Transcriber Notes on KNOWLEDGE SEEKER WORKSHOP 90 03
December 2015

Another great workshop with the Guts if it being at 0049: with 4 videos made by the Innovations team in the Philippines with detailed instruction on building the power supplies correctly)

0000: MK starts by saying that some of the power systems being built might be over Gansing – so too much Gans in the wire – too paste like – will turn it from a coil into a tube – so no interconnected plasmas Also some people did not Polarise the nano coating with a negative – positive flow

0007: in any case even if your meter is showing nothing – doesn't matter keep it on it is still nano coating your house wiring

0008: When you put Gans it should not be like paste- (as in Roald Boom's vids - sorry Roald - and thank you for your brave efforts!) it should be 70% like drinking water - you add CO2 or whatever Gans you want into the water and then you wash your system – dip your coils in it Important not to touch the coils – you crush your layers. (can be 30 to 50 thousand layers or more)

0011> The Stacker layers should be separate

0012: if you nano coated your coils with caustic make sure to wash with water afterwards to make sure to remove any trace of caustic

0014: Better to use heat/gas for nano coating – Innovation center video coming up

0018: The unit we are commercializing we use the heating system – can directionalise the plasma – important how to burn it – the correct direction

0021: if you see rainbow colours that is the failure point – the structure is not fully nano coated 0028: Get the flame in the right place to get a gold colour - - if you heat it red hot you've gone too far and you have to start over again – if rainbow go back and get it – slow process

0040: most of you are saying the system does not work – yes if you pasted it and you did not align the layers – make sure no connections – then don't go over 2kw – the copper will melt and fail – you overloaded the system by overheating

4 INSTRUCTIONAL VIDEOS FROM THE KESHE INNOVATIONS TEAM

0049: Proper coiling for Magrav Systems

0052: The Way to Fire the Coil with Butane Gas Coating

0103: Applying Gans

0107: Capacitor Making

0115: How you hook up your capacitor is important

0117: If your capacitor is still wet it will blow a fuse If you add a 4th stack to your system after a month or so you will handle 5KW

0133: In the New Year after the holiday we come back and teach how to make the power supplies out of plasma – you have a big surprise coming! You can produce water – food – materials

0135. I am the beginning and I am the End. I start from the Beginning and teach you till the End.

0142: The Planet is a living being and the intention of the planet is to create life. You have the emotion above and the lymph below and the INTENTION in the middle (draws three lines), in the nervous system, these are three Gans layers and the manifestation into matter, into nail, in cell of the heart – is the result of the intention of the emotion to create ... Most of you by intention will learn to create what you need to guarantee survival... MK describes the fast expansion and involvement of the Government in Italy,

tax changes to reflect the new wealth and need for expenditure on oil and energy which is where the majority of the tax goes – (In earlier workshop MK talked about the ideal government of the future – flat tax of 10 – 20 % to support services hospitals education etc and people will be glad to pay it)

0200: Structures of the Kf org Internationally. Innovation → Scientist → Manufacturing → Distribution → 2 pieces are left that is → TV education for public and → New Banking System, which is getting there. We teach ourselves as One Race One Nation → connected in different countries → marketed by correct people etc. Self-subsistence is guaranteed – after 30 years of Big Business in oil Industry MK has structured this to free the world.

0215: We have given you a generator of plasma. Keep it connected to your home and if ready build another 4th Coil and Capacitor.

0218: We need transcribers. Thank you to Dutch and Belgium nations – they have just set up teaching. Italians are having 1 Saturday a month. Kf also provides Zoom time to Kf Teachers (like Mike Nashif's INFINITY1 workshop this last week) (see post from last weekend)

0222: Luigi in Canada. Asking a question about new tech with nano coated plastic tubes instead of copper coils – can we use plastic tube instead of copper. MK says do what you like, experiment! Nano coating hollow tube is difficult, like getting an elephant through the eye of a needle, but it can be done

0236: African teaching from Afro-American gentleman visiting the SSI... The copper and the vine or root is the same thing, inside or outside is Gans – technically you have a Gans filled tube system right there...

0244: MK responds that's what he told Alekz – don't look to the west, use the roots. There are 2 ways to energize Gans 1. Coat it 2. Extract it, change it and put it back into circulation. 1st one is the better option he reckons. Find a root with a tough strength – make a Gans of it and coat your root with a stronger root Gans. Another way is to put the Gans of the root around the skin of its own leaf. With just a few drops of this you override millions of years of evolution and you get away free!

(©: What comes to mind is Tabernanthe Iboga - the Master healing plant root of Africa, the root bark of which has the ability to heal a heroin or alcohol habit in just one dose – wow – a Gans of that in a headband along with CO2 and Folic acid, Thiamine – I am now visualizing those indigenous head bands MK was talking about in ws44 – a new fashion

☺
)

0250: Look at the 2000 year old olive trees in Southern Italy – they are plugged into their support system via the roots – why are those roots soft on the outside and hard in the middle? Now we're doing the opposite with the Gans in the middle and hard outside (tubes) – if we reproduce the olive root – soft on the outside – then that is how you build the nano layer into Gans

0256: The olive has a hard stone with the program and grows the soft Gans layer, like most nuts, (But the walnut is soft Gans inside the shell of its cup, inside the GM field of the shell, like the brain in the skull – follows that walnuts are good brain food!) Brett: have you done any experiments filling tubes with Gans? MK: Yes in the early days when experimenting in Tehran –talked about his spinning sphere reactor that went black and he finally put caustic in it (which led to a new path into the plasma tech) it had 3 holes in it and he tried all sorts of tubes with different types of Gans...

0306: $E=mc^2$ from Taiwan asks a few questions. Is it possible to rub the vine on the outside of copper nano coated for effect? MK goes off on a tangent talking about Chinese fast food cooking on hot plates- creating Gans out of the vegetables for extra energy – you eat nano coating every time you eat Chinese.

(Good question in fact and I think the answer lies not in rubbing but in creating a caustic as Mike Nashif does in his lab with plant medicine and gold gans for spraying on copper wire infinity coils for healing effect – also MK talked with me © in ws44 about making headbands with Gans layers of folic acid and B vitamins as well as CO2 and plant essence Gans for helping with addiction and alcoholism) (See notes to ws 44)

0308: $E=mc^2$: When making coils do we have to go through the whole

process of burning to nano coat or can we just attach the new coils to the first stacker unit and let them nano coat naturally? Just like the process with the house wiring becoming nano coated? MK: This is what is planned in the new factories – Yes!
