Marko. People who will do testings, this is not from Keshe Foundation. This is your research Eliya.

Eliya. Yeah, it's mine. I am not saying Keshe Foundation. I never mention it...

Marko. In the long term, we can also have problems if we use these needles which are partially nano-coated.

Eliya. OK. It is my research, if someone has problems I will inform you, but actually nano-coating is not supported ... the skin because for the long term it will cause some kind of damages of the cells. And understanding to use the two parts was that you are supposed to represent the model of resistors and capacitors and to make the neutron current and actually the GANS current. Another one idea is to nano-coat in the spiral, just to increase or decrease and to be able to manage the current of the neutron. If you nano-coat everything is one other research for the long use for the chronic disease can be applicable. That is why I do research, and I want to take a data and to see what kind of nano-coating, in which part, how long, will take to collect a data. That representation now it is a reflection of light and how nano-coating growing to the next one part.

Marko. Can you comment?

Armen. You know, and I explained you, that we need to have GANS, little spheres on top of the needles that you don't need to inject this into the body.

Eliya. Yeah, this is the next one.

Armen. ...and is near the body and create the same field

Eliya. Yeah, this is the next one, what we are able to investigate. And also in the Sujok method actually you don't pinch all the layers of the skin this is only the upper one or two even and even the blood is not coming out. This is a different kind of acupuncture system just.

Marko. You can see the light how it reflects the nano-material.

Mr. K. Hello, can you hear me? Can I be heard in the background? Yes, fine. Sorry to come in I am waiting for research results from Fukushima, so we can talk about it openly while they are doing their testing there.

I have listened to this, it is a beautiful research. It is a very beautiful, scientific analytic, of what it is. But first of all, the reason I do not accept, or is not accepting, we have to accept everything in our technology, but the way I explain, and I think it has not been seen by Dr.

Kostova, is that when you have nano-coated and matter, it does not matter if nano-coating touches the body or not, you create a condition - two double parallel conditions. So you open a channel for a new disease. You solve maybe one problem - you drain fields. It's beautiful I watched most of the presentation. I will look at it after the session. I have been tied up with all this live research, which we are testing now.

Let me explain to you something, maybe I open the door why I keep on explaining, and somehow you are not managing to transfer the knowledge even at the highly educated people as doctors to understand. The body of the man is a vacuum condition, the body of man works in a non-atmospheric condition. Up till now, even with the acupuncture, you enter a foreign matter inside the body to change the condition of the plasma. The situation we see with acupuncture, needles what Dr. Kostova added to our knowledge in past few months, and making the needles for her in China, Armen brought it, coated it, is that this is again matter interfering with a plasma, inside the body of the man.

Let me explain and open a new technology to you now that we have seen such evidence from Dr. Kostova. The new you can, and I have used this on numerous occasions, hundreds of times, is I do not need to know a needle or an acupuncture. If you make, I have asked Armen to bring me a lot of little balls. If you do, and find out the gravitational magnetic field of the, let's say the cancer, or the point of pain in the body, this is how the pain pads work, and you fill in the container with a GANS of the material, and put it at the point of where for example Eliya puts the needle in, the gravitational magnetic field of the matter in the ball will interact with the point of pain, either cancer or whatever, and you will have a hundred times better results than putting a needle in.

This is a development in technology. I was setting it up to show it to you in the coming days and weeks, but now that Eliya has brought this on the table, we pass the matter interaction. This is the needle and acupuncture not only creates a new disease, new conditions for diseases, on different layers.

With a new system, when you put plasma with plasma, now you work within the structure of the body of the man. You don't have steel, copper, silver in space, but you have the GANS, you have the energies that you can transfer into the GANS, or energy ball of plasma GANS put it next to the time. This is what I said, and I explained even recently that the new system which we showed with Prof. Liuzzi is out of date, because of this development which I am prepared to release. Because, even what you saw in the Opening with Prof. Liuzzi is out of date, because you still go through electron and matter condition, you have to hold the matter.

So, what is the option? The option is not needles anymore. Because, if you can direct the fields as we have seen, instead of by the copper and the needle, through the plasma itself what's the need for a needle? You can transfer the energy of the cancer from the cancer

point to the ball. This is where the breakthrough is. This is where the huge change in the world of medicine has come in. Needles, you interfere! First of all, you cut through the conditions.

Now, I would love to see how Prof. Liuzzi, or Dr. Eliya, will show the new technology. Fill in the balls with copper oxide. You oxidize. You are still working in a nano-condition, you are not working in a plasma condition. Half matter, half plasma. Fill in the balls with copper oxide, the same as you have on your needle, but in a free state of plasma, and place it on the pain, position on the pain. And one of the things you have to do, you have to put another one on the other side of the body that you create a connection where the pain is, that you show the line of action for the fields to flow. Or you can do it individually.

So, what happens from now on, we don't intrude in the body of the man. We cannot interfere. This is what is called plasma. That is why you work within the structure of the universe, not what I call the structure for schizophrenics between matter and plasma.

I enjoyed watching this presentation - it is fantastic. It is to detail. It brings a lot of things. But I was not expecting this presentation. I was never told. So, I can only come in and make very direct comments. With the new technology, come out of your schizophrenic condition because it causes more problems, especially in the world of medicine. Then they say it has side effects, it creates new diseases. It comes from the lack of understanding of the doctors who use it, and push it, because, if you work in a plasma condition, you only interfere with the plasma which you are targeting, not other plasmas on the way.

In the presentation we saw today, with the needles, you are cutting through layers of skin, you are cutting through layers of flesh to reach the point. It is good to show it in a glass. It is good to show it in a bowl. But the same kind of change of conditions you create in the skin and in the flesh, to get to the point where you put your needle. Time for acupuncture is over. It is finished. The only thing you did with this presentation, which was beautiful, it's absolutely well presented scientifically, is that the time has come to work in one dimension. There is no matter inside, and that's why in my talk, if you go back last week, I directly repudiated the use of needles, because, you create a new. You use the needles as a matter - it has been done.

Now you bring nano-layers into the operation, and then with the matter half sticking in the atmosphere, half in the body and then you do the transfer this can...you get results, but what is the long-term effect of other parts of the nerves you have changed? You have to work in a condition that there are no side effects. With the needles, half nano-coated half inside the body, fully nano-coated half inside the body, you create conditions, then the medical world has a tool to fight you with.

In space work in one direction, I know it is very difficult for you to see. But, in a way you make the needle, but in a plasmatic condition interaction with a point of attraction, very much like MRI machines, what we were talking this week.

It is not coincidental, this is part of the structure of the work of the souls, I knew what she will do. It was obvious that Eliya Kostova would sooner or later will show that what she has shown in the paper, or the knowledge she released about the disease, that it took so many hours from 20 years suffering. But you can do this in much less time in a more affective way, but at the same time when you work with a plasma not only you change the physicality you change the emotion of the disease as well. Because, you move it from one place, but you have not solved the problem of establishment then it will manifest itself somewhere else in the body.

This is what I say, that is why I have asked Armen to bring a large number of small balls that we can create conditions that we don't need to intrude. We can point it at the point where you want it, but you cannot interfere and break into the vacuum seal of the body of the man.

This is a good scientific approach, but creating problems sitting in the future. This is a weakness in the structure. When it was suggested to be done, I asked Soheil for it to send them, to take the science to one step further, but when a scientist like Dr. Eliya presents such a paper everybody rushes to have nano-coat... and then new problems we have to tend to correct the mistake. This way I stop it at this point then there is no more mistakes to be made. The paper is just to be listened to not to be applied. Do not use needles which are nano-coated, you sit for huge problems, because you are interfering with the vacuum condition and in reality.

What we have seen in the cup, what Dr. Eliya has shown, change of fields, we know this is 100% without a shadow of a doubt. If you go back to all the teachings we did, is that 80% of the energy of the man is absorbed from his environment. When you put a ball at the point of where you know the line of nerves are, the chakras are, or whatever you use, we know these, instead of using the needle start working with the new knowledge.

I will be interested to see what Eliya will present by using balls and different mixtures of materials in different balls. And even to get your system right, you have to nano-coat inside the ball that again in a vacuum condition the same condition as the body of the man. It is in the same magrav gravitational magnetic field. Don't just fill in the balls with the GANS material, you have to nanocize it. That's why I talked to Armen, these balls need to be coated to be able to put caustic in and take it out.

Because, I knew sooner or later, that so many scientists around us will come up with a solution, or they might see it, but with seeing this paper and then I have to go and defend it

later on to explain it. You have seen the knowledge and seen that it works in the matter composite. Do not go any further, you learn. So it shows the physicality.

Now go back into the nano-material, if you do not see a result it means your field is not as strong in respect to what the disease is because the emotion does not accept it.

Understand why if it doesn't work, it means you have to change the percentage of the CO<sub>2</sub> in respect to the copper. You have to change the energy level, the amount of CH<sub>3</sub> in your ball in respect to the emotion. Understand the totality of the plasma technology, not what it suits too brief. Then you don't run into problems, you don't open a window for critics to come in. You already concreted the wall.
