- *** NOTE: The timings provided were for the RAW version of the workshop. Remove about 7 minutes for the edited version which removed the first 7 minutes of fluff

Notes from KNOWLEDGE SEEKER WORKSHOP 93

December 24 2015.

The day before Xmas it was Ali in Vancouver who delivered the best Christmas present on his own birthday - the first one to crack the flight system condition although needing a bit of strengthening and adjustment here and there according to MK.

0007: Rick intro.

0010: MK: Good to see people exploring and experimenting in their own ways – its not just ‘monkey see – monkey do’!

0011: Today and next week are days for recapping and adding to the knowledge. Original explanation of the plasma was that it is expansional – it expands (draws a spiral going out clockwise) The flow in the spiral (outwards or inwards) is the mean or average of the Magnetic and Gravitational field strength. Gravitation is always more, otherwise there is no mass.

0013: The first reactor built in 2005 was a dome – 2 cores – 2 divisions – we tried rotating both clockwise, both anticlockwise, and counter rotating

0016: however this is an invalid construct – planets and stars don't have a central solid core and an outer core – in the center of the Earth there is an area that creates the GM field of the Earth – interaction of this field with the solar field creates all the life on the surface \

0018: If you make the centre field the Gravitational and the outer field the

magnetic – if you make a cross section on your copper coils you will see the structure of the planet with inner and outer core, the structure of the sun/star, the structure of the creation of the Universe.

0020: Are we in the inner or outer/ magnetic or gravitational field of our galaxy? There is a reason I ask this. A lot of you have followed the path along the way – made ping pong ball reactors, copper coils, and we all followed the procedure to understand.

0024: What we come down to is this: This drawing shows us everything we have done in the last years – have we missed a very big part?

0026: This structure of the Earth is the structure of everything we have done in the teachings – we just changed the tools and elements. This was the first Iranian reactor 8 years ago, this was the first structure we did in Belgium 12 years ago, the same as the little gas balls you made, same when you added gansing – same structure as planet Earth and Sun, same structure as your coils (x-section) – nothing has changed – it is all creating a gravitational section and cascading it with an outer section.

0027: What about if we use copper and aluminium pipes nano and gans coated? Will it be a more effective GM field? What if aluminium outside and copper inside? What about adding brass? If you put a composite Gans of brass inside and copper outside ? Extend the knowledge to where the central core is your Magrav and outside becomes your house.

0029: Starts a new page: You created a ping pong ball reactor, You created a star formation and saw the formation of the free plasma. You created a copper coil structure – then you understood the magnetic field of the equatorial rotation, which is gravitational. This equatorial area has the greatest heat.

0036: MK shows a double coil setup just received from the Phillipines. – shows how one can take the central gravitational coil and rotate it to where it is 90 degrees across the outer coil. This is the way to create the free plasma in the middle. Also remember that each of the inner and outer coils have both mag and grav.

0042: The 3 stacker system has a similar effect with longitudinal and equatorial fields creating free plasma in the center.

0046: With the star formation you created free plasma – with the two coils at 90degrees to each other you control it.

0049: Next step is to create a star formation out of your free plasma (with each of the points having free plasma created inside two coils at 90 degrees to each other – see picture)

0055: the next step will be zero time communication and travel.

0105: Question: John from BC: Is the spacing important in this new configuration? MK: You can use the 3-stacker system at each of the tetrahedral points as well, the middle layer stabilizes the system. Helium and Hydrogen are 3 stacker systems and that's why they are stable/inert.

0108: Question: Could you create a similar plasma system with use of Aleks bead configuration? MK: Yes...

0112: Discussion with Brett about huge energy release from plastic coils as they contain H. You are on the right track Bratt – but understand what you are doing!

0116: Question: How to nano coat plastic? MK circles around the question and says caustic is Na O and H – you have the H+ also in the plastic and you have the C from the plastic – you have the free Oxygen from the caustic – Rick remembers how the coke bottle necks would dissolve before the rest of the bottles...

0119: $E=MC^2$ asks about using a soup of Gans versus using different layers of different Gans: MK you can try both

0112: Sandor: We saw beautiful 3D drawings on Rick's plasma group 24 hours ago. Discussion ensues about the 3D rendition of the split capacitor system – shows picture... is this correct – maybe better to get it correct before drawing it? MK says he will throw a spanner in the works and asks what would happen if you put a 3rd coil in the middle of the split capacitor?

0129: Douglas: Says he has achieved lift of a piece of Iron in Nickel Gans solution.

0139: Douglas's video of this phenomenon entitled "Magnetic anomaly in Nickel Gans!!"

0147: Discussion about further experiments to further define the anomaly. MK wonders if there is iron in the stainless steel forceps? Doug says no he has never had any magnetic effect =from the SS surgical forceps in the years he has been using them. Brett remembers he and Vince did the same thing causing increased attraction to a straw or even a hand/finger – attraction/repulsion – gans/nano materials

0150: MK answers Douglas's question from 0134: about the white chunky material that appears on the bottom when he tried to produce Zinc oxide or CO2 Gans – MK explains that the blocks of white stuff at the bottom are most likely Calcium. CO2 Gans is white powder, Zinc oxide is white similar to CO2 but slightly different white. Aluminium is a gluey gooey white. CH is orange. ZnO₂ has molecular weight 60 +16 + 16 = 92. The field inside the zinc and copper plates attracts carbon and then you get transmutation of ZnO₂ to 2 calcium atoms + Carbon = 40 + 40 + 12 also = 92.

0156: MK has been waiting to explain this for a while. Wherever you find solid residue you have used a high power – you did not put an LED or load on the wire between the zinc and copper plates and you will create ZnO₂ Gans. If you put an LED or load on you create CO2 Gans. The new CO2 kits from Italy all have an LED on them. If you want to create ZnO₂ you can take the LED out – when you see solid residue on the bottom that is Calcium. The body creates bone from Zinc (connected to emotional part) and bone creates immune system to guarantee survival of the emotional part. In the same way shellfish create their shells from calcium.

0158: Video from Ali in Vancouver: He has created a 15 stacker system with 6 in the middle and 3x 3stackers at 120 - ie a T120 arrangement.

2000: MK: you have created the first lift system! Next you will see a shimmer! Adjust the field flow and you will see your spaceship. This is the

same as using 5 of our magrav systems.

0201: MK: Instead of powering it from the grid use your capacitors.

0202: Ali comments that he put the crystal dust into the Gans

0205: MK: if you see a shimmer in the shape of a dome you have created your spaceship. Good to see it done and not by an Iranian!

0206: Ali comments he has arranged the plasma from bottom to top heavy medium light heavy medium light in the 6 stacker core and the 3 stacker units.

0207: MK: You have to learn how to strengthen the center field and the connections and don't link up the 2 3 stackers in the centre.

0209: You have to fix or lock the system to a plate with batteries in parallel to each other. 0215: Ali comments that his ratio for his coils is 89 – 144, golden ratio. MK: Your stacker systems have to open up slightly and connect gravitational from peripheral stackers to the center. You will see first a shimmer then you won't see your system any more. This is the right track. Make sure your connecting wires don't touch the floor.

0221" Alekz is developing a wireless plasma system in his home, in which he will no longer need any wires...

0229: More details for Ali: Make the fields feed themselves – no leakage – connect the gravitational system at the bottom of the 3 units to the bottom of the central column and the magnetical from the 3 to the center on top. You should see a white silverfish bubble that suddenly connects to the 3 and you will see your ship.

0233: Rick comments on Ali's birthday – the day before Christ's birthday – kind of a spoiler! (Lol)

0246: More instructions: Lock the system with Perspex plates but don't let the bottom plate touch the ground- have some legs (eg stainless steel bolts seen on some stacker systems with clear Perspex) – then you will see the

fields . Listen to a radio close by all the time and it will give you information like we discovered at Descanzano – it will give you information about the field expansion – you need to listen to both AM and FM

0244: Bernard from Canada: presents his system he built in Canada that zeroed his power bill and caused some confusion at the power company – eventually he was charged for the power that HE generated with his unit! So he generated the power and then had to pay for it! He has been hacked quite seriously – even lost his last computer - but now learnt how to defend himself

0258: MK: We know who the hackers are they come from Belgium and Germany. Bernard comments he does not use skype any more as that is how they got into his computer. MK agrees and says that is how they access computers via skype so don't use skype on your computer (ok on mobile phone though apparently)

0302: Pain pads and pens are being released from Italian factories in January – have been certified by health authorities.

0305: Presents the beautiful blue pen in the white box – ataahua! Beautiful package!

0312: Kf Deutschland is set up. Kf Bulgaria is open for registration by the new people who have organized the manufacturing. Kf Japan is registered in Tokyo in partnership with a major company. Kf China is being supported heavily with finance from headquarters in equal measure – China is part of the support for Africa. (Kf NZ is also in process)

0314: There is a new website – we now have 3 websites KfSSI is the teaching division headed by Marko. Spaceshipinstitute.org is the spaceship development division and the keshefoundation.org remains as the mother site.

0320: Rick reads a beautiful and powerfully poetic writing of gratitude from Anwar who points out that these spaceships are the Vimanas of the ancient Vedic scriptures.

0322: Rick: Chinese referring to the stacker unit as the 'happy box'.

0329: Setting up a Kf Banking system with our own credit cards etc.

0330: next step is releasing further developments of the medical tech.
Thanks and gratitude to Vince, Rick, Sandor, and many others.

0333: End.
