Summary

This has risen a huge question mark in the world of plasma technology at the moment

So, what happens, in fact, in the center of this imaginary plasma, or what they call it free plasma, sits a very powerful principle star

Armen and Marko, they were asked to take charge over the running of the reactors through their thoughts and not through electronic needs.

Now you can read each other's thought, even with a machine, each other's intention

Giving Money with Two Hands

We choose a number of people around the world that collectively, when all your wishes are exactly the same, you'll be able to see the lift, and that will be the time when we reach the world peace treaty

Most of the creatures of intelligence, of high intelligence, have no physical tangibility to the eye of the man

When you all unite together, you will be able to see the lift

So, you've got to realize, we are not here to show you a Ferrari with golden handles.

Luciano: So Mr. Keshe, I'm going to stop it just for a second, before you go in another direction.

And, as I said, we are on our 2014 road map plan, more or less

OK, so there is a Question from Ad

00:00:00

Rick: OK, just doing the sound check on live stream and looks like... Just a second here, I have to get things situated, to see if speakers, audio is working, OK, let's...

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

We are ready; we are ready to begin the 34th Keshe Knowledge Seekers' workshop, and once again we'll be meeting with Mehran Keshe of the Keshe Foundation, he is at the Spaceship institute with Marko and Armen and they will be describing some of the events that took place this week with the major breakthrough of 129 Tesla magnetic field pulse and there's current activity going on in the lab and some big changes are occurring and so on; lot of excitement generated this week with the Spaceship institute, so let's move along and get talking to Mr. Keshe and we'll find out more what's been going on and about some of the new announcements and, so on, let's go on to Spaceship institute. Mr. Keshe, are you there?

...And good evening to ones who are going to sleep...

We are not hearing you; do you have a microphone?

Can you hear us?

Or is it me?

It's you, I think.

I can hear you, Mr. Keshe.

I think it's Rick.

I'm not getting my audio happening, just a second here, maybe I have a Skype preference I have to set or something;

We are all set.

OK, I'm told that the speaker's ok, but I'm not getting speaker coming through.

Can you hear us?

I can hear you, Mr. Keshe.

It's on Rick's end.

You say it's coming through on live stream;

I can hear Mr. Keshe.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

OK, apparently, we can hear you on the live stream, so, we are going to go with that for now, and I'll find a way to hear you through my headphones.

I can hear him through the headphones, I'll press something here, sound setting to other, there, there...go there, go there...

Can you hear us, Mr. Keshe?

Yes, I can hear you through headphones and now through the speakers.

Ok.

OK, now, can you hear us clearly?

I can still hear you, yeah.

Ok, no problem. Can we start, we are ready to go;

Yeah, he wants to continue, he'll try to figure out the audio issue on his side while we continue.

MK: OK, good morning to you, good day, wherever you are for the second time, as a lot of people who watch this or listen to these workshops know, or you've been following the, what do you call it, live stream from the lab, we have achieved some major breakthroughs which we are trying to reconfirm, and re-test, and re-evaluate. At the moment, we have seen huge Tesla readings; we have asked operators and developers of the system to re-test, to reconfirm the correctness of the equipment, there is a very, very large accumulative reading on the Z axis which is the field radiation coming out of the free plasma within the cores' setup;

[This has risen a huge question mark in the world of plasma technology at the moment](#), I know, I've spoken with the scientists from Los Alamos, they consider it not to be correct, you cannot produce energy or magnetic fields at this level with equipment that we have.

But, as I explained to the scientists, as you know, we have info from the Iranian government at the presidential level of the breakthrough; we have info on the Italian Nuclear Center and Italian government of the breakthrough, the American Security, National securities aware of the development because it has a huge implication, and, at the same time, the Russians and the Chinese are fully informed of the development.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

The reason we have taken this step is that if you can deliver 129 Tesla in bursts, you can literally destroy every satellite system within the boundary of certain distance from the Earth. So it has huge applications if you can direct it. On the other hand, this brings what was the target of the Keshe Foundation, world peace treaty, one step closer. Let me explain to you scientifically what has happened, that's why it's not acceptable to a lot of scientists of the present what are called "World of physics plasma", not the plasma technology as we work and we call it "The new technology", independent from the physics plasma or medical plasma.

At the moment, according to the Los Alamos, I spoke with their scientists; they've used 1.4 giga watts of energy to produce for the fraction of the second impulse of 100.7 Tesla. According to them, the magnets that they used, explained to me the whole setup, how they've done it, I was on the line with them for quite a bit, and the magnets that they used were totally destroyed. This took years of development to get to this point, and they said they can repeat it, but you have to, I can hear myself again, just one second, are we off, Marko?

OK, yeah; so, what is happening, in fact, is that they had to use such a huge amount of energy, to be able to package energy pack of 100 Tesla. But, go back in what you've done and you developed, and what we taught from the beginning, ganses are dynamic, plasmatic, magnetic field bowls, billions of them; in each reactor, and we have four of them.

So, ah, good morning Armen, a very good friend has arrived; good morning, Armen, where is your coffee cup? Oh, you forgot? No problem; Armen just arrived. So, what it is, is, that's why they have a problem to understand this development and to them it's not realistic. But, as I said, when you have billions and millions of small plasmas hitting each other, in a dynamic condition of motor you created, releasing and interacting of these fields together, is a natural process.

They are working and thinking on the electron level and photons, we are working on gravitational magnetic field interaction, the way it happens in the universe. So, this has shown clearly, and now we have asked other organizations to come out and verify, and we hope we are correct, we think we are correct, is that gravitational magnetic fields of four small reactors are interacting with each other in a specific formation that they create their own condition for creation of the dynamic plasma which absorbs any surplus magnetic fields which is released continuously by the other four.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

So, the free plasma, which is within the structure of the setup, is in fact a real replication of very much, we will show it by time to come, of neutrons; if you know how to release the energy from this free plasma, it can release energy in micro-tesla to a neutron star. And this process will explain as it's needed, that's why one of the reasons we inform the governments; people who are involved in satellite defense from high magnetic fields will feel the effect of these reactors as they operate and they take off into space. And then you don't want to have interference with all the satellites, which is sitting, and billions of spent to make life for mankind easier.

So, what happens, in fact, in the center of this imaginary plasma, or what they call it free plasma, sits a very powerful principle star, because all these fields have to be absorbed. The pulses which we see at such a huge amount, is when the free plasma, as we showed it on the bar last time, moves and it comes in touch with the center bar, which is nano-coated, the interaction between the plasma, dynamic plasma and matter environment, releases these high bursts. Now you understand how correct and why you are seeing these bursts.

So, in fact, as the four reactors are not totally tuned to be in a perfect loading, because the loading measurement is done by Armen and it's just by the syringe, at the moment, and he decides if there are enough in each, there is a slight difference between each reactor. So, as the fields are built up, the free reactor in the center of the pyramid moves along in different directions. We have fixed the plate for not to interact and the earth gravitational field to push the plate to off center; that's why, suddenly, when we fixed the plate with the four reactors, that the vibration of the magnetic gravitational field was blocked, we start seeing such huge rises, because now, whatever was making the plate to move, now it has to be released. Now that we've done this, now, all the four reactors are in fixed position, they cannot be moved. Position in respect to Earth's gravitational magnetic field is more or less fixed, I still see some vibrations.

The only thing that is left now is fixing the free plasma from moving out of the center. In fact, it doesn't move out of the center; as it comes in touch with gravitational magnetic nano-coated material and the bar, it's just like grinding a sand-paper with the knife. It's into this box. These boxes are the picks you see; there is a process which is happening, I've seen it and hopefully, we'll try to correct it as we switch the cameras off later on today to reset the whole structure, trying to avoid this condition of release of plasmas. So, what you observe at 129 Tesla, once it's confirmed by independent scientists, should be about right and we can build up on it.

There is a point here; every time we start, we go back from zero, where in fact, we should be reading the total amount at the point of every reading. This is one of the questions I have put to

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

the manufacturers yesterday. So, on the other hand, when you look at the graphs of the reading, for the first time I was looking at it last night, has moved into the positive above zero by 3, 4, and 5 milli Tesla. So, there are some changes where before, X, Y, and Z, were used to be always below zero. On the other hand, what we see is that the increase in the dynamic fields in some cases because you only see the peaks, leads to the reduction in the weight of the system. This creates, if you are scientifically trained, you should understand, this creates a big problem; because, your detectors are giving you a position field strength in a free environment, but the scale is measuring inertia mass condition in the environment.

That's why there is an understanding; I'll explain this later on; this is the difference between the mass and weight, and then, at the same time, interaction of the field which does not exist, but influences the weight on the conditions like, very much like a wind on the scale; if you have a very strong wind, you can reduce the weight if you keep it in the right direction on the matter which is on the scale. These things I will explain as we come to it in the coming time; so, one of the points which is fundamentally different and is changed is not just the weight.

In the teaching yesterday with the children, I brought this in very much in the front for the children to understand. And Rick tells me this morning, he bet it was too much for children to understand. Now we go through it in a different way, but very in a similar way. In explaining this, in for people to understand what is happening, plasma is a free dimension. Wait, I've just received, Armen wants me to receive, to tell you...

Rick: Sorry, what was that, Mr. Keshe? I didn't catch that last sentence.

Armen has put something... I don't understand what he means, you have to let me read this afterwards, because now I cannot read it, I don't know what he means. It's somebody's theory; he assumes and we have to see what his assumptions are;

OK.

So, what has happened is that each reactor is independently creating its own gravitational magnetic field. Each reactor interacts with his next-door neighbor reactor, plus the collective

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

fields of all the other three. So, the bowl inside, is very much, is very co-hexagonal shape. And it depends how it's pushed by each field;

So, what happens is that magnetic fields, from the free plasma, now itself interact with the other four plasmas in the cores. So, even though the four reactors, fields being magnetical and gravitational, lead to creation of the free plasma environment in the center of the pyramid, now, this free plasma, as an entity, becomes to interact with other four, too.

And at the same time, because it's receiving continuously residual field for both gravitational magnetic field from four sources, which are nearest to him, plus the environment, it becomes strong enough, it should become strong enough to interact as a total representation of the five reactors in respect to the gravitational magnetic field of the Earth. And that's why you see the changes in the scale, in the weight. And sometimes it does not make sense because you are looking at the weight of the whole system as it's hanging from the hook, but, an imaginary space, free space plasma is dictating the condition. And it depends where is moving to, it dictates the weight loss or weight gain.

We see this now because we switched the cameras off in the lab for bandwidth problems, you've seen this since yesterday, there are no motors running, there are literally no electrical systems which are running, except two small pumps, which are testing light system which Marko is developing; there are no electronic things running in the labs. And we have seen drops in weight since yesterday. And it's coming to near enough to 11.16 which was the original weight when we started it. If you've seen, the weight was in 13 kilograms, 12 kilograms, and it went to 13.8 kilograms when down to 10.6 kilograms. Those interactions are enforced on the plasma. Now, the plasma, the free plasma, is accepting its condition in respect to the Earth gravitational magnetic field and settling at about the same figure at 11.2, 11.16. What does this mean? This goes back to the teaching we said; first of all, the frame and the mass outside the parameters of the reactor are connected beyond the fields of the reactor, effective environment, which is as atmospheric, magnetosphere, atmosphere, so, they are holding it, they are dictating the position.

This dictation of the position, by hopefully tomorrow, should be sorted because we are putting the reactors back in system, which means they will be independent of the environment. On the other hand, the whole free reactor is still interacting with other reactors, which is about 9 of them around the lab, with their fields, with their plasmas, with their ganses. So, it is still influenced by the environment, not by itself. A very, very interesting point.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

As a lot of you know, on Tuesday, lunch time, we asked Armen and Marko to take charge over the running of the reactor independent of the motors. This process, in talks, last workshop, last Thursday, I said it and if you listened to it, it was mentioned, it's going to be done; and it was just as usual, just people listening to a talk, but everything I say has a meaning and the reason when I say it. In the talk last week I said soon that we are going to have reactors to be running. In the past few months we indicated and we explained that the control of the plasmatic reactors through matter base, like electronics, and computer, will not be able to be done because it's so fast and it's so powerful, that electrons have no effect on dictating the condition of the plasma which is the mother plasma.

As I say to children, a little two-year-old cannot move the 40-year-old elephant. It's that difference. It has no effect. Electronic systems have no effect on running and controlling the condition of the plasma; and in time, when you see the fields go beyond the boundary of the each reactor that you can see its interactions in totality, you find out that you cannot even communicate through electronics to run the system to motors. This is why we are bringing everything into the stocker unit. That we are within the system, at least we might have some control over the motors.

So, as I said last week, and now on Tuesday, to the surprise of [Armen and Marko, they were asked to take charge over the running of the reactors through their thoughts and not through electronic needs](#). This was some point of apprehension and excitement between the two, so, to settle the situation, I asked them to leave the premises and try to control, and come back about 3 hours later. We monitored the operation within those 3 hours; in one point, you could see joined feeling because both, I knew where their thoughts were, and we saw changes on the scale. When they came back, at 3 o'clock, known to them what they were doing couple of weeks ago, I asked them to make two keys. These keys are built to control the reactors. And they've been on the table for about couple of weeks and they thought it was forgotten; these keys we tested about two weeks ago, with Armen going outside the lab, and trying to see how it can interact with reactor cores. Each one was given one key, and was sent home, go on, do whatever you like, cook, drive, sleep, whatever; but I asked them to write down who's in command, and when you are in command, you hold the key in your hand, otherwise, you keep it away, put it in your pocket.

And then we, I monitored overnight, the development, the increase, the decrease and the changes in the whole scale of the work. If you go on live stream, you see that, when Marko was in command until 8 o'clock, we lost a lot of weight, very rapidly; 280 grams, 300 grams. When

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

Armen came on, the losses became slower; and even some time there were no changes because he was asleep, and again, if you go on the live stream, I made a couple of small comments during the night and early morning that Armen is asleep, and blah blah, and you immediately saw a drop in the mass; in the weight. We have access to change, but, we have access to change through the emotion and the feeling, not necessarily touching the system, because I was away, at least 100 meters away from the lab. If you check the writings, where I wrote, and I referred to Armen is asleep or whatever, you see immediately, within milliseconds, the changes. This was done deliberately to show we even control the emotion and the feeling control of another body through the system.

There is a huge explanation in what is about to be explained; when they came back, about 10 o'clock yesterday, I gave them 2 hours, and I said, now, for the next two hours, one hour each, you are near the building, try to control it. They never saw this screen, they were not aware what was happening. The important thing was to see how the effects and the emotions and thoughts can affect the system. We were not looking for high-pulse numbers. I was looking for behavior. A lot of you looked for numbers, always going down, Armen is asleep, the other one is doing, or he's having a coffee, it's nice to see, but what was the whole plan was to understand, behind it, the behavior of the controllers. And, then, at 1 o'clock, we took the keys back from them. And, the keys are in my pocket.

So, if you go back on the readings, we finish by 1 o'clock, and then, next week, I explain exactly what has happened. Now, the two are not in charge, but in fact they are emotionally connected. The whole structure is very simple. The line of communication, computers, and all the latest gadgets in material world, in the world of physics and matter, in a space operation, is obsolete.

What happens? I explained this yesterday in the children's presentation, if you haven't seen it, I explained that each plasma is made of gravitational magnetic fields, very much as you see it. At the same time, two plasmas to connect to each other, they have their own fields, which they interact. The interaction of the fields happens on magnetic gravitational level. What does this mean? There are no electrons. What this sends out as a field, in fact, is very much picked up by the other. So, the two fields are interconnected through the magnetic fields of each other.

In reality, what we see, what comes from the north of one, or the exit of one, ends up with the entry of the other. So, the field interaction crosses each other. What happens? Magnetical field is slightly different in the strength than the gravitational field strength. So, the two never, in fact, interfere, what do you call, delete each other out, but they still have interaction. So, what is sent

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

out on the magnetical field by the magnetical fields of one is received immediately by the other. And, what is sent out as a magnetical field by one, up to the point of equality in the strength, is taken over by gravitational magnetic field of the receiver. So, as this pushes away, at the instance will come, will be picked up by the second one, by gravitational.

So, communication is instantaneous. And, it's the same the other way. When the other one sends the fields through, through magnetical, at the point of balance of the two fields, the gravitational field of the other one pulls. So, zero time communication is upon us, because electrons take too much at the moment to send a message to all the latest mechanical electronic systems from here to Moon is few seconds. To Mars, few seconds. If you understand this concept, if you are in a communication system, and you can use the properties, the properties of the gans in interaction with nano-layers, you should be able to make zero time nano-machines, computers, communication lines, within the coming time.

This changes the whole world of communication. This is what I said. None of this technology can be patented. Now, you'd be anywhere in part of the universe, because the gravitational magnetic fields can go from one strength to another, according to the point of gravitation, you move in by the order of magnitudes, without any losses. So, it doesn't matter if you are at the boundary of the universe or you are on Earth, what you say is heard instantaneously. At the moment, those who are familiar with the world of electronics, you see, everything is adjusted that the voice matches the picture by the time it arrives, even though we know the voice arrives a few seconds later than the picture. They've synchronized it.

With this technology there is no need for synchronization. The plasma technology, the ganses which you produce as plasma, brings in a new game in communication in the world of the technology of man's interaction with others, but, at the same time, has a huge, huge application.

The application is, now that the man's trained to look and understand this way, which he could not see, [now you can read each other's thought, even with a machine, each other's intention.](#)

So, you can feel, you can have a machine very soon. We've done it here, now we've shown it, practically done with the machines, with their thoughts controlling the system, that you know what is the intention of the guy when he says 'hello' to you, is he a friend or is he there to rob

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

you, is he there to shake hand as a president of the major government to create war, or is he there to sincerely help your nation.

The false handshakes and promises are over. The way now we put detectors to see who's going through the ports with the temperature that they can bring Ebola, the same kind of detectors will tell the authorities who's planning to do what activities and what are their intentions. This is why 3 or 4 weeks ago I called on the World governments to talk about and come to understand the application of this technology, in respect to what's happening in killings, in mayhems by terrorism and the likes. This technology will change and change the core of the whole structure of how man lives and operates at the moment. When we talked there was a talk. Now, we start showing it. You've seen it in past 24-48 hours.

You've seen how, when it's distilled and 1, 1 or 2 grams, there is a dispute between me and Armen, let's say 5 grams, of gans material, can reduce and create 3 kilograms of weight. That's, let's say, 2.5 thousand grams for 5 grams of material which is never going to be destroyed and it's still 5 grams for their time to be, as long as the man and his ancestors live on this planet. We have not destroyed a single entity. We have used the conditions that the entities have created through gravitational magnetic field in the advantage and the use of man. So, the time of burning fuel is over.

A lot of people write to me: 'Can you give us the free energy?' Armen has the systems sitting in the lab, and in the coming weeks we will show you how you can create as much free energy as you like at home. But, that will not solve your problem. That just begins your problem. Your biggest nightmare is when you are going to have the free energy. The biggest revolution and evolution in man's history will come when, within coming weeks, we teach you how to create these systems and produce energy through very, very simple systems.

Most of people have a pressure cooker in the house. With the pressure cooker, I show you how you can have everything you want, but don't forget the way I talk. When I said, with two mobile phones you can have everything you want, you were looking for water dripping and gold dripping from the mobile phone and all the energy. So, we opened the packages of it, and you understood the copper layers in the battery are your source of energy. In the coming time, when your knowledge becomes ready, you will hold on like gold to the pressure cookers that you are not using and it's been there from grandma's time in the cupboard.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

When we build the system and we show it, then you understand it why, because, by then, all most of the knowledge of the plasma will come together for you to be able to reach the next step. Our target is not here to achieve lift and show energy. Our target here is to teach that everybody understands that we move collectively together. This is very similar, and we are, as of this week, coming weeks, we cross language barriers, that not everything is in English.

I have spoken with the Chinese Keshe Foundation group, and hopefully we already had a couple of our sessions this last Monday. From next Monday, with the help of the people at the live stream, we will teach in Chinese, and it gets translated by the scientists and the knowledge, knowledgeable scientists in China, that instantaneously we see to what they need to do, because they have achieved the step breakthroughs in the agriculture, and now we speak with them in their language, and then we open the agriculture through the Keshe Foundation China. They need to gain some confidence, and then when they come in you see how the changes will come.

They have grown seeds, which, we had a talk with a gentleman who was doing it and the way it's been done, we have a gentleman in Europe who's developed the Keshe Foundation seeds for the Keshe Foundation, and we have connections with the agricultural centre in Africa to actually do mass production or mass growth of the materials in, in Africa. The structure is coming together.

Moreover, I am speaking with the Mexico Keshe Foundation organization, the people from there are flying in today, there is a conference or a small meeting going on in Mexico City with the Keshe Foundation of the Spanish-speaking in Mexico, with the scientists, and tomorrow we organize the teaching in the Spanish. This technology is not limited to any language, race or color. So, now you understand, you do not need to know Spanish to understand what the Chinese guy is talking about. You know his intentions and you know his needs, because now, with this technology, in a very, very short time, the electronic wizards will come up with the computer wizards to develop this technology.

We already received a request from multinational organization of scientists based in Hong Kong in China and we responded to them, we are prepared to talk. We do not usually respond to organizations who approach us, but we check, and if it is in that level, and they work with the same philosophy as the Keshe Foundation; free sourcing, which means free patents everybody can use.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

So, now, a little test: in the past 48 hours in the Foundation, I already said, has changed the course of humanity, as I was talking yesterday to the children's program. A lot of us remember 1844, first telephone call of Bell, past 48 hours we registered in the same manner in the history of man, through people communicating, through their thoughts with the machine, and dictating its, its thoughts in a free way.

You've got to understand what was given to the instructions to the Knowledge Seekers. You don't take and you don't give. You wish and you had to come. I will steal your soul pitfalls. When the wish to fly was so powerful, instead of wish, it became a demand, and the system failed. This is how you operate in the space technology of the future. I desire to save and be what I am, and I want to be in the position where I want to be. If you understand, as I say, read the book no. 3.

The size of this universe is dictated by the gravitational magnetic fields of the other universes, which is within, and you cannot expand beyond that, if it's not allowed to by other field forces. It's very much like putting your balloon in a room full of balloons. The shape, the position of the balloon is dictated by the other balloons which are in the room. This is the same with the plasma. So, the condition and the position, which your system is allowed to move in, is dictated by what other fields allow you to move in. They accommodate you. Even you think you can go with a ten thousand times speed of light and you can enforce it, if the fields are not there to allow the accommodation, you will not be able to achieve it. This is one of the reasons the reactors are still on the floor in the lab.

This is why the time with Marko, losses were more rapid. I asked him yesterday, when he came back: 'Explain to me, what you felt and what you wanted, and what your feeling was.' He told me in a simple word: 'Armen wanted to fly so I helped him.' Am I correct, Marko?

So, what does this mean? Unity in action, being equal, not taking and arguing. That's why Marko and Armen are chosen two years, as a, what do you call it, joint equal partners in this development part of the section. We have stopped every kind of research here until this is completed. So, Marko, with a feeling of accommodate, made a combination, the losses were very rapid, and the peaks came in a different way. Armen's intention wanted to, wanted, this was a want, 'I want to fly, I want the systems to fly', because to him is important to show you flight, to justify 'I'm correct', but he is actually correct, because he built the systems, but he

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

hasn't realized that yet. And, when the two come in balance, between the two controllers and the system, the system become equal to them and will take their wishes. The system will sit on the floor till these two decide 'we're equal with the system, but at the same time, the system operates within the environment, so we have to get the permission'.

Giving Money with Two Hands

Is it different than you asking for a piece of bread? With demand, and you asking for a piece of bread with request or pleasure. A piece of bread is thrown at you, or a piece of bread is given by two hands to you. It's trust; I'm safe, you're correct. This goes back to the ethos of the Japanese culture and the Chinese culture mainly. Our Chinese colleagues tell you. What I learned with the Chinese over years of being in interaction and being with them, if you give money with one hand to a person, he will count it, because you are not sure, he is not sure, so there is no dispute, you accommodate each other. But, if you give money with two hands and is received with two hands, the man will never count, which means 'I trust everything you say'.

This is how it has to be and how the fields operate. The two hands is gravitational magnetic field. Gravitational and magnetic field is we give you two hands and we find accommodation, we trust, we find balance. There is a lot in the cultures the man has forgotten why, and that's why in the West we just put the money on the counter, because we don't even trust handing over because the guy might have Ebola or a disease.

So, the operation of these magnetic gravitational field plasmas are not just for the physical motion, but understanding the emotion in the behavior of the man too. And, now, as we said yesterday, talking here, you become the judge of your own behavior and you try to find balance and correctness. So, we are going towards, one step toward the world peace. What does this mean? When you are in charge, when you know it is correct, there is no need for laws and books to be written in different religions and languages, of the punishment, because you are aware of your own doing, so you do not do wrong, because you know it will be rejected with two hands.

Now, we show the work of the plasma in operation of the man's work of life. This is where the society has to learn and, in a very simple way, in the coming days and weeks, those who have been waiting and wishing to see the first flight and lift, you will see, when you are all ready to receive the knowledge collectively for the world peace; because, when this gift is given, it

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

cannot be retracted, and when this gift is accepted it has to be on the basis of world peace and universal peace. Nations who have it are calling and claiming for peace.

Tomorrow, in the medical section, it's about the bone marrow and heart, of bone and heart. Then, we'll show you how, with what we're going to release, we'll change the course of the humanity, in so many ways, for the present time. I said, if I have to take you off brick by brick, I will do, and now we are starting to take bricks off, and then when you take the foundation away, the whole structure, doesn't matter how big it is, will collapse under it, because now we start showing you.

You see in a very simple way how plasmas communicate and how we can detect your emotions and your feelings, and how your emotions and feelings can operate systems, at zero cost. We had to build the copper cores to show it, but if you can walk into a shop, as Rick has shown you, buy yourself a couple of ping pong balls, you can see what your neighbors are thinking and doing, as much as you can see your president when he stands and tells you everything and he is all lying, as I said in talk yesterday.

In the coming time, a president will stand in front of his people without talking, because people will read his intentions and they'll understand his emotion. As it's been said, very soon, no one will take the crown of kingship because it will be so hard not to lie, because with this technology, you can feel, you can understand what the intentions are in the brain, not in, what the sound comes out of the, the mouth, or what is written by the fingerprints on the computers.

It's very simple. A gans is an entity, and as I always said, pray for your reactors before you build it, because when you pray for it, you make the connection with it, and through this connection you understand and it understands what you need, when you need, as much as you need. The beauty of this time with this technology, when it's dispersed among the man, is that man has made enough mobile phones. As I've told you, mobile phone has been the biggest friend for the society and the biggest change in the whole structure of the man in interacting with each other. And, thanks to scientists who developed it and spread it, and past 30 years all the ones that were the worst ones, the ones which went, damaged very fast, all have been sent to Africa to get rid of it, because we didn't want the waste.

Africa's become the waste ground of this planet, because they don't understand, they can have it, the chemicals we don't need, we send to Africa. But, this time by sending all the broken

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

computers and telephones or whatever to Africa with their batteries has made Africa one of the richest nations in energy, in power, without making a move, without the single digging of the oil well. The new, battery-operated telephones, you cannot reach the battery. Look at the Apple, open your Apple phones, destroy 900 euros to get into 5 cents copper lining inside it, the rich will suffer more this way, and the poor will have the benefit of what has been discarded as rubbish.

I said, and I will always say till people understand, till the mankind doesn't become as one with this technology, mankind will find a lot of problems with itself, because it has to change attitudes, who's superior, who's different colored than I am. As I said, the time of WC is over. A lot of you don't know what WC means. This was used in South Africa during Apartheid, white color only toilets. And, they still, in some nations, you see the word WC, it means we are still racist. And, in most of the nations you see toilet. This is the change that is coming irrespective to color, religion, creed and nationality. And, very soon, very soon, hopefully within coming days, when Armen and Marko, with the way they are setting the systems, it will come and hit the governments so hard, to understand that the game of war and planning war and sanctions, according to the profit of the pocket, is over.

We open the doors, we, we literally take brick by brick out of every frame till the men all become humble enough to be all on the same ground level. At the moment, tomorrow, I will make an announcement about Ebola, and what is happening in Africa regarding Ebola and the Keshe Foundation. Again, stealing of technology. But, how can you steal when everybody has it? Again, blocking and stealing has come from Harvard University, but this time we'll erase it in a mess, in such a way that Harvard University can shove all the research. Do not forget that the scientists from Harvard University were present at the presentation at the Presidential Palace in Cert D'Lion, when the Keshe Foundation technology of the gans was submitted for allocation of Ebola. I'll release the documents and the paper that is released by Harvard University, confirming 100% gans materials are the solutions to Ebola. And, they released pictures to it, as well, how it's done. I sent the documents to the head of the University of the Cert D'Lion in last 72 hours, so they know they've been lied to.

Strange enough, out of Harvard University where the professors were sitting there, trying to claim that they discovered something new, where actually the technology has been sitting with them and they were using the Keshe Foundation technology. Now, that the Africans have it, it doesn't work, because they cannot sell millions of drugs with it. But, Africans use it without permission, because it's their right, they have the right to survive. There is a very important point in the whole structure of the plasma technology.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

Plasmas, the way we open the plasma technology, it's very, very simple. When you open it, there is no difference between what is inside it and how it behaves outside, it has one face. So, that's why, because it has one face, it cannot do anything because it can, the only way it can survive is to share and be equal with the others. Depends on the strength and depends on the location. So, the process of past 72 hours here at the foundation has not just been to show two men can control with their thoughts the operation of the reactor.

A lot of you looked for it, but go back again and watch the last 24-72 hours recording. Look at the weight gain, weight loss, and not on the Z but on the X. X is what is coming from the environment, what this field is releasing that others can use. Y shows how the plasma itself is prepared to control its environment, pole to pole, 360 degrees. And, Z is how much the plasma is prepared to give out because there is a need for it in the environment, so it's become the mother. We see changes in the plasma on the X, Y and Z, not to see how hard and how far and how high we go and go and claim the digit number is wrong, because the system is wrong, because I am cleverer.

This is exactly the behavior of the materialistic people who are thieves. The whole data, the whole numbers, the whole weight scale, is to understand the behavior of the environment. How much are you prepared to take, and how much you are unbalancing your environment? If you look, X and Y are very, very similar to each other. None of you ever noticed, because for you the figures are not big enough, because you are in a world of megawatts and mega-computers. But, you've forgotten the little numbers which are the most important.

I always say, I am a nuclear physicist, I am a nuclear engineer, which means I take notice of the minutest. Let the civil engineers be busy building big blocks, which have no meaning in the future. You are looking for big numbers in the data that we are releasing. I am interested in the behavior of how the X, which means the environment, is prepared to give, and how Y, which is the plasma, has been behaving itself. Y is changing from negative to positive. Y is spreading its strength in a different direction. Is there a demand somewhere else that it's forgotten or it's a call, like somebody calling you from the left side down the street, or then somebody calling you on the right side on the street? You turn to pay attention to give them what they need. And, that's how the plasma goes from negative to positive, or changes its polarity. I am not interested in those 120 mega, what do you call it, Teslas, even though for the human being it's got a huge significance.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

What does it mean when the source gives so much? Means there is a need for it. The field is not only in the direction of the detector. The field is reading 360 degrees plasmatic, which means the whole of environment needs it, which means there is a hunger, there is a need. Start reading figures in reality what it is. I told you, pray for your reactors, because your reactors are alive, they have their own character, and they carry the character of the creator, generous and equal to one and to all. If you compare the amount of energy is taken by the fields, by the plasma, in the free environment, it's nothing to the amount of energy which the plasma is releasing to its environment.

Strange enough, a lot of the fields go out of the plasma when one person walks around or near or thinks about the plasma, and we know who it is, because he is a thief. It's two, three of them, because they were here when these systems were built, they have a direct connection, but they cannot do, we let them, we, I wanted to see how they behave and I see it. In English, you call them thieves who backed out, robbing at night. Now, their behavior is open to us. Now, you can understand. In the medical language, we call these people ADD, attention deficiency, they do so much, they steal so much to keep attention that they exist.

So, now, in a very simple way, you just put the reactor and the detector in front of your lab, in front of your house, you know exactly which every neighbor thinks about you when they are knocking on the door for. They are there to give you a kiss and a cuddle and help you, or are they there to steal you and rob you and then stab you? You know you have these sensors in front of your gate, when somebody passes it goes 'beep', you know somebody is coming into the shop or past the gate in the house? Very soon, you'll have the same system, but 'beep' will tell you the guy is coming to give, but is wearing the clothes of, what do you call it, a poor man, or he comes in the clothes of the priest, to rob and be very generous on the outside, because the system will read the intentions, not the clothes of the man.

You have to go back, go back and look at the past 48 hours readings, and know the X and know the Y. The weight is irrelevant, look at the X and Y. Then, you know what time Marko was in charge, and then you know what time Armen was in charge. And, then, you understand the anxiety and the true cleverness and the clearness of the line. If I open a channel to the reactors, every one of you, doesn't matter if you are in China, in Tokyo, or in Canada, or South America, will be able to control the reactor. We're going to do this very soon.

We choose a number of people around the world that collectively, when all your wishes are exactly the same, you'll be able to see the lift, and that will be the time when we reach

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

[the world peace treaty](#). We give you a hidden key access. I show you what the key is that the knowledge seekers have been carrying with them. This is the key. And, this is the other one. One was given to Marko, and one was given to Armen. Inside these keys, because they are human, they have to have something physical, is the same material as is and from the same containers as is in the three cores. So, the plasmatic magnetic field in these keys is directly connected to the fields in the reactors.

Mother does not need an extra child to show the love and affection and that it's thinking about it. The child is in South America and the mother is in the North Pole. Through the connection of the field birth and connection of the origin, they are connected; mother feels the pain of the child or happiness of the child. This is the child and it's in the hand of Armen. And the mother sits, so the emotion of the child is transferred to the mother, as simple as that. Every container's been built by Armen and Marko. The system has been, so many times we've seen the pictures, the two of them putting the system together, helping each other to build it. I said to both of them yesterday or the day before, and they understood in a very simple way, hopefully. I said: 'If you think you chose to be here in the institute, you are so far wrong. You've been chosen to be here by the soul.'

So, if you have the wrong intention inside you, as we've seen with the other people who are not here anymore, now you understand why two are here. Because if you bring charlatans in, they carry the key, they sit in front of the machine and we see their behaviors, so they are not here. I told you, a few months ago, I got every Knowledge Seeker to sit in front of the system to give and take, and in that process I knew the structure of the soul, how it will behave in handling these keys. And, now why you know two people are here. As I said, walk in with the clothes of the priest, but be a thief inside, and we had them, and they are gone. Because if I would have given this key, when it's supposed to go the right way to go up, will go down and cause mayhem.

Now, you understand how advanced we are, but we have to speak the language that you understand and we let you to see it physically, the way you see it in the physical eye, and then put the truth to you in the reality of what you've seen through the eye of a man. So, the science of the technology, the science of the universe, is merging with the behavior of the universe. There is no difference, there are no religions in the universe, and religions are man-made. That's why we put an end to it, as of two weeks ago. Because now, every man is responsible for his own behavior, because his behavior, it affects himself, nobody else.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

In a way, you put yourself to be rejected, from the fields of the others, or be accepted, and not many people will like to be rejected. And now you know why and how we operate. Science and belief and combat will go hand in hand. These are the three gifts that are in, in the Bible, which came by the three wise men.

Now, you know the wisdom. If you think correct, your reactor will respond to you correctly. If you act correct, then you don't harm nobody. And, if you talk and behave correct, you live in the environment that you give, because you need the others, or need. These were those promises of the three wise men. **Talk correct, think correct and behave correct.** And, when you do that, you are not a thief. Thou shalt not steal. And now you know why. If you steal, the system doesn't behave, doesn't respond to you. So, what's the use of wasting energy?

And, you've seen, because Marko was in intention to support the like what was the desire of Armen, he lost a lot, very quickly, in two or three hours, 280-300 grams. But, Armen's wish was 'I want to see if we'll fly'. Your want has to be accommodated. And, every time the want was so big to satisfy the subconscious, we allow 20 grams. So, try to understand, this is not anymore energy producing systems, CO2 system, lift machine and energy machine. There is no CO2 in the space, there is no lift machine in the space, and there are no 10 giga watt generators. Everything is milli and micro, but everybody lives equal and perfect and has everything they need. Any questions? I hope you can find the button.

Oh, yes, I found it.

I found the button, but it might echo in the live stream. In any case, I'd like to ask a question here. Again, I am interested in this concept of what you brought up, the words 'free plasma', and, for example, in what you have on the table there. How, how do you see, how can we visualize free plasma in terms of, say, for example, the keys, what, how would the word 'free plasma' apply to those keys? Is it around those keys and...?

You see, no, no, no, no, no. You see, this is a problem with your physical eyes. This is what we said like the plasma fields inside plasma. With your understanding and what you see through your eyes, this is the end point, because they are finished. But, in fact, there is no end to the motion of magnetic fields, they go forever, they link from one to another, and another, and another. This, this is no end. And, somewhere in that process of going from one to another, they

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

cover, they encompass the keys, and the keys are in the same position, they have fields, which is made by the same, by the same strength material, by the same plasmas.

So, nobody is giving to reach someone, everybody is in the same pot. We say you want to move further out, OK. So, there is not that the keys send anything out. You missed a very big point.

First of all, ganses are plasmas, so they behave the same, and at the same time the material in the keys and in the cores are the same. So, their field is, has, and will be part of the same, so there is no change, but because in demonstration you're still human you say: 'Oh, their field ended there', because, sorry, I cannot have a million kilometer wires to go around the universe and come back, to show all the fields are connected. This is the problem with the physicality, that, but all the fields encompass, this, this is the field from the reactor, which does not finish, it carries on and it connects with another one, and it connects with another one, and if you look at it that way, if it means to you, if you can see the shape, so, this connects with the other one and the other one and then they encompass and they go around the key. There is no end. And when this...

Mr. Keshe, would, would the free, what you call free plasma, would that be the total...

If you see, if you see, OK, hold on, hold on...

Because I am confused where free plasma enters in.

Yeah, wait, wait, hold a minute, please, our confusion will come off in one second. You see, this is the core that the fields are coming out of it, this plastic. Now, the same plasma is free. That's what we call free plasma, no containment, but they've been contained, accommodated by what is in the environment that accommodated them. In a physical body, we learned the skin create that environment, the separation. In the universe, there are no skins. If you have a gel in a room, it's contained by the gel, and then when you blow the room the gel opens up all the free and take the space where it wants to and it connects whatever it likes.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

A free plasma, it means not having containment, but being contained by the balance field around the environment where it is. We don't see a container around the plasma of the solar system. And, we don't see a container around the galaxy. But, the fields of the galaxy creates a container size for the stars within it, and then the fields within the universe gives a container size to the galaxy, is the strength and the order of magnitudes of the mass. So, the free means fields are contained by the environment, where in the reactor plasma is contained by a matter. Both are contained, want you as a man, it's physical, now you can see, it's a cup, and one as a plasma technology, so the plasma science, you see what other fields in the environment have created the container, and this container, unfortunately, has no shape and size, and it changes according to what happened to the fields around the place. This is one of the reasons why, as of next week, you see the reactors going into a new container, what do you call it, frame, and we move to the lab of their own in order to understand their behavior independently as much as we can.

There, we were with Marko yesterday, the room is very dark; it's totally, absolutely dark, 24 hours a day. So, as I said, the whole structure of the Foundation through the security and me being poisoned is being restructured, and this is bringing a lot of changes in how we operate and we run our business in respect to teaching and research. So, in, in the compound, within the park, we have three buildings, so one of the buildings is totally isolated and allocated for research and development and teaching, where before we were all over the place.

As I said, when they tried to get rid of us, it made the opening much easier and faster. When they went to poison me and, with arsenic and all the pains which I went to be, to go to process before dying, it forced us now to isolate, but open it much faster. And, you've seen, since past 3-4 weeks, and since what Marko made the comment, we have opened the doors in an unprecedented way for research and development.

There is no restriction. You, you are used to physical boundary. Now, you have to get used to magnetic gravitational boundary. Then you understand if you are intruding in another field or not, or what field is in present in front of you. **Most of the creatures of intelligence, of high intelligence, have no physical tangibility to the eye of the man.** How do you know you are in the presence of a highly intelligent creature, which can help you to survive and make life easier for you? You have to lose the eye of physicality. Then you see the truth the way you see a lot of things around you.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

You'll find out you've been living among the ocean of creatures which you never knew, and you call them ghosts, something moved, because, as you've seen with the free plasma when it touches the bar it releases the pulse, sometimes when these creatures of the universe touch physical man you see that the sparky field they push. You call it a ghost. Welcome to the world of universe. Depends in what you have contained it. Sometimes you feel a touch without anybody around you. Have the adversity to the steel, to understand you are not the only creature in the universe which has a physical existence? Not tangible, but physical existence. And, sometimes, if the tangibility of the fields slows down, you will see them in the image of man, because that's how you recognize things, and your brain can figure it out, 'this is near to what I know.'

This is why, if you go back a few weeks ago, I said that we are making a frame box for man to be able to see other creatures in the lab, and this is why I am freeing the frame, because I need the frame to make, to give you the container, to be able to show you that you are not alone in this planet, in this universe, because, now you understand the physicality of the plasma. You, if I would have told you there is a plasma there, you wouldn't have believed it, I had to put a detector there and you watched it for nights, you didn't go to sleep, now you believe there is something there, because you see data, you see numbers.

Now, your work can be taken to the next step, that you have to come to believe that there is something there, we call it a free plasma, you say: 'Explain to me the difference between a plasma and a reactor.' Now, you understand where we are taking you. And, don't forget, in all the workshops I give you a hint what is to come. You get a very big hint. And, I told you a few months ago, we need the frame to make a space that we can show you the creations, the creatures of the universe. Because, you cannot keep a fish on a dry land.

You want to have a live fish and enjoy its beauty, you have to make an aquarium. Now, we are making the aquarium of the universe. But you had to see it to understand it. Now, slowly, we take you to that level. And, then, you understand how much knowledge is still to be given to the man to move from this village of animal planet Earth.

For you, 6 months ago, nano-material was a puzzle. What is in that Coca Cola? What's the Keshe Foundation liquid that we can have? Now, you all produce it. Now, you produce the gans. Now, you produce the fields. Now, you see the effect of the fields in the free plasma. Then, in time, [when you all unite together, you will be able to see the lift](#), which is your biggest wish. You all can fly anywhere in the universe with your own physical body, but you've forgotten how, but you'd like to see something else does it, and then you believe there is something, even produce as much energy as you like, but, now, slowly, when you've created this free plasma,

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

and you can create a balance free plasma, then empty space of the universe will talk to you in the frame of the lab.

Then, as I've said, we show you what you call the video of the past, who's done wrong to who and where. You will see the presence of Brussels name Christ. It's all recorded. This is what I said. We dismantle Vatican brick by brick, if we do not achieve world peace, where the Pope has no say, when the master is present. We are getting there, and you are seeing it. You call it the free plasma. Now, you understand where we are going. When the chief of army is present, a foot soldier has no room. Those who claim, we can ask their questions to their claim. We just bring you the soul of the Christ.

And, you've seen it, free energy. This technology is not given just for you to see free space. It's given to free man from the shackles of tangibility and physicality. Very soon, you will understand, you talk to the plasma, the plasma responds to you. Are you comfortable? Would you like to go to the left, would you like to go to the right? This is what I talked to Knowledge seekers yesterday. We'll practice this once a week; once a week, they'll have the key, and slowly, you cannot expect them the first time to jump; you've never seen a pilot becoming, what do you call it, jumbo jet pilots the first time they sit behind the wheel. He starts with a little glider, and this week it has been just showing them how the plane looks like. And it takes time, and all of you will go with us, we're not just the two. We'll carry those who are clear in conscience to be part of the world peace treaty.

You've got to realize something; there is no difference in the structure and the fields of my body and yours. Doesn't matter what color, what clothes, where I live or you live, or what position we have chosen to entitle ourselves in the world of physicality; I am as much connected to the most powerful man on this planet as I am to the poorest in, literally, slums of Africa. So, I'm responsible for both, the way you are and everybody else is. It's just where you feel comfortable to be in counts, not where they want to put you to be in.

So, let us understand what this technology is bringing you; giving you, as you've seen, if you have managed to produce a system to clean up the mess with the CO2 and the others. Medical application confirmed by Harvard University in past 72 hours, to eradicate the most frightening disease called Ebola. Given you the resources to make batteries and be happy and have energy but you are too tangled in the little bits, but if you look at the reactors, you can have megawatts out of it if you understand it, because, Luciano has shown us something which all of

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

you have missed. Lucian showed us something very, very simple but all of you, even himself missed what he was showing.

And then we saw how, what do you call it, Bert and Wince showed us the conversion. Let me explain to you how much you are missing things; Vince showed us a nano-material, in cooperation with Bert, and then they put the metal inside it and between it, and they put another nano-material and they were getting energy. Now, step one further, they released the nano-material and they called it gans, and now, the gans is in dynamic position which creates its field and it's coming in touch with the bar between where is nano-coated. You are getting the sparks. Have you ever considered how much energy is going through that bar? You measure 1, half a volt in the static condition of it. Now, if you look inside the bar, you've got megawatt sitting. And you are still asking 'where is the free energy, why can't I measure it'?

This is why if you look, we showed it to you, there is a reactor, very miniature reactor aluminum which is made by Armen, sitting in the star formation in the middle. That reactor is equipped to measure and Armen has already measured voltages in it; half a volt? So, now we are going to show you how you are going to get kilowatts of it; but it's a small brush, you can't do much. But, you can scale it. Between the two nano-layers and aluminum foil, you have static condition. Now you have a rotating bar and you have a dynamic plasma. What have you missed and don't still see. And you still say '129 Tesla is fake, it's something wrong with the machine, I convinced everybody that there is something wrong'; The only thing that is wrong is your misunderstanding, understanding what actually you'd done yourself.

The aluminum foil is nano-coated bar in the middle, with copper inside. The two nano-coated material is the plasma which is on the move. And every time the edges of the plasma touch the nano-layer, you get the peak. So, your plasma is isolating in the middle, it's like a pendulum; every time the pendulum kicks you, you go out so you get the peak of energy released. And if you look, go back on the presentation of last week, when Armen shows that bar in front of you, I showed you the sphere, we see the end of it. So, in a way, we fixed the plate but we haven't fixed the plasma because of the different amount of plasmas in different cores, so, every time the pendulum hits, you get the burst of a release of energy.

And every time it's bigger and bigger because the plasma layers of nano-material are opening up and closing again. Even the system is making confused reading with it because it receives so much information, it doesn't know what to do. If you look at the setting of yesterday, and the time before, and first time at the beginning, and first time we did on, was it Sunday morning? We

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

changed it on 1 o'clock, Saturday; Sunday to Monday. The system used to read a few 9 milli Tesla, and then it first time jumped to like 8 or 10, with Armen and Marko 10, and yesterday went from 9 or 10 it went straight away, I think, to 39. We have a movement. Pardon? 74; that was this morning, but yesterday it jumped from 8, 9 to 39, the first jump. It's not online, we disconnected it to be able to have this.

So, now you see, the readings are coming in line according to how much you are opening up the line. We asked for some updating of the system from the manufacturers of the detectors, they were very surprised yesterday when I asked them to go live online, to look at it, how we are using the system.

So, you've got to realize, we are not here to show you a Ferrari with golden handles.

We are here to show you how to make every piece of this Ferrari that, when it's made, it's not yours, it belongs to everybody to share. Please don't ask where is the free plasma; the free plasma is where you are detecting it, you are measuring it, don't forget the detector, is measuring into open space, it's not looking at the reactor. And the fields are coming out of open space to it. And we know it's coming directly from the center in the Z, because if it was coming from the reactors above, we would have seen the reaction on Y, if it was coming the reactors on the bottom, we would have seen the increase in the X. So, these two guys have given life to a child, they have to nourish it, they have to understand its language. At the moment it's a bit, what do you call it, he doesn't understand the sounds of the human being; because he's used to another sound. And in time, when the two of them tune with it, that he understands the language, then, you'll find out they have control and you can ask them 'can you go to the left, can you go to the right'; the fun is still to come. We just started putting the pieces together. But as I said to both of them yesterday, the soul and the blood is blessed.

Luciano: So Mr. Keshe, I'm going to stop it just for a second, before you go in another direction.

MK: Lucian! Yes, I was waiting for you to come out of the woodwork!

L: So, you are trying to suggest that the central coil will heat, so, if you are running cooling fluid on that...

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

Plasmas do not heat, gravitational magnetic field, what, this is the habit of humans; you've got to understand. What it gets, it takes away; that's why the temperature of the plasma is always at room temperature. Heating is when you hammer it, but it's silly, you are in schizophrenic condition, darling. You got the gravitational, you got magnetical, you are fanning it.

What one gives, the other one takes, temperature is constant. Do not look for another turbine; with this technology, there is no need for turbine. Unless, unless you are trying to make a sun; and then you are back in the old habit. I'll bring you the gamma pressures; then you'll need it because that's your way. There is no heating because what the gravitational field pulls in, the magnetical field releases. So, in a way, that's why you see the isolation, the vibration when we put the graphs on. It's balancing of the fields. And at the same time, don't forget, the nano-materials are plasma, even the structure of the cover is the plasma. They are accommodating each other. So, forget about your pressures, your steam turbine.

L: A lot of people are asking, you know, how, after you build these reactors, being plastic or copper, you do you heat your house because apparently...

MK: You don't heat your house; Aha, OK, OK; I'm gonna answer you because you missed a point I made yesterday, in the children's program.

L: No, I was not there.

Lucian, I'll tell you what exactly has happened. How are you going to heat yourself? How are you going to have electricity for your job? If you go back on recording of the live sessions, of the lab, you might pick it up because we talk openly in the lab. Go back on the operation of the lab in the past two weeks. I did something very simple and Knowledge Seekers, none of them realized, because I do it, they are just there, like children on a playground, jumping up and down in the castle, they are not watching what is blowing up to keep the castle up.

I went and I brought one of the most advanced hand-held detectors. This is alpha, beta and gamma detector. I'll tell you a story about this gamma; then you'll know powerful it is. For me to be able to buy this detector, on the advice and the permission of the Belgian government, the

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

American developing manufactures were allowed to release it to me that I had to pay a 100 euro for it. It's considered only for nuclear power stations. But it's very simple; I had, I needed the permission by the, because it was ordered by the Belgian nuclear atomic energy authorities, the Americans had to give it to me because I already agreed that I'm going to have one anyway, because I work in the environment in contact with it.

Now, you see this as a black sack; you've seen in the past year, even when we showed the energy system. I hung this detector, I put the detector in a sack and I hung it in between the wires, you don't even see it. It's facing the direction on the side of the cores, the setting. Listen to 'click-click' as you hear, 'tup, bloop' and, two days ago, I went and said 'Oh, we changed the detector'.

All I did, I showed it, they have seen it, you see on the top of the board, you see, like a spider upside down sitting on the top board, I took the cover off. All these past weeks when this detector has been hanging, has been operating with the radiation, absorption cap in front of it. And you've all been listening to 'bi-beeps'. When the gravitational magnetic field of the plasma goes out, and it hits above certain levels, this material, some of it, is released enough that the detector picks it up as a radiation inside.

Two days ago, I took it off; you don't hear any noise now, because nothing is converted. The plasma gravitational magnetic field, it does not affect the human body. I have tested this for the past two years since I've had the detector. Somehow, by coincidence, it's just the right material; they built it to stop any radiation to go inside when the system is not used. But, it gives me the right, in right direction, to convert the energy of the plasma to 'beeps' or what do you like it, electrical current or whatever. How much energy do you need from the plasma? Or, in another terminology, if you understand it, how do you want to wind your wire the way you did with your coil, and you found the energy and you were surprised.

So, would you like to use these 'beeps' to heat up, cook the soup, or warm the swimming pool? I told you, you don't even observe a millionth of what's going on around you; you are so much tangled with tangibility, even when you hear it, you don't understand it. Go back on the videos and hear the 'be-beeps', and then Knowledge seekers can tell you I took the cup off, was it two days ago, three days ago? Two days ago. And how could the machine with a cap, which is specially made that no radiation goes through it, 'be-beeps'? And a few times during the operation I always asked, Ivan told Marko and Armen, look how the picks go with the picks on the scale of the, what do you call it, altimeter. So, what would you like to have, a gamma ray,

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

would you like electronic field strength of the radiation? You choose; it's very much like satellite dish; how would you like to turn your dish, and what distance from the thing? The detector sits about 25, 30, 40 centimeter away from the core, am I correct?

L: I think I'm missing your point, you are suggesting to do this course nano-coated, to be able to convert...

MK: No, no, no; put a satellite around your plasma. And then you'll decide which satellite you want kilowatt from, which satellite you want milliwatt from. But understand how you convert which part. If you are converting the gravitational field strength, or are you converting the magnetical field strength? Because, it's a big difference between the two.

So, all you need, go back to what you did, with your wires around, making your hole and putting your gans inside; now the material which you wound around the wire is imaginary, is free. You have to find out how close you want to be in that, near that all where you put your gans material in. Do you want a kilowatt or do you want a megawatt? And don't forget, plasma works for the order of magnitudes going reverse on magnitude strength. So, a kilowatt should be very easy for you to produce, if you know how to change that physical winding of the speaker you use and you put your wire, you are winding on it, we are going to show you, we have a coil made in the center. As I told you, it was specially developed. We are going to bring that in due lot; all see as much energy as you like.

But, you are not ready for it, if you do that yourself, it's good, if I'd do that I'd be killed. So, these way, let us all get killed by people who don't want us to have it and got no costumers to supply with it. Understand?

L: Ha, let me tell you something I'm working on to do, copper oxide ganses and I will change the CO₂ with copper oxide, what you just suggested, I will let you know if there is any change.

MK: Yeah, yeah, Luciano, in a couple of months, in a couple of weeks, or before Christmas, Armen has already changed one of the reactors to the gans. Copper oxide, he took it out again; so, we are going today, after we finished the session, have you got the plates with you? Yeah; so, what you are going to see, hopefully next time we'll put cameras on, you won't see the

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

orange frame anymore. Everything goes on a stacker because we've got all the pieces of it's going to, because to move this huge things to another lab is very difficult, secondly, all the power supplies which are there if you need to interfere are going at the bottom of the stack, and the detectors go on the top, that we all can see; and then, hopefully, we connect this set to a table in the lab that you can see, that we can sit on the table, that it flies all of us together. This is the plan.

L: I'm sorry, I've got only one more question for you: these ferrates that are used in transformers are mixture of oxides, iron oxide, I think, titanium oxide, so, we discussed in the group to make, like, some sort of final, to put all caustic inside so we can do nano-coating inside ferrate, so, after this it will be done, I will try to put the copper oxide gans, to see what we get there; so...

MK: That's fantastic; that is perfect, because if you are doing it, you are literally doing what we do with Coca-cola bottle. Coca-cola bottle is nano-coated itself, as we know from our German friends; they put in a plastic machine and it kicks it out because it behaves different. So, what you are doing, you are going back to what we did with nano-coating the reactors, original reactors with the ganses, filling.

But my advice to you is, don't do it. Because then, your container becomes a filter, dictating what energy can come out of your reactor, your hole you made to put the things in. This is one of the reasons we did not coat the small gans reactors; if you do it, put, don't put the center into it either, because then all the energy has to be dictated by the material inside the center.

You are going in a very good direction Luciano, it's with your team, I congratulate you, but try to think in plasma direction, not in the matter strength. And whenever you want to change, always create a nano-layer barrier that it becomes a mediator between the plasma and the matter; because, the plasmatic magnetic field of the plasma is so high that it just goes through the matter.

It's just like neutrinos, it just goes through. By accident, if one of the electrons or one of the neutrons or one of the protons in the 100 kilogram bar of copper is in the change of, for example, from principle to, let's say, transition, which is at the strength of your plasma outside, then you might see a pulse. So, use intermediary of nano-coated copper, or nano-coated any material, that that layers of gravitational magnetic field some 100, maybe 200.000 layer between

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

the, what you see as a surface of nano-layer to the copper itself, becomes a filter for the frequency which you need. In time, I'll teach you how to tune into plasma, how you go...

You see, the top outer layer of the nano-layer, it goes to the order of magnitude by 10 to the power of 50, 60.000. The last layer of, whether there is an interface between the nano-material and the copper, if you understand the space between the hundred thousands layers of nano-layers, 200.000 is so big, it's in micro; so, then you choose whether you want to be the thickness of your nano-layer, if you can connect to every layer, will allow you to go from instantaneous speed energy to below micro electrons. Do something, test; if you are doing it...

L: So, you are suggesting me this issue: I don't know if you are aware, but there is something what is called flat transformers; that means the windings are just pieces of busy beats, connected with each other, so I'm thinking to do something like this: coat the trace of copper...

MK: Why do that? I'll show an easier way;

L: You suggest...OK;

MK: Yeah; wear a glove, nano-coated copper, strip off copper or a copper wire, wear a glove, don't touch the nano-material before you use it, but try to practice before that you exert the same amount of pressure on the nano-coated wire. And then, use different pressures for different wires, and measure the current you get out of them. By crushing certain numbers of the layers, you dictate that 'this bandwidth I don't need'. And you only absorb. You'll find out you make a system and you touched it, you make a copper nano-wire and you touch it so much, and it gets 0.01 volt, and the guy who worked very immaculately, like the Germans, and they get 1.2 volts.

Both have done the same thing, but they don't understand how come. Because, the minute you touched the nano-layers, you have dictated the limit of absorption and rejection; and electron transfer. So, you have to take, you have to take note of what you are doing; not just because you made the system. Even when you make the gans of material and you put in dynamic condition, you have a packing order in the reactor. And you find out that the ones that are in the background, near the wall, behave totally different than the ones which are in the liquid side.

If it's very hard to understand, go back to the medical section, go back to the structure of the brain. The easiest command with a lot energy needed but it can be done very frequently sits on the outer boundary of the edge of the brain; your fingers, your arms, the movement, these are

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

useless things but it needs to be done. As you go to the center core, to number 5 you call it, talamance, (?) you'll find out that the packing is very compact and most of the energy comes out of it, one little center controls the whole operation of every single cell in the body. And then, understand the working and the structure of your gans in your copper reactors, in plastic or anything you like. Then you decide if you want one milli watt or you want two kilowatts. Next question. Hello? There is something wrong here, we lost. Hello? Can you hear us?

Yeah, I can hear you; can you hear me?

Aha, OK.

We can hear you.

Yes, I have a question, explaining the magnetic fields, the gravitational fields when they cross between two entities, at the points where they cross, is that where the matter is created...

MK: Can you, can you, can you repeat, please?

Sure. When you were explaining where the gravitational and magnetic fields cross between two entities, where they are connected and they cross in the centre, is that where matter is created on different dimensions?

That what, I don't get... I don't understand what you are talking about.

When you had the two spherical entities and you had the gravitational magnetic field lines coming out of each one and going to the other, and they crossed in the centre on the way to each other, at the point of centre where they crossed, is that where matter is created on different dimensions?

Not really. Matter is created on the strength of the observer, plasmatic magnetic field. You decide the state of the matter, not the other plasma.

OK.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

Your gravitational magnetic field of your amino acid decides what becomes matter to you. You will understand this very soon. I will show it to you in the operation of the reactor.

And I have another thing. As far as the nano-coating process with the water, I was thinking maybe we could do a liquid state, a liquid, like put a balloon bladder and put the material inside there with a, and do a burn inside the water, so that it can reach higher temperatures than the nano-coat other materials. Have you done something like that before?

Hm, why, can you explain what's the reason for it?

To get to higher, to get to higher temperatures for metals.

No, no, no, no, no. You see, I think you better go back to the first teaching session of the knowledge seekers, and the one before that, the first 2, 3, 4, 5, or 6, that's the ones done with Rick. The whole process of nano-coating is not to create higher temperature. The whole process of nano-coating and the temperature with the caustic is to create, not the melt and not evaporation, to create, this is the whole technology of plasma technology, you create conditions, and that condition which you create with the caustic allows the top few atomic layers of the copper to become loose enough not to melt the whole thing and not to be freed from the metal. So, in that state they become atomic and what you call nano.

Right, I understand that, but what I was thinking is, say, if for example...

Why do you have to heat up more, when it doesn't make any difference?

If you had metal...

Yeah, carry on.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

If you had a metal that, let's say, gets to that condition at a 1000 degrees, and you, let's say, you light gunpowder and fire inside of it and burn, but it won't melt the metal, but it will just get the right conditions with the other materials to coat.

It depends on what materials you are using, huh?

Yeah, but you have to be sure it would work.

I presume, I presume, if you use the, what do you call it, the pancake sponge they use, they use for heat shield for the shuttles to come back in, you'll have nothing left as the nano-material because it's just the, what do you call it, the popcorn, but it stands high temperatures.

Please, if you, if you want to understand in so many ways the behavior of the plasma in the reverse with the nano-material interaction, ask the NASA boys to give you, what do you call it, a piece of these sponges of the heat shields of the shuttles. It's very much, absorbs the strongest field from outside, and by the time it gets to the back end and which is sitting against the plane, there is nothing, you want the high temperature, you want giga watts, or do you want milli watts, and, then, by the temperature you release what you want, and that's the structure the way that's released from inside when you heat it.

You've got to understand what you have in your hand that allows you to reach that condition, that you do not go too far to melt and you do not go too far to evaporate. And, interesting, the Japanese have come up with a very interesting technology. This technology is very simple, but it goes back, what we didn't understand or we forgot, and what they done, they've developed it in a very nice way. For example, a cam shaft which would have lasted you one year, now lasts you fifty years. And, they are selling, they are promoting the technology in a very rapid way. All it is, a scientist in a factory came up with one idea.

Go back to the time when they forged metal. The more you hammer the metal, and the more you fold it and you hammer it, you increase its strength, because it becomes more compact. And, there is a limit that you can hammer, forge hammer metal. But, you want the outside to be as strong, but not the inside, but at the same time the transfer to be orderly between the inside and outside of a vessel cam shaft. What they have come up with, they have made near enough

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

nano bigger size pin balls, ball bearings, as a dust, and what they do, they put the naked cam shaft like everybody else, and then they put them through this process that they get hit by billions of literal balls, that it does the same job as forging. And, the material comes packed in a way that you need it.

Now, do the same thing, take other pins for the other material. Then you see a difference in the structure and the bottom temperature. You don't need many, much heat to separate even gold, Mr. Klausen can tell you, he is playing with it very, very, very nicely. We will ask him very soon to come and show his, his ways in trying to create gold. You don't need temperatures, it depends what material you need at what temperature, for what, just not to release the atom from its gravitational magnetic bounding with the other atoms of itself, and not hot enough to become molten, and it becomes part of the other material.

I know there are some Chinese scientists who are going in a very correct and direct way, and bearing in this. I congratulate you, you know who you are, we are monitoring what you are doing, and it's perfect in what you are achieving. Very strange is, because we sit where we are, it's becoming more and more clear to me the state of understanding of this technology is getting a shape of national, cultural barrier. The one in the East, through their understanding and mentality of being balanced in yin and yang and the way they live, are reaching into goals and the gravels of the foundation technology much faster than the West, which is all materialistic, and our monitoring the boat is very, very interesting.

Scientists from South America are achieving much more than the scientists in the North America, because they are more in tune, they more understand the balance. They are not looking for to be the top and to be the biggest and to have the most, longest car in the world. They like to see what the little Mini performs, that it can do the job perfect. And it's, it's a cultural development and I watch it, it's amazing how it's coming out.

It's ahhh, in a way, if it could win the enthusiasm of the West, with the settlement and the patience and the balance of the East, we'd achieve a lot of good things in the Middle East, between the two. Because you, the all you speak to the Americans, you speak to Canadians, you speak even to the English scientists, they are walking and talking about trillions and billions. I had this experience last week with the Las Alamos scientists. How can you have? We use 1.4 giga watts and so much to create 100 Tesla, and... 'How much are you using? 12 watts? It's impossible.' But, if you look in the universe, huge Teslas are released in neutron level, without any power energy of one gigawatt. And, the Chinese and the people who have the Eastern

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

culture, education of balance, are reaching the plasma condition and the use of the plasma much faster than the West, because they are looking in the root and the essence, and West is looking for the size and tangibility.

And, I see, when I hear, when I speak now with the Chinese, because I start having more interaction because of the researches they are doing, I start appreciating and understanding and valuing the way they are approaching and understand and appreciate the ways as the Western people are doing. Some may walk away from the megawatts and come into this and then you find out that somewhere, that's one, which is about the average you need. Next question.

Yes, I have one.

Hello?

Go ahead, Lucian.

L: OK, I am on. OK. One more question, Mr. Keshe. Marko is doing that experiment with the plastic tubes and the pumps that are pumping two different ganses. Is there any progress on that, or, because it's showing that the plastic tubes...

MK: Yeah, no, because, particularly, it's abandoned, it's a child abandoned at the moment, as well as himself, it had to be stopped, but because of the situation with the, the reactors, we literally tip-toe more or less around the lab. The section beyond the table is blocked, so we cannot pick up any of the tools and the equipment we need. And, this week, when the, the gans reactors are moved to their own lab section, then we have the freedom to do other tests and carry on with other things.

But, as I said to the Knowledge Seekers last week, is that the jump in the knowledge transfer is so rapid and so fast with these balance reactors which Armen has created thanks to his work, that we have to put everything on the stand still, till we see, and we've seen the results, and there is another set on the way, and then you will start seeing beautiful things. That's why I restructured the setting. There are beautiful, beautiful things to come. Hopefully, we can achieve it before Christmas.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

[And, as I said, we are on our 2014 road map plan, more or less](#), in achieving what we are trying to do. You see, the other problem has been, Lucian, is that the other 8 reactors we had were of different makes and different things. We could not come to balance. With these new, small reactors, everything is exactly the same, so we can create the balance environment and achieve things much rapidly. And, I was even told, which is a surprise to us, but there is a lot of things we discuss later, John is planning to build his own copper reactors, aluminum reactors apparently he's designing, and it's getting financed, most probably, by the Belgian government. So, we will see what is about to come.

So, we have to see and learn more with the balance reactors, and this is the conditions which we're having. Any other question?

Yeah, there's a couple of questions. One from Isaiah Noble: "When is the system going to be taken outside and when is the middle barb being removed to watch the copper gans reactors?"

When we are ready. There is a way, Armen has a way, we discussed it yesterday, but Armen doesn't know it, but it's going to happen very soon, is that, what we are going to do is, when you see the stucker unit, you'll understand. The stucker unit has 4 levels. One is at the bottom to carry the batteries which you are going to put in with the more, what you call it, the power supplies. The one back from the bottom is the plate you see already, with the motors being held underneath and the beam on the top, in the centre. And, then, there is going to be a plate on the top to be able to suspend the, the, what do you call it, the bottom reactor.

And, then, there is a plate on the top where the load cell can be fitted that you can go through. In that structure, we are going to take off, when we understand the whole operation, we are going to take off the bar out, and connect the motor of the central top core, the principal core on the top, to the plate on the top of the hanging plate, which means the core will hang in the same position but from up and the motor is sitting on it, so the space in the middle will be empty, we take the shaft out. So, when we come to it, we do it, but at the moment it is not time for it, before there is a lot more to learn before we go that way. There is more to learn, especially because the plasma technology...

L: When I was speaking about the... ... they say is that...

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

MK: interrupts: Let me, let me explain. When I talk about the defense technology, it is not to do with the military defense, in defense of the system, in respect to the environment, which is going to be done, because the system wants people in, has to be able...

You've got to, you've got to realize a very simple thing. Once we establish a full core system, balance plasma beyond the boundary of the frame, then we are subjected to the magnetic gravitational winds of the environment. You are not conditioned on the wind or the blow, because they've been in a room, in a closed room, but there are magnetic fields above the human level, that we see it, that they can disturb the process and topple over. That's why I said to the Knowledge Seekers that we have to secure the base, so that it doesn't topple over.

So, once that is established, we take the pin out and we literally bring the motor central core to the top, but keeping it in exactly the same position, so the middle bar disappears. But, in a, maybe, after Christmas. But, on the other hand, you've seen the operation past day, two days, huh? Do you need a motor, or do you need a middle shaft? Marko is shaking his head. Ha, ha. No? You can even take it out today. But, let us do our experiment with the speeds, with the variation of the speeds, that we all learn from it, it's alive, you can all see, all learn, and then we go to the next step. Next question.

Do you hear me, Mr. Keshe?

Yes, I can.

OK, just making sure. **OK, so, there is a question from Ad:** and it's more of a question or hypothesis, and it says: 'Hypothesis on gans, gold and cancer, and other gans of the copper group. Is it so that through creation process of alpha decay, like in Fukushima, and through the use of the nano-wires as the final stage in this process, the decay of gold in a state of -1 and the decaying oxygen by leaving a free positron, create of the dynamic gans of AUO in this process? In the process of using gans AUO, because the normal human cell will not accept it as a supplier of oxygen, because the gold is of a higher order than the body needs, while the cancer cells being of a higher order themselves will attract the dynamic gans, gold, oxygen but, in being unable to extract the energy of the oxygen because of the dynamic gans AUO, that is not able to give it freely without destroying itself, thereby creating a sort of balance between the cancer cell and the gans of the AUO, gives the body time to organize...

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

MK: First of all, can I, can I ask a question? Why, why do you think that the magnetic gravitational field of the cancer cell is equal to gold? This, this is a hypothesis, again going back to human level. The cancer, because I have done tests at the, in the medical side, this is, this is, this is irrelevant. That, it doesn't work that way, because, it's a good way of thinking, but... Let me explain to you something, we go back, this should be done in the medical side, but when you bring it this way, not trying to be dismissive but scientifically explain it to you exactly what happens.

Most of the cancers in the human body have a metal base reason. People who come to us with a deep cancer problems, we, I usually look for the metallic content within the body. The Keshe Foundation medical team in Belgium, when we used to work there, on the health centre, we always, anybody who came to us with a cancer, we asked for the full details of metal content in their body, in the blood. Why metals? I always explain, you cannot go camping for a week when you have 3 days of supply. So, you have to find supply from somewhere for four days.

Metals, heavy metals, are the suppliers of energy and then they become part of the cancer process, because they can support the life of the cancer cells with the high order energy. So, if you put gold in the presence of the cancer, you don't destroy it, you feed it more. Our tests have shown, when we, we develop the system that we get rid of these metals within the body, the cancer reverses. So, you never introduce metals into the cancer zone, according to our research, it's the gravest thing you can do, because you add a power supply. Metals carry more power energy than actually the hydrogen or the oxygen.

So, to my, my understanding, and we have done developments in the medical side, I would not even go near the gold. You've got to understand, there is a big difference between gans and metal. But, if your gans behaves as a metal in the environment of the cancer, you literally grow cancer like a weed across the body. The cancer cells are higher order magnetic field gravitation system of their own. Because of their higher order, they create higher gravitational fields, and usually as tumors or cancer cells they attract more, because of the gravitational field strength, open channels of the blood and the nerve system to themselves, and that's how the cancer spreads, and that's how the cancer gets into the blood stream.

You create a heavy pull, and that heavy pull attracts everything around it. Blood is one of them. That's how you find the, the, the increase, rapid increase in the cancers, when the lymphs are removed, because you put the cancer in the blood stream. With the metal connection with the cancer you create a cavity, and then that creates itself magnetic field gravitational cavity, not the

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

cavity, the space cavity. And, then it gets pulled in and it brings in the blood and it feeds itself, and then you find how they go very fast. Introduction of nano-materials, especially in the matter level in a cancer level, unless you understand what you are doing, it's horrendously wrong, according to our research. And, we can always be 100% wrong. Next question.

Rick: I don't see any more questions here. Let me just check the live stream. No, I don't see any more questions on live stream. Is there anything else you wanted to add?

MK: Leave it, let's take care... We've got very heavy days coming up. Yes, what we're going to do is, as I said today, Armen and Marko were supposed to teach you how to make nano-layers, but they've been busy with the, with controlling the key, so... Armen is laughing. We tried to teach you...

You just have to get out of there.

Out of where? I'm doing it.

Out of Dias.

You know him too well, I think. No, but, if you, if you look at what we said, what I showed you, with these containers, we put these containers in a different way, about 4-5 months ago, if I can show it to you there, you might see it better, you see a distance ball, this is the ball which we made by copper oxide, about, was it 4-5 months ago?

The brain, yeah.

MK: The brain, yeah. Now, because the, the people who went out, to especially destroy this, that this doesn't happen, there is no difference between this and what's in there. That has been tampered with, deliberately. We see it because Marko and I found the hole on the top as we opened it up, and if you see on the top, we don't see it from a distance, there is an empty space now, evaporation, because they removed it to inject material into the sphere.

It was done by one of the Knowledge Seekers. I told you, the enemy within us, sits within us. Not from outside. So, they thought it was very clever, I made sure these containers are made, have never been touched, sealed by Armen and Marko, and now they had it. So, what we have

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

done with these units is bypassing the interference and tampering with the, with the materials in the lab and here.

So, the whole thing is that what we've shown in past 48 hours was set up as this brain months ago to be done. And, now, due to the situation we are, in the coming days, you will see the new brains which Armen has made. They are little Christmas balls. He's already coated them, and that we held in hand. There is a reason we chose that one. When you choose the spherical one it'd the same structure as plasma, you don't see materials like this in the universe. It has to be spherical, but that was because of the speed of development, how well you are doing, this week we used this, and in the future we use the same, because then they will be the same shape as the, as the, what do you call it, the reactors.

The whole thing, slowly after months, is coming; pieces of jigsaw are coming together. And, this jigsaw is a 3-dimensional stacked from the bottom up. Slowly, slowly, we get into somewhere on the first level, first step, and there are about thousand steps on this ladder. So, you know how much more is left. Armen is looking at me. He says: 'What are we doing here?'. He is shaking his head. This is just the first step. You'll be old and gray by the time you get to the second, well, forget about the thousandth one.

The, the reality is that ...start thinking and working on understanding the structure of the plasma, and if it's too far, you don't understand it, start looking at the structure of your own body. Then you'll understand more of the plasma. Start understanding the behavior of yourself in respect to your environment, to your children, to your wife, and then you understand it. It is very, very interesting; if, even in your life, in your private life, you find that there is a point and you are in the marriage, that the marriage is because of the problem, which you are not cause of it, but your partner is, and you can make with love and care your partner to understand, the problem you have in respect to the relationship should accommodate your problem. Or he'll accommodate your problem. Then, you find peace.

It's no difference between that and the two plasmas in the reactor, accommodating.

Understanding what the need is and how the need needs to be satisfied in a way that it does not take from nobody, but it gives more from you than from them. And then, they appreciate the gift, it's the same thing. If you look at the peak of the plasma, reactor gives a lot of peaks out. But when you look at the small peaks, don't look at those huge peaks, when we put on the graph, look when the Y goes up, and when the Y goes down. And then look when, at the same time, the X goes up and X goes down.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

When everybody says we are in need, you find out the peak you need to get, you are short of. In fact, the other system which is sitting inside the cage, the first set, is still connected to a monitor, we never showed it, but it's on the monitor and the computer; we see it. I monitor that all the time. If you look yesterday input on the live stream, I put up the feeding of the reactors, one hydrogen; we are still looking after it, I still feed them, nourish them and keep them going and I've done it during whole summer holiday when there is no water running.

On daily basis, I put clothes on them that they don't get cold and they don't lose everything, and we call it layers of, what do you call it, nitrogen and helium. And every day, I give one shot of hydrogen to all of them. And those seems, in the past days, you don't hear the radio, it's not just a field of the reactor which is passing, which is the radio is behind the first and the second set, it means the reactors on the way are in need of, so they are receiving. I see the monitor which is controlling the reactor in the center, how much is deep down, has really gone now; we used to see .7, .6, .5, we used to push it to .7 but .5, .54, .59 was normal. Now when you put the switch on, it's .39. It's come down nearly to half, 60% below, 70% below because now they have somebody to feed them and look after it.

That's what I said, you've got to stand on the standing the totality of the picture, not just what you want to see. And then it becomes much and much easier, it becomes much faster to achieve what we want to achieve. I think you will see a lot of, what did somebody tell me, 'you do a lot of preaching'; I don't preach because if I don't tell you that side, you will fall and add a mistake to where past were made.

Science and ethos of control of the new science and be part of science goes hand in hand; so, try to start looking at a plasma the way it is, in a plasma science, not as a plasma in a blood or a plasma in the physics. Then everything becomes much easier. We will try new steps in the coming weeks, new steps in understanding and explaining, no research lab in world has ever put their cameras 24 hours a day on. No one has ever done. This doesn't come out of weakness;

Thank you for that Mr. Keshe, we've been very busy watching.

Yeah, I know; I don't think that your wife likes you much nowadays, huh? You spend more time watching the computer nowadays, I see; I'm in the same boat as you, because we all want to make the change. You want to be part of the change in the positive way. So, as I said, no

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

organizations, no fund, no research has ever, the people think all these are fools, do you know how much money they spend, and losing by doing this, so much research, they are showing and we can make millions, because, I understand one thing, when I go past, what is it, two kilometers, even hundred meters from the surface of this planet, there is no American who can jump a hundred meters up, and give me a dollar. It's worth nothing any more. The worth of a dollar is as high as the tallest man can jump; beyond that, you can't give it to anyone in this place.

So, I know, in time very short, man is in the space. What would you like to deal in the spaceship? I'll give you two dollars if you give me a lollipop? And we are going to Mars, we are never coming back, so, understand the need not to get something but give that when I need, I can give more. It's a big difference. In a very short time, in shorter than you can imagine, when a man is in the space, on a continuous basis, and, as we said, we open the aquarium of universe to the man, you ask them how many dollars would you like to take to the planet Zook; you worth nothing.

So, try to bring the ethos of the technology and ethos of life together and then you are there; that's why I said there are no churches, mosques and synagogues in the universe. All man made. And I say it again, and I'll always say it: green back is worth as much as the tallest man can jump; beyond that it cannot reach and it's worth nothing.

The whole process is very, very, very sensitive because the change is shocking a lot of people. Somebody sent me an e-mail, 'president Putin, his Excellency president Putin has got a cancer; can you help?' My response is very easy. 'He knows where we are and he knows what we can do'. The same thing, I received an e-mail: His holiness Ayatollah Khomeini is suffering from the prostate cancer; can you help? I said 'They know who we are, they know where we are' and offers have already been made.

We did the same thing; we shocked a lot of people when we start finding a solution for ALS; one of the first people I offered the technology was to Steven Hawking. He was suffering from this. But he knows if he talks, and he can talk and walk, he has to apologize to a lot of people who has stolen technology from and science from. So, he prefers to stay silent. This is how the change comes, there are no enemies, and we are there to accommodate each other. We are all the same, it doesn't matter what role position we hold in the society. If there are no more questions, we call it a day.

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

One last question, a quick one, Mr. Keshe, some people are wondering if the CO2 kits are being shipped yet, or...

MK: CO2 kits, we said once in the forum that it will be done in 30 days, the Italians had to modify things with one whole and manufacturer had to do it, all the kits should be up by the end of next week. Because, there was a problem with the stability of the plates in the container, so, it was done with one hole, then it had to be done with a second hole, and materials getting are delivered to the factory, I think, tomorrow, and we said in the beginning, we'll be done within 30 days, we should cover it in time, because it's only coating up the plates, everything else is in hand. Because I know the nickel plates are arriving on Monday, Tuesday, it just goes in the packing and sends off. It's just a first patch; we found a fault in design...

Just to clarify on that, you mean, zinc I think, and not nickel?

Zinc, yeah, OK.

Thank you.

There was a designer's fault we found out, this is just a, all this is, the plate has one hole for the connection of the wires, and then when it came to be hung in the container, it was dropping into, when the CO2 was made, it would have dropped in the CO2, and the short contact would do the plate. So, the manufacturers had to do things, and being Italian, it all takes time; the second hole had to be added that we could hang it equal away from the bottom, that we could use the plates for longer time.

Well, that's good that an improved product is coming out from the way, that's great.

Yeah, it's going to be done because what happened, it was a design that it was a bar put in by the Italians, and that bar being the, they thought it was a good design to put in, what do you call it, brass. And I explained to them, once you put the brass, you create different condition and

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

different materials will mix with the CO₂, it has to be wire and out of the place, so, it's a problem with the design; I think the Japanese unit will be out very fast, the Japanese guy in next couple of weeks will launch theirs, hopefully next month or so, it'll be on the same basis, and then we'll see what the Chinese and the South Americans will do.

I'll tell you quickly about my idea for the Canadian one, which is, the Canadian penny which has just been made obsolete by your government recently, and people have stacks of them at home, many of them in 1997, 1999 year rate, all them from 1997 to 1999 range have copper outside but there's zinc inside; so, I figure, if I can grind one side of the coin, I'll have zinc exposed and the copper cladding on the rest of it, I can nano-coat that, it will have the copper and zinc all in one piece, do you think that would work in...

Why not, it's fantastic; see how much quantity will take out of it;

Exactly, yeah, we could stack them, stack pennies.

I'll ask my sister to send you some very quick.

It has to be '97 to '99 to have zinc, otherwise, once before that, or 98.5 % copper, they are very, almost pure copper. Once after that, they are steel, they are retracted by magnet and there are steel ones from 2000 and up. That's Canadian, so, other countries...

Canadians are making a lot of problems nowadays, huh?

Yeah, I'll say. That's the least of them, the penny, I'll tell you.

Yeah, a lot of problems. They take your brass from you, your copper and give you metal, that it's so worth the same.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

If you are a scientist, they'll take everything from you, it seems.

Oh, man who has been in Iraq is not going to be there very soon. I hope they don't get worse over there. Don't worry, don't forget, I'll call him, because it's a long story, you all know. Was online, ordering and was kept at the airport and threatened. And this stupid guy in the office was telling me that I had five minutes online, asking me questions I have to ask. One of them was the Prime Minister's office. So I know who you got on your head. Any other questions?

I think that's it for now, we can...

Thank you very much, we meet tomorrow at 2 o'clock with the medical and I think, Rick, while we are here, everybody knows about it, thank you very much for all your work, but if you can speak to James regarding the Keshe foundation teaching live stream in China from Monday, we can sort something out to be online.

OK, that sounds great.

Yeah, so, you can still help us because, at the moment, if you are interested in agriculture, because the agriculture guy in China has done a lot of work and is doing a lot of things, he can show his pictures of what he is doing, and other things which are there, like spectroscopy, which is done by the Chinese scientists, in China, we'll speak with them and we'll discuss it, then it can be used by all because it's translated to English, because I don't know Chinese, and we can all learn from it, in a different way than allows the agriculture to be developed through the Chinese Keshe foundation and all of us learning from it.

That workshop will be translated in Chinese simultaneously, I should speak?

Yes, yes, we have James who does the translation and we have a lady who does the translation. Anybody who doesn't speak but listens to them could help the language.

Right on, that sounds great.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

Yeah, but, as you know, speak to James, James can tell you, I think we do that, the first one we start at 12 o'clock on Monday, or at least teach them how they've got to do it, how they are going to do it, then you can put it on recording that other people can listen. We can enjoy learning some Chinese.

Mr. Keshe, if you don't mind, if the gentleman with the spectroscopy is not secret his name, probably I'd like to speak directly with him, if you don't mind about that.

No, because they've done some spectroscopies now, you can come online on Chinese and ask questions.

No, probably in English, later.

Just disguise your voice.

No, no, James is a very competent translator and I think it's Lin who translates, she is very good;

Lisa;

Yeah, Lisa; Lisa is very good. So, we have to learn not to be shy because we don't speak a language, and hopefully tomorrow, we'll come to an agreement with the Mexico-Spanish group to run the process in the Spanish. We've got to learn to have the patience, we have the comfort of us and it gets translated to theirs, now we have to translate, at least we have the chance to translate to English, to understand. As I said, we'll teach every day of the week, most probably Tuesdays we'll go to the Spanish speaking, and then we have to have, once we have come to an agreement with our Indian connections, we'll do the Hindi if they need to, because we can exclude that kind of language. I'm prepared to do so as long as I can sleep somewhere in between.

Transcript from 34th Knowledge Seekers Workshop held Oct 30, 2014

(v1 2016-04-10) DRAFT (Transcription has not been verified. Double check info with video)

OK, so I guess that's it for today;

OK;

Thank you very much Luciano;

Thank you Mr. Keshe;

Thank you very much, thank you indeed; goodbye for today.

Rick: And, as I've said so many times, and probably with an echo today because the software did not work properly, so ends the 34th Knowledge Seekers' Workshop. Thank you everybody for attending, and see you next week.
