03:49:22

Mr. K. With where we are, we have two choices: allow the man to carry on with the structure of the matter, or where we are, open a door to new structure that we can copy the body of the man. Where with can replicate the work of the universe with no screws, no panels, no chairs, no wings, but be able to replicate and be carried automatically, as is needed, the way it is needed, according to the need of the passengers of the craft. We call it the human body.

This is a change in transportation in the space technology in a matter state, or in a plasma state. In the matter state, as a craft, if you take this into a different gravitational magnetic field strength of the universe, the aluminum instead of being a solid as a craft, will change to matter, because it is a matter state according to the Earth, it will change to something else, you have no craft you have got all your passengers swimming in the atmosphere of the universe.

Where in the structure of the body of the man, because it is a dynamic GANS state made in accordance to the work of the universe, the man uses different structural gravitational magnetic field of his GANS to fit the environment he enters, so you never disappear. You mutate to different strengths magnetic fields of the GANS' operating structure. The structure stays intact, while we there. With the elements of the aircraft you have nothing to fly with, because it is fixed according to the matter state of this planet.

When we are in GANS state we always say the body of the man is in GANS, it's a plasma state. You take the Sun in anywhere in this universe it still behaves like the Sun because it is a plasma state. The point comes we learn about the energy, we've seen how Alekz shows, we have seen how Renan has brought us the change for what we call the health, we have seen how our Chinese friends and others have brought us the knowledge of the food transfer and the healing through the food, energy transfer. The point is, is the human race ready to create a craft without a structure?

Most of what you call UFO's have no structure, they are made the same as the body of the man. Is the man ready to take the next step? Is the man ready to make a universal craft, not an aircraft, which is not tied up to the air of this planet minus? That is why we call today is the man ready for the journey into space travel. How do we create it? First of all, define to.....

I invite anyone who wants to be involved in development of this craft to come to Barletta, Italy in the next 30 days. We build the craft totally as one race. It's for you to organize your travel, it's for you to organize to bring your system, it's for you to organize the visa, and the rest and whats The Foundation provides the grounds for the development of the first, what you call, spaceship without any screws, without any nails, without any platform, understanding the work of the structure of the plan.

(v1 2016-03-04) DRAFT (Transcription has not been verified. Double check info with video)

We have enough knowledge to be able collectively as one race to prepare to build the first spaceship on the basis of universal structure, not on the basis of the matter structure of this planet. How do we do it? We have to extend our knowledge in understanding of the interaction of the plasmas with each other.

Can I have the first picture with 3 dots in it Vince, please? You see Kf on the side and you see three red dots, these are if you look are 3 reactors, positioned at the bases of spacecraft.

Can I have the next picture please, with the flow with a lot of red dots in it please? No, not this one, the other one, there is one with a lot of dots in it, red dots. Yeah!

Now, we position reactors across a given distance from the ones underneath, that the interaction of these fields, of all these reactors, brings the structure of the base of the spacecraft. No screws, solid platform, the bone of the man in horizontal condition, the depth is the skin of the man and the fields the muscles that be it. Can I have the next picture, which is a dome?

Now, we can see with the interaction of the 4th reactor positioning, we create an entity without the screws, the body of the man in a vertical condition, or a horizontal position as you.... Can I have the final picture, please?

Now, if you look inside, by positioning reactors in different positions internally, we can create the structure floors, walls, or whatever you need. Can I have the final picture, please?

Vince. That is the final picture!

Mr. K. Final picture, we haven't received the one which is totally at the bottom.

Vince. Let me check?

Mr. K. We should have received a 5th picture, which is that.

So, as you see we don't need aircraft hangers, we do not need a condition to build and bring materials to be paid to site. If you look, these are the field interactions, here is the body... I am trying to go to an option.

Can I have the last picture please, not this one, but the one with all the red dots inside it?

You see by positioning reactors, to bring human condition position, you have created not only the structure externally, but as you go into Space and come across different entities, different environmental forces, the plasma within these reactors change according to the environment, you never lose the structure. The rings as you see, there is a central ring here, this central ring of reactors dictates the control of the gravitational fields, where these rings in the external will give you the control of magnetical fields, as you see it.

(v1 2016-03-04) DRAFT (Transcription has not been verified. Double check info with video)

These rings here dictate the flow making.

These rings dictate the bone structure. How solid would you like the bone to be?

Man does not need matter state to dictate his condition for flight. We estimate, totality, some 500 reactors, working in sequence, in order, will give the man the first spaceship without the need for any landing, without the need for a single piece of a rod, or aluminum. In turn, if you understood the creation of these plasma reactors you do not even need cores.

So, is the human race ready for travel in deep Space? Yes! Are you willing to be part of it? You are invited to Italy to do it as one race. If you get it right, if you understood it right, the first time around we should have to be able to have a craft in the hand, at least to see it, create a door for it to be able to enter it, to live in it, to create a Environment. An environment where there is no need for an environment of needing to ask or develop CO₂, and the energy is constant brings life. This is your option, not mine, this is where you have to decide where to go to? How to do? You have enough forces, enough people in China, you can create your condition.

This is why up to now a lot of you have had a problem with a lift, with what you want to call flight. You want to fly in matter state in the ball of the plasma. Now you can fly, I have given you the final option. This system continuously interacts in totality with the gravitation magnetic field of the planet, as one cell. Now you can fly. Your dream was to fly. If I would have let you to fly with the cars, with the aircraft into space you would have been annihilated. With this you have the safety, total safety conversion at the point of need according to the environment, as you predetermine the basis the maximum minimum on the amino acid of your body will be in the structure of your Now you are ready to fly. Now you are ready to take into Space. But sort out your problems before you do.

Vince. Mr. Keshe.

Mr. K. Yes!

Vince. Could you say that building this ship like, like we see it here, would be like the structure of the light?

Mr. K. Exactly! Light is part of structure of the plasma interaction. You have to decide how you allow energies in these systems. To what strength will create what transparency of the walls of your craft here? Do you want transparent, or do you want it with a slightly different strength that you don't see across the wall? But don't forget with this system, if you move this reactor from here to here, now you move the wall.

You don't need to bring a plank and a wood. You don't need to come back to Earth to get a seal to build up your walls. And, if the community increases, all you need to do, and you want

(v1 2016-03-04) DRAFT (Transcription has not been verified. Double check info with video)

to expand your community, you want to go into Space that you have a better opportunity for living and a bigger space, all you do you move this reactor here, now the dome becomes bigger.

Now, the man is ready for Deep Space. Now, you understand Governments are perturbed. Now, you understand, in so many ways, why you could not fly up to now, and you have everything you see it, but you cannot achieve it. Do we need to expand the knowledge of the man in how and the way we want to do our interactions? Do we need elections to who will be the presidents of these spacecraft with thousands of people on board, or we are all presidents because we are all equal and serene? It will take a huge step for man to be the passengers.

If you can produce, understand what you produce, understand what was shown in the past 3, 4, 5 weeks, then you have the control system, you have the food system, you have the medical system, and we have seen how our friends in the US have shown us to produce water, but you they lost control of it. And we've seen how easily a craft is made.

All these shapes you see is the shape of your muscles, interactions of the fields means the creation of your cell, your skin, it's the same. The interaction of the 3 base reactors here, here, and in the back, with the interaction of the outer fields, rings, gives you the curvature. The interaction of the inner gives you the internal curvature, like your back of your muscle and the front of your muscle.....?. The shapes because it is positioned exactly in the right order creates its own features and structure. Easy to fly, continuously, because it is preset to the amino acid of the man, protecting the minimum and maximum and because of that the condition of one gravity 1G constant.

We see another friend, we come across the friends which is not like man now to leave his planet. We make reactors in space that fits his life, and you carry it, because now, you create the environment through reactors in the specific position. You don't need to carry fuel, because your fuel is the structure of the plasma. Armen has created a ring, and we've seen it with the others, a double ring inside, nano-coated. If you understand this, you understand how easily you can build reactors without tangibility.

Is human race ready to go now? Yes, it is.

Do you have enough? We have to start somewhere.

Do we need world leaders to decide for us? I don't think so.

But don't forget, these entities have no borders, nor no lands, nor no sea, nor no ocean, nor no Universe, you become passengers of the Universe. But would some of us fly from one point of this planet to another by the East, and carry 1,000's of us, total cost less than \$100, to start with? There is no need with what as we've seen with John Searle to get people to build frames..... Start with a small setting, somewhere here, and as you build your fields, move the

reactors further out, expand the size, until you achieve what you want. The reality is in a simple way...

Vince. Mr?

Mr. K. Pardon!

Vince Just lost audio! I think it was my connection, so it is OK.

Mr. K. In a simple way, you can decide on everything without me too. Can I disarm and use this technology to disarm to create, within the structure of this craft, gravitational magnetic field of every nuclear bomb on this planet? The answer is Yes! Then you understand why we said Iran is a peaceful nation, we don't need nuclear....., you print all of them but you can't use them to capture it. Not for Iran, but for the human race, that there is no more threats of nuclear bombs, as it has been made out. Do we need now to have the race to see who will be the most peaceful nation? Are we going to market the best C02 to make it peaceful? The option sits on humanity.
