00.03

Mr. K. First of all... I should thank Alekz for coming all the way to show his understanding and development of the technology. As usual, we see our technology so correct that we are not afraid to share knowledge, and we are not afraid other people around the world to copy, to develop new concepts, and do things. We warn when it's wrong. I warn strongly when the things are wrong and it is getting done. And when the people do it because they think they can do it, the Foundation stays totally apart and independent from any damage to the Foundation. I explained this very thoroughly.

Yesterday, in the recording what came, we asked when we announced that when you mix GANSeS with amino acids it can create new germs, new viruses, because of the combination of fields. And I warn you categorically, anyone who uses, or contemplates to use, to develop, to manufacture needles as part of the structure of acupuncture, you are playing with people's lives and Keshe Foundation stays totally independent from this find.

We taught the technology, if anyone develops with categorically, because I can explain how you create diseases in people, you don't understand, and people look for their own private... what you call it profit pocket, you are responsible for people's lives. Especially if you are in the medical field and you do it with the warning I give. So, if any new diseases or deaths caused it stands responsible by you and not by the Foundation.

We are very categorical about this, because we know that there are people around the Foundation who are developing, or trying in China, especially Dr. Eliya Kostova, to develop needles in acupuncture. I warn her, she has nothing to do with the Foundation, she is categorically beyond the limits we have warned. That if such a step was taken, I hope I am wrong, but it is for people to understand and authorities to understand, we separate these kinds of actions from the Keshe Foundation.

These kinds of needles, nano-coated in any shape or form, deliver energies on the layer which the body has no immunity for. A skin cancer and different kinds of cancers are inevitable. We warn and anything to intrude, and I give this categorical warning to Dr. Kostova: It is beyond the limitations of the medicine while you are warned to practice and develop such a technology. And it has nothing to do with the work of the Keshe Foundation, and this can create huge damages to people who use it, long-term and short term. Time will tell, and we stay independent from this.

The same as what we warned about the use of amino acid in reactors, I think I am quite clear, yeah, we made our point very clear in this respect. So, amino acids can attain and produce new microbes and diseases, so it is your responsibility not to do. It is your responsibility to be aware how you do and how you develop these kinds of materials.

(v1 2016-03-04) DRAFT (Transcription has not been verified. Double check info with video)

Today, we have touched on the structure of change, the structure of a new beginning, with the help of Alekz, and understanding of the technology in a different way. What we learned today, is bringing the whole totality of the energy matter, composites, GANSes together. And what we've seen in how to use the nano-layers as a different strength, in conjunction with a GANS as different strengths, in conjunction with a matter as a different strength, which is GANS part of its structure, to produce energy balance difference in the plasma. Where... where....

Vince. It's cos he's used to wearing the microphone. So he just walked up to the board.

Mr. K. I forgot I left behind me. If you look at the cross-section of this you have the GANS, the nano-layer, you have a tissue paper with a GANS, then you have brought a matter state with a GANS, and then what you've done you've taken the energy ... can I have a red one please... you have taken energy with another nano-layer on top. When you look at this cross-section this is what you have, nano, a GANS embedded in tissue, then you introduced aluminum, then on top of the aluminum you introduced zinc.

So, what you have done, all these are matters of different strengths, because now the field force comes internally outwards, because the GANS is more powerful than matter state. So, what you are getting, is the push of a nano into the GANS out for the matter level to be absorbed. So, in this aluminum, and in this zinc layer, you are reducing the energy of the plasma to matter state. So, what you are actually picking up here is a fraction, of the fraction, of the fraction.

So, it means, there is still a need for further understanding that in your development, Alekz, to replace these two with a nano-layer, that instead of getting 1 kw you get 1,000 kw. Because, here, you are still working in a schizophrenic. No, you haven't ...it is not a schizo, you have used different structure of the plasma, very strong, holding to, pushing. This is exactly if you look is the same structure as what Armen did with a coil inside. Yeah. You understand. So you have managed to break internally outward.

What I can tell you very interesting is, if the cameraman can show us. We go to the system we have set it up here. If you look, we have put 2 fans as the load, and we have put the system here. I try to go away that you can see. We have put the system this way that 2 fans are taking energy, we have connected the energy what is getting consumed to this meter, and what we are putting back into the grid here. This meter was red number 1 when we started it, which means we are not taking anything from the grid at all. This one which is feeding to the grid, originally 2 hours ago was between 0 and 1 kw, and now is switching to 1 to 2 kw. If you can come, the cameraman cannot come so close, it was zero and 1 we have done a picture with a camera with what you call mobile phones and now you see the number 2 in red coming up. So, we have already started supplying the grid with 2 kw of the energy from 0 to 1 now we are going to 2. So, this proves completely the correctness of the structure. Thank you very much, Alekz.

(v1 2016-03-04) DRAFT (Transcription has not been verified. Double check info with video)

So, at this moment we are supplying into the building the energy which they need. Why we see such a huge rapid drain? Is because the building is using energy, and in time, you will see this will go into 1 kw, 2 kw blah blah and the rest of it. So, in the past hour, we have fed to the grid point nearly 2 kw of energy, and as the ambient builds up, we will see we start supplying kilowatts. So already in 2 hours the concept is proven to be correct. And it's not just me it's two, four, six, eight, ten of us here, we have watched it. We can confirm it was 0 to 1 and now it's 1 to 2. So, it's building up, hopefully by 4 or 5 o'clock we see, and it's proven the correctness.

We've become a supplier to the Italian grid. So, less than the cost of 1 dollar, and if a 1,000 Italians do this will become fantastic. This is what I explained to you. We have got this circuit set up by the Italian electricians, they've done it yesterday. It was done especially for us to see. We have put Out on the top and In on the bottom. This is the In and this is the Out, you see it, and now the figure is running 2. And we see where we are going to get? Is there anywhere we can come close? The cameraman, can you come close to see? No?

Alekz. I think he....

You cannot zoom? But that digit is red. Anyway you have got to trust our word, there are 10 of us we don't lie. Shall we lie out together? There are a thousand.

Vince. I can actually.. I can actually see that it is actually between the 1 and the 2. Is that correct? The red number on the Out.

Mr. K. Yeah. This is what we said. You become national supplier, but do not forget we are putting energy out in AC in the national grid. Where we are consuming 2 electric fans.... And input is still stays out...one. So, we are not taking anything from the grid. We are not taking any energy from the system in this country. We become a supplier. I would like to send my bill to the electricity board.

Alekz. Mr. Keshe.

Mr. K. Yes.

Alekz. Actually, all the computers in the...

Mr. K. Pardon.

Alekz. All the computers in the classroom they are taking energies from the beads as well.. So they.. are supplying free.. They are getting free energy from the system.

Mr. K. So, all our computers working here are taking energy from the system, that's what Alekz tells us.

Alekz. Yeah, that's correct.

Mr. K. And so, what I want to ..something is.. the power of each fan is a 45 watt fan, so every... every... what you call it.. that is 90 watt an hour, in 10 hours we use 1 kw. So we are not there yet? The famous Canadian what are we there yet? We are not there yet. And the strange thing is we still add one. Armen, can you take a picture of this then you can do it because the cameraman can....

Marko

Mr. K. Err yes, would you like to connect yourself into it? No, you can connect yourself to it if you want Marko. Pardon.

Alekz. Water heater

Mr. K. What?

Alekz. Water heater.

Mr. K. The water boiler. That's what we did in the other lab. Yes, bring it.

Alekz. The kettle, yeah.

Mr. K. Yes, bring it here...in the other lab. Bring it. Actually, even if you put it on in the other lab it still comes on it.

Alekz. It OK. On the beads.

Mr. K. Ah, OK you can join us here. Bring the kettle. Anybody would like a cup of tea? Very easily. Oh he wants 3 of them.

You took a picture close up?

So what we see now is actually ... they are trying to focus on. Yes, we see the 1, OK. Can you do the same with the top one? Ok, leave that there. Now can you do the one with the top? Ok fling switch it till we see it ... err. Yeah it's suprah. It is suprah. No, a bit more. No, we have a light on it. Oh, there it is, don't move, don't move, you see the 2 is coming down. Keep it there, yeah, you see the 2 is coming down it was 0 and 1. That's perfect, yeah, it's the light you need to it. So now if you go back up, please can you go up, you see the 2 is coming down very rapidly, it was 0.

So by the end of the day, it says kw hours, we are putting in 0.2 kw hours into the Italian national grid. It is not illegal because we are not consuming any fuel. The international law says, if you are producing energy from national resources, or you bring sources in, is a criminal

offence. You need a license. We are not doing anything, we are using the natural heat of our own heat of the body. All of us, the reactor which is running with the GANS of the CO₂.

And the most beautiful thing with this is that by tomorrow we go to 2-3 kw an hour we put 30 – 40 kw a day into the grid. Not only we are not using we are supplementing the government's subsidies, and on top of it, if 1,000 or 10,000 Italians do the same the mathematics build up very quickly. The mathematics is very simple, if 10,000 Italians put in 50 kW a day. If 1 million Italians, out of 70 million do it, that is 350 or .35 gigawatts of energy, but don't forget this 1 million not only they are putting in, whatever they use is not there either. So, in fact it is much 2 or 3 times bigger.

So, a country like Italy, if the national government decides to support, it will be energy free, and I tell you something, Saudi Arabia king is planning a very big coup d'etat.

One of the things I said, I enjoyed in my trip 7 years ago to Iran, was the address I had from Dr. ... Ahmadinejad was that, you are not here for energy, we know energy resources is going to finish, just contemplate on the space technology. And now we see what has happened.

From today, there is no need for a single cent, it takes about 2 to 3 months to bring into the national grid, to be spent on fuel, which causes what has been the CO₂ global warming. If this procedure is followed, not only we absorb the CO₂, but at the same time we make for the first time the possibility to produce energy without damaging environment. There is no environmental damage. There is no reason for changing the environment except putting what we need.

Something that you will understand very important because of the transformation in the system, this is the system running, this is your body, you will receive energies as you need, so you'll find out the members of people who live near these systems become very healthy, because any deficiencies are supported. But you cannot take more than what you need. So, what we should see in the coming time reduction even in the health problems. This is a huge development.

Alekz. And the appetite, do lose the appetite, you don't feel like eating. You have so much energy and you don't have the need for food.

Mr. K. Now you hear from Alekz, he lives in a house with this system for 8 weeks now. He says you don't lose your appetite but you don't see a need for energy to eat because you receive what you need.
