when you boil the steel when you do this processing it's very much like when you cook meat. You go to the butcher and buy meat and put it in the boiling water you see a fluff of dirt coming on top of the pan – the same thing happens in the steel industry – the dirt comes to the top. For hundreds of years it is scooped away and dumped – mountains of solid metal by these huge manufacturers.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

They sell the copper for 6000 dollar a ton, 8000 dollar a ton. That is worth nothing – that's absolutely peanuts because the wealth is in the dirt they put aside. What is in that dirt? All the rare earth materials – because the copper came from inner sanctums of the planet and in that process everything is attached to it – everything is together. This process what they do they try to dig and cut and whatever with these blocks of dirt that are sitting for 15 or 16 hundred years near these refineries near these plants, shipped to Belgium the company called Udimineer (?) or the sister company in S Korea. They produce gold, they produce rare earth minerals, they have developed a process.

How do I know? I've been to their factory. When the Eastern block broke up we were part of the structure to see what we could salvage. So why did Udimineer, in conjunction with the Ck Office, in conjunction with the Belgian atomic energy, pay for looking into the coca cola bottle? – A million 2 million spent by Udimineer!

SITTING ON A GOLD MINE

So – now the same process can be repeated in Fukushima but in the plasmatic Gans state of matter. It's the same thing as the wool on the back of the sheep the guys are trying to get rid of. Japanese are sitting on a gold mine of rare earth materials in the cesium tritium condition in their reactors and in Fukushima.

In Belgian Government blocking me from travel, imprisoning me here in Italy now that I'm here Governments have taken steps to overcome this – but now this brings back why you understand Belgians are so anxious to get their hands back on me. I know too much, and I know how much, and I know who is involved in what. And they want to have the whole technology it's just this being a scammer and blabla is a way to get back in. The European governments will start opening their eyes – very soon none of the Belgian warrants arrests around the world will be accepted because it's all tainted with criminality. We'll open, we'll discuss this in the coming weeks, they are trying to dismantle the Kf power cell that they can get their hands on something they can force, but other governments have already taken steps to protect.

We don't talk, we don't do anything, but we show in time when it comes. Why? Because it's not the process, its understanding – its understanding the whole structure. Go back; start understanding why you put so many wires next to each other, why you put aluminium foil, why

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

you put the copper coating. I explain to you next time try to do the nano coating, Gans, and the nano coating.

If you can empty these wires internally from the copper, now, because of the strength of the GMfield - the weakest in your wire in the nano coating was the wire because it's the Matter GMfield strength - your nano coating is a higher level in the strength. Now this higher level by removing the copper from inside the wire and putting the Gans in becomes the weaker part, and the Gans becomes the strongest. Now you see the level of power you increase!

THE NEW SUPERCONDUCTORS

In the papers I released about nano materials you understand how the nano layers and the Gans are such superconductors. We explain everywhere that the nano layers are diamond structure because this is what you can understand – all you could understand till a few weeks ago. Now that we explain why the nano layers are resistant 20megawatt or whatever, its because their GMfield levels in balance, you cannot go though when its already balanced! It creates its own atmosphere you can't get!

These layers of non-connection very much you call it the Coulomb barrier – this is the real physical Coulomb's barrier that you see it but you don't understand it. You think it's a diamond structure. This is the problem if you can twist the two wires, which are nano coated and get cross energy – you have managed to achieve fusion – that's what fusion is! Understand the structure! Understand what you are doing in respect to what the reality is, not in respect to the schizophrenic way of thinking that we have.

When you cannot weld the nano layers together it's because the Coulomb boundary – that's the real physical atmosphere – what you call atmosphere, in electronic we call it Coulomb barrier. They are magnetic fields that you cannot cross and in human terms you call it 20 mega-ohm, 100 mega-ohm – but when it becomes conductive its not because of the Coulomb barrier, its because the gaps and the holes in point of gap can cross if you can make it slightly of a different material tighter you can go to 1000, 2000 mega-ohms, depends on how much you make and how you enter. If you come directly to earth in vertical you get burnt out! You find an angle you come in and when you have so many barriers, so many spheres next to each other on a nano layer, somebody can find a way to penetrate, and that's why you see the sparks, you see the

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

heating. Look at the video we released today with Vince – Rick, can you put it up that they can see it?

Rick: Ah... Yes I'll try to get it up – which part would you like now?

1:23:20 MK: Start from the beginning. If you start from the beginning and add it to it I try to remember what I showed you.

Rick: There are some pictures of the torch or flashlight – we can start at that – let me see I don't think there's much before that. It was just set up and you start to show the flashlight. I can put that up now – are you able to see the live stream or not?

MK: No I have no access to it.

R: Ok, well I can describe and you can tell me where you want me to put the video.

MK: Tell me when you start I try to remember what I said.

[DON'T GET DAZZLED BY THE LIGHT](#)

1:24:10 R: OK I'm starting the video now and I'm showing you with the flashlight complete, you're just showing the end of it now and aaahh...

MK: You see the light?

R: The light is not on but the torch, the flashlight is being shown yes.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

MK: When you see the light when we open the torch just don't look at the light – don't get dazzled by the light! Don't get dazzled by what it is on the torch! Look at the structure of the nano layers. We go in detail when the KSs are here. We open it up that you can see how to set it up – the position, the way, the closeness you put these wires together dictates how much energy you absorb. Very much like Vince showed last time – he put the wires next to each other. When you wind it's very much like the winding of a coil – you are too busy looking at other things you miss the nitty gritty – the details.

How much does this torch value to you? If you understand it is worth a lot! But you have to be able to manipulate the knowledge, and manipulate the technology to achieve and get what you want. If you make a torch the way we done and the way we explained today pay for the torch to the Kf – as a donation and then we can do more. This is the reason we are opening the doors to close a lot of things – there was a lot of credibility issue too because you couldn't understand the patents. My credibility is 100%, it's your lack of knowledge which is questionable – it's your knowledge you don't understand.

1:26:35 if you see the torch, don't look at the light – the light is a by product, look at the structure the way the wires are set, look at the structure the way the wires are positioned, look at the structure the way the wires are connected, understand the interaction between matter and nano, nano and plasma, absorption of the plasma, absorption of the energy, absorption of GMfields as energy. Wince told us when he put it next to his skin or he holds it the thing goes up to 3volts – it cannot go if its not there, where does it come from? It comes from the plasmatic – actually it comes from the direct touch with the aura of your body, which is rejected by the body, because another side in the area you don't have it. When it comes to concentrated GMfield which is your skin – your aura – its like with the GMfield of the sun and the GMfield of the Earth you create heat and light.

Now the interaction of the GMfield of the nano layer with GMfield of your body creates that heat and light, but because of the nano layers inside and the matter you see it as voltage and current. Understand what you do in the real term of physics. Why when Wince holds his capacitor whatever in his hand has no material no energy as such? – But when he attaches it to his body he sees a high voltage? Nano layers are GMfields – your body is GMfields – they interact – daylight → energy, energy → battery charged 3volts. You shouldn't have been surprised – you should have understood the principle. That's how, when you put nano layers together, connect them, put them on something that has energy to release or can create an environment that the energy is there.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

Go a step backwards. Change your skin to the surface of the planet, and then make your torch to be the herb, closer to the earth more interaction, higher energy the stronger the herb. This is the difference, just translate the knowledge and take it across one to another. The torch is the same, then I showed the globe too, and I showed the layers, I showed, I said to you last workshop that what Wince showed us we already had for years. You see the aluminium foil you see the nano coated wire sheet, the copper, and then you see the copper sheet. This is very much the layer of your skin the way you can protect your systems in high radiation, from damage.

Then I showed the globe, the spherical globe, and how we can measure every step – different current in the north and the south and the bottom and the top. If you look in the globe you see some liquid – this is pure water, it is natural water. You don't see any sediments as you see with the Gans materials because these systems are set not to produce Gans.

Try to understand how you can set the structure not to produce Gans even in a salt condition – because this water from the tap carries salt and minerals, we cannot stop that. This is important to understand and don't get puzzled or baffled by the lights and energy. Understand the energy what it is – translate the energy from current and voltage, to movement and the strength difference – and always – (broken transmission- something about GM fields and EM fields)

Electro magnetic fields only exist in the matter level – when you go into the plasma you always have to consider both gravity and magnetic field or what we call magravs.

Then tightening the two wires together and getting 20 mega-ohms is not a puzzle – its understanding that you have two earths or two Coulomb's barriers which you cannot cross. There is no way you can cross this and why you get a drop or maximum mega-ohm or whatever is when there is a gap, not in the nano materials, in the gap between the two the way the GMfields position themselves. We try to show and explain usng all the teachings and from now on we go live from next week that you get a full understanding of it – is their any question?

1:33:12 long silence...

Rick: Aaahmm... yes – I'm quite sure we'll have some questions here – chuckle

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

Vince: If I can find my un-mute button, I said I think that everybody's jaw is wide open and they can't talk!

So – thankyou very much Mr Keshe for all that information it was very fantastic to hear and I'm glad that sharing the knowledge that we can understand has brought forth more knowledge and I see that as the correct way to go myself. Ive seen that for a long time and we just had to wrap our heads around it and understand.

MK: Aaaahhh – we loose you! We can't – hullo!

R: Did you miss part of the last part of what Vince said – is that what you're saying?

MK: I haven't heard any of what Vince said, he just totally lost...

Vince: You didn't hear anything! OK! Is my voice ok now?

MK: Yes, you're OK now.

V: I'm OK now! – OK! – I was just saying that to thank you for more knowledge, and we have seen it in the plasma group that we needed to come forth with our own understanding in order to increase the knowledge, and I think people wanted to say thankyou for helping us increase our knowledge, and I'm sure we'll move forward and incorporate this into our next understanding – just keep building!

[MS MOTHER DANCING WITH HER CHILDREN](#)

1:35:15 MK: Yeah because now people wanted to see the torch, we were told there was a question of credibility – we have no questionable credibility – ahmm... There is a listener today

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

I'm sure he's online – he approached us for specific reason and we responded to his request and this week I received an email from him, or through him, or because of him that it justified a lot of things we did in medical research. I asked permission from him that I can release their email and they said yes but thinking in their high side this creates a lot of problem for them if we release this, that how in 8 days using of the system the lady can dance with her children with MS, which she couldn't do.

They know who they are, we protect their names, but in the knowledge of the science, doctors will work with us, understand how we do it, and we explain it, its not very far from what you done with your capacitor. For a mother to be able, with the MS, to dance again with her children – it's a lot of joy!

But the knowledge is very very simple – I spoke with Mr. Bezant a couple of days ago before I spoke with him about this situation with the ALS and the ice bucket. He picked the phone up and he was happy. I said, 'Mr. Bezant you're happy!' He said "yes I was laughing with my child, he was playing" or whatever he was doing, and he was laughing, he said "I had a wonderful summer, I went to the beach every day and I enjoyed my children, and I was laughing with my son!" I said "Mr. Bezant, the day we met I said to you give me one good reason that you want to live – that I am convinced you want to live for yourself and not because other people want you to live". And he said to me in the hotel where we met " want to live for my children!" And when he told me on the phone, that he was laughing with his child and he was happy, I said, "That's what we came her for, and that's why I accepted your case!" For him to enjoy his children and for children to have a father!

We don't release names of people who are successful because Mr. Bezant has seen it and he received so much pressure from everywhere that he does not want to be in the public light. People are cruel, and we respect this, that's why we don't release any more names of people. But people who try to take us to court to say we do illegal health, we don't do illegal health! We make a copy of the planet, and people are made of the planet and they respond to it.

So if you understood again the work of the capacitor you made you'll understand how we've changed the life of a mother and the life of a father to be more with their children and enjoy their children. The people who want to put stuff in the way or stop the progress are people who put their fathers in pain, and mothers in wheelchairs, and fathers in grave that the children can suffer, and they have no right to this.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

Those who complain that the foundation done this and that, we are researchers; we develop according to the man's body according to going into space. So, if it suits for you because you can hide and divert the tension of the joy of other people because it suits you to become attention center or you make threats against others – we know what we done we know what we achieve we know what progress we have offered that we learn the knowledge to do it.

The email reads within 8 days of the use of the system I can dance with my children. No knowledge, no technology has managed to reverse MS in 8 days. All the money spent on MS and ALS is needed – research is needed to understand more. In a recent paper by ALS association in America who said they are responsible for research, they said they see abnormality in the RNA in a number of ALS cases.

What is RNA? RNA is part of your conscious information part. This is exactly what we say – ALS comes directly from emotion, which sits within your RNA, not your DNA. Which affects its work on the DNA, which goes to formation and paralysis. They are confirming what we do, but what we do in practical application. The same thing is with the cancer, the same thing is with a lot of things that people don't understand but they –because of their lack of understanding – they blame. There is something I would like to explain in talking about this.

[STOP USING ZERO DRINKS](#)

Please, I see this a lot, and I see more and more of it and we have noticed it hugely this summer. Please if you want healthy children, if you want to have a healthy future, stop the use of this zero sugar and diet sugar. I see a lot of zero drinks around, and I see this diet material around – people are enjoying the sweetness and fizziness of the fizzy drink and think they are not getting fat – Oh boy! You don't understand what you are doing to yourself!

1:42:46 You are setting the seed for cancer, you are setting the seed for a lot of abnormality in the coming time, you are setting the seed for diabetic, you are setting the seed for a lot of disorders. Understand the principle – what does it mean, diet coke, 1 calorie? What does it mean zero sugar but you still have a taste of sugar? These are worse than nuclear bombs sitting in the body of man the way it is going on.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

The manufacturers of these drinks zero drinks and diet drinks, a lot of people say all this material, the false sugar they use have so many side effects. No you have not understood what it does in the body. The problem is not the material so much; it's the process of the work of the body of the man, which will set off the cancers of the future, pancreas problems of the future, digestion, abdominal cancer, bowel cancer, schizophrenia, Alzheimer's, and Parkinson's.

Let me explain to you, understand the principle. Anybody who uses zero drinks can understand what it does in the body. The concentration of a can of drink doesn't matter if it is gassed or not, is about 12 teaspoon of sugar per can, because every sip has to be the same sweetness. Now understand what happens in your body when you take a sip of cola – any cola, no name. The minute it touches your tongue, the stomach and the brain evaluates the amount of energy its going to receive, and accordingly it works for it to absorb it or store it to use it.

Now you're playing the fools game – I show it to you but I don't give it to you – but you already have done a work – its like you go to work as a plumber and you do whole plumbing but you don't get paid. You show the body that you're putting 12 spoons of sugar on the body, the body works for it makes accommodation because this is what it knows that much sweetness has to have this much what it can do with it and there is nothing! You used diet! You used zero!

You fooled the body and you think you're going to stay healthy? All the organs in your body they are going to work on the basis that from now on whenever we see this thing nothing is going to come so they adjust themselves. You have played with the energy to your brain, you have played with the energy to your intestine, you have played havoc with your lymphs, you have disturbed the total neuro system of your intestine, because it does not react anymore.

R: Mr. Keshe can I ask a question regarding this? Its from Licksenwayne, she's interested in the structure of the cortex or outer parts of the bones and why do they have such strong mechanical properties, and how can we make bones.

MK: I get you broken up Rick.

R: Let me try that again Ill try to be a little more clear. I had a question regarding the human bones and the structure of the bones, of the cortex or outer parts of the bone why they have

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

such strong mechanical properties and how can we make bones – associated with what you're just saying, how would the bones be affected by the conditions that you're just describing? How would it change the structure of the bones by taking in these zero drinks?

MK: Yeah, because you don't take anything, you don't take anything, this is the problem. The body expects it but you don't take anything. What happens is that you change the structure of the lymph – over time the neurosystem of the intestines gets affected – how can I describe it? Its like magic show, you know when you pay lottery and you get nothing? And then you keep on paying, and then you give up because you never win? The stomach waits for the energy to come in and it doesn't come.

SCHIZOPHRENICS DON'T DRINK ZERO

The people with schizophrenia, if you observe them, they drink a lot sweet drinks – they can consume up to 8 to 10 cola drinks a day when both or a number of characters are active because they need energy and that energy from cola goes directly to the brain. If you have observed people with schizophrenia physically they might not be very active but because 2 or 3 parts of the brain are working continuously because they are communicating, they are doing their work internally for each other, they consume huge amounts of sugar. You don't find anyone with the real schizophrenia consuming diet coke or zero coke, because that doesn't give them the energy to operate.

If you are able to provide energy they are very calm people because they have – they drink a lot of high concentrated coffees and teas and drinks or chocolates. When you don't provide it and the body is expecting it because you gave the information it's coming in you swallowed it and there's nothing there, the thymus starts re-assessing its radiation field. Thyroid glands will assess their work according to thyroid, because this thing is nothing we are not working on it. The gland in front of your forehead, which is your neurosystem assessment, will not be trusted because this is the one that absorbed, informed, there is a lot of sugar coming in and nothing has come in.

By taking these diet or zero drinks you create huge problem, internally for your body not trusting its own work, and I see a lot of children with a lot of zero drinks, everywhere! My God, a zero life, because your perception, your eyes, is the last part which the brain trusts, but because of your perception in your forehead, which informs directly your emotional part, has confirmed with

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

the eye to its emo part, there is a lot of sugar coming in, but the thymus, pancreas, parathyroid glands, the glands on your kidney report back to the brain we are not receiving anything someone is lying here, so they all adjust each other, and then you don't have zero drinks all the time - you have a drink with no gas in it which isn't zero with the same concentration of the taste – the body ignores it – what is going to happen?

The acid and the enzymes in your stomach are not ready and it arrives in there. The digestion problem, the cancers of the future are set with these drinks and people don't understand it – the chemicals are nothing compared to what is played with the internal organs. In my house, in my life, these things are banned, not because I ban them, I explain to my children, I explain to my family what it does, and they understand. If you don't want to get fat and you have a cola, have a cola but in moderation. Allow the body to absorb the energy. If you have a coca cola don't eat with it food that has a high salt content –the energy will not be used for what it is needed to be used. Understand what you are doing inside your body, and the same thing goes for your lymph's. You have the lymphs when you drink these diet drinks, which operate slightly differently, and then the size differs and then the operation of the absorption of the lymph to the bone marrow changes too.

1:55:34 Chemicals do not cross the wall of the stomach – the energy of the chemicals crosses the wall of the stomach. If you eat a gram of gold it doesn't get digested you don't carry the gold around in your body we carry the plasmatic GMfield of the gold so when the body needs it uses it. Understand the process, understand the structure, and understand what you are doing to yourself. Understand why cancers are specific to certain foods and cultures.

Understand why ALS and MS can become hereditary, that you can pass it on. Because you deform the gene and the gene accepts it and RNA informs the physicality to show – this is the part of the problem that the world of medicine has never grasped. They keep on looking for DNA. DNA is exactly the same as the body of the man, it only functions and works on the instruction which is received from the RNA.

[CHANGE DNA THROUGH RNA](#)

The world of medicine should understand the RNA before DNA then through the RNA they can change DNA. They see chromosomes, they say DNA there is something in that chain of the DNA – look in the RNA of that section what information is coming to create that change. You do

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

not go paralyzed in ALS if the emotional part has not informed the physical part the world of medicine is too involved in physicality, not in the origin of the thing where it came from. In time they understand their mistakes, they are opening their eyes into it. Change in the DNA hardly happens because of its materialistic position, it comes because RNA, which is the information base says, a robot hand cannot move unless the program has come in to move. And that's exactly what it is and that's what the world of medicine doesn't understand.

So – in this technology we work with plasmatic GMfield. Do we work with DNA or do we work with RNA? Why are our systems are affected by emotional psychological problems? Because this technology touches the RNA not the DNA. This is the first time I explain this and for people who are in the world of health medicine pharmaceuticals; understand! The game has changed! Because you are dealing with information carrier Gravitational Magnetic field.

DEALING WITH MS, ALS, ALZHEIMERS

That's why we can reach ALS people, that's why we can reach MS people, that's why we can reach Alzheimer's people – because – why do you get Alzheimer's? Because you want to be detached from the physicality so you become forgetful, the memory is not there – the memory is still there! There is no Alzheimer's! It's just that the life is so harsh on the emotional part that the emotional part detaches itself from physical part – and you call it Alzheimer's. I feed. I nourish the emotion through RNA physicality shows itself, they remember everything, they are very good, and we are magicians!

2:00:00 Start understanding how this technology works and on the basis it works. Don't now go back – you are supposed to have so much energy because you drank the diet cola and its not there, and the brain has programmed the emotional side the way you breathe to process something and it doesn't receive it – what is it going to do? Its going to switch off, its not going to trust next time.

You find a lot of people who use these diet drinks and they become long term emotionally unstable people – why? Because the brain assumes it receives, it doesn't receive; it doesn't trust itself so the system starts working in reverse. You find people who like to be very slim, especially girls, escape to these drinks, because emotionally they're already unstable so this feeds into it.

ANOREXIA AND BULIMIA

Anorexia Bulimia these are all part of the same process – why would a bulimic – you look at their face – I walk on the street with my wife – but you look at the way they walk the way they are – chipmunks! What does a chipmunk do? He hunts for food and puts it in his cheeks – what happens when somebody is bulimic? What do they do, or anorexic? They put their finger in their mouth, they develop the technology in the brain to vomit the food, and they vomit it in the toilet 2 minutes later. They hide it in their chipmunk cheeks, big fatty cheeks, and they lie about the fact that they have their food – you see it in their eyes on their faces.

It's very easy to solve the problem for anorexia and bulimia – we done it in the Kf and it takes a few weeks! Because these people can not vomit the energy they receive – they receive it GMfield plasmatic directly into their body so they cannot vomit it out – so you give it time, you give the body the chance to process itself.

TIME TO START TEACHING THE DOCTORS

We start next week teaching how to makes these systems, directly to the doctors, because if you do it the wrong way you create problems for yourself in different ways. Please keep your children and yourself away from anything to do with diet – the only reason you get fat is because you add salt to your food – or psychologically you have to be big to show authority, because people are afraid of big things, but the only problem is some people don't have the height but they go fat in the other way.

Something happened to us I told you in the past month and a half when KS have been away I've taken 3 or 4 days off, no more, because there is so much to do. And we were out with my wife and my child and I noticed that there were cameramen in clothes in swimming area – paparazzi – from newspapers, taking pictures. They noticed we noticed them so they moved and then they moved somewhere else – because somebody we were informed whatever whether we were in that area.

You cannot fool the body because when you are consciously aware you see them, and they walk in the swimming pool with a full camera bag and everything else. It's the same with your

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

body when you are conscious of the awareness of the area, your environment, you cannot be fooled, you cannot fool your body – so this guy moves in a position that he can take picture of me and my family for whatever newspaper they work for.

Because we work with a clear conscience we are aware of a lot of things. Try to understand what I teach you because this is a teaching for you for your family for many generations – I try to teach the family with exactness – (you are students – knowledge seekers of the future) the process, not because you say so, because you can explain the process, you can understand the process. Try to realize what you do to yourself with the food you eat, not just physically – the food has a direct effect on your emotion and the emotion physically according to what it receives affects the physicality – and then you get the outcome.

ASTHMA AND ECZEMA

There is something I read someone put on the forum – can you explain about asthma and eczema. Asthma is a psychological disorder when you cannot accept the energy, which is in your emotion according to your lungs – the energy conversion in your lungs through – you – the lung has to adjust itself motion so the rate of the Hydrogen energy into your lung has to change – you show it as asthma.

All asthmatic conditions are psychosomatic but you have to understand the reason for the psychological motion that shows itself in the somatic side, which is the physical side of your body, with not breathing.

We had a case in Belgium, a child during the summer is kept outside as much as possible and in the winter the reverse. Because any time he touched cold he used to get blisters about 5 or 10cm in diameter – there are photographs – every time he jumps in the swimming pool he couldn't go in summer to a swimming pool because the cold water would have increased the blisters – as eczema – it took us two sessions to stop the process.

2:09:40 Again with the asthma all these asthma pumps – these they relax the lung to change the condition of the conversion of the Nitrogen for production of the Hydrogen – then you say

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

your rest – if you understand that the brain does not send the information, I receive too much energy – then you understand how you get asthma attacks.

MY PILLOW, MY LIFE

Caroline has written a paper entitled 'My Pillow My Life' – We release this paper, this paper as I said before has been donated, was given as a donation to the South Manchester hospital for asthmatic children – we will not release this paper on the website, it's the first paper we release by Caroline – she worked on it for years and I helped her finalise the final bit – which shows how you can get rid of all your asthma partly psychologically and then with the support of your physicality you'll walk away and never ever use a single asthma pump, and it works every case.

If you cannot sort out the psychological pressure which has caused it you'll find that you come back to it – asthma is a psychosomatic which shows itself as a direction and a direct absorption of energy from your lungs for the working of your emotional part – and when the emotional part is using too much it asks for more energy from the lung, the lung can not deliver it, so you're short of breath you want more Oxygen, more wadayacalit – Air – to be able to receive that – and why do you get emotionally disturbed?

Its what you expect of the community, the society, the environment you're in – and – or – you have to pretend to be something you're not – so to pretend physically you have to use a lot of emotional energy to inform the physicality to do, and the energy is not there, the fast energy production comes through the lung so you show it as asthma. It took Carline 10 years to research this and we gave it as I said, in 2004, to the S Manchester Health Authorities, but this paper is going to be released in the coming days on the Kf Papers – its called "My Pillow My Life"

And then you find out follow the procedure in any child who is asthmatic or has eczema they will not show a single sign and they leave without any pumps. Pharmaceuticals wont like it but this is the reality that works. Ten years ago between me and my children we used to use at least 4 or 5 different asthma pumps – green, blue, yellow, grey, whatever colour was in the system we were given! And all our family, grandparent, uncles, parents where the children were more in schools, they all had the asthma sets – if you are there and anything happens – today we have to search to see if we can find a asthma pump in the house. Its unheard of, past ten years we don't even see it, it's the same with eczema.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

Why do you get eczema? Because it shows I'm in pain – look at it – I can show my pain! I'm scratched, I'm bleeding, I have a big sore piece in front of me – physical manifestation of the pain emotionally inside in the psychological part. When you can feed it, when you can balance it, it doesn't need to show. You have a physical problem, you show it as a temperature, cos you ate the wrong food or you went with an infection. The emotional part shows in certain ways its work in its physical outer way – Understand the process, understand what you are doing!

You'll find out a lot of people who use these diet drinks will become asthmatic, become eczematous, become other disease because as I explained in past workshops, CH bond sugar Hydrogen is the only process which the energy in a fast way is delivered to the blood system, and you starve it of it, it has to show – why do you go out of breath? You get asthma you put your hand on your mouth you suffocate and die because through the air you breath you directly send energy to emo part, what happens when the emo part wants energy and the lung cant give it? Suffocation (gaspng sound) you cant get air – its the reverse of you put your hand on a person and stop the air the emotional part dies – the emo part asks for the energy and you can't give it so you have the same feeling – I'm getting suffocated because I have an asthma attack

2:16:16. We have a case, Eliya knows, that due to asthma attack people go into coma – why? Because the physicality will not support the emotional part, the other part that the physical part shuts down (noise of switch off) - coma. You give the wrong information to the lymph, the lymph does not receive what it needs, there is not enough conversion in your thymus gland, and the info is wrongly balanced in your parathyroid gland, and in your thyroid glands. What do you expect? You change the environment – you get cancer. Drink as much as you like, diet drinks, and cola drinks and zero drinks, and then you'll see the consequences in the rapid increase in young age cancers.

There is something I have to explain to you- we are trying to close down the SSI side because of security reasons, it will happen in the next few days, but the webmasters are doing something and they try to replace it somewhere else, so if you see the Keshe foundation and the Space Ship Institute going down, we are organizing it ourselves the next 24 to 48 hours. Don't inform the Foundation, the webmasters are working on it. Now – any questions?

2:18:10 Rick: Aaahh... there was a question n the livestream and it relates to what you were saying about the asthma I think. But they asked the question before you began that, so he goes on to say 'by nano coating the inside of a length of tubing and allowing air to pass though that

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

tubing into your lungs, you could then cure any imbalance of your body and ultimately lead to perfect health'

MK: Don't try it!

R: Yes... that would be the advice that I would probably suggest for several reasons I suppose like we shouldn't have the nano materials touching our lips and mouth and even fingers.

[HOW TO MAKE THE CUP OF LIFE](#)

MK: You can do it but you have to understand what the nano material structure is. Even though you absorb a spectrum of the energies but at the same time you have to have the Cup of Life, we explain this when the KSs come – we teach you how to make the cup of life ...

R: Can you make a straw of life, a tube of life?

MK: Yes! We do it, I do it – the people who use the health system, they always get a cup with a straw on it – they all tell you.

R: Mmmmmm!

MK: this is not something but you have to understand – the people who have used the Kf have used our systems – they always tell you we provide a cup with a straw in it and they put this straw with the plastic up in the reactor in the containers and in the flasks and then they breathe in different zones, because different zones create different plasmatic GMfield in the air – you have to realize it's not the air we work on so much as the nitrogen which is attached to moisture within the air, which when it touches the lips it delivers the energy much faster.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

R: Sorry did you just say that It was the Nitrogen that carries the energy? – I didn't quite understand that.

MK: Yeah, the Nitrogen attaches itself to the water, to the moisture – it's a very simple process but that's the way, and then that Nitrogen and then when you change the Nitrogen level in the lung you change the process. The air is not the Oxygen that they told us – everything is Nitrogen dependant. So the air you breathe through our systems is what you got through the moisture that it delivers and what it needs to do, and they say – its been said before – the Nitrogen comes down by rain.

We say rain brings life but actually what rain does it brings nitrogen down from upper levels and because of its conversion ratio into other materials it becomes what we call a fertilizer. It's not the water, the nitrogen in conjunction with water because of its ionization, makes easy the release of the energy of the Hydrogen in the water. And then it gets absorbed the same way as the lung does, but in the stomach it goes into the –wadayacallit – protein of the plant, and the plant grows.

Understand the process! Why – rain – is! Why do you put a fertilizer which is Nitrogen based, around your plants and then you water them. Because that nitrogen in conjunction, it speeds up the process of the GMfield release of the Hydrogen in the water, and your plant grows. Because Nitrogen creates a centralisation for that hydrogen atom in the water.

Understand the process! Then you understand it is very easy to work within the life of the creation. This doesn't apply to man and there are Physicians in the future who understand the same process when we come in touch and we live amongst other races in the Universe. How energy is converted by their body in their environment in their existence. You call it; it could be Hydrogen on this planet, Magnesium in another Universe, and most probably Plutonium in another Galaxy. Its all the same, how they receive energy – you have to work the system they work for workable energy, and the level they work in. If Hydrogen is too weak for them they cannot absorb it you have to go to a level they absorb. If they work on the energy level of lets say Potassium, or Magnesium, or Plutonium – so you adjust your system. Once you understand the principal and the concept, the rest is easy.

[LYMPH AND CHEMOTHERAPY](#)

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

This goes back again to the other question you put to me about the bone. When you have aaahhh... chemotherapy – I support chemotherapy strongly because I understand the work of chemotherapy, everybody knows it – I know now how to diminish the side effects of it. Now let's look at what let's say diet coke does – what it does to the bone. The bone is a sieve. The energy which is supposed to come from that drink into your lymph is not alive, because you think you are drinking the cola, you create a lymph that will have enough energy that it will go all the way – but in fact because you got this diet restricted food and whatever – what happens?

The lymph becomes so small because lymph is like a balloon. You put energy in it – it expands. You don't put energy in it – it is small. That's what happens with chemotherapy. You put high energy levels into it so your balloon of the lymph cannot go through the holes of the bone to become bonemarrow, to become your amino system, you call it T4, B cells and T cells.

Now you do the reverse, you don't give energy, so lymph is very small, very tiny! It goes through the bone very fast and because of the high speed of going through – you change the position of your amino system. So you produce yourself much weaker, because it goes through, it's much narrower and goes through the holes of the bone, the sieve, much faster. Instead of there being friction it streams through, and so much of it gets to the bone marrow and the bone marrow has certain capacity.

So you create a weak immune system so with people – let's stick to the bone marrow that diet cokes and diet colas and whatever they drink, you set the scene for weaker structures. Weak immune system, thymus doesn't work properly, tomorrow breast cancer.

My darling young girls don't touch these poisons of your own body, there is nothing wrong with them, it's just you change the pattern of the immune system in the body. The smallest touch with the breath the smallest internal infection there is not support from the immune system to deliver the energy to sort the infection out. The infection becomes solid and then they call it a breast cancer at a young age.

Understand the process! What you are doing to yourself. Put this out in public as much as you can, and let them understand why, just don't say diet coke creates cancer, let them understand why – you create smaller lymph, smaller lymph goes through your bone marrow they cannot

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

support cannot strengthen your immune system, your T cells, your T4 and B cells, which you need to fight infections, or whatever you need, and multiplication of the cells in your body. Then the smallest infection becomes cancer.

One of the greatest reasons, to my research, high rates of breast cancers in the young girls, not only because they are more sexually active physically, it's because in their mothers etc they used to have a decent process of food. Even if they had internal injuries in the breasts because of the sexual behaviour, the immune system used to recover. But now because they are literally with these diet drinks they are washing the lymph out into the bone marrow and out of the bone marrow into the bloodstream which has no strength. How do you expect to fight an infection? Understand the process!

FOOLING THE BODY WITH WRONG MATERIAL

It is the same thing with the young people – they are sports people and they go on a diet drink. The energy for the fabric of the muscles, of the heart, are not there – how can you run a marathon when you shoot yourself with a shot gun on both feet? When you know what happens with the bone – nothing happens with the bone structure, the bone structure still creates still vibrates, but receives the weaker structure attachment of the calcium and minerals that make your bone, brittle bone and the rest of it can be the future of it.

But this continuous use of fooling the body with the wrong material – it leads to these diseases. How do you expect to change a system when you don't put anything in the system, you fool it and you take all its parts away from it. I think the worst, worse than Fukushima, worse than Hiroshima, worse than any other nuclear bomb made for man, is these diet food. People don't eat or drink diet food to stay slim, cut the salt content from your food – you've done it – you don't need to do anything. But don't fool your system because at the end of the day it needs energy, it needs an immune system to protect you and it's not there 'cos you washed it out, you cleaned it out too fast.

I try to put a paper on the forum about this blablabla more about the sugar based sugar free drinks with further elucidation of the process leading to looking at the structure of the tongue, the sensations and taste on different parts of the tongue. Why is the tongue structured that way? It's coded to give instructions to the stomach for acidity alkalinity sweetness etc but it gets fooled, and then the body gets fed up – so stage is set for all diseases to come – next question...

THE NEW WIRE STRUCTURE

2:33:07 Brett: Mr K I put a video up on the google drive, and put links in the plasma group for people to see the new wire structure you talked about – I made one!

MK: Yeah I don't have the facility to see it at the moment, hopefully when the KSs come back we hopefully sort it all out, but please, if you program your life we carry on with the Thursday workshops, but from next week – we're going to announce it on the forum and everywhere else – we're going to do a detailed study teaching.

Next week we can collect your questions and answer them, we can talk direct to the African universities about Ebola. If you find translators for the French or Spanish groups we do it for China, Japan, or wherever we support you. You are on the right track but understand the working of the wires and you will see you can achieve a lot. Start putting these wires in very much spherical condition, and then you'll find out you'll achieve huge amounts of energy through Gans materials.

B: Ok Ill try that!

MK: no problem – we'll try to show these in the lab.

THE SPHERICAL CONDITION

Rick: Speaking of spherical condition, part of the movie we made with you before the workshop started, you show a speherical reactor, I'll show it soon, with many wires, I think you mentioned 37 wires connected.

MK: Its electrodes! Its electrodes!

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

R: So you have these electrodes that are placed inside a sphere and there are different orientations, some of them face downwards, some of them face upwards, and you mentioned you could have different types of nano material coverings on these electrodes so they could absorb different types of radiation, different frequencies, and so on – ahh... could you explain a little more about that spherical reactor?

2:36:20: MK: The reason I built this was primarily to test material condition in space. In space we create the GM condition of the field we want for a specific reason. Or we open the plasma – ahhh... the position and the angle of each electrode you see in this sphere is preset. The way I've done it is that I've taken two half spheres and I marked in the half spheres the position and the height that I'm going to put an electrode on.

If you look in detail into the core you see the electrodes are at different heights, and they're slightly differently twisted so it's the orientation and the height – different heights absorb different energy – it's the same proposition – and if you look some of the electrodes overlap each other, one is under the other one. So I detect, I expect so much energy from this and then each electrode is connected to its material and its nano side to two points on the mother board in the background you seen then the red and white dots – then I have sealed the two half spheres together as an umbilical cord out of... out of another core which is sealed and out of that core connected to the mother board which holds these wires.

Now I have a full control – I know the height – if it is too high or too low, and then capsulating it in the bigger sphere I can dictate the environment of this sphere, of the electrodes. I want to put Nitrogen in there as powder Nitrogen in the racks with the electrodes in the nano layers. I want water I put water. I want mixture of gases I put mixture of gases – then now I'm in charge, I'm in control of the environment in respect to the electrodes – but because they are nano GMfield based – I give you what you look for so I look for electrode number 27 in respect to 28 which is next to it, and something on top, which is energy, absorbed from the upper levels of the atmosphere from the light side where we receive the light from the sun.

I want to see the fields which are absorbed from the ground level, I go to electrode number 2 or 3 which is in the bottom southern hemisphere because I directly absorb what is coming from the planet and this goes back to your wires that you are making... or what Wince showed us last time. You put it near to the earth you absorb more of the heavy strong fields from the earth –

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

you put it in the air your receive hardly any. This is what happens with your electrodes so it's what we say during the night time you receive more radiation than the day time because the radiation from the sun suppresses the field of the earth into the inner layers to the earth and when it is not there they come out so you absorb more and they are much stronger.

This is the same way. You absorb more if you ever feel depressed if you ever feel not good you go into a park and lie on the grass, go camping in a camp in a tent, what happens? And you feel good – its not so much that you went on the camping and you seen the sight ok – but by sleeping on the floor near the ground when you go on the grass at the park and you go asleep. Try to fall asleep on the grass in the daylight, and try to go asleep on the grass in the evening or night. I tried it. You feel totally different, even your organs will feel different because during the daytime you absorb mainly what comes from the top. During the night time you receive from the materials of the earth – if you could put yourself on a spit and turn you slowly somewhere around half day time, half night time, you'll find a full balance if you can find a hammock that goes around like roasting a chicken – you'll find out – you'll feel ...

2:42:18 Rick: Is that part of the idea of rotating the Gans reactors to obtain that balance?

MK: Yes of course. You concentrate on the GM field, in the concentration of it, how you bring the fields into one environment – ahh... its important to be able to change the orientation, because if you can change the orientation you change the condition effect of the plasma. If this is hard to understand just go back on the structure of the planet earth. Most of the majority of the planets and stars rotate on their axis straight – just because of the little deviation we have life on this planet and 4 seasons. It doesn't mean that you don't have life on the ones that go on their axis – they still have life, but because of that slight orientation we have absorbed different types of fields, we have released some radiation, and then you have the heating and the cooling and the rotation of the fields around this planet. Try this with your reactors and then you will see what you will see – you'll see the changes and the effects.

R: Would that be the orientation of the axis in relation to say the magnetic fields of the earth or the central gravity point of the earth like...

MK. No-no-no-no-no-no-no

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

R: What would it be orientating toward? What are we trying to line up with then?

MK: You line up in the star formation – you line up in respect to your reactors.

R: But what about the reactors with respect to the environment like does the earths magnetic field make a difference to the orientation of the reactor in the sense that...?

MK: In some cases you can - in some cases you can – if you can control the – in the future we will show this – if you nano coat your reactors when you centre your electrode which is coated you will find out you can twist and turn and mix your gases in a different way. At the moment we are at the preliminary stage of making these reactors.

By changing the plasmatic magnetic field of your center core the one you nano coated now is continuously the same then you'll find out how you can change your plasma. You can turn your plasma inside out continuously by changing the GMfield strength of the plasma of your inner core stick – what you put as central column. If you go to the original central column in the patent everybody looks at the magnets but that is the concept of nano materials. I saw originally a lot of people put a lot of magnets on top of this, but now that we've gone a step futher we can open the book.

[READ AND MIX THE PATENTS](#)

2:46:07 Now, maybe, maybe some of you who have read the patents all 3 4 5 6 of them, whatever you had time to read, start crossing information and mixing and then you'll achieve what we planned. Each patent carries a part of the key.

I've seen a lot of people sayng “Oh Keshe the fake – the key, he doesnt give it to us! The crook!” The crookedness is in your ignorance of understanding. Now you have a debt you want to find a key. Partially this is part of the key.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

Start understanding of one patent and insert it in the other patent and you find answer. You have a nano patent. Take the nano technology and bring it into the core reactor patent – energy reactor – space reactor – then you have partially the release of the material as a Gans. Bring it into the patent, the design, now you understand why all the patents have to be read together. Medical application has to be brought up on the patent of the health with the nano materials – very much what our friend is doing – when Armen comes with the small reactors he's built we can show the work of the technology and the medical application.

Start now, read the patents again but understand where you read what and how you bring it together, and then you show everything the mosaic is complete – getting completed. I can only teach you as much as you can understand, otherwise to you it's all ahhh... whadayacallit – jingle jangle.

R: I remember one thing you told me in the beginning workshops about how you could go into a wrecking yard and find the materials to create a reactor, and you also mentioned about using a cell phone to create the conditions and so on, and Knowledge seekers including myself at that time had all sorts of theories and ideas and for several months I would be pondering – what did he mean about this? Answer how all the different ways these mechanical parts of the cars could be used and different ways to create the conditions and so on, but what you were actually referring to mostly was the creation of nano materials more than the material form of things like the element copper for wire.

Yes it was for the wire, but it was to create the nano materials, not for the copper windings and this kind of thing. So it took a long time to realize the power and potency of what you were talking about with the nano materials and I guess I just want to say thanks for persisting in that because it would be easy to get off on the wrong trail if you didn't have a basic understanding underneath to know how to go with it.

You mentioned the cell phone for example and I started thinking all these different frequencies and so on, and somehow these cell phones would interchange, two cell phones held on either side of the reactor or something, but it was actually using the cell phone batteries to get the copper foil out, to nano coat the copper foil and use that inside a reactor type setting, or to create Gans and so on, and it's a totally different approach than a sort of linear approach we were trying to apply though those hints. So it's forced us to think in different categories, is what I'm trying to say, and that was very beneficial because from that it opened up whole other worlds of possibilities. So thank you for all that information.

TEACHING AT THE LEVEL OF UNDERSTANDING

2:51:29 MK: The thing is – I try to teach at the level of your understanding – as they say Professor aahhm... teaches aahhh... physics in the University with a guy who already has a first degree or has a Master – for his research. And the same Professor goes to a school to a nursery and teaches a young child the same physics in different language – it's according to the understanding of the listener and the maturity.

For me to put a torch, this is a torch you could have done years ago, as I explained in a couple of private talks around the foundation and the skypes. We can give you everything but you don't understand and it then becomes magicians, but as you do it yourselves and you teach the others, the others understand so they don't need to believe because they know, they understand, they can make it themselves. It's the same thing I proposed to the... it's a very funny proposition and I repeated to them one Sunday and it just went over their heads.

You know these security forces in Belgium in the Police force that they have a problem or whatever they are trying to carry out the orders they are given to do. I said to them you know a lot of your colleagues have back pain and back problems because they jump, they fall, they hit then they arrest – whatever happens to them. I said give them all to me and I give you healthy officers with no back problems. At that time to them that was just – 'now he emphasizes that he is a crook' – but when the officers all go back when they're on the force and they can serve their services and they can serve their community – then how can they say that the technology doesn't work?

I DON'T GO AND FIGHT

This is how you don't upset but you put the facts on the table for them. I don't go and fight. I don't go and fight disease. I don't want to fight the condition – I want within the conditions for the change to come. The whole thing is, even with all this mayhem whatever it is, we don't lose our hat but we stay calm, we show how the system works. How can a technology be wrong when we can put all the police forces back on the beat with no back problems? Who are they trying to arrest for the nano technology that helps them to live a healthy life? Then you don't need to fight.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

DISSOLVING CANCER

Then we show the same thing in the body, we don't need to fight the cancer. You have to find out how cancer was created, what condition was created for the same length to liquidify and then to solidify. That's all it is. You go and put lets say 100 or 200 spoons of sugar in a hot glass of water. It dissolves – it is not there – but when you put a string in it and you let it cool down, you create a condition. Out of nowhere you get solid sugar crystals attached to the rope. This is exactly what you do in your body. You create a conditon and you put the string there so that's when you call it a cancer. Now – through the plasma reactors understand how you can create a condition without matter for these crystals to release themselves and then there is no cancer, there is no sugar lump.

Then you find out, fighting and understanding is very much in understanding the principle, and with these workshops I'm going to give through the Internet and other things. I have had time to realize more and more in the last few weeks that a lot of people even though they read the book they don't understand it. I was talking to James, he said to me the Professors who are supposed to read the book to peer review it or whatever they have to do, to write about the book what they think, they have difficulties in understanding it! So it's just trying, it came to me, if the Professor has trouble translating, God help the normal man on the street!

LEARNING THE BASICS

2:56:58: So we start teaching. All these recordings we start learning the basics. One of my assumptions was that people who are around the foundation and work like other people, when they read the book and the patents they understand to do it, but apparently a lot of people cannot make the connection because they've been taught in different way and that's where the confusion comes. And that's why we start the new teaching process, to go into detail that you don't think there is something wrong and that's why you don't have anything.

When you go to the scrap yard you have the copper windings, you have the motors that can start the reactors and believe it or not one of the first things you should take out of the scrap yard is the batteries they put inside. Those batteries can give you a lot of energy in the future and a lot of materials in the future. The process is to understand how to use it in GMfields and in

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

the matter fields, and if you have a matter go back and turn it into plasma and then you manipulate it.

Understanding and working on the level of the plasma and then understanding the separation between the plasma and the matter level and the plasma as a free plasma, and the plasma as a Gans. Up till now I keep on telling you have to understand between the matter and the plasma or Gans. In fact the matter itself is a plasma but of a different strength – so now you have to understand the different strength of the plasma. Then you start playing the creation process – then you understand you have a plasma, which is invisible as a plasma. You have to understand that you can change the plasma condition to be visible but it's still plasma – you call it a Gans. You can still have the same plasma but in a different formation, you call it nano layer. But then you can go to another level of the same plasma in a different strength in a matter state in a different way, and then in the future you understand the four states exist in every level of the Universe. And then your headache just started!

Thn as I said we start creating the box in the lab where we create the environment in different strengths for you to do the creation of God. You have to understand what it is – the physics – you have created a plasma – now you change the environment of the plasma slightly, you make visible the plasma, you call it a Gans. You put the Gans in order of respect to the structure of each other in the atmospheric condition process, you get the nano layers, and then the same plasma you change it in the structure strength, you get a matter! 3:00:52 And then go in a different outer strength level. If for example the copper is let's say 10 and the gold is 50, you can have a gold in 500 too but the other one is the 100 – so you are the same material different spectrum.

THE LIGHT OF A STAR

Now you have learnt more we start teaching you how; then you learn about one of the biggest hypocrisies in the sky – that's it taken 1000 light years for the light of that star to get here. (In fact) the light of that star has taken it instantly the minute you see it it's been released by the star – not 100,000 light years – because the energy which is transferred across it comes the field strength energy of your eye which carries the full spectrum of the plasma of that sun. It's instantaneous! How they come up with this rubbish and they accept it and everyone says it takes 200,000 light years to get to the other star, or for the light from that other star – because you measure it in the matter level and that's what it gives you!

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

If you measure it at the strength of the transition, which is conformed matter when it is slowed down to matter level, then its instantaneous – yes – it takes so many years because of its speed and resistance to get here! But the transition level star plasma, which is equal to transitional within the plasma of your amino acid – It's instantaneous! What you see is actually what happened in that instant. And they say a this stuff might have died billions of years ago – even if it is done at the matter level you see it not at the transition level.

So all this hypocrisy is (the same as) what they used to say in the 18th 19th centuries when the car came out – If you go faster than 25 miles an hour your eyes will pop out, your ears will blow out, your brain will come out of your nostrils! Then you understand how we cross the lengths of galaxies and universes instantaneous according to the energy field we create – but GMfield of the plasma of the destination.

TIME ZERO TRAVEL FACTOR

This is a lot to learn about in time – the natural process – the way I always see the children jumping into the computers like nothing and we have a problem here finding where the camera is. In the future operations we'll do this normally, its just for us as a prison race, we are schizophrenic in between one and the other. We accept the physicality so much we don't like to leave the comfort zone – but in time you'll see you can produce a lot of things you can extend and understand the knowledge.

You can go from here to the moon as fast as you can go from here to Jupiter as fast as you can go to other galaxies – time zero travel factor is here.

PARALLEL WORLDS

3:05:20 Rick: Mr Keshe there was a question on facebook about that – aahhh... Rafael Bahaia – 'I would like him to explain about parallel universes mentioned in his book *The Origin of the Universe*, and if theres a possibility to access these worlds?

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

MK: Yes the future generations will do so in a very rapid way. You call it different universes – how can you access from one neutron to another? How can you go from one electron to another? It's the same process. You call it two different neutrons in the same nucleus – change it to universes. Each neutron even it looks the same, internally its done the same, but in the outer balance level the condition – they reach the same condition as the environment allows it.

So you call it parallel world, I don't call it parallel – we have twin universes which came out of division of our universe, and our universe came out of the division of another universe – so it's the scale of the mass. So if you think you can find another earth somewhere else with a twin of you running around you are dreaming. It doesn't exist because there is no possibility – zero chance possibility – that in another condition the same thing, the same parents, the same grandparents, the same food, the same time, and the same place that led to your creation.

Parallel world does not exist, but other universes exist in parallel with this universe, in line with this universe. So in a way we had a problem to jump off, and it took us years to understand how to fly like the birds. Now we have the plasma reactors we can travel around – in the very near future we understand the condition of the other universes, we need to create to be accepted or rejected, or achieve into being able to reach. It just needs time, man doesn't understand. At the moment we are cutting each others head (off) and we think we are in power! We are still animals in the jungle! How do you want to go into the universe?

ZERO TIME COMMUNICATIONS

R: There is another similar question from McArthur Liso – 'I would like to know if gravity waves, or electro-gravics can be used for faster than light communication?

MK: Speak to the Brazilians – they are at it – chuckle. But there is something that a lot of people don't know going on on the background and a lot of criticism and discussion that has come through Germany against the Foundation is that what we call the Third Reich people are still looking for that it will save your false system. And as they did not get it from us they started through different divisions a lot of attacks on the Foundation.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

But they have achieved a certain amount of work in Brazil in zero time communication systems which most of these people in Brazil are pretty powerful at high level connections which they use in the Brazilian military – ahhh... It's achievable – you go to the length and strength of the plasma electroGMfied level and are given the strength and you replicate the same thing in the same place or different places, and because they're the same they link up and this is the zero time communication, zero time travel – because you're on the same field strength. This – I always say – has anybody measured the speed of the field of the solid magnet? Then you understand how fast you can go! Sigh... Next question...

[ALL QUESTIONS ANSWERED IN TIME](#)

KS: I have a question...

MK: Try next week to go on the forum if you are a medical person you want to join the teaching on the medical side we try to keep on the skype that only medical people can come on or we have to find livestream secure that only medical people can access.

There is talk that we will most probably in the coming weeks or maybe much faster we start teaching military defence technology to different nations directly in the same way. These are important for what is about to come through – not human side of the military, but you have to be ready for what is to come. So National governments have to be prepared and put in line that the Nations can be protected from what is about to happen for saving the Nationals. So very soon we open direct teachings on the military defence – wadayacallit – glasses for protection of upper atmosphere.

We put this on line, we teaching directly to the military people – we will show it how it's done. We will show defence technology for radiation protection and barring what is happening. As I said we developed it in Fukushima, its going to be passed on – aaahhh... in a way spending more – wadayasay... defending the system as a totality for this planet and this is the method we share with the militaries at the highest level and we start teaching. They can log in one by one and learn the way how it is done and they can protect their citizens.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

R: Aahh... Mr Keshe! In that regard recently we've seen a couple of failures of rocket launches. One is when the US military sent their latest craft up and it exploded, and also Elon Musk Space-X did a launch and their rocket also exploded, both within a few days of each other. Now some theories exist that there are some powers that are beyond human that are not allowing things to move in and out of our atmosphere essentially at this point – It's sort of officially a no fly zone for planet earth! Is that true or is that just a coincidence – aaahhh...

MK: Aaahhh... you know! You know how many rockets Verner Braun tried to get the first rocket to reach England? Failure of the systems is nothing to do with that people from outside didn't want the Germans to get hold of the – wadayacallit – U bombs and the rest of it. These are just coincidences but it makes a lot of good news stories to say if they're connected. To me it's a physical failure and not understanding.

3:13:36 Rick: Spaceships with fire coming out of the back of them is a losing proposition basically – not the way to go for the future. Perhaps these failures will produce a little more attention on the Keshe foundation – your type of Magrav technology may be more preferred.

MK: Aaaahhh ... propulsion is part of the space technology but slowly these people will turn to plasma propulsion but not the way they are following it. Plasma propulsion is a very very effective way of creating GMfields – and motion and physical movement – because when you create physicality you have to move it and plasma gravitational propulsion in a matter level in some cases is needed.

[PROPULSION IN SPACE TECHNOLOGY IS FINISHED](#)

Propulsion on the space technology is finished – cleverly if you look – very very interesting if NASA realized this. NASA stopped investing in propulsion systems – they shelved the rockets, they shelved the shuttle system – these are 'let other people spend on what we've finished with!' A lot of space people have realized, like Richard Branson spending so much money in getting people off for a few seconds – because the big boys in space technology know that the rocket time is finished for space technology. It's not that they're not investing in it, because but they're still doing some research around it.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

I always remember in 2004 2005 I was walking down the main street, I even remember exactly where I was, I was standing out-side the hotel in front of Antwerp train station. I was standing in front of this hotel and I received a phone call from NASA boys. He said "Mr Keshe if we accept this how many people will we have to put out (of work) in NASA if we close the propulsion lab? but we know we have to do something with it!" Why do you think they're lending the launching pad – the launching room of the shuttle? They spent so much time to develop it, now (they think) let them have it and we play a new game!

R: And they're using Russian rocket boosters but they're not allowed to use them any more because Elon Musk's SpaceX is making it a lawsuit through the government so they can't use. They're not supposed to be using the rocket boosters because they're in conflict with Russia! There's a big problem now with the whole space program because they don't have the boosters and so on – they kind of shot themselves in the foot you might say!

MK: No but in a way people at high levels in NASA they know that propulsion is finished, but because of the research and the work they've done – they don't need to do the space ship propulsion technology. They are very busy with different type of plasmas – we have access, they received the key. Actually you got to realize – they know more or less – the Americans shared knowledge with the Canadians and the Belgians and the British which was kept away from the others – that was when they arrested me in the airport in Toronto. All the blueprints of the Iranian space reactor were in my suitcase. They downloaded all of it so they know how advanced the Iranian space technology is, and they know something has to come to an end.

Rick: What came to an end in Canada – It ended the publishing of Iranian science articles and papers. If you're Iranian you're no longer allowed to publish in Canada!

MK: That's because we're too intelligent!

R: chuckle

MK: What I was trying to point out is what you received off the USB stick this year – the blueprints in my suitcase – they even left their papers to show they downloaded – we showed it on the internet a few years ago. So they knew the Iranian space agency and space ship

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

program is very advanced but they didn't know how advanced. And they know there is no use for rockets. So all we did in a very polite way, we shared the knowledge with the rest of the governments what the four of them (Canada, USA, UK, Belgium) had.

When they kept me the 11 days it took them the 11 days to analyse the material, because all their fingerprints, the numbers on the tubes, are there. I always show it to the KSs every time I pick up these samples they see they have a black mark and numbers on it – the Canadians and the Americans and the Belgians the only time they let me go was when they downloaded all the info from every piece of my work. So instead of sharing it with a few bandits I shared it with the rest of the world. Now everybody has it! (Sniff)

Now we start teaching it and they know the reactor sitting there with all the reverse technologies in the papers. They are going through it with a fine toothcomb seeing what they can do and what they have achieved. So there is no room. They think 'oh we let the Rothschilds be happy – they are launching the only rocket where they have the privilege' – No! Because you paid ten billion to the Russians to do it in a different way, and now while they are busy with that they never thought the Russians received the key in the same way. I met with the highest-level Russian diplomats in Brussels and I gave them the key personally – and don't forget the Iranians have a very close connection with the Russians.

So everybody knows the rocket propulsion is dead but they still have to carry on with things they started years ago. They can't put people on the street – 'We are not producing this car anymore, you're unemployed!' They are trying to divert from one science to another. As you know the black astronaut, he has his numbers with him, he has the highest – he is from S America and has been developing plasma reactors. He is a very nice guy. Put it this way – we know too much – we better don't talk! But now he's become responsible I would have loved him to become part of the Kf space-teaching program. But in time it will happen.

R: There are also some people that would like to see SpaceX and Elon Musk get behind the Keshe foundation. He produces such nice high quality things and he's totally different philosophy from the other NASA contractors and other people that are trying to do the space programs and so on...

[THE PROBLEM OF THE BELGIANS](#)

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

MK: You see there is a problem because we are not aware of this – we were wondering for some time in the past few weeks, the past few months – there is something changed in a lot of government approaches of the Kf. And what happened, as you know we are closer with the Japanese because we have the solution for Fukushima partially – and they went over the test with me in Fukushima – they went back to the test centres from the Japanese government, re-did the tests, re-evaluated the documents which Yukako made in the past 3 or 4 weeks, or months actually, and they confirmed that the technology is correct. It's 100% correct, and they asked us now for more of it – so the ministers – I was put in direct contact with the Prime Minister of Japan.

When I put names out there you know how correct we are! They wanted to do a fast track to get into Japan that we can sort out a solution. The first thing that came out was there was a warrant for the arrest of Mr Keshe! It's not a warrant – it's the same paper as we released, so they have a problem. Otherwise we would be in Fukushima doing it. Now they're trying to find a way around it. They can bypass the Interpol situation – I made it very easy for them that I start teaching live to the Japanese from next week how to do that. I don't need to be there – so these are the barriers the govts took to service their own problems, and we find a solution around it.

At the moment I put a call to Mr Delanois a couple of days ago asking him why he had to put this paper, which is a request for an interview by Interpol. This is illegal – even the note at the bottom is so nice – it said there could be no lawyers present. If the officers of Interpol read that they throw any application, by the human rights, from the Belgium police into the bin! So that is one of the problems we have sitting now with Tokyo – and directly speaking with the Minister of Energy and the Minister of Research and Development, and Finance and the Office of the Prime Minister of Japan, how to get me to Tokyo by bypassing this stupid thing that the Belgians have put in – and by coincidence Mr Delanois is on holiday!

So everybody knows we are highly tested, the technology is 100% correct and if need be we release the emails directly which come from the ministry and their officials of Tokyo, through the company organisation we work with. The technology for Fukushima is 100% correct. The technology for health is 100% correct. We had to develop systems which had to be done to understand the working of the man's body, but as you know the materials for Africa for Ebola were stopped and we are working with someone on this forum for ways and means of getting into Africa. But now as we have direct access, and these materials can be made on the ground, from next week I'm teaching in the University.

TRANSFER OF KNOWLEDGE TO HUMANITY CANNOT BE BLOCKED

You cannot block the transfer of knowledge and helping humanity. So that's why we change the course – that's why we teach every doctor. Every doctor should be able to help his patients or her patients on the level. But the problem is how to make a system. This is what we start teaching live.

We put cameras here; we show you piece by piece how to make the structure of a man in a cup! –

The mental part, the physical part of the brain; their interaction and how they are connected, and how we are connected.

The same thing will go with the Lift. I will push the speed of the teaching into a level, which – now – the key for me was seeing what Wince showed last time. They are getting there so I speed up – you have to understand that – and with it teach the others and record everything, that the other doctors who are asleep tonight they can watch it tomorrow. The same thing with the NASA scientists – if they want to see it we open the key. Yes there is a key we can show – but that's the key to me not the key to you – you might come with another solution. But read the patents, read the books, and mix it, and you understand it, how you do it!

R: And along that line we're going to try and come up with a sort of synopsis of each of the workshops, and a better filing system so that people can access different parts of the workshops quicker and easier to get the information they need and the things they want to discuss and so on. So we'll try and makes the system a little easier – more functional that way for people to research.

Blessings upon you and thank you so much for your beautiful work Rick!

MK: We got to teach everyone at their own level. I need to teach about what is about to happen and what is to come. The health program we have to cover very fast and at the same time we start teaching the defence technology to militaries without access by public. But I will teach the

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

Iranian forces as much as the American forces as much as the Russians, as much as the Chinese – so all the National forces will learn how to develop the same technology. Aahh... it will not be wide screen, some people will do whatever they can do, the programmers will come to some sort of arrangement with you Rick that the defence technology is at the moment an extreme priority with what is about to come up soon for all the nations to be ready to protect their citizens. We've got to organise it and we've got to make a timetable once we record it we send the links to the governments to listen to watch and to take action... Any other questions?

KS: Hello. Hi Mr Keshe – I was wondering if you were aware of the craft that was built in the 1950s called the OTC X1.

MK: No.

KS: OK – so this is a craft that's very similar to yours, it has a lot of parallels but it's constructed differently – what interests me is I know you said they took your material in Canada – but I believe they've had the technology for a lot longer!

MK: The technology has been with man three times! This is the third time. Go back to the time of the Egyptians – go back to time of Pharoahs. We've come back to teach more, but this time it seems the humanity is ready!

KS: Do you know much about the Vimanas?

MK: No

KS: Ok – thankyou.

MK You're welcome.

Brett: I have one more question Mr Keshe. You mentioned that box sitting in your lab to show the colour of the moisture in the atmosphere and the interaction of the fields. Some other races on the planet, they'll get a musical instrument and from opposite ends they'll play the same notes but because of difference in their voices they'll create a timbre between the magnetic waves and the notes and will create like a liquid light in the atmosphere and entertainment – is that similar to what's going to happen here?

MK: I stretch your imagination...

Brett: Okay ... (long silence)

R: Maybe it's the ...

MK interrupts: Let me tell you something – you will find out where is the habit of lower level intellectual creatures.

R: But what about music and song!?

Mk: Aaahhh... music – music is all arts because of the level we create, and that he is on – it's the plasmatic fields you detect. Music is the physicality of the ears – you feel the emotions, you feel the happiness from the emotion.

NON-INTERFERENCE IS THE RULE

3:31:46: Ahhhm... Very strange – you know the guy who used to do the strange parachuting surviving in different areas – he died a few weeks ago by doing something in S America or whatever. They used to drop him off in a remote part of the world and then he used to get himself out and show how he did it by eating different animals. I was aware of his death 2 or 3 weeks before it happened!

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

But we cannot interfere. The problem is not interfering with the conditions and the situations. The problem is letting the process to be - otherwise you interfere with everything that is about to happen.

R: ...So there are rules but you get to bend the rules a little bit – because you are giving us hints and so on of how to proceed.

MK: No we don't bend the rules we just make you aware of the conditions.

The conditions are... I see a lot of people saying 'Oh Ebola – it's a game! They're trying to kill us!'

There are 7 billion of you! – how can Ebola... kills a few thousand people and that's it! How can another disease affect 7 billion? There is no way! Even with the biggest money, the biggest knowledge in the Universe, you could destroy this planet to get rid of the physicality of the man... And they keep you so busy with these things you don't see what they are doing – it's a magic show! Every day is a different thing!

[THE PROBLEM OF MR. MICROSOFT](#)

As I said today, at the moment Mr... what's his name? Mr Microsoft. Bill Gate. He's got a huge amount of money to help with different diseases – but – where is the money to help all the different diseases? It's all publicity act!

You bring any of the organisations, scientific or whatever what you do – put your knowledge, put your information, put your technology on the table – let everybody use it. And then you see how honest they are. We do it because we are so confident and free from physical attachment. They won't do it because they calculate how much money in the bank! I don't care – my money is the soul of the people who have our support!

There comes my breakfast again! Thankyou very much!

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

R: That reminds me – we probably should start wrapping things up here, it's been almost 3 and half hours.

THE PROCESS FOR THE FUTURE

MK: No we are – no problem – no we start teaching in depth from now on, we try to go into everything from now on. Up till now we had to create a condition that people come in, people like you Rick and the people round the foundation work this way that you don't need to put your time in supporting and working. So people have to know you don't send that email that you would like to work for a time but your looking for people to support – we done that, we have supported people, supported the foundation for years, that they lived fairly comfortable life.

Since we came to Italy we had to change, so now we try and go back. I have directly gone out to people we know asking directly for donations for research – and this is something I've never done and I never thought that we should do, but now we do because we have to support the foundation in a correct way. People bring us land, people bring us materials to support us – these things do not feed at the moment the foundation.

We need physical things to put people who can do – there is so much knowledge to be translated – so much! At the moment I see this as a handicap – if you are English you can understand all the words – all the work has to be translated immediately so Japanes and even South Americans have access to it directly. This has to be set by us, by the Foundation that I could be gone and we are set up, and if people give their time they have to be looked after – we change the program. From now on we go 4 5 times teaching, and we have good teachers with Marko, with Armen, with John and Eliya and people who are around us.

They have to learn how to share the knowledge without emotions or trying to go and disperse the knowledge in the physicality of the matter in respect to plasma, and now its 5 of us teaching, and as more people get to know like Wince and others, well they become teachers and they have to be looked after that they start teaching – we don't need all to be in Italy. There are gorgeous scientists in China! So we have to teach them and learn to speak their language – we have a beautiful guy like James on the line who has been there 2 or 3 years and he has done a lot of work for the foundation, and the Chinese team there in the background, we have to be

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

able to give the knowledge to scientists in China very rapidly that they can develop it, and it doesn't come by 3 hours talking or 4 hours.

WE START TEACHING EVERY DAY

We start teaching every day. We choose a subject or you choose a subject. Doctors want to know about a certain ailment – we go into what happens to the fibre, what happens to the neurosystem, why you get these conditions, how the system works. They teach us, they explain to us the material side of the body, and we teach them the parallel and other side and these teachings have to be live, available to any doctor around the world to access.

It's not the energy anymore – you wanted the energy I showed you the torch and at the same time when Wince showed you the system last week – we open the teaching, from next week we go out, not just teaching 4 or 5 people here. The 4 or 5 people here from next week become the teachers while they are doing their research for us.

To spend ten million to open a centre in Desanzano, and for a few people to come here for a few years to leave their life and to go through all the hassle of separation and the pain to serve humanity – they can do it from their home! If you come here you come here as a pleasure to add to our knowledge as a race, so from next week the teaching goes home to you. You decide how you want it and we teach. We set up the lab, we set up the testing. All the reports from our health programs will be distributed to the KSs and doctors – they can see what is to be done, they can assist, they can write a report on it.

R: I'm really looking forward to the child teaching program actually – I think that would be a great feature to have and not only that but I think that most adults would also benefit from it if it is presented properly.

MK: I think this goes with the guy who started the suggestion – aaahhh... I think he better move from where he's sitting and start working and we support him – he came up with it and this is what I knew in China, it was discussed too. So now you start making a program about the plasma, about the physicality, about the breathing. There will be chaos in the education system because children will know something else on the internet and they go to school and they teach

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

them something else. And it becomes a situation we had in Africa when I gave a lecture in a university in Sierra Leone – the professor of Physics stood up and said “Now you students know as much as I know – I can’t tell you any lies anymore!”

So we start teaching the children parallel, because they are told something and they learn something else. We can’t change 1 and 1 make 2, but the biology and physics is a different thing they have to learn.

We start the full intensive teaching from next week and everything has to be recorded that at the same time I request from James what he can do, or the Spanish group, or the French group, the Portugese language – I have all my time devoted to you. You put a program for the physicists you want to record for Chinese in physics, we do it – and then it spreads to everyone else. We can bring translators and line-by-line I stop – you translate the questions, we answer, it takes longer but at least we do positive work.

MAIN OBJECTIVE NOW IS HEALTH

The main objective now is the health to open up because we didn’t pay much attention to it. I’ve brought it back last 3 or 4 weeks, and next week and on – the defence technology.

We record with people on secure skype and then on livestream in public for military style classes to be brought – to give it to the militaries to understand what is to come. I am a great believer, and I believe and I live though security – national security, being armies, being police, being security national secret service – without them there is no peace but at the same time, with them, they have to understand they have to work as a collective, not harming the Earth.

The budgets for defending national borders that don’t exist will become the money for advancing of the man, and that is the whole purpose of this program we starting next week. I will show how we make literally military aircraft invisible on the radar, then they understand how advanced it is. We make systems that they cannot communicate – when the KSs left the lab they left the radio on, when they come back they see the radio is totally dead without being touched. So we teach this to the militaries.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

You have to realise something – to me armies are one of the most important factors governments have to work with. If we don't do we seen the chaos in the name of religion in the past few weeks (*Gaza*). Police forces are for civilians, world armies are needed to stop these chaoses if and when they come up.

YOU DON'T NEED TO HIT TO KILL

(THE USS DONALD COOK INCIDENT)

I don't mention names, I don't take sides, but if we have a strong powerful delivery you don't need to hit to kill. You create a condition that the guns cannot fire. We cannot stop the work of the knife and we cannot stop making the knives. We don't need to make the guns but with an instant all the military guns can be made useless. But what are all these terrorists going to do? They make life mayhem for us! We have to understand what we do – we have to collaborate very closely with National governments, but all on an equal basis. Not to give to one nation so another nation can be superior or inferior. At the same time don't give the knowledge to be in the hand of the terrorists.

(At the time of the final editing of this manuscript, in Decemeber 2014, listening to the 37th workshop, Mr. Keshe described the recent incident, reported in the latest Nexus Magazine, in which a Russian aircraft with a simple device paralysed the USS Donald Cook in the Black Sea. The warship was dead in the water with all systems down – and the aircraft simulated an attack on the defenceless warship 12 times, after which apparently the US warship steamed straight for the nearest Romanian port and according to one report 27 of the crew immediately requested to be relieved from active duty! Apparently the Russians have joined the Iranians in successful development of the plasma tech. Jamming of military technology is absolutely child's play, Mr. Keshe says – and because it's plasmatic it's harmless!)

So from next week we go into the teaching in very very great depth, in depth, line-by-line, theoretical, you set the program and I follow. I don't mind working 24 hours a day! Any other questions?

R: Aaahhh... I think we better give you a break now and give our minds a break as well – Aahahahahah lol!

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

MK: No problem!

R: Is that Ok with everyone or are there other questions where someone is on the edge of their seat and really really has to ask? Or no?

[PLEASE SUPPORT THE FOUNDATION](#)

MK: Can I repeat myself? When you go off the line go back to the foundation donation line and think on how much you learn and how much you can do, for advancement of the technology that we can keep the foundation working, and we can share the knowledge and we can keep people like Rick on the line that they can serve the humanity.

Rick: Thank you I appreciate that, and I'll also put up my go-fund-me link that people could make a donation if they like. I could really use it now actually, so that would be useful – yeah thank you for mentioning all that Mr Keshe, it sounds like a whole new perspective from the Kf on accepting donations and going forward with all that so it sounds like an exciting time coming up here!

MK: We see what happens, because if we don't do I'll become another Tesla and the others, and you'll have to wait for a lot. We are aware of what is happening, we are aware of what they are trying to do, we are aware of how much they think their interest is in danger. If you do not work with us there will be no interest to be in danger – so we share it, we share it directly. As I said we start releasing papers. Do not consider my English because its written with a one O and one A – correct it and send it to us – we correct it for you and you choose the pictures how you want to explain the nano layers in my writing which I write, and you put your pictures in. Even if it means 10 different pictures on the same number, but with different understanding, we'll put them in. Then my papers will become your visual display and what you can do, because up till now they've done a lot of work trying to translate my work into pictures.

Now that you're getting more educated you can add to it – we put at the bottom of the papers, we allow any new discoveries to be added at the bottom and the name of the people who have done it. So we keep up to date in respect of that paper.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

The first paper will be the nano paper and then there is a lot of requests for me to release the schizophrenic paper. I will release it I promise you within the next coming weeks – and then we show you the design of the health reactors that the doctors can produce, and hopefully when Yvan comes here he can explain to the other doctors the physical part that they can do it around the world.

Yes please! - the Cup of Life coming your way soon! ☺

Thankyou veru much for your time!

R: Thankyou Mr Keshe, that was a wonderful wonderful workshop.

(Everyone saying thankyou)

MK Interrupts: If we can organize the first teaching for let's say next Wednesday we do Wednesday, Thursday, and Friday – maybe we do the first Wednesday with the theoretical and we do Friday with Eliya with the medical side, then we start expanding with the following week the military technology for the armies – because to me this is a priority.

We have to stop this mayhem that has started going on with the full knowledge of all the governments world militaries – we have to be able to protect ourselves, our environment, and our children from the hand of these animals – and all it can be done if the nations work together as one, irrespective of the colour of the flag.

So if you can organise next Wednesday for the teaching of the theoretical, Monday, Tuesday here with the KSs we set up to see what we have to teach because they have view from your side, from my side, and then on Friday we'll try to sort out with Eliya how she wants us to explain. You have to tell me what you want to know and then we'll structure it around you ... and then the following week we'll go 4 days a week.

Transcript from 25th Knowledge Seekers Workshop held August 28, 2014

(v1 2016-04-09) DRAFT (Transcription has not been verified. Double check info with video)

But there is something that you have to understand – don't make everything at the same time, that then it becomes exclusivity to people in the Northern hemisphere or the Southern hemisphere or whatever, or people who do their shift work – we have to be able to adjust it to the time when people can participate around the world – and if the Chinese want to have a session specifically every week for something then I respect that because China has a quarter of the world's population and they have to be taught correctly the right way and we have a beautiful team like James and the team in China who supported us.

Now we start putting back in the country what they have given us – so work on that program, tell me what you need, we do the first teaching on Wednesday on the theoretical and by then we try and get the camera going so it can be understood. People want to understand the theory and then people can go and study it in their own time – thank you very much!

Rick: Thank you for that guidance that was helpful! OK!

MK: Have a nice weekend, thank you bye bye!

Rick: And so ends the 25th Knowledge Seekers workshop and once again thanks to everyone for joining us and having lots of great questions and for your presence here – OK – bye for now!
