1:52:42 to 2:37:42

You showed an apple. Now, this apple has a field which goes through it and it comes out of it. Now, if I put another apple here, so we call it...this positive negative in talking about plasma has to end because we don't have a positive negative we have entry and exit, if you get to that point then you solve half of the problem. So what you have you, you have a magnetic field, which is exit to entry, yeah, and then you have the same here, you have an exit to entry.

Now what you have done, be it in a matter state or a non-matter state, you have, in this place... in this state, in the first two, as you go into a plasma, and I was to explain, due to decay and adding of the energy from the principle matter coming out, to the plasma, to the edge of the plasma, or a reactor. Your field let's say enters at 1 and exits at $1+e$; whatever energy it has added to its mass to come out from the top.

Where this energy is lost in the process, partially with the environment, when it enters at the S. Pole, or what you call S. Pole or what we call the entry. Can you hear me..... So, now you have an energy of $1+e$, which as goes by the same principle in the plasma comes out $1+e$ plus e , because now it has gained energy from this plasma too. Which partially part of this energy, here at $1e$, is equal to what is entering at the other exit too, because it is lost in the process in the interaction with other fields. So you have a loss here of e minus the losses in the transition.

But what you have shown, and this is something you have to understand, I don't expand on it, because you have to add to your knowledge by whatever you call it by understanding the totality, is that now you have a plasma, and you have the same plasma here in the same position, now you have added another plasma in the centre. You have locked because of the physicality the access ???? are totally locked in. Now you have brought in additional power supply, meaning in the state of the GANS, or nano-layer. So what you have here at the exit is $1+e$, which because of the pressure cannot do anything, it has to come and go in the matter state in the nano-layer and be added. The same will go the same way. Where this state of matter is adding energy to the entry.... The same way is adding energy to the entry, which the more energy is added there are no losses on the magnetic field level, so you start creating a loop of energy production.

One thing which none of you have understood up till now is how close you have to bring these two together, so that you can force the losses of nano-material to zero, but at the same time forcing the nano-coating to release energy in a plasmatic level.

If you can understand this, and you can force the issue, then you break into a layer lower than the nano-layer, which is the higher energy power. Don't forget the principle of the plasma. The plasma increases its energy as it goes to the centre, because the principal matter unwinds this way.

Nobody, none of you, has managed to cross this comprehension - this level of understanding, and that is why you are stuck between the two levels of matter and also sub gains.

You are dealing with a matter state and electro-vibration between these two, but at this stage through the nano you are releasing a huge amount of energy, which is in a field level and not in a matter level, and you cannot harvest it, because you are looking in the wrong direction for what to you in matter state is correct.

So what have you got to do if you have got to expand this, and measurement, and the system, and I have seen discussions going around forums? Look at the structure of what I suggested to Armen, and Armen has made very good copies of it, but still he is not reaching it. This is your copper tube (matter), then you have a nano-layer, then you have a GANS added, then you have a nano-layer, and then you have the matter (this is the matter and this is the nano). Now, if you go back in what I explained in this picture, and if you look at the structure which is here – then you see you have a nano-material, you have a GANS of the material in the plasma, in more freer state which can release more energy, and then you have another material which can absorb it, in a way of matter state in electron – if you are interested in this?

You have to work, find a way, where you work between this layer and this layer. Not between this layer and the matter inside. This is where you are losing so much power and you don't see it. If in the coming time, we put an aura detector around this you will see how much the aura of the pipe changes.

What we are doing with this layer with the power supply which is added to it, is by putting another coil inside, which again has a combination of a matter and a nano-layer. We are trying to force the release of more nano into a GANS state to pressurize the current flow in this barrier in the centre. So in fact, the copper wire inside is getting forced to accept more and more of plasmatic packages of energy in electron magnetic field vibration strength. Listen to what I said I chose the words very, very carefully.

You look for a current in the shape of electron vibration. A current! What you are collecting is the residue of leftover of what the plasma's interaction with a matter state have released in a plasmatic condition as equal packages of energy, as what electron vibration will do between two bands of its orbit around the electron in the matter state.

So what you have to push, what you have to extend to the knowledge, is to understand the vibration, and the distance, and a gap, between these two points in an electron vibration in a matter state. Then you can produce millions and millions of kilowatts from the same process, but you collect it in a plasmatic condition not in a matter condition. Then, you are actually looking for something which is going over your head and you don't see it.

And this is where I saw the pictures, I saw the windings you do, but somehow you have not come to comprehend this simple explanation. If you can understand this simple explanation, you can make

(v1 2016-03-04) DRAFT (Transcription has not been verified. Double check info with video)

power systems in gigawatts. Because, when the energy enters coming from the N. Pole, or coming from what you call the entry or exit of anywhere, when the energy enters comes in $1 + e$ plus the energy of the plasma which has been released to it, added to it, so by the time it goes through the centre it is already added and it gets added. So you have such a perfect amplifier of plasmatic energy and none of you have used it up to now because you don't understand it.

This circle here could be the wire which is nano-coated, or this circle in here can be the plasma of a GANS. You have not, and you will have a problem till you come, or you do not understand the implication and application of plasmatic magnetic fields, specific magnetic fields (sub math what we call in the very first book, first chapter). You have to find that specific plasmatic gravitation magnetic field package of a plasma which opens the key to universal energy. Then from the wires you showed from the system we have developed here you can drain what you need when you need.

I reckon it will take you at this level, maybe those of you who understand it and don't work between a matter and a plasma maybe, maybe 2 years. And those who understand it can achieve it by tomorrow.

You have to extend the knowledge, but by extending it you have to understand what it does. You do the same thing when you eat a banana. When the banana enters your digestion system it becomes in a GANS state, it means it adds to the energy that allows the energy to expand and to for it to extract. In so many ways if you understand this enforced pressure on the matter state due to the flow of plasma, or presence of plasma, then you enter the universal energy source, and it is unlimited. You have to create....

Vince – So this depends on the strength of that nano.... to be able to do what you are saying though?

Mr. K. This is the point... this explains in so many ways why at the moment there are so many problems with people around the chat rooms and others in trying to see to observe flow or current. This is what I explained to Armand and Marco.

What we have done in this copper tube, and I explain it again that maybe we can understand it better, is that we have made a copper tube, nano-coated (I do it one side or we will be going everywhere?), then we have put a coil which has a nano-coating, then we have put in a GANS, then we have put in a copper wire which on it is nano-coating. What we are doing, we have connected this to a power supply, very low zero voltage - .1 amp .2 amp, .3 amp we are increasing it. The reason we are doing this is that by introducing current to the coil we are releasing as you all have seen creating nano-layers which because of the salt condition we have created in here, releasing these nano-materials, as we can, to push them to become a GANS that the push exertion on the GANS materials to the centre material leads to more pressure on the nano-materials on here to release their energy as electron packages vibration in a centre that you can observe current flow between the two.

(v1 2016-03-04) DRAFT (Transcription has not been verified. Double check info with video)

So what you have to realize, what you have to understand further, is that we are creating plasmatic magnetic gravitational pressure. This is what the intention is. At what point we manage to release enough material from this plate, from the coil which is placed, that is the point when the gravitational magnetic field of the nano-layer here, and the nano-layer here, tuned to be the same and you get a massive reduction and release of energy. And this is the part which is not understood and keeps on getting extended on.

When you make these coils try to understand. As scientists, you have to understand the process of conversion of plasma energy in a plasmatic condition. You just make the tools, you put a nano-coating and you wind it, but you do not understand the total concept.

It is very much for those who have a Physics background. You put a gas in, you increase the pressure, the gas becomes liquid, and then its transition goes to a solid. Even in the solid state it is still active matter, but on the outer layers which is behaving as a matter state - that's as I said in the last talks, the misconception about the minus 270 degrees, that everything will freeze, there is no electron movement. This is the lack of understanding of the man.

If the electron does not move around and does not have a vibration around its centre by exchange of gravitational magnetic field plasma then you have achieved the state of GANS, because now they become unified gas, unified entity, unified plasma, this is exactly what you do in this process, as has been done by creating minus 200, 300 degrees to stop, but here you are trying to find the point of the balance between the two fields and your material is of the same of the two, copper nano-coated, copper nano-coated. You can do it with plastic. You can do it with wood.

This is if you go back and understand this, and can replicate it, then it should be very easy to make tools of the measurement for any gravitational magnetic field, without even observing, and knowing and detecting, or being on the point of observation of the field of the matter. You feel the pressure of the universe on your system. You feel the pressure of the galaxy on your system. Then you know which system where creates what pressure. Then it gives you a point that you have to tune into it to be able to be attracted in the opposite direction, very much as this system.

And if you can do, then your reactor not only gets attracted, but it releases your energy for consumption inside your system. You are tapping into universal energy. You are tapping into zero-time travel. You are tapping into zero-time communication. Then you dictate the speed of communication. Then you dictate the speed of travel. As you go inwards to the centre of the plasma strength, you go out by the speed of magnitude. A hundred times the speed of light, a billion times the speed of light, a billion billion times the speed of light, because now you travel at the strength which you have matched, not what you have achieved at the speed of light on the matter entity, because you have passed the matter border of the plasma.

(v1 2016-03-04) DRAFT (Transcription has not been verified. Double check info with video)

And if you understand this, in no time the scientists who have understood this can create motion, information transmission, time of travel. This is where I tried, I explained to Armand and Marco what could be made, and Armand has made a system. You all tried to replicate, or some of you are trying to understand it, but understand what sits behind it, what it means to work in this way. I kept on telling you in the past you have to create gravitational plasmatic pressure. Now you see how it is done.

Some of you weeks ago, went and showed us that you can create GANS without caustic, by adding a little bit of energy, and I explained to you how you are doing it and how it is done because you are going the same way. You are creating enough heat on the top layer of the element that is not enough to radiate, but is enough to release the top layer - resistance between the matter as a copper and the air as a gas.

The problem with your understanding is that you have done this every day of the winter. You plug in the electricity, your wire, and the coil heats up and you take its heat. Because you are used to megawatts and kilowatts and you buy an electric heater for 2 kw or 10 kilowatts, and then say ooh it is too much money to pay and I stay cold. But go down to micro amps and nano amps, and then you release the nano-material, as you have seen it, and then you use the power of what you used, you released, as nano-material in a GANS state, to release the power of the universe. And this is what you as a totality have in time of teaching you will learn. And this is what I tell you that you live as a schizophrenic between one and the other and you do not know where you are?

You have to create enough pressure that allows the gates of the energy as given magnetic gravitation field strength to open up. It is you who has to find out at what level? What mixture? That's why I always say we are pushing for collaboration with the Japanese. Deuterium, the way people say I can get and that is no good to us. Deuterium at the energetic level that can become a GANS, and it has to be created through plutonium, which is the easiest way, is what the Japanese are sitting on.

The gamma rays, which they penetrate, you have to find plasmatic gamma rays, which can extract their energy, and it is very easy. Every atom does it every day. Because you have to understand these plasmatic pressure and the work of the plasmatic pressure. And then if you understand this you go a step further, which is in fact - what you do is you increase the plasmatic pressure to each other. The loop, look at the loop. You increase the power of order of magnitude, not from the beginning, but by absorbing more, and more, and more, and more, because there are no losses because in a plasmatic condition you have another set, which sits the same, so this passage of the flow of energy you dictate.

And it is exactly if you understand it, is your copper wire with a winding. Then at the same time, if once you have a copper wire, why don't you use two copper wires nano-coated twisted together? So you have your copper wire, you take one nano-material, winding, you get a second copper wire, winding. Make one copper, make one aluminum, make one copper, make one zinc. Then you can measure the magnetic gravitational field flow of your environment according to the matter state in the universe.

(v1 2016-03-04) DRAFT (Transcription has not been verified. Double check info with video)

You can do it in a much easier way, because this wire in the centre, and this double loop to the top, is the structure of the human body. Two legs - why do you think you have got two legs? They are not there for walking, and they are not there for dancing. Nano-GANS material, if I can show it to you. Energy connected to your bone, to your hip, starts the cycle. As in a way, Mike was trying to explain in Mike Harris show, in a matter state which went totally wrong, in so many ways, you have created your double loop.

Maybe now you can understand how chakras in strength increase. At the bottom you have the chakra of the Earth at the top you achieve the chakra of the universe. Why they increase and they change? Because of the organs within the body dictates the condition, and this is what you have to replicate. It is so vital that it can lead to intelligence, but if you can read you can produce it, it can lead to anything you want to achieve.

The process is very simple. The process is to understand plasmatic pressure and how to create it without relying on a matter state. Then, you find out why, the body for example in the body of the man you have glands? This is a topic I have asked Dr. Eliya to do for the next session you have the rest the energies come plus what enters you. Then you look at the glands, the position of the glands in respect to the loop and increase of energy. Their position, the kidneys, then the others, they control how much energy is allowed to go up and depending on the position of the glands and their operation they dictate the intelligence of the man, and then they dictate the strength of the soul of the man.

The structure, there is no copper wires in your body and there are no nano-layers in your body common electric shock creating it, but a very low, very low gravitational magnetic fields even in the lining of your intestine locks into what is inside passing to what is outside to transmit to convert it back into energy in the lymph. And you look how much energy is created. Very simply, you try to keep, let's say, 50 kg at 37 degrees right across the whole structure in any shape of form you like. Then you understand how much energy is released through the same process as you showed on your wire, without any wire.

You try to keep 50 kg of water at a constant 37 degrees 24 hours a day for 50 years? You need a power station. Understanding the temperature has to be controlled everywhere and it can take energy, that this motor does not stand still and is floating, thinking, working and everything else as well with it. So how come it is so hard for you lot to be able to extract this energy in your systems? Your body does it constantly every day from the minute you are conceived until the day you die.

If you go back on the electronic vibration, as you like to call it the electrical current, it is as Dr. Eliya said in one of the talks, I think that when you die you release something like 18 Hiroshima bombs, energy

Transcript from 54th Knowledge Seekers Workshop – March 19, 2015 (partial from 01:52:42 to 02:37:42)

(v1 2016-03-04) DRAFT (Transcription has not been verified. Double check info with video)

only. Where does this energy come from a banana or a carrot? Because the body has learned how to convert, not to convert, but how to use accordingly when it is needed at the point it is needed.

You measure temperature at the matter state in the electric electronic electron vibration. Once you have the tool, measure the power in a plasmatic condition. You will be amazed. A simple way of how much heat or energy is released is your aura. A colour changes if there was an energy irradiated it could not be attracted with an atmospheric gravitational magnetic field to create a colour that is visible to you.

So go back to the drawing board, go back to understanding the totality, then you can produce energy systems which are to your level in mega, mega kilo joules and the rest. Because then you push enough in plasmatic magnetic field level to be able to bridge or cross a field strength in a plasma. Then you can tap in a higher energy level than a matter level as much as you need. So in fact what you do in a plasma, you dictate your energy according how much you go in and out of the outer layer of the plasma. Higher energy, you don't need it you go back. And then this energy, if it is used the way you do with the star formation, would you like to go with the speed of beyond your imagination? Or would you like to go with the speed of a donkey? Any other moment you are there. But if you come by the inner because that energy has to cross from here to become the energy of a donkey, so it must be huge amounts. Because even in the small gap in the plasmatic condition of the plasma there is a huge amount of losses and interactions between the other fields which are within that plasma. It is not all hunky-dory all going the same way, there is plasmas, directional flow, friction, lower strengths, higher strengths, becoming higher, and becoming lower, so the structure has to be understood.

And as I said, so we spoke, and we have shown for the first year how we can create the fuel. Up till now you have learned how to make fuel and how to play with this fuel. None of you have crossed to start using the fuel, understanding the fuel. I was explaining this very recently, some time ago, to an oil minister. Oil was gushing out of the earth for millions of years, and we never understood what we can do with it until we made the cars and then we found a use for them. It is the same plasmatic energy has been available to the man from the time of his inception because it is part of his inception. But you have been blind to it. We chose to be blind. Because we did not understand the work of the universe. Now you have to understand the work of the universe, as you are doing, and then start working in that level.

Then what you can get from the tube you showed me, or whatever Arman's tube, is more than all the nuclear, and thermal, and hydraulic power stations, and power supplies on this planet from that little tube. Because you tapped into the universal energy, and when you can tap it is not what energy is in that cup which is given it the energy which matters the universal energy delivers what is in the universe as you need it, endless. This is what you have and can extend the knowledge, and I said to you and I repeat it, you have been very active, very busy with how to make a fuel. Now you made a fuel. Now start learning how to measure it, and how to manipulate it to give it what you need. But walk away from the physicality.

Transcript from 54th Knowledge Seekers Workshop – March 19, 2015 (partial from 01:52:42 to 02:37:42)

(v1 2016-03-04) DRAFT (Transcription has not been verified. Double check info with video)

Work with a plasma within the structure of the plasma, then you push the plasma, you play with the plasma, you encourage it, you press it, you get whatever you like out of it, it gives you bananas, it gives you steel, it gives you gold and plutonium, from the same plasma. Again, I repeat for you to understand, as the energy here in the plasmatic is hydrogen, here is plutonium. Which material on the strength you want to be? Because don't think of matter state of the energy, look at the plasmatic gravitational magnetic field of the plasma, and the strength of the plasma at that point which is equal to plutonium. Then you have the attribute of a plutonium without any plutonium body achieve what you want to achieve. Then at that point out of plutonium you can make as many bananas as you like because you can divide the energy you can tap into it to divide it.

Here on the edge you are given the leftovers, and you are happy with leftovers, the crumbs because that is the matter state. Now with the knowledge you decide what that crumb to be? What it will taste like? Or to behave like?

This is time that we move into the maturity of the knowledge. We have seen it with our friends in the Spanish group, they start playing with the fields of it in agriculture, and how it will affect. We have seen it with Erick Claussen in Germany, that he says the fields the plant in the cold of the winter; still they are green. We have seen it with our Chinese colleagues, the beautiful job they did and nobody understood they just looked at the picture, and it is still there with the Chinese programme. The way the leaves stay green. Why they do they stay green? Why don't they freeze? Have you asked yourself that question? Why the roots are short why the roots behave this way? There is no difference with the plant next door which dies or a frost kills it. What has it changed? Nothing? The GANS in the ground has created an environment around the plant that allows the temperature, or the cold what you call it, at a certain condition of the matter state to be as what is inside so it does not affect. When you have a wind and a storm you break the glass. When the pressure both sides is the same and you cannot create it because it is all the same and it stays the same and works the same.

Understand a fundamental point, in especially people who work in agriculture, the leaf is a skin for a GANS of an entity of existence. No one works closer with the GANS on a daily basis than the farmers, but they look at it as a matter state. And if the agriculturists start looking in a GANS state and plasmatic state in the structure of the plants they will find and tap into the energy source food magnetic field strength that it can give you everything without ever you growing anything.

The teaching is becoming very, very, direct, but very open. Now you understand why we kept on teaching the health, the agriculture, the materials, the energy, and the plasma. Now it was a good way, it was a correct way. Now you see the narrow-mindedness is not there. We were open you see everything. We had to bring everything you see in one place to educate the totality.
