SUCCESS AT FUKUSHIMA

INTERNATIONAL KNOWLEDGE SEEKERS

00:00:00

Rick: Okay! The mike's on ... K... this is the ...ahh ... fifth KS workshop – let me see I have to change the screen, just hang in with me a second – a lil adjustment there... ahhh ... this is the 5<sup>th</sup> KS workshop with the KS from the SSI , and MK, with... ...Orrr ... Jay? ... is that the best way to say it??

Jorge: Yes – this is Chor-chay–

Rick: Kor chay?

Jorge: Haha lol I have the same problem – my name is Chor-chay!

Everyone: hahahahaha lol

Rick; can you tell who is in Italy just now?

M: Well the table is not full, Yukako is in Japan, American intelligence is still not here!

Ludmil: Armen is sleeping yeah?

M: Yes – maybe he is at the door? But we don't have camera so he is waiting there – Dr Yvan is in Belgium – he will be here next week Marek is here, John, Mr Keshe is here, Horhay here – so five of us here at the moment –

To summarize, last week was very busy with the experiment some testing at Fukushima – on live stream – so everybody could check results and we are very proud of Yukako – she did a good job --- Armen is here

## Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

Marek: we are doing the videos on youtube as well – good results, our material can be used to eliminate radioactivity in Fukushima! So we did some progress also with reactors, busy with pipes for distribution of gases and vacuum – a lot of reactors and we have to make connections for all of them, reliable piping without leaks – we have to work to seal correctly the pipes - So in fact we set up a new place for all reactors working

Marko: Yes we need to make a special place of testing w different configurations - so we don't approach near during the test – V IMPORTANT re safety – we should not be near – should be about 3 or 4 meters away – because magrav fields can be harmful to health – so anyone who is doing test – a warning to be careful - Geert is in final stage of testing – and if he needs help he can contact us – but we should be careful

John: – further information re the setup of reactors – each reactor can have 4 gases inserted – 2 pumps, a ruffin pump and turbo molecular pump – also a dumping system should be there- 2 connections – most reactors will be dual core – the system for mirroring of the gas – so all together 11 valves on control board – to control gas going to rotating spheres – so things still to be put together – but we need some more time to continue the puzzle, and we should have something very symmetrical for each reactor – inner outer core – each of us will learn how to control the systems – any questions ?

10m Rick: – opening up the floor for questions – we're not ready for results of Fukushima testing – lets open it up here ...

Geert: no questions but to let you know Saturday our group will be together – safer with a group I think rather than alone to start the reactor

John: – so if you start a system you have to be very careful – we'll have 2 radio sets a Geiger counter to check no radiation coming from the core – control at a good distance not to interfere with the reactor – careful

Vince: - don't the Fukushima results point to absorption of radioactivity and not expulsion from the core?

## Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

John: well Fukushima results show different aspects – mainly reduction in radioactivity very significant but at certain points we see a reduction and on different levels with isotopes – if there was some uranium or plutonium we could not see them – we have an increase on cesium 137 or 134 from the 137 – but Cs 137 will decay to that – not sure absolutely – but could be decay from plutonium – cesium appears in the decay

Marek: On the experiment in Japan – we have made with food quality assurance company on 29<sup>th</sup> and 31<sup>st</sup> – we have been using gamma ray detector – there was contaminated soil from a rice field – the soil was soaked w water from local well, the well water was checked – it did not contain radiation – very low levels natural – soaked the sample – top layer without sediment taken away, then cleared once again because still some sediments at bottom – measured through wire filter - nano coated filter – it was wires made from another power source treated with oxide and hydroxide in GANS state – treated by wire filter and by Gans copper, and afterwards we put them together to make final mix – and more measurements over a period of lets say 6 hrs. The graphs on the charts show us indication of initial decontamination - and after reaching saturation point the radiation decrease stopped at some levels, then there was a relaxing period over 3+ hours – during this period some of the radioactive materials, for example Cesium - its amount was raised - then afterwards decreasing. There is certain capacity of the Gans material or the coated wires which – certain amount of Gans can decontaminate certain amount of radioactive material – transforms it into non-radioactive – but afterwards it is saturated – so you have to add more Gans, or treat the material with clean coated wire again-

After this experiment we moved to Fukushima city, and during March 30 we made experiments at a non profit org there w samples from roof gutter – and radioactive soil – quite high radiation levels – we have measured over 100,000 Becquerel per kg – quite high value even 3 years after the accident – safety standard is 1000 bpk in the US – so high levels – we tested the soil and then tried 3 procedures with the water.

We have used the soil without water first – added copper Gans to sample and measured it during a period of time – radioactivity decreased but it reached saturation point – so radioactivity not fully reduced – to do that you need more Gans material –

After that was testing of radioactive water – we split the water into 3 parts and tried 3 treatments – one nano coated copper, another part w copper Gans, and 3<sup>rd</sup> part treated with CO2 Gans – results showed us that all 3 procedures reduced radiation, but the wires were less effective than copper Gans material – when we put the Gans material into the water sample we first measured

## Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

after – then we separated the top layer and measured separated water alone- residual of the Gans material was separate sample – we saw 2 results from this – treating with copper Gans reduced radiation to zero – eliminated! In the Gans residue there was still some radiation in copper Gans.

With the CO2 material the top water without residual CO2 the radiation was also zero, so again elimination – MK said ‘drinking water’ and it was so – but when we checked the CO2 Gans sediment – it showed zero radiation as well !!!! So CO2 Gans was the most effective – better than both copper Gans methods

Vince: –a question – if they were effective for both cesium 137 and 134 –

Marek: – in this sample they measured only 137, and the Gans material totally eliminated the radioactivity of the sample – we will explain the process later, but the results were very impressive!

Vince: - do you have a measure of how much of the material was used to get zero radioactivity?

33m Marek: – wait I will find it – water sample w total radiation elimination – it was – I think we added 21 grams of C... (lost contact)

38m resumed contact – (Rick introduces Armen but again lost contact)

40m resumed contact - John on new topic: – we have a new system that allows very high speed – instant – communications – this is the future of computing – and when we understand what has to be done we will influence the sphere – each KS picks a sphere representing the brain – now half filled with nano – (demonstrating John’s broken ceramic reactor that is coated internally with the bright blue nano coating)

**Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014**

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

We still need more of the blue coated Gans material – in any case this represents the brain – MRI shows different shapes and densities – brain in Gans state – allows control of the material body and connection with inner soul – so system will be the control system of the space ship for the different reactors – because the start formation has to be controlled in a very high speed way – this is the system that will allow control of the star formation

Vince: – are the layers different types of Gans or single type of layer ??

John: – I will show it on skype download from messages –

Rick: - it will take about 5m

John: - you will see a very nice sphere – ohhh - Armen corrects me – a very nice brain (joke) – it's a brain construction – Vince could you repeat your question?

Vince: - is this a single Gans with different densities, or a layered Gans?

John: at the moment is one Gans – it deposits on the lower side – its not yet finished

Vince:- right, so the different densities are due to different pressures? –

## Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

John: – yes of magrav fields within the system – the different layers are different magnetic and gravitational levels – its all one type of Gans – all blue copper stuff we have been collecting – kind of like the bucket experience – different magrav fields creating the ribbons we saw – right?

0047: MK: Good morning – let me explain the whole structure – due to different layers produced in the sphere you get layering of the same material but due to Gans being independent magrav field you create different layers – the main field strength will sit at the bottom – when it is filled the control moves to the centre – then they get part of a bigger structure in one unity – for the time being the magrav field of the earth effects it – but at certain point when filled the plasma centre moves to the centre of the sphere, and the material radiating outwards –(breaking up and sounding like an ET) – each Gans material is a sphere on its own – the connection is not electronic but magnetic gravitational of same strength – so what happens – a person makes contact with the sphere – copper oxide, and we have copper oxide in our body – this becomes the specific fingerprint of man – also when you touch your sphere you make a connection – so this is how we can have different operators running the system – the reason we used this structure it is a copy of the brain – but in time different parts of the system will accept different jobs – if you cut a brain you see different densities – so this structure of the Gans channels ...one second please...

Because of the weight of our body where the main brain sits – the emotional brain sits in a small part, and the main brain is physical and connected with the physical body – with this system the emotional part will move to the centre and the connection with matter to the outer part - I think you saw pictures in past and you saw channels to the centre , and a hollow magnetic field centre - the magnetic black hole in centre – now the black hole will move to centre of sphere – this is the first wireless computer control system – now in reality it's a zero time communication system because the body creates magrav field in the same strength – so from now on what you think will be automatically transferred to the reactor with direction of motion – this 3D wireless computer or control system now is a reality – a part of its operation was shown in the Fukushima tests done by Yukako on Saturday – people did not understand it because they don't understand the totality –

This is a watershed – this is a whole change in the paradigm of nuclear contamination – you have seen the graphs from Marek – very professional job – this is the first time the KF is putting out detailed scientific info thanks to the KSs – in one test we see initial reduction of Caesium137, then with more CO2 we see increased Caesium137 – you cannot produce 137 – that's fusion – but you can get other material to change to 137 – we see increase in 137 – this

## Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

proves beyond a shadow of a doubt the presence of plutonium in the contamination from reactor Number 1 – this puts this beyond doubt –

Uranium 137, Plutonium 137 is acceptable as a nuclear engineer we understand – we now open a new chapter – why is there such a high level of plutonium in the water from the fire station at Fukushima city? –

This brings a lot of political stuff to the front – all nuclear nations are involved in production of plutonium – any nation that is nuclear is producing plutonium – we cannot crucify one nation now, because all the nuclear nations are producing plutonium

55m This data has been predicted for years – because of the pressures from IMEC we had to keep quiet – now its in public – big question – how can you produce CO<sub>2</sub> that makes radioactive materials including plutonium neutralized? No cesium, no gamma radiation source at all! Cs 137 has 30 yr half life, 134 2-3 yrs – so how can in a matter of a few seconds highly radioactive material turn neutral – this goes back to properties of Gans materials – when you convert gas to Gans CO<sub>2</sub> – you release energy – that is why the light is running in our experiments, and the material become electromagnetically balanced – at the same time the energy in the water is released in conjunction with H and O in water, plus N crossing the water has produced fat or protein – this protein has now gone for testing and we have seen the results – but what does this mean – is this magic? – no it is the property of the Gans

The energy in the container of the water transforms into gases or energy – so in these waters we have radioactive material which is in balance – now the Gans of cesium in balancing its energy has become non radioactive – so we can carry materials into space in balance and then transform into radioactive materials if we want – so we go back to one thing...

0100hrs We release this to the Japanese public – and now the nation of Japan can help themselves – on the other hand Yukako says there is large number of children and people with cancers in the Fukushima area now – we have to make a decision – with our cancer research and development in bone marrow – we are opening Italy to cancer research for Fukushima – in next few hours Italian government will designate our foundation as research centre – Yukako and Eliya have agreed to take patients from Japan – so I took a step further – we need to bring all the cancer patients to Italy – (live stream skipping minutes) – with a certain confidence we say we can eradicate all of these cancers, so we request the Italian government – please make the KF the centre for treatment of Fukushima cancer –(skip) – something about health reactors

## Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

– we allow the cancer in the body to become non malignant – we seen this before now the process opens up – KF is open today to all the cancer victims from Japan – we look to financing – most of these people have lost everything – they need to come for 2-3 months initially then we send them back home – at the same time we open this research to public to Iran America Russia China and the rest – I understand the process somewhat – we can use the CO2 to literally eliminate most of the cancers – the process is very clear

We have now received a lot of requests for treatment of Alzheimers too – and we plan to make a centre for Alzheimers also – we should soon get a response from the Italian government – I am sure they will open the doors

0107 the whole problem of Fukushima brings a whole new dimension to work of KF – initially we launched a video re Fukushima – then our colleagues released the patents – mind boggling millions of downloads – unbelievable – so it comes back to one point – all of you have the documents – there is a time limit – the KSs start at 10am and then we have to kick them out at 11-12 pm – many consultants around the world have been getting in touch – it is impossible to bring all the KSs to Italy – the key has been downloaded, so we now make an announcement -

We now open the international world wide KS panel – from now on a daily basis the International KSs will be set up through www program – the time to open International KSs is earmarked for 15<sup>th</sup> April – you have to register and pay 1000E per year – the expenses of teaching this service – our people estimate they can accept 100,000 to a million – you will learn everything we do here and at the same time teach us – we accept anyone – from today you can register and fill in a small form, and from the 15April you start to be taught – it will take 3-4 years – we try to put daily teaching from the lab – our estimate is a few hundred thousands of people – new KSs will come to Italy, but the mass teaching starts from today – we have been open, and our openness had put a fright in the nations – we teach like night classes – the level you understand is according to your intelligence – whoever signs by the 15<sup>th</sup> – we will send immediate response – only condition is that you have to sign the World Peace Treaty – which means the knowledge you gain is used for peace – these ethical points lead into interaction with the space tech – the KSs who come in June will become your teachers – they can travel to your country to your place – on the other hand the KS here have been very busy – next week or so you will see the results from our reactors on the net – we went live on youtube for Fukushima – if results were negative they still would have been live - we are not hiding anything

## Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

We expect one thing back – what you learn you come back to us and teach us – this will become a focal point for teaching the IKSs – the forum has been blocked by us – the teaching program by the Keshe Foundation and the downloads have forced the webmaster to take everything from kf.org and put it on space ship institute – there are so many people running round the institute that KF website has become irrelevant because everyone is going to SSI – so we keep KF.org as a front, and whole new servers put in for teaching. In so many ways we go back to a whole new era of teaching – at the same time we cannot work without International support – we need to buy pipes etc etc – please send your requests and CV – the way you mark your CV is very simple

Name – year joined KF – area of expertise – nation

Language should not become a barrier - we need to know the languages you speak – hence our data will pick you up immediately if we need you or you need us – it will be automatic – like with Yukako in Japan – every day at 3pm everybody was around the table – we try to do a mass release – all applications we receive will be answered

At the moment we have in line to start the seed program – will start in the next 2 weeks when the temp comes up for planting – trials have been done in Belgium for 3 years on how much soaking is optimal – we start an agricultural forum, a medical forum – no more barriers, the doors are open – the knowledge is new – we are not afraid of learning and failing –

I discussed this with my wife – the son of the ex king of Belgium is in hospital in coma and the ex king and the queen have not visited him for 11 days – so we decided to adopt this son of the king as one of our sons – KF tech is available for him in coma – the same the world champion who is in coma through snow accident – it takes us less than 48 hrs to get him out of coma – we offered the same to the prince of Holland, now the same thing to prince of Belgium – we can retrieve from coma and one life is the same as the other – so this is where we stand – we are open and today we launch the International Knowledge Seekers of the SSI –

On another thought we had a meeting with the people who will manufacture the space ship here in Italy – they were shocked at how tech costing millions has become obsolete – they are digesting this right now. We also had a meeting with the Italian manufacturers of the energy system – this should be up for viewing in a couple of weeks – this belongs to the Italians –

## Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

other nations will have to develop their own. Other technologies arise out of this too – like the wireless instantaneous communication systems –(interruption)

Oh – they say the prince of Belgium has recovered from coma and they don't need us!

The other technology is the 3D control system- this is a zero time communication line – what this means what you transfer into it – transfers to another system – so we transfer our comms to the central brain and this can be tuned into zero time comms around the world – you can be in Mars and on Earth and have zero time communications – that means you can change one reactor to another directly – your system carries the principal and you can change another in space

I will explain the purpose of this ball you see on the table – the 3D brain is the structure of the brain of the man is for the KSs - they have a magrav field and this system produces a magrav field – this sphere is a living entity it absorbs from the environment what it needs and gives back what it needs – if the people are with a pure heart they will see the light. The magrav field of the earth interaction with magrav field of sun produces daylight – when you reach the purity of the ball you will interact and see the light – you reach the point of maturity – one of the conditions of this ball is because it doesn't need anything – it doesn't fight or deceive – it is the ball of truth – you cannot lie – when all of the KSs are around the table with sincerity and truth they will see the light – they will see the colors of each other – its like the sun – the same with the KSs – their interaction with the ball will create a specific light and when there's 8 around the table they know who is genuine – this is the change of the course – this is the agreement you make with yourself and others not just on paper when you become a KS or an IKS – in the beginning this is hard but soon becomes second nature – it is fantastic to have Eugene back – we never met him but he is here – you don't need to be around the table because you are already part of the knowledge seekers panel – any questions? – I think I talked to myself! ... ... there is nobody there! ... eheheheh!

0130hrs The ones who can afford to be here they can come because we need those – they will be the ones who teach – the ones who cannot come but can put time in the villages – they can join to the international space tech – you can pay the 1000E fee in installments, every month or 3x a year – there is no way this tech and knowledge can be shelved – if I tell you what our security teams have informed us – the last few weeks there have been discussions in the corridors of power what to do with the Keshe foundation – the knowledge release has been so rapid and nobody was expecting for everything to be free- and this does not work with the

## Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

present system - everybody thinks in terms of patterns of how much things can give them – and if you want to make money in these kinds of ways you have to find a cheat or deceiver –

This new way is very clear and thanks to our creator none of us have suffered or gone hungry since we been here – if the protein result comes out like we think – we will produce drinking water from radioactive Fukushima water – the fat has gone for testing is identical to the Gans of your fat – you touch the edge of the cup and it gives you enough energy for the whole day – your cup will produce enough fat to run your meager existence – all the cups have created a certain amount of fat – like having a chicken in the house – an egg a day – no need for anyone to go hungry – we start mass producing these once we have correct data – if you have a piece of copper you can feed yourself you can produce energy and matter – and now the 3D control system is on the table for the first time – we expect millions of people in the coming months – Mr Cho is aware of 3 reactors being tested in China – a couple of thousand people are building or testing reactors around the world already!

What we said about the assassination plan 2-3 weeks ago – there is now a plan to arrest us – we were 3 weeks ahead – it's a request for me and my wife to attend the police station to be arrested – it will not happen! Its coming from the same office of Mr Delanoir – so you can see how well informed we were ahead of the email we received about 3 days ago.

So the plan is well advanced to bring the KF and the KSs to a halt but the KF will carry on – I still request from people who understand legality and the framing of the world order to respond to what we ask regarding the three people who are involved in assassinating scientists and silencing technologies – any questions?

Ludmil: – I have a quick suggestion if these lectures are able to be recorded –

MK: – Ludmil! everything will be recorded and you can listen to it 24 hrs a day ...

Ludmil: – because I'm gonna become a zombie here, that's for sure!

MK – you are already a zombie ehehehehehehe!

Ludmil: – I know – still I am trying to grow my teeth hehehehe

MK: –ahahahahahahah!

Rick: – hahahah I think I'm going to try to be a movie producer too to try and keep up as well!

## Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

MK: – this is one of the reasons why we will make the fee 1000E because there is a lot of people need to be supported to keep these things going, not only in one country – has to be translated into many languages.

Rick: – I was talking to Gee earlier – we have about 14 reactor designs – what we were coming up with was a reactor that would be useful in specific parts of the world

MK: you will have to see John's – you never seen anything like it! It looks like a UFO made of clay and he hopes to fly!

Rick: yes well this is the thing. I'm convinced a reactor could be made out of a coconut with the right coatings and then it could possibly fly

MK: Maybe banana skin because it already has the Gans layering inside it aye? I looked at the banana long ago – the inner banana is the perfect nano material

Rick: – yes and the inside of the coconut is the perfect material to make activated carbon and to make carbon nano tubes for example - and the potential is enormous

MK: – now we know what the monkeys see aye? Eeeheheheheheh ! Sorry about that!

Rick: – so the idea would be that reactors could be made in any area with the materials at that place eg sand in some places eg black sand has all these potent minerals and potent metals embedded – it could be used with a hydroxide process and become part of the nano material coating – the idea being to use what is available – does that sound right?

MK: – more or less because when you create the field beyond the boundary the material doesn't matter – any questions??

Lucien – yes good morning Mr Keshe this is Lucien, because ...

MK interrupts: Oh Lucien, you're a spokesman for a gang! I know! Because they said you're the only one who can interrogate me! – I was told we give everything to Lucien because when he asks questions I answer ...

Lucien: – Oh no no no I think you had the wrong information

MK Eeehihihihi!

Lucien: - from these guys who interview you –

MK: Eeehehehehehe

Lucien: because with him you can do whatever you want aaahahahahaha!

## Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

MK: No I was told you became a front for a lot of peoples questions and I was aware of that and I said to myself one day I m going to find out about the people who control you

0142hrs Lucien: – right, aahahaha! – now let me get to the question – so basically, as safety is coming into the frontline – you said the Gans are virtually indestructible – you can't destroy them...

MK interrupts: – no no no its not that they're indestructible – you have to put it in the right way – I was saying this to John what I learnt 5 years ago – its not in being indestructible – its being able to change into the environment where you want it to be – you don't destroy anything – what happens – lets say you carry a copper from earth to a destination point and when you are there you want the same properties of the copper here, but behaving in that environment – this is the beauty of the Gans you don't destroy it

Lucien: – yes it has environmental impact implications – looks like Vincent and other people are being successful in replicating your experiments with the CO2 Gans – so at a specific place it seems the process will not continue to the formic acid so people will achieve Gans and with these quantities you have 2 options – to dump them in the ground or into the city sewer ...

MK: – No! why do you need to dump them?? – no – there is so much application – why don't you keep them? – there are 2 or 3 risks, this is what I always say –1. If we attract too much CO2 into Gans state we will imbalance the environment – there will be more disasters than those caused by global warning – 2. These materials can be used eg as a fertiliser –

Lucien: – just a second

MK: No no no! I have to tell you this!

01:45 – missed connection to 01:46:42 –

MK: so to put a cap on it – this is what we do on the test for Fukushima and the new tests of the new material – we want to know what it is converted to by independent lab spectroscopy in the next few weeks – we use the Iranian scientific base of knowledge because they are neutral – in Tehran there is the possibility for the scientists to work

**Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014**

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

01:47 Lucien: – so let me continue on my theme

MK: use the right word because we got to use the right word from the beginning!

Lucien: – right ! Suppose you get the Gans and you dump it into the soil – it will mix with the soil?

MK: you fertilise it!

Lucien: – suppose rain is coming will it change to gas?

MK: – No – not with water but it will if you burn it –

Lucien: so will it stay there forever in the land?

MK: yes, it looks like it

Lucien: so the only safe way to dispose of it is to burn it?

MK: when you burn it you turn it back into its original state – gas

Lucien: understood

MK: when you take it into your body it becomes the heat of your body – by burning we turn it back to gas again

O150hrs Lucien: – so my second question would be –

MK: use the right wording

Lucien: - let me tell you something about this person who would go to jail immediately because of the FDA – because he provides a treatment for cancer, which is not FDA approved -

MK: - now that person can make it in his own home – they cannot put people in jail because they treat themselves!

(live stream distorted u to 0155hrs)

MK concluding stating no we are stronger than the FDA - this is a kitchen technology – people will be making reactors in their kitchens in the hundreds of thousands – multi billion dollar businesses are down the chute – now if you want a banana it is out of pleasure (not need) and now we are teaching in the open and thousands of people are doing it – nobody goes hungry in

## Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

Africa – a piece of copper will give you all the food you need – control is out – it is even happening in the US – you know how many stem cell organisations get in touch with me to help them – (more loss of live stream to 0159 )

0159 Mr Chu: - I want to clarify a point – so the CO<sub>2</sub> Gans will be absorbed by ...? (interruption till 015940)

MK: - so the CO<sub>2</sub> becomes the tool to attract the magrav field of the hydrogen – the reason you water the plant is to allow the N to become active – you put it as fertilizer – provides energy to do the job to release H, CO<sub>2</sub> is the intermediary – this is why weeds have such a high percentage of protein etc etc - (further loss of live stream 8-10sce chunks makes it impossible to accurately follow the conversation) – (tantalizing glimpses of Gans providing fertilization to the environment receiving and using lots of Nitrogen) - much higher harvest – an expert in Sierra Leone – the magrav of the O and C enough to attract N to attract to the CO<sub>2</sub> – C is 12 and O 16 and Nitrogen 14 in between gets attracted – it gets pulled in – you cannot over feed N to the plant it takes what it needs – at same time when you have N with bubbles you create a specific fertile moisture –

02:05:44 Mr Chu: – got it!

Lucien asks a further question about why some of the pots did not produce Gans –

MK: this goes back to our biochemist and physicist understanding versus biology – but its not a chemical reaction so you aim to produce a material in the lab – you will find people slip on grease on the floor etc – and they are trying to understand how the condition is creating this outside the reactors – or John trying to be the Archimedes of the 121<sup>st</sup> century and getting gold from fresh air – you create the condition but understand it before you create it – I looked at how fat was produced –

Lucien: what will be the difference between CO<sub>2</sub> and CH<sub>4</sub>?

## Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

MK: - a lot - you understand the numbers of protons and electrons and neutrons in each structure – simple – you get 1 C and 4 H and the other one different – look at the magrav field not the atomic structure – I look at how the magrav fields accommodate each other – and that gives a good indication of what you do – you have to watch and be observant – production of protein – in Tehran ... (broken live stream)

One of the 7 systems on the floor is the Iranian system – you will see how small this reactor is – it is not a hidden thing – has already lifted – (more breaks in live stream) – most of these reactors carry the Iranian tech – now nobody can make money for selfish reasons because this is on the table – we have American, Slovenian, broken pots from Belgium, and everyone is in it

Brett: regarding the comms with the gans brain – I have a friend who is much more advanced than I am

MK: lets get him onto the next workshop – speak with Rick – you sent me the prisms right ? Turn them into spheres – you have to share this with us the way we teach you, this is very interesting – you are more in the matter and I can show you how to get into the plasma – you understand half of it and I will explain the other half of it when you share

Brett: – what about sleep walking? –

MK: you have to understand the structure of the brain, the relationship between the emo and physical – the physical part is more active than the emotional – and operates independently – in some cases you see feeling as well – I had to understand because my son when he was 3 y o would walk and go toilet in the fridge – so I had to understand this – the physical part is more awake than the emotional part – there is a separation – the physical part carries the memory of the destination without any feeling part of it – we had one man who would wake up several times a night and make love with his wife and had no memory of it – very interesting to understand how this happens etc etc

Rick: – a question about the brain that will be the control mechanism – will that be a en emotional and sensing apparatus rather than a thinking apparatus –

MK: - yes yes yes I explain this in future – (echo in live stream - difficult to understand)

## Transcript from 5<sup>th</sup> Knowledge Seekers Workshop held April 3, 2014

(v1 2016-03-05) DRAFT (Transcription has not been verified. Double check info with video)

Rick: – so the brain senses the same as you sense – feeling the gravitational magnetic field –

MK: – this needs development we are working on it – to understand the composition of different fields - this one on the table is mono – copper oxide – you have to have multiple materials

Rick: – would it be true that kind of nano coating is super sensitive to human fields?

MK: – No not super sensitive – depends on our own field strength level – we speak very general in these workshops now with the IKS – we will spend 3 4 5 sessions going into details –we will go into a lot of detail about why, how it can be applied –

Rick: – I think it is really exciting the concept of all these KS providing different points of view

MK: – the KSs are now standing their own ground and more confident eg Marek today presenting Yukako's results – these are all scientists – this is freedom of knowledge and freedom of understanding – what I could not express in my language they are doing easily in their own way

Rick: – every single human in their own way can understand this process even if not highly educated – out of the mouths of babes – this makes them more direct in their experience

MK:– we are all learning from each other - when you have one flower in your hand it is beautiful, but when you have a bunch of flowers you have a whole bouquet – and the human race is a bouquet.

Several more questions – re 'gating' phenomenon to make doorway in the craft – and discussion about the IKSs from the 15 April – a few thousand people around the world as International Knowledge Seekers –
